A group of nine local crime commissions, meeting in Chicago last Monday, appointed a committee to examine the possibility of forming a National Association, or Federation, of Citizens Crime Commissions.

This national association would serve as a clearing house for information between the various local crime commissions. It also would serve as liaison agency with established Federal organizations. It would keep the spotlight on crime and corruption at all levels.

Members of the committee who will investigate this possibility are Virgil Peterson, of Chicago; Jim Walsh, of New York City; Arlon Wilson, of Kansas City, and Daniel Sullivan, of Miami. All of these gentlemen are tops in their field, all associated with Citizens Crime Commissions in their own cities.

The Senate Committee to Investigate Crime in Interstate Commerce, of which I formerly served as chairman, saw the need for a body such as this. In our third interim report one of our recommendations was the enactment of appropriate legislation to set up an independent Federal Crime Commission in the executive branch of the Government. We proposed that the Commission be appointed by the President with the advice and consent of the Senate, that it have as its function the continuing study and surveillance of operations of interstate criminal organizations throughout the country, reports on such activities to the Interstate and Foreign Commerce Committee of the Senate, maintenance of liaison between Federal, State, and local agencies, appropriate social studies relating to crime, its punishment and law enforcement; the maintenance of files and records as a national clearing house of information respecting criminal activities in interstate commerce, and other functions.

There was considerable opposition to this. In fact it was the only proposal, I believe, on which the committee was not united. Senator ALEXANDER WILLY dissented, since he feared that this might lead to a national-type police force at some future time.

In our final report, recognizing this opposition, we changed the recommendation from a federally appointed National Crime Commission to a proposal for a National Crime Coordinating Council. We proposed that the council would be a body composed of representatives of privately established local crime commissions. We urged that it keep the searchlight of public vigilance turned upon crime and corruption in a manner that leaves at the local level the basic responsibility of law enforcement and at the same time affords centralized guidance and coordination to crime detection and preventive activities.

If the proposal of the nine local crime commissions proves feasible, and a national association, or federation, of citizens crime commissions is formed, then such an association may very well fulfill the need that we had in mind. I think the proposal has great possibilities and I hope it is fully supported and backed up by interested citizens and foundations.

North Dakota

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. LANGER. Mr. President, an extremely fine article entitled "North Dakota Comes Into Its Own," by Leo A. Borah, appeared in the National Geographic magazine for September of this year. This is one of the finest articles about North Dakota that has ever appeared in any magazine. I have ascertained that the cost of printing the article in the Record will amount to approximately \$250 more than the regular allowance, but I ask unanimous consent that the article may be printed in full.

The VICE PRESIDENT. Is there objection?

There being no objection, the article was ordered to be printed in the Record, as follows:

NORTH DAKOTA COMES INTO ITS OWN (By Leo A. Borah)

As this issue of the National Geographic magazine reaches society members, hundreds of combines are sweeping across the golden fields of North Dakota, harvesting one-tenth of the Nation's wheat crop.

North Dakota produces more wheat than any other State except Kansas. In hard red spring wheat and durum, source of macaroni and spaghetti, it ranks first. It led the country in flax in 1950, vied for top honors in barley and rye, and stands high in production of potatoes, sugar beets, and hay.

Under its western grasslands lie 600,000,000,000 tons of lignite coal, and last April high-grade oil was struck in a flowing well at Tloga, between Minot and Williston.

PEOPLE HAVE SPIRIT OF NEVER-SAY-DIE

Rich, deep soil and vast natural resources on the eve of development are tremendous assets, but the greatest wealth of North Dakota is in the never-say-die spirit of its people. In spite of blizzards, floods, drought, dust storms, grasshoppers, and all manner of devastating plant diseases, they have clung to their faith in the land. That faith has been justified by 10 successive crops which have brought them from near bankruptcy in the 1930's to such prosperity that the gross income from the average farm in 1950 was \$9,000.

No longer is agriculture in North Dakota the desperate gamble it was when the only crop was wheat, the unpredictable. Diversified farming, crop rotation, summer fallowing, irrigation, airplane spraying of fields to kill grasshoppers and to destroy weeds, and development of drought- and disease-resistant varieties of grain have removed some of the hazards. Undoubtedly there will still be bad years when acre yields will be curtailed, but even the most adverse conditions will hardly cause complete failure as in the past.

North Dakota is no place for the timid or the weak; its winters are too rigorous, its

summers often too hot and dry. To the courageous and hardy, however, it is truly a land of opportunity.

When I arrived in Bismarck in mid-April this year, to begin my last survey of the State, the capital city was crowded with oilmen. Courteous Frank Hayes, manager of the Patterson Hotel, who came to my rescue with a comfortable room, told me that speculators from outside the State were engaging whole floors in the hotels.

"It's even worse in Minot," he said. "They swarmed in the minute the news of the oil strike leaked out. I hear they are paying from \$5 to \$10 an acre for leases on farms many miles away from the Tloga well.

"There is no doubt that the oil is there, but whether it's near enough the surface to make drilling profitable is a question. The first well, already 11,000 feet deep, has cost \$400,000. The flow is 400 to 600 barrels a day."

Before I left North Dakota, the Tloga well had been capped, and the drillers announced they would deepen it to 13,000 feet.

SKYSCRAPER CAPITOL A BARGAIN

The 19-story capitol, tallest building in North Dakota, dominates the scene in Bismarck. Towering above a hill to the north of the town, it can be seen for many miles across the rolling prairie. The little city, with a population of less than 20,000, is built on bluffs above the Missouri River. Its streets are broad, its buildings low. In such a setting the height of the capitol is accentuated.

"Some people criticize us for building a skyscraper statehouse on the prairie," Russell Reid, superintendent of the State Historical Museum, told me, "but nobody can say the taxpayers didn't get their money's worth in the construction. Fire destroyed the old capitol in 1930, and the new one went up in the depths of the depression when prices for everything were down. The architects scoured the country for ideas and gave us an edifice with interior space 80 percent usable—one of the most efficient public buildings in the United States—for a total cost of only \$2,000,000."

Mr. Reid has in the museum a fine collection of Indian relics. Many decades before Plerie de la Verendrye—first white man to set foot on the territory that is now North Dakota—came up the Missouri in 1738, industrious Mandans, Hidatsas, and Arikaras were tilling the soil there and raising good crops.

The warlike, nomadic Sioux who ranged around the Turtle Mountains, westward into Montana and south into South Dakota, were bitter enemies of the farmer folk.

Today, most of the agricultural Indians live on the Fort Berthold Reservation on the Little Missouri. Near Rolla, close to the Canadian border, is the Turtle Mountain Reservation. The Fort Totten Reservation is south of Devils Lake, the Standing Rock Reservation, where, near Fort Yates, the famous Indian chief Sitting Bull is buried, is the home of Sioux tribesmen.

The Mandans and their farmer allies built houses of logs covered with earth. A full-size model of one of these early dwellings has been erected on the Capitol Building grounds.

"During the worst winter of the depression," said Mr. Reid, "relief agencies sent food to the Indians at Fort Berthold. There were potatoes from Maine—'coals to Newcastle' in this potato-growing State—and grapefruit from Florida. Of course, the Indians, some of whom speak only a few words of English, had no idea what the grapefruit were; but they would shoulder bushel bags of them and stride off for home in 30°-below-

zero weather. Doubtless the grapefruit were frozen solid before the Indians had carried them half a mile."

The Mandans, Hidatsas, and Arikaras actually raised corn on their northern farms. It was small and short-eared, but it matured in the brief growing season. Painstakingly, experts at the North Dakota Agricultural College have crossed that flinty Indian corn with larger and better varieties to produce strains that can be grown profitably throughout most of North Dakota.

Bismarck had turbulent beginnings as a port of call for steamboats carrying freight and passengers up the Missouri to Fort Benton, Mont., in the sixties. It was known simply as the Crossing when the Northern Pacific, first railroad in North Dakota, reached the Missouri River in 1873. Rails had been laid to Fargo in 1872, and transportation from there to the camp which became Bismarck had been by wagon trains.

THE BISMARCK TRIBUNE TOLD THE WORLD OF CUSTER

Lt. Col. George A. Custer and his Seventh Cavalry were bivouacked at Fort Abraham Lincoln, which included old Fort McKeen, across the Missouri from Bismarck in 1873. Here he and his attractive wife were the center of gay social activities. When Custer set out from Fort Lincoln in 1876 with his troops for the campaign which ended in the tragic Battle of the Little Bighorn in Montana, his wife rode gaily with him for a little distance.

On July 5, 1876, the steamer *Far West*, piloted by Capt. Grant Marsh, came into Bismarck with the desperately wounded from Maj. Marcus A. Reno's command. Marsh brought the news that Custer's entire command had been annihilated. Twenty-six women at Fort Lincoln learned that they were widows.

The Bismarck Tribune, oldest newspaper in North Dakota (it has been in publication continuously since July 11, 1873), had sent Mark Kellogg as a reporter with Custer's troops. Kellogg was killed in the battle, but his notes were found on his body. On July 6 the Tribune told the world the story of the Custer disaster, and telegraphed details to the New York Herald at a reported cost of \$3,000 for 24 hours' use of the wires.

Though most of the business in Bismarck stems from State government offices, the city has a thriving trade as the distributing point for a vast wheat-growing area. It has grain elevators, flour mills, creameries, and the largest seed house and nursery in the State, specializing in seed corn developed from the quick-maturing variety grown in early days by the Mandan Indians.

NO "PUTTING ON AIRS" IN NORTH DAKOTA

"Nobody has enough help here when the legislature is in session," the hotel manager said. "Some of the legislators bring their wives with them, and the women get tired of just sitting around. It's nothing unusual for them to take jobs to fill their time."

North Dakota is "plain as an old shoe." "Putting on airs" is unheard of, and even the wealthiest farmers toil in the fields with their hired hands.

A day or two after my arrival in Bismarck, a companion and I rode 75 miles northwest to Garrison Dam on the Missouri and the new, ultramodern town of Riverdale, population about 4,000, conjured upon the bare prairie by United States Army Engineers.

Eight tunnels—one, 26 and two, 22 feet in diameter, for flood control, and five, 29 feet in diameter, for power—were nearing completion; and the tremendous embankment was growing rapidly as giant trucks, each carrying 30 cubic yards of earth, dumped their loads upon it.

When completed, Garrison will be the biggest rolled earth-fill dam in the world. It will contain approximately 67,000,000 cubic yards of earth, packed down by sheep's-foot

¹ See *Indians of Our Western Plains*, by Matthew W. Stirling, National Geographic magazine, July 1944.

rollers which exert upon it 640 pounds pressure to the square inch. Steel sheathing and rock facing will prevent erosion by the water.

The dam will furnish eventually 400,000 kilowatts of electric energy. A part of the Pick-Sloan plan for control of the Missouri River, it will prevent floods and metamorphose agriculture.²

The Fort Peck Dam in Montana is completed. The Garrison in North Dakota will be finished by 1954, and the Oahe and Fort Randall in South Dakota are scheduled for completion thereafter.

From a point of a short distance below the Fort Peck Dam it is proposed to divert water to irrigate a vast area in North Dakota and to raise the level of Devils Lake, largest body of water in the State.

The Garrison Dam will create a lake 200 miles long, and the Oahe, near Pierre, S. Dak., will back water up to Bismarck. Thus a land now semiarid will be converted into a well-watered area suitable for intensive farming.

In excavating for the Garrison Dam, the Army engineers uncovered thousands of tons of lignite coal. This has been separated from the earth and clay and piled in great ridges below the embankment. It is used as fuel to furnish power for the construction machinery.

The dam will be 12,000 feet long, 2,600 feet wide at the base, 60 feet wide at the top, and 210 feet high. Its crest will carry a four-lane highway. Earth dug to build the dam would leave a hole a city block square and more than 4 miles deep.

From Riverdale north to Minot the smooth highway goes through wheat country. Traces of snow from heavy winter falls still lingered along the way, and seeding was late. Here and there were shallow pools dotted with wild ducks and geese. The spring migration was in progress. An estimated 65,000 snow geese and Canadian honkers had descended on Devils Lake a few days before.

We saw scores of ring-necked pheasants along the fence rows. Sometimes these game birds are so numerous that motorists are cautioned to drive carefully to avoid killing them on the highways.

We watched two ring-neck cocks, handsome fellows, sparring near the road. They put up a battle for the favor of the drab-looking hens. Shooting is prohibited by law in the spring, and game birds seem fearless then.

In the fall, however, North Dakota is a huntsman's paradise. Most of the pheasants were imported from China several years ago. On a main flyway of the midcontinent, North Dakota lakes and streams are breeding places for myriad ducks and geese.

Minot, which sprang up overnight in 1887 when the Great Northern Railway was being pushed toward the Pacific coast, is a fast-growing city of 21,924, third in size in North Dakota. Near it are the Souris waterfowl propagation areas. The slow-moving Souris River winds for 8 miles through the city. From this stream hundreds of acres of rich farmland are irrigated.

Time was when conductors on the Great Northern trains approaching the city are said to have called, "My-not: Prepare to meet thy God." The town was then a rough frontier settlement which had grown to 5,000 population in a few weeks. Today it is a clean, prosperous business and residential city, seat of Minot State Teachers College, largest of five North Dakota normal schools. Others are at Valley City, Mayville, Dickinson, and Ellendale.

In the Minot area farms are generally larger than in the Red River Valley to the east. Wheat is the principal crop, and the city has an important privately owned grain-shipment inspection station. Besides wheat and other crops, Minot farms raise fine sheep and cattle.

BADLANDS, REGION OF MYSTERY AND BEAUTY

The area west of the Missouri River is North Dakota's wild west. Here are the mysterious and weirdly beautiful Badlands, a considerable portion of them included in Theodore Roosevelt National Memorial Park. The south unit of the park is near Medora, west of Dickinson, the north unit south of Watford City.

To regain his health and recover from grief after the loss of both parents and his wife, Roosevelt came to Medora in 1883 at the age of 25. He was actively engaged in cattle raising here from 1883 to 1887. A cabin he lived in has been removed to the grounds of the Capitol Building at Bismarck, where it is used as a museum of Rooseveltiana.

At the time of Roosevelt's sojourn in the Badlands, a young French nobleman, the Marquis de Mores, set up at Medora the first meat-packing plant in North Dakota. He built a magnificent chateau, which can still be visited, and erected for his bride the first Catholic Church in the region. His packing plant and other enterprises failed after three disastrous years, and De Mores returned to France.

Though carved like comparable areas in South Dakota and Montana by the action of water on clay and sandstone, the North Dakota Badlands are different from those in the neighbor States. They are mighty clay and stone hills with color-streaked walls thrust up from flat land. On the bluff sides are alternating stripes of red and brown, spotted with red scoria. Black outcroppings of lignite and sparkling patches of snowy selenite mingle in brilliant patterns.

Among the hills are spaces covered with sagebrush. Twisted evergreens, showy cacti, fragrant evening primroses, and clumps of willow grow along stream beds.

Through the 4,000 square miles of the rugged country the Little Missouri winds a tortuous course, often dropping a thousand feet in 20 miles. Black Butte, 3,468 feet, highest point in North Dakota, towers 700 feet over the floor of the area. Here are petrified forests, caves holding ice even in midsummer, and all manner of Nature's sculpture.

Some observers believe part of the mineral coloring in the Badlands to be due to the burning out of beds of lignite coal. Near Amidon and at two or three other spots in the region, unquenchable underground fires are still burning. The fires have advanced only a few hundred feet in 50 years. Probably they have been raging for centuries.

Relics of prehistoric Indians are found north of Williston, the most notable the strange Writing Rock between Grenora and Crosby. Archeologists have uncovered evidence in this area suggesting human occupation millenniums before the coming of the known Indians.

The part of North Dakota between the Missouri River and the Badlands is predominantly range country, though it contains many large farms where wheat and other crops are grown. With considerably less rainfall than the drift plains in the central part of the State and the Red River Valley in the east, it is better suited to stock raising than to general farming.

At Bowman, in the southwestern corner of the State, is a plant where Van Dyke brown is made from lignite. North Dakota produces more than 50 percent of the Van Dyke brown dye used in this country.

WHERE THE OLD WILD WEST STILL LIVES

At Mandan, a railroad town of 7,268, across the river from Bismarck, the atmosphere of cowboy days still lingers. The annual rodeo here attracts entrants from all over the West. Dickinson, too, near the edge of the Badlands, and the little town of Sanish, near the Fort Berthold Indian Reservation, put on big wild West shows.

Besides the usual broncobusting, steer roping, and bulldogging, these rodeos feature races between teams of cowboys to capture, saddle and ride wild horses from herds driven into the arena. Another unusual competition is between teams who rope wild cows from a herd and milk them. The team first to take half a cup of milk to the judges' stand wins.

The manufacture of briquettes from lignite coal overshadows the wheat and cattle businesses in Dickinson, a city of 7,457. This fuel is made by charring the lignite and blinding it into small briquettes with substances extracted from the raw product. For each ton of briquettes about 28 tons of lignite are used. The briquettes burn like charcoal, with intense blue flames. From a large, modern plant 50,000 tons of briquettes are shipped out annually. They are superior fireplace fuel.

Williston, 7,353 population, has an important experiment station of the North Dakota Agricultural College. Here are conducted studies in scientific irrigation and tests of rust- and smut-resistant grain. Both sprinkler and siphon irrigation are tested. In the cool, dry air of North Dakota all-day watering in full sunlight can be carried on without danger of wilting crops.

Excellent crops of high-quality wheat are grown by dry farming in the Williston area. To preserve the soil and conserve moisture, summer fallowing is practiced. Ingenious machines called surface tillers are used to remove all weeds and pulverize the soil to a depth of four inches. This process creates a dust blanket which holds moisture.

Just after the spring rains and three or four times more in the course of the summer, the surface tillers go over the fields. The result is that enough moisture is retained under the dust blanket to give the following year's crop a good start. Contour plowing and strip farming are also practiced with success.

FLAT NORTH DAKOTA NO LONGER MONOTONOUS

I took the Northern Pacific train across terrain ever more level to Fargo, the metropolis of North Dakota, a bustling city of 37,981. On previous visits this flat country had seemed to me monotonous and uninteresting. Now I had acquired new respect for it. It was once treeless, stretching away in unbroken sweep to the far horizon. Nowadays it is dotted with groves and tree rows planted to foil the winds that cause dust storms and erode the land.

A State-wide campaign of tree planting is under way. With mechanical planters thousands of seedlings from the State nurseries at Mandan and elsewhere are being set across the farmlands. The only sizable natural forests in the State are those in the Turtle Mountains near Bottineau, where the State School of Forestry is located. In a few years, however, there will be hardly a farm in the State without its groves and tree-row windbreaks.

At Fargo, William P. (Bill) Sebens, field representative of the Greater North Dakota Association, met me. Bill knows and loves every part of North Dakota. Under his guidance I obtained an intimate view of the most interesting things in the State.

Fargo is as typically midwestern as an Iowa or Indiana city. By eastern standards it is small, but population is no index to the importance of North Dakota cities. Fargo is the distributing point for a vast agricultural empire which ranks as one of the richest in the world.

In recent years it has taken much business from Minneapolis. Here are farm-machinery plants, flour mills, and a big packing plant of Armour & Co. Across the Red River in Fargo's twin city, Moorhead, Minn., is a big sugar factory which handles enormous crops of beets, raised extensively on both sides of the river.

Bill and I went first to the 70-acre campus of the North Dakota Agricultural College in the outskirts of Fargo. Here North Dakota crops are safeguarded and improved by the most efficient system of research I have ever observed.

President Fred S. Hultz expressed for me in a few words the purpose of the college.

"We have in North Dakota," he said, "more hazards than the average farm State. Because of moisture uncertainties, our problems are difficult. We try here at the college and in our experimental farms throughout the State to combat natural hazards and insure our farmers against calamity."

I talked to Dean Harlow L. Walker of the College of Agriculture. He pointed out to me that North Dakota has three distinct levels and three different types of soil: the Red River Valley—containing the lowest point in the State, altitude 750 feet—the flat bed of ancient Lake Agassiz where the soil is deep, black chernozem, rich as the Valley of the Nile, the drift plain, a higher, glaciated area, with earth still rich but somewhat lighter in color; and the Missouri slope, still higher, with thin, light soil best suited for grazing.

"We try," he explained "to develop seed and methods of farming adapted to each of the three levels."

TWO CROP MAGICIANS HAVE WORKED MIRACLES

Since North Dakota Agricultural College opened its doors to students in 1891, many of its faculty members have rendered distinguished service to farmers. Two have made such remarkable records that no description of the State would be complete without reference to their achievements.

These men are Dr. Henry L. Bolley, now retired, who rescued the flax crop of the world from deadly wilt, and Dr. Lawrence R. Waldron, plant breeder, who has developed strains of rust-resistant wheat which save North Dakota farmers at least \$20,000,000 annually. When I visited Dr. Waldron in his office at the Agricultural College Experiment Station, he was working on crosses to combat a new rust which threatens calamity to even his highly resistant Mida and Rival wheat.

When Dr. Bolley began work on flax, a devastating wilt was ruining crops everywhere. He began planting seed from all over the world in an experimental plot at the college which some of his colleagues scornfully dubbed "Bolley's Folly." In the soil of that plot were spores of all the diseases known to flax. Dr. Bolley reasoned that if he could develop a strain that would grow in such soil, he could solve the flax problem.

After exhaustive research and endless crossings of plants, he discovered the fungus parasite that caused the fatal wilt. He then produced wilt-resistant varieties that defied the infected soil of Bolley's folly and saved the crop.

In his greenhouse at the experiment station Dr. Waldron makes crossing of hundreds of varieties of wheat. He removes the stamens from a plant of one kind and carefully fertilizes it with pollen of another. Usually one of the wheats used in the cross is a popular heavy-yield type, the other a kind found to be impervious to rust and smut.

Seeds from scores of the crossed plants are placed carefully in separate pots. When the plants mature, the wheat each yields is planted and grown in the greenhouse.

In 16-foot rows the new varieties are planted in an experiment station plot which has produced crops for 80 years without being fertilized. The crop is harvested at the end of the season and tested for disease resistance, acre yield, protein content, and bushel weight. Kinds obviously unsatisfactory are discarded, and the few remaining are tested for bread-making qualities.

Thus Dr. Waldron has developed his wonderful Mida wheat and other strains now in general use. Seven out of ten farmers in North Dakota plant one of Dr. Waldron's varieties of wheat. He has raised the average acre yield by 3 bushels.

When I told him President Hultz had estimated his value to the State at twenty to twenty-five million dollars a year, he modestly replied, "That's a bit exaggerated, I'm afraid. I still have this new B 15 rust to lick."

Few sights can be more beautiful than a vast field of flax in bloom; its exquisite blue sweeping to the horizon, or than an ocean expanse of golden wheat rippling in the breeze. North Dakota farmers have Dr. Bolley and Dr. Waldron to thank for their magnificent crops of these grains.

At Grand Forks, second city in North Dakota, is the State University, where the new lignite research laboratory of the United States Bureau of Mines is finding hitherto unsuspected uses for the State's tremendous supply of 600,000,000,000 tons of lignite coal. Alex C. Burr is in charge of the laboratory and the pilot plant where 400,000 cubic feet of heating gas has been made in a day from the low-grade fuel. The gas from the plant may soon supply needs of the university and the city of 26,617.

"We have found out a few of the many ways to use lignite," Mr. Burr said. "When it comes out of the ground, it is 30 to 40 percent water, consequently, to ship it far from the mines is not economical. By intense heat from furnaces we can drive off the water, then ship the coal to plants where further treatment reduces it to liquid fuel and heating gas."

"There is enough lignite in North Dakota to keep the entire United States in abundant fuel for generations. Just now the cost of producing gasoline and gas from raw lignite is high, but eventually petroleum from oil wells will become more expensive and the processing of lignite cheaper; then our product will be in high demand."

"Lignite in char form may be used to reduce low-grade iron ore, sufficiently freeing it from impurities to make mining profitable. From lignite also we are already obtaining considerable quantities of creosote. The uses of this newly tested natural resource are numerous."

Like the State Agricultural College at Fargo, the university labors constantly to improve North Dakota. It is the home of the State Medical Center, supported by a 1-mill tax levy and created to improve medical services and to educate doctors, nurses, and technicians.

Founded in 1883, as the University of Dakota Territory, the university opened its doors less than 10 years after the Battle of the Little Bighorn. North Dakota did not become a State until 1889.

CREAM OF WHEAT STARTED IN GRAND FORKS

President John C. West proudly directed my attention to the fine new buildings going up on the campus. The school is growing rapidly and now has an enrollment of about 3,000 students.

Grand Forks has considerable industry: flour mills, a packing plant, a large potato-flour factory; across the river, in East Grand Forks, Minn., is a beet-sugar refinery. In the

surrounding country diversified farming is the watchword. I was interested to learn that Cream of Wheat was manufactured first in Grand Forks before the company moved to Minneapolis.

Bill and I talked to several of the leading farmers at a potato growers' meeting. John Scott, who farms 4,500 acres, told us he plants about 800 acres to potatoes, half that area to beets, and the rest to wheat, flax, rye, barley, and alfalfa. He rotates his crops and occasionally summer-fallows a part of his land.

Agriculture in the Red River Valley is more highly mechanized than in any other area I have visited. Machines plant beets and potatoes, weed the fields, and dig the crops. Machines handle the wheat and other grain from seed time to harvest, the combines reaping and threshing as they sweep across the fields.

Bill showed me color motion pictures he had taken of agricultural processes in all seasons throughout the State. One reel featured airplane spraying of crops to kill weeds. I watched the plane flying low over a field depositing 2-4-D on spring wheat. A later part of the film revealed the same field several weeks later. The grain appeared green and weedless save for a 15-foot strip of bright yellow mustard across the center. Evidently the pilot had misjudged his flight and missed that strip with his weed killer.

"Grasshoppers were terrible before we began spraying them from planes," Bill declared. "They would descend on a section of growing wheat in the morning and by sunset there wouldn't be a spear of green left. They wouldn't eat poisoned bran spread on the ground."

"But now we spray or dust the growing wheat with poison that really kills them. They are turned from a deadly menace into a fairly useful fertilizer."

Some of the motion pictures showed ingenious machines in action. In one sequence a wheat farmer was pulling with a tractor a seeder consisting of three 14-foot units hitched together. He was seeding a strip 42 feet wide each time he crossed the field—160 acres easily in a day.

"That kind of speed saved crops in 1950," Bill told me. "Spring was so late that it looked as if we'd never get the wheat in time to mature before frost. Luckily, we had a mild October, and by working combines from early morning till long after dark, we got in the third biggest crop in the history of the State."

If a farmer cannot find a machine to do the sort of work he wants, he devises something for his purpose. Some farms in the Red River Valley are so flat that it is difficult to run irrigation water across them. Often shallow swales in the fields become mudholes. By the use of terrace plows, ranchers fill the swales and dig sloping ditches which readily carry the flow of water.

The average farm in North Dakota has approximately 600 acres; the average for the whole United States is about 200. Of late years there has been a trend toward increase in size of Dakota farms, and some ranches are 10,000 acres or more in extent. Naturally, such large holdings are worked best by machinery. The coming of irrigation will bring more intensified agriculture and tend to reduce the size of individual farms.

In the early days of land settlement in North Dakota, when the Northern Pacific was encouraging homesteaders, enormous bonanza farms were owned by eastern capitalists who hired manager to operate them. These ranches ranged from 3,000 acres to 65,000 in the famous Grandin farm.

The slogan of that time was 30 bushels of wheat to the acre, and a dollar a bushel. Because of careless use of the land and periods of drought, the wheat yields became lower, and eventually the bonanza farms were broken up into smaller units and sold.

A GIRL WHO GAVE HER LIFE FOR OTHERS

Nowadays most main paved highways are kept open during the winter, but 30 years ago roads were often impassable. One dark winter afternoon in 1920, 16-year-old Hazel Miner started to drive her younger brother and sister home from school. She lost her way in snow driven by a 60-mile wind. The sled tipped over, and the horse broke from it.

The girl covered the younger children with every robe she could find in the overturned sleigh and finally lay over them to protect them. The next morning Hazel was found frozen to death, her brother and sister unharmed. At the courthouse in Center stands a granite monument to the young heroine.

The North Dakota countryside burgeons with wild flowers in spring and summer. First to appear are the delicate pasque flowers, which come up amid drifts of melting snow. Later come the wild rose, the State flower, and a galaxy of other blooms, to vie with the blue of flax fields and the green of wheat.

A visitor from the East reported standing in 1864 on the plain where Fargo is now located and looking across the land dappled with blossoms. "It's a beautiful land," he wrote, "but I doubt that human beings will ever live here."

Strangely, farmers from wooded areas looked askance in the early days at treeless country. They felt that ground from which forests had been cut was far richer.

One evening Bill took me with him to a community club meeting in the little village of Chaffee, where he lectured and showed his motion pictures of the North Dakota water program. Interested in irrigation, farmers had come from miles around to attend the meeting.

Everywhere in the State, folk are eager to learn new methods of agriculture.

NORTH DAKOTANS READY TO TAKE CHANCES

"They are the greatest people I ever saw for taking a chance," Bill told me. "Whenever a fresh idea comes out on how to improve crops, they will try it whatever the cost."

We went from Fargo to Wahpeton one afternoon through a country of perfectly kept farms. Here is a rich dairy and livestock-growing section where purebred cattle are a specialty.

In Wahpeton is one of the unusual industries of the State, a pottery plant. It was established a few years ago by Laura Taylor, who had studied ceramics at the University of North Dakota. Robert Hughes, a successful printer, who later became her husband, backed the enterprise.

Mrs. Hughes was molding ash trays decorated with dog heads copied from the National Geographic magazine.

Clay handled in the plant comes from enormous beds near Mandan. At first it was used without addition of other substances, but now a little feldspar from South Dakota is mixed with it. Rosemeade glazed pottery is shipped all over the world. Because the designs feature birds and animals, it has become a favorite with collectors.

As a gift to his city, Mr. Hughes has created a recreation park in a once unsightly river-side flood area. Wahpeton is the seat of the State science school, where students are given vocational training.

The unpredictable North Dakota climate produced a snowstorm on a Saturday late in April, but the following Monday when Bill and I drove to Valley City and Jamestown the snow had disappeared. This flare-back of winter was delaying the seeding, and the only traces of green we saw were a few fields of winter rye. Ordinarily, wheat is all sowed before the 1st of May.

At Valley City we drove past the trim campus of Valley City State Teachers College and dropped in at an unusual clothing store. This store, though located in a country town of less than 7,000 population, carries a stock of men's wear fully as varied and up-to-date as that of the best eastern shops.

"People here want the best money can buy," the proprietor explained, "and they have the cash to pay for it. Probably this store looks too elegant for a small city, but it is a profitable venture."

I had noticed an unusual number of expensive automobiles on the highways everywhere in the State. Gross farm income of North Dakota in 1950 was nearly \$610,000,000.

At Jamestown is the only independent college in North Dakota. Jamestown College, an endowed school under the sponsorship of the Presbyterian Church, is nationally known for its low fees. Here a student can work toward a bachelor's degree in liberal arts or toward a registered nurse's certificate for less than \$700 a year, all expenses included—tuition, books, room and board. The college is fully accredited. On the campus this spring were about 300 students.

The college, started in 1883, was the first institution of higher learning in what is now North Dakota. In the beginning it had only one building, on a hill overlooking the frontier settlement of Jamestown.

The panic of 1893 forced it to close its doors, and the lone edifice stood deserted until 1909. That year Barend Kroeze, a young college president from Washington State, saw the neglected building and determined to resurrect the college. He resigned his position and took the presidency of the moribund school.

When Dr. Kroeze retired from the presidency of Jamestown in 1946, the college had 11 modern buildings on its fine campus and an endowment sufficient to permit the enrollment of students at fees for all expenses half those of many schools of equal rank.

The southern part of James River Valley is one of the richest farming areas in North

Dakota, second only to Red River Valley in fertility. With completion of the water program, it will be under irrigation.

It is a veritable mecca for wildfowl. Every autumn sportsmen come here from all over the country for pheasant shooting. Until recently hunters were permitted to carry large bags of game out of the State, but laws in force now have put an end to this privilege, which would soon have decimated the birds.

A VIRILE LAND FINDS ITS POWER

The future of North Dakota holds amazing promise. Awakening to a realization of its resources, the virile young State is building its power. It does not forget the tribulations of the past, but profits from bitter experiences. No longer will it be known as a land of blizzards and dust storms.

It looks back proudly upon its victory over handicaps. Truly it is coming into its own.

Cause and Extent of Damage Caused By Pipeline Breaks

EXTENSION OF REMARKS
OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. HESELTON. Mr. Speaker, I now want to make available the results obtained by the Federal Power Commission from reports of 28 gas transmission companies covering cause and extent of the property damage and the number of deaths and injuries resulting from the pipeline breaks together with references to the causes of these failures. This is as follows:

Code No.	Cause	Extent of damage	Distance from point of failure that damage resulted
13	Pipe exposed due to wash-out.....	\$500 property damage.....	200 feet
	Escaping gas ignited.....	\$750 property damage.....	At point of fracture.
	Excessive strain due to soil stress.....	\$1,881 property damage.....	6 acres.
10	Longitudinal groove fractured.....	Crop damage.....	450 feet
	Lack of fusion in longitudinal weld.....	Damage to farmland and barns.....	350 to 400 feet
	Electrolysis.....	Damage to surface facilities of oil wells.....	Adjacent to break.
	Geophysical crew drilled into line.....	Truck and drilling rig destroyed.....	At point of break.
1	Top blew off 500 "B" meter.....	Employee killed.....	Do.
	Damaged pipe.....	3½-acre crop damage.....	600 feet along axis of line.
5	Landslide.....	Slight damage to farm outbuildings.....	150 feet.
6	Pipe ruptured by dozer.....	Operator killed—dozer destroyed—bad fire.....	
7	Contraction break caused by cold weather.....	Fire damage to adjacent house and property.....	125-foot radius.
	Lamination in plate.....	Minor crop damage.....	250 feet by break, 450 feet by fire
9	Inadequate penetration of girth weld.....do.....	235 feet by break, 525 feet by fire.
do.....do.....	85 feet by break, 300 feet by fire.
	661 breaks in longitudinal weld during testing	\$71,850 property damage.....	Not shown.
	Operation.....		
14	Break in longitudinal weld.....	\$18,000 property damage.....	Do
do.....	\$26,000 property damage.....	Do.
do.....	\$12,000 property damage.....	Do.
	Defective field weld.....	\$1,800 property damage.....	Do.
16	Undetermined.....	6 houses and 2 autos destroyed, 2 deaths.....	1,500 feet.
23	Pull-out due to landslide.....	\$225 damage.....	200 feet.
	Blow-out due to corrosion.....	Crop damage.....	
22do.....	Land and livestock damage.....	
do.....	Land and property damage.....	
	Defective longitudinal weld.....	Crop damage.....	
	Faulty field weld.....	Property damage.....	300 square feet.
	Rupture caused by faulty pipe.....	10 acres property and crop damage.....	500 feet.
	Pipe laminated.....	2 acres property damage.....	1,500 feet.
21	Not determined.....	Crop and property damage in a 1,000-yard area—3 persons killed, 2 injured.....	1,000-yard area.
24	Faulty field weld.....	Crop damage, 2 acres.....	
	Inlet header ruptured.....	Filling station and dwelling damaged.....	

Code No	Cause	Extent of damage	Distance from point of failure that damage resulted
25	Backfill removed by contractor	2 employees fatally injured	Localized.
	Negligence on part of outsider in setting off dynamite blast.	Damage to railroad property, electric line, highway, 2 pick-up trucks, and 1 trailer truck; 3 persons injured.	500 feet.
	Broken weld	8 1/2-acre property damage, 500 feet of fence burned.	350 feet.
	Corrosion	2,500 feet of fence destroyed and 2 head of stock killed.	500 feet.
	Corrosion	Minor property damage	
27	Split in pipe	do	
	Crack in weld	do	
	Blow-out	do	
	Corrosion	do	
	Blow out	do	
	do	do	
	Blown gasket	do	
	Split seam	Dwelling, outbuildings and crops damaged.	600 feet.
	Ruptured pipe	Dwelling automobile and utility equipment damaged	200 feet.
	Break in weld	Minor property damage	
28	Assumed that failure occurred in longitudinal seam	4 1/2 to 5 acres secondary timber destroyed	800 feet.
	Pipe damaged in construction	Slight damage to land and fence	240 feet.
	Faulty longitudinal weld	6.4 acres farm land damaged	175 feet.
	Damaged by construction equipment	Farm buildings damaged or destroyed, 2 persons slightly burned	2,418 feet.
	Unknown	Fire damage to old buildings, timber was burned—telephone and power transmission lines damaged—2 persons suffered superficial injuries	3,150 feet.
	Damaged pipe	3.2 acres timber burned	275 feet.
	Split pipe	1 employee killed 6 acres of timber destroyed	330 feet.

Cause of failure	Code No	Number of deaths	Number of injuries
Top blow off "B" meter	1	1	
Pipe ruptured by dozer	6	1	
Undetermined	16	2	
Do	21	3	2
Backfill removed by contractor	25		2
Negligence on part of outsiders in setting off dynamite blast	25		3
Damaged by construction equipment	25		2
Undetermined	25		2
Split pipe	25	1	
Total		8	11

Canada "Grabs Ball" on Seaway

EXTENSION OF REMARKS OF HON. THADDEUS M. MACHROWICZ OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. MACHROWICZ. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article from the Washington Post, dated October 14, 1951, entitled "Canada 'Grabs Ball' on Seaway":

CANADA "GRABS BALL" ON SEAWAY

(By G. V. Ferguson)

MONTREAL.—Parliament opened its fall session Tuesday with the traditional speech from the throne which outlines the legislation the Government will propose. In domestic circles, chief interest centers on the proposal to bring payment January 1 of old-age pensions of \$40 a month to all citizens over 70 without a means test and as a matter of right. A special contributory tax will be levied to pay the pensions, whose initial annual cost is estimated at \$330,000,000 with 700,000 persons on the rolls.

But interest in the United States is more likely to focus on the proposals for construction of the St. Lawrence seaway. Canada,

now in its greatest era of expansion, demands the seaway and has become increasingly linked by the blockade in Congress of any legislation to make possible American participation.

The Canadian support stems from two chief sources. The first has already been mentioned: National expansion needs the seaway, particularly since the development of the vast Quebec-Labrador iron-ore field makes water transportation to United States steel mills more important than ever.

The other is the national sentiment that it is time for Canada to assert itself against its powerful neighbor. National pride refuses to accept the congressional blockade. The cry now is for Canada to go it alone, if necessary.

While Canada wants the seaway badly, there are difficult legal problems to be settled before even a solely Canadian development can take place. It is agreed that the canal and the power should be made available together. Nothing prevents Canada from constructing canals on its side of the St. Lawrence, but power development means the construction of dams, and a dam across the St. Lawrence has its south end on American soil.

Is it within the power of President Truman to permit the construction of such a dam? Or does he require congressional approval? If he needs the latter, we are, for all our brave words, right back where we started. Canada proposes Congress disposes.

There is, in the Canadian view, much obscurity about the legal position in the United States. It begins, Canadian experts say, with the fact that there is a difference between the known law on the subject in Canada and the United States. In Canada, for instance, the water flowing in a navigable stream (such as the St. Lawrence) is under Federal control. The bed of the river, however, is under Provincial control, the equivalent of American States' rights. So far as is known here, United States courts have not laid down the law on this point.

Over and above that is the question whether the President can grant permission for Canada, a foreign power, to build a dam abutting at one end on United States soil. Canadian experts believe that he can, and they have so informed the State Department. But such a foreign opinion is not conclusive, and it may be that, on the verge of a presi-

dential election, Mr. Truman might be reluctant to raise a controversial point.

He is friendly to the seaway and wants it. But friendliness and effective power do not always march hand in hand.

Meanwhile, Canada is reluctant to wait. The rich and powerful Province of Ontario must either have St. Lawrence power soon or it must build steam plants to generate electricity. Cost of power produced in steam plants (incidentally, out of United States coal) would raise the price of electricity to four times its cost from existing electric sources.

If the President is powerless to act, and if Congress persists in its blockade, the chances are far too great of a rapid rise in anti-American feeling in Canada. It is, though not serious, high enough as it is.

Australians Asking if Gold Standard Is on Way Back

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. CASE. Mr. President, I ask unanimous consent that I may place in the Appendix a very significant article entitled "Australians Asking if Gold Standard Is on Way Back," written by Albert E. Norman, chief of the Australasian News Bureau of the Christian Science Monitor, and published in the Christian Science Monitor, October 17, 1951.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AUSTRALIANS ASKING IF GOLD STANDARD IS ON WAY BACK

(By Albert E. Norman)

SYDNEY.—Does the present brisk business in solid gold South African doorknobs mean American and the rest of the free world are on the way back to the gold standard, last heard of in 1933?

Two resounding monetary events have touched off that question among Australian gold producers: One is the report that the International Monetary Fund has decided to wash its hands of all further responsibility in holding the line on free-gold sales by member nations at above the official United States Government price of \$35 an ounce.

Insight shows that this decision virtually was inevitable after IMF finally cleared South Africa's persistent applications in 1949 to sell some of its gold for industrial purposes at prices above the 17-year-old fixed price of \$35 an ounce.

Since then an increasing South African export of solid-gold doorknobs, door knockers, and other industrial gold, has set up an ominous pounding on IMF's dignified portals, some say even on the future of IMF itself as an international price-fixing institution for currencies.

ASK WHERE UNITED STATES POLICY IS HEADED

For the present, however, such predictions must remain in the realm of speculation. What the Australian gold-mining industry wants to know is: Just what doors to new financial opportunity are the South African golden doorknobs likely to open up? Or more specifically: Where is American gold policy headed?

Taking the second resounding monetary event, it would now seem these expensive doorknobs have opened at least one profitable door in Canada. In that big gold-producers country, Finance Minister Douglas Abbott has announced producers may now sell gold on the world's free market at what they can get for it.

It is worth noting that among the few official strings attached to this new selling freedom was a provision stating that Canadian gold-export licenses would not be approved unless payment was in convertible exchange, preferably in United States dollars.

A possible explanation is the growing desire of governments to run down dollar balances rather than clear them with gold exports to the United States.

This trend to preserve and build up national gold reserves was dramatically pointed up by recent large-scale Italian and Dutch Government gold purchases from the United States gold reserve notwithstanding both countries badly needed the dollars for other purposes.

This desire to increase national gold reserves accounts for the drain on the United States reserve estimated at \$3,000,000,000 since devaluation of currencies in September 1949.

Under the United States Gold Reserve Act of 1934 foreign governments have the right to purchase gold at the standard price of \$35 an ounce. Nonofficial but vocal American viewpoints in Australia do not regard such government-to-government transactions at this price as good business. Obligated to sell at the same price, under IMF rules, Australian gold producers have been saying much the same thing for a long time.

GOLD NOW SEEN UNDERVALUED

Both parties seem agreed that \$35 an ounce is too low a price for a commodity which actually is the most readily convertible currency known to man.

That conclusion also suggests that as a commodity the present American gold reserve of \$23,000,000,000 is considerably undervalued compared with today's ruling commodity prices.

It is this fact which perhaps best illustrates the political value of gold in world trade and commerce. And the present official movements toward a world free market in gold are filled with political implications which extend all the way to a revived gold standard itself.

In fact, when it comes to the political value of gold the words of Dr. W. Randolph Burgess, chairman of the executive board of the National City Bank of New York, reported in this newspaper almost 2 years ago on the subject, are well worth repeating.

Said Dr. Burgess: "The great political conflict we are facing today (1949) is the conflict between the so-called welfare state and sound money.

"Historically, one of the best protections of the value of money against the inroads of political spending was the gold standard—the redemption of money in gold on demand. This put a checkrein on the politician. For inflationary spending led to the loss of gold either by exports or by withdrawals by individuals who distrusted Government policies. This was a kind of automatic limit on credit expansion (i. e., inflation)."

This, of course, was strong advocacy for a return to gold. But while that prospect still remains heavily clouded, the fact is that every government's gold reserve is subject to erosion in value while the arbitrary IMF price of \$35 an ounce holds this one commodity down while all others are permitted to rise.

IMPORTANCE TO BRITAIN

For the British Government faced once again with a dollar crisis, this erosion in the

value of national reserves is of first rate importance. While some government critics possibly would consider any writing up of the British reserve as inflationary, there is the counter argument that it would provide more buoyancy for wallowing commonwealth finances.

To cushion the economy against the impact of recurring British dollar crisis, the Australian Federal Treasurer Sir Arthur Fadden has now revealed this country is building its own gold reserves.

Australia suspended gold shipments to Britain about a year ago, Sir Arthur said. He also revealed the Australian Government wanted to see a higher price for gold. This is regarded as evidence Australia is prepared to support the free market now getting under way.

This new attitude is an historic shift in Australian fiscal policy. It means this country is no longer prepared to put all its golden eggs in the British Commonwealth dollar pool. It means Australia wants to pursue a much more independent line in its transactions with the United States. And gold will be the basis of that independence.

Australian, Canadian, South African, and others growing support for a free market in gold brings up the question of currencies.

As seen from here, the formation of a free market in gold necessarily means an automatic revaluation of paper currencies. These will be put to the acid test of how much or how little is required to buy a fine ounce on the free market. This, of course, will also apply to the dollar.

On the other hand, it is possible for the United States by planned releases from the vast Fort Knox hoard, to keep the free market price bobbing around the arbitrary IMF \$35 level.

SNYDER'S DENIALS NOTED

Where does the dollar officially stand in relation to gold in these moves? The strong denials of Secretary of the Treasury John W. Snyder that the United States Treasury intends to increase its price above \$35 have not been missed in Australia.

Some of the more unbelieving financial scribes and Pharisees here have likened them to the spate of firm Crippsian denials preceding sterling devaluation.

But if the Mr. Snyder denials are accepted, the steady foreign sales from the United States gold reserve suggest that Washington mainly is intent on a better distribution of gold throughout the free world.

This redistribution would offer two immediate advantages. It would increase the quantitative value of the gold available for world trade, presently insufficient. It would facilitate the return and stable operation of a free market (as now indirectly approved by IMF) and therefore would be a move toward elimination of present restrictive exchange controls.

It must be remembered that this latter move is a major tenet of United States international trade policy.

It also must be remembered that a free market would encourage increased gold production, thereby increasing the world gold supply.

A genuine world free market with its automatic revaluation of paper currencies seems necessary before any general return to the gold standard could be contemplated as practical politics.

In the long run, such a return would be anti-inflationary. If the United States and Britain decided to return to gold the decision would be superb news.

It would mean that citizens once again could see the golden color of their money at the bank. More significantly, it would indicate in the Burgess formula that these two countries were putting a checkrein on the politician; a kind of automatic limit on credit expansion (inflation).

Bureau of Valuation of the Interstate Commerce Commission

EXTENSION OF REMARKS

OF

HON. ROBERT CROSSER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. CROSSER. Mr. Speaker, under leave to extend my remarks in the Record, I include the following statements:

BUREAU OF VALUATION OF THE INTERSTATE COMMERCE COMMISSION

The peak of the work of inventorying the railroad properties came in the middle of the period of calendar years 1916-1920, when the appropriations averaged about \$3,300,000 a year, and the employees varied from 1391 in 1917 to 1,124 in 1920, when the Transportation Act of 1920 was passed. From then on the employees have steadily decreased in number, but appropriations were increased from approximately \$1,600,000 for 1922 to \$3,200,000 for 1932, when the peak of the recapture work was reached and passed. From that time on to the present time the appropriations have steadily shrunk and the personnel have been progressively reduced. With recapture out of the way by repeal, and the Commission was relieved from the duty of going further with telegraph and telephone valuation, the force was cut from 917 as of December 31, 1933, to 360 at the end of 1934. By the end of 1939 it was reduced to 187 and continued at about that figure until 1944. December 31, 1944, there were 155 employees. There are now 81. The construction of the independent offices bill for which some contend, based on the report of the House conferees, would reduce the staff of the Bureau to 61.

Under section 19a (f) the Commission is given a mandate to keep itself informed of all new construction, extensions, improvements, retirements, or other changes in the condition, quantity, use, and classification of the property of all common carriers as to which original valuations have been made, and of the cost of all additions and betterments thereto and of all changes in the investment therein. The Commission may keep itself informed of current changes in costs and values of railroad properties, in order that it may have available at all times the information deemed by it to be necessary to enable it to revise and correct its previous inventories, classifications, and valuations of the properties; and, when deemed necessary, may revise, correct, and supplement any of its inventories and valuations.

Under paragraph (g) of that section the carriers have been furnishing reports and information to the Commission required for the purpose of permitting the Commission to perform its duty under the provisions of paragraph (f).

During the lean years, the pipelines of the country have been valued. All but 4 of the 79 on the original list of properties and 9 recently constructed small pipeline systems have been completed.

The force assigned has been utterly inadequate to perform either the field work or the office work necessary. For instance, there are now but 6 out of 12 field offices for land appraisals in operation, and one of these (Chicago) is practically closed, as the appraiser in charge has reached retirement age and the Commission cannot employ a successor. The land section is without the service of any field force in many sections of the country. As to the auditing work, the Commission's Bureau of Valuation is 2½ years behind in auditing valuation order returns which are required under section

19a (g). For the verification of original cost, other than land, it is 1½ years behind currency. As to the land inventory it is 8 years behind, and on property other than land 7 years behind being current.

The Commission has repeatedly pointed out in its annual reports to the Congress that the valuation work is falling lamentably behind. With the backlogs indicated, it is becoming increasingly difficult for the Bureau to prepare reliable data for the use of the Commission in the general rate-increase cases, or for other purposes. This was pointed out in the 1950 annual report, page 125, as follows:

"The Commission should not be required to accept reports of carriers without check and a certain amount of policing. It is this guardianship of the accuracy of the public record that gives it probative and practical value."

Without continued scrutiny of the carriers' returns by the Bureau's forces it is safe to assume that the valuation records already made, and the mounting mass of carriers' reports remaining unchecked and unaudited, will soon lapse into a chaotic state, and can no longer be relied upon as representing the value of the physical property of the railroads, or the cost thereof.

Inspection of railroad and pipeline properties, the checking of inventories, the ascertainment of maintenance prices, and the depreciation studies have had to be deferred. The Commission does not now have in its service a hearing examiner or trial attorney who is thoroughly familiar with valuation history, theory, and practice. The competent staff of these law officers that had been assembled is completely dissipated.

The situation is bad, and as one who has dealt with the problem of valuation of public service properties for 45 years, I deplore our inability to give the public the protection the valuation act demands from the Commission.

Respectfully,

CLYDE B. AITCHISON,
Commissioner

BUREAU OF VALUATION

¹ One employee on loan to DTA on reimbursable basis.

BUREAU OF MOTOR CARRIERS (From Commissioner Rogers)

The Bureau of Motor Carriers is seriously handicapped by lack of funds in three principal phases of its duties. These are the handling of formal proceedings, its highway safety work, and obtaining compliance with the provisions of the statute and regulations.

Our formal proceedings include hearing and determination of applications for operating rights and complaints involving the reasonableness of motor-carrier rates. The time involved in holding hearings and preparing reports has been unreasonably long

for years. For the past 2 years we have been slowly catching up on our backlog, but the Budget Bureau recommended a cut of \$185,000 in this work for the current year. Because of this proposed cut we lost a number of examiners by transfer and did not fill the positions because of the uncertain outlook. The appropriation bill for 1952 provided for a reduction in the staff assigned to this work, although the reduction was smaller than that recommended. As a result we will probably be unable to fill any of the existing vacancies. By the end of October 1951, there will be approximately 750 applications for operating authority awaiting hearing and 1,650 applications which are ready for a decision but not decided. Because of this situation, we will not hold hearings on new applications for the following 3 months in order that our examiners may prepare reports in as many as possible of those cases which have already been heard. We are also unreasonably behind time in hearing and deciding the pending rate cases. No immediate relief from this situation is possible for the reason that it takes a considerable time to train additional examiners and their value in reducing our backlog would not be apparent for some time. The immediate appointment of a substantial number of new examiners in the lower grades is essential in order that we may prepare to resume the reduction in the backlog and the handling of formal proceedings on a current basis.

Under the appropriation for 1952 our staff for handling highway safety has been almost entirely eliminated. This is especially unfortunate at the present time because of the large quantities of explosives which are moving long distances interstate over the highways. As our highway safety work is concerned principally with the development of safe operating practices, including driving time, by motor carriers, this work cannot be taken over by the separate States through which the motor carriers operate, even if all of those States had regulations and adequate policing within their own borders. Few States have any limitation upon driving hours and half of them have no provision for inspection of vehicles. Although our staff for this work has always been substantially less than the minimum required to do an adequate job, their work has been demonstrably effective. Comparison of the records of individual carriers which have adopted safety programs in line with our safety regulations shows a 50 percent reduction in accidents within a period of 2 years. The over-all accident record of carriers holding operating authority from us shows that the number of accidents is substantially less than the general average and the increased hazard due to the increased number and mileage of vehicles on the highway.

Not only compliance with our safety regulations, but also compliance with all regulatory provisions will substantially decrease because of the reduction in our safety staff and in our law and enforcement staff. The number of attorneys has been substantially reduced and the number of persons available for investigating violations has also been substantially cut. Our field staff, whose principal duty is the obtaining of compliance with our regulations and preparing cases for prosecution where necessary, must be reduced by more than one-third over the number available last year. As we had only 339 field employees scattered through the entire country, it is obvious the reduced staff will not be able to do even a reasonably adequate job in obtaining compliance from the more than 20,000 separate motor carriers holding authority from us or the much larger number of interstate truck and bus operators which are subject only to our safety regulations.

BUREAU OF TRANSPORT ECONOMICS AND STATISTICS

(From Commissioner Splawn)

The authority to require reports from the various classes of carriers from which the Bureau of Transport Economics and Statistics compiles the official statistics necessary for our regulatory functions is provided under the following sections of the Interstate Commerce Act:

Part I, section 20 (1): Steam railways, electric railways, sleeping car companies, carriers by pipeline, express companies. Section 20 (6): Persons furnishing cars or protective services against heat or cold to or on behalf of the railroads or express companies.

Part II, section 220 (a): Motor carriers.

Part III, section 313 (a): Carriers by water.

Part IV, section 412 (a): Freight forwarders.

And in addition the report requirements of the Accident Reports Act, approved May 6, 1910.

In the fiscal year ended June 30, 1951, the Bureau of Transport Economics and Statistics had funds for 151 positions. Because of extra work added in recent years the Commission requested 77 additional people including the filling of vacancies for fiscal 1952 which would have made a total of 228. The Bureau of the Budget allowed only 8 additional positions instead of the 77 requested. The House Appropriation bill directed that \$375,000 be taken out of valuation and transport economics and statistics together. That meant a cut of about one-third. With that bill hanging over its head the Commission left all of the vacancies in the Bureau of Transport Economics and Statistics unfilled so that the staff of the Bureau had deteriorated through retirements and transfers to 143 as of October 1, 1951.

If the Independent Offices Appropriation Act is construed in accordance with the legislative history that the House intended to cut this Bureau by one-third, the staff would be reduced some 50 positions under the 151 positions of the date specified in the House bill. There are other bureaus in dire need of additional people. The way to provide for these people is through additional appropriations.

The staff of the entire Commission has deteriorated during 1951 down to a total of 1,891, which is 51 less than the 1,742 authorized under the Jensen amendment—article 805, section 2 of the Independent Offices Appropriation Act. Since the staff of the Commission is already below what is required to satisfy the cuts provided in the Independent Offices Appropriation Act, it seems altogether unfair further to cut the Commission's staff by pinpointing three bureaus to the extent of about 250 people. If the work of motor-carrier safety, of gathering and compiling financial and operating statistics from reports of the carriers and the work of valuation for rate-making purposes are of such basic importance, an impairment of the bureaus affected would be tragic.

Pipeline Failures and Causes, as Reported to the Federal Power Commission by 28 Major Gas-Transmission Companies

EXTENSION OF REMARKS OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. HESELTON. Mr. Speaker, in connection with the consideration of

H. R. 88, providing for the establishing of a safety code applying to the operation of gas-transmission companies, I

now want to make available a tabulation showing the number of failures and the causes as reported by 28 major gas-

transmission companies, together with certain other pertinent information. It is as follows:

Code	Failure during—	Period	Weld			Couplings		Machinery		River cross-ings		Pipe				Auxiliary equipment	Unknown	Total
			Field		Shop	Blow-out	Pull-out	Road	Other	Wash-outs	Other	Corrosion	Damaged	Split	Bend			
			Acetylene	Electric

Forest Resources of the Seventh Congressional District of Alabama

EXTENSION OF REMARKS OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES
Saturday, October 20, 1951

Mr ELLIOTT. Mr. Speaker, 63 percent, or 4,000 square miles, of the land

area of the Seventh Congressional District of Alabama is covered with forests. The corresponding percentage for the Nation as a whole is 30. The percentage in Alabama as a whole is 57.

SEVENTH CONGRESSIONAL DISTRICT RANKS THIRD AMONG THE NINE CONGRESSIONAL DISTRICTS OF ALABAMA IN PERCENTAGE OF AREA IN FORESTS

The Seventh Congressional District of Alabama ranks third among the nine Congressional Districts of the State in the percentage of its area in forest lands. Only the first and ninth districts exceed

it in percentage. Likewise its 4,000 square miles of forest lands place it in third place among the nine Congressional Districts in the number of square miles of forested area. It is exceeded only by the First Congressional District with 5,267 square miles and by the Second Congressional District with 4,971 square miles.

Thirteen and one-half percent of Alabama's forest lands lie within the boundaries of the Seventh Congressional District.

Under leave to extend my remarks, at this point I include a study made at my request by the Legislative Reference Service of the Library of Congress styled "Selected Statistics on the Forest Areas of Alabama and the United States," and a photostatic table showing Alabama forest resources by Congressional Districts, based upon the Southern Forest Survey, 1932-36:

SELECTED STATISTICS ON THE FOREST AREAS OF ALABAMA AND THE UNITED STATES

Forest areas by counties in the Seventh Congressional District:

County	Forest area		Percent in forest
	Acres	Square miles	
Blount.....	247,700	357	60.5
Cullman.....	213,600	334	45.0
Fayette.....	289,000	453	72.2
Franklin.....	258,500	401	62.7
Lamar.....	239,000	373	61.7
Marion.....	269,200	408	63.0
Pickens.....	372,600	582	65.6
Walker.....	337,800	528	65.2
Winston.....	304,100	476	75.1
Total.....	2,562,400	4,004	63.2

2. The Seventh Congressional District:

Forest area:	
Acres.....	2,562,400
Square miles.....	4,004
Percentage of land in forest.....	63.2

3. Percentage of land in the United States in forest: On the basis of 623,828,000 acres of forest land in the United States, 30.5 percent of the total area of 1,956,362,000 acres is so classified.

4. Percentage of land in Alabama in forest: Alabama's forest area of 18,877,700 acres is 57.7 percent of the total land area of 32,689,920 acres.

5. Congressional districts in the United States having a percentage of forest area greater than that in the Seventh District of Alabama: With 63.2 percent of its area in forest, Alabama's Seventh District ranks among the more heavily forested Congressional districts of the country. There are, however, a number with a higher percentage. Data is not currently available on which to make complete and accurate comparisons, either on the basis of forest area or the volume of the timber stand. Individual districts might, however, be selected from several of the forested States. For example, the 11 counties in the Seventh Congressional District of Arkansas have 64.6 percent of their area in forest. This unusually productive District is selected because the forest growth reflects 30 years or more of cooperation between local forest industries and State au-

thorities. The area, however, exceeds that of Alabama's Seventh District and the forest stand of 10,778,100,000 board feet is twice the 5,071,400,000 feet in the Alabama district.

6. Congressional districts in the United States having a percentage of forest area less than that in the Seventh District of Alabama. More than two-thirds of the United States is open land and without forest. Included are great areas of open land in the Great Plains States. One may assume, therefore, that more than two-thirds of the Congressional districts have a smaller percentage of their area in forest than does the Seventh District of Alabama. An enumeration of them would require more data than are presently available, and even a partial enumeration would require statistical data not available at the present time.

7. Forest areas in each Alabama Congressional District:

Congressional district	Total area		Forest area		Percentage in forest
	Acres	Square miles	Acres	Square miles	
1.....	4,728,000	7,389	3,370,400	5,267	71.3
2.....	5,131,000	8,022	3,181,000	4,971	62.0
3.....	4,086,000	6,339	1,829,200	2,859	45.1
4.....	3,491,200	5,455	1,978,000	3,062	56.1
5.....	3,179,520	4,968	1,635,900	2,558	51.1
6.....	4,109,440	6,421	2,430,000	3,829	59.6
7.....	4,051,840	6,331	2,562,000	4,004	63.2
8.....	3,223,040	5,036	1,490,000	2,293	46.4
9.....	714,880	1,117	498,200	778	70.0
Total.....	32,689,920	51,078	18,877,700	29,490	57.7

8 and 9. Congressional districts of Alabama rated according to percentage of area in forest.

Rating	Congressional district	Percentage of board in forest
1.....	1	71.3
2.....	9	70.0
3.....	7	63.2
4.....	2	62.0
5.....	5	60.1
6.....	6	59.6
7.....	4	56.1
8.....	8	46.4
9.....	3	45.1

10 and 11. Trees common in the Seventh Congressional District of Alabama: The forest is about two-thirds pine and one-third hardwoods. Loblolly pine (*Pinus taeda*) is the most abundant single species and is followed closely by shortleaf pine (*Pinus echinata*). Longleaf pine (*Pinus palustris*) occurs on the tops of some ridges and occasionally elsewhere in isolated patches. Originally it covered a much larger area, but as it was logged off it was generally replaced by loblolly or shortleaf pines. The more com-

mon hardwoods are red oaks, hickories, white oaks, red gum (*Liquidambar styraciflua*), yellow poplar (*Liriodendron tulipifera*), and black gum (*Nyssa sylvatica*). Bottomland hardwoods grow along streams and consist chiefly of red gum and black gum, water oaks, yellow poplar, elms, American beech (*Fagus grandifolia*), hickory, and maple. Other varieties are present in small numbers to include most of the 180 tree varieties credited as native in Alabama. None of these trees are peculiar to the Seventh District, but all are found over much of the State.

12. People employed by forest industries: At least 5,000 people were employed during 1947 in 219 establishments which the Census of Manufactures reported as devoted to the manufacture of lumber and forest products in the nine counties of the Seventh Congressional District. This may be low, because the Forest Service reported 730 active sawmills in the district in 1946. These included eight medium-size, permanent mills, and 189 portable mills which were operated more or less regularly. All the other mills were portable and operated intermittently. Greatest sawmilling activity was reported in Fayette, Walker, Pickens, Marion, and Lamar Counties.

Of the 219 establishments reported in the Census of Manufactures none were engaged in the manufacture of furniture. They were grouped into 168 with 1 to 19 employees, 45 with 20 to 99 employees, and 6 which employed 100 or more.

Of the \$49,530,000 reported as having been paid in wages and salaries to the 37,392 employees credited to 1,618 lumber and forest products establishments in Alabama, approximately \$6,500,000 may be credited to those located in the Seventh Congressional District.

The Reconstruction Finance Corporation

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very intelligent and enlightening editorial by Ralph Thornton, on the Reconstruction Finance Corporation. The editorial appeared in the Minneapolis Star on Thursday, October 11.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RFC HAS PROVED TARGET OF POLITICS FROM VERY FIRST

Abolish the Reconstruction Finance Corporation, advises Herbert Hoover who proposed its organization in 1931.

Keep RFC, answers Stuart Symington, the new Director, who has been doing some vigorous housecleaning in the agency since he took control.

So the Democrats are defending it, the Republicans attacking. That's a reversal of positions in 20 years. Its history is interesting.

Hoover proposed RFC as one of a series of moves to stop the depression. He met great opposition from the Democratic-controlled Congress.

But the bill passed both Houses on January 18, 1932, in version which curtailed many of Hoover's original recommendations. These were never restored, in spite of his vigorous efforts. (They were, however, quickly given when asked for by Roosevelt.)

By March 25, more than 600 institutions (many of them small banks) in 45 States had been assisted by the agency.

A CAMPAIGN A YEAR

On June 26, 1932, runs began on several Chicago banks; the Dawes bank and a whole group of Illinois banks were threatened.

Fortunately, two of the Democratic members of the RFC Board were in Chicago.

They immediately recommended that the RFC extend an advance to keep open the Dawes and other banks. This action undoubtedly averted a national panic at the time.

On July 6, 1932, Speaker of the House John Garner insisted that the recipients of loans from the RFC should be published. The campaign of 1932 had begun. Campaign assertions claimed that the RFC only helped banks and corporations, did not help the common man.

Unheard in the din were the voices of economists who tried to explain that strengthening the bank which represented his savings and the industry which provided his income did benefit the workingman.

The RFC directors protested the publication of the loans, and the bill passed after the provision was limited to confidential filing of the RFC reports with the clerks of the Houses of Congress.

However, after the elections of November 1932, and at the insistence of Speaker Garner (then Vice President-elect), the Clerk of the House allowed the current monthly reports to be publicly released.

On January 4, 1933, the House, under Speaker Garner, passed a resolution requiring all loans made before July 21, 1932, to be published as well. The RFC board again objected.

Runs on banks had already begun when the first monthly reports were published.

President Hoover, on February 20, implored Congress to repeal the procedure of publishing the RFC loans. His words fell on deaf ears.

NO COOPERATION

The Democratic Party, waiting to take control within 2 weeks, seemed content to let the Nation's economy suffer the destruction of confidence caused by publication of the loans until they officially took over the reins. Publication of the loans was suppressed as soon as the Democrats came into office.

On February 17, President Hoover wrote to Roosevelt asking for a statement of policy from the incoming administration which might restore public confidence and stop the runs on banks. He also suggested that Roosevelt speak with congressional leaders

about stopping the publication of the RFC loans.

By February 27, a wholly unnecessary panic was in full swing. The President-elect still had not replied to Hoover's letter. On February 28, Hoover again wrote Roosevelt.

On March 1, Roosevelt answered lamely stating that his secretary had neglected to mail the reply to Hoover's February 17 letter. Roosevelt did not even mention the RFC.

On March 3, Roosevelt was again asked if a bank holiday should be declared until the panic could be dispelled by a statement from the incoming administration. The President-elect said that the governors of the States could take care of the necessary closings. In no case should such a general proclamation be issued, he said.

Two days later, on March 6, all banks in the Nation were closed by proclamation of President Roosevelt. Most of them reopened on March 15.

The country was not ruined; 92 percent of its banks were still solvent, thanks, in many cases, to the help of the RFC backing.

RALPH THORNTON.

An All-Canadian Seaway

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "An All-Canadian Seaway," published in the Bismarck Tribune of October 5, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN ALL-CANADIAN SEAWAY

North Dakota has long been interested in the proposed St. Lawrence seaway. Members

of the State's congressional delegation have endorsed it and the State's governor and legislature have gone on record in favor of its early construction.

The State's interest, of course, derives from the fact that the opening of the seaway would bring ocean shipping thousands of miles closer to North Dakota, lessening shipping costs on North Dakota products which go into international commerce.

Now Prime Minister St. Laurent, of Canada, has indicated that Canada may proceed with construction of the seaway on its own hook, since it cannot secure cooperative participation by the United States.

It is not surprising that Canada may be approaching such a decision, because Congress has had a St. Lawrence seaway bill before it for session after session, and has never acted upon it. It is only 2 months since the House Public Works Committee laid aside a measure authorizing United States participation in the project.

President Truman, moreover, has indicated that if Canada goes ahead with building of the project, it will be with his blessing.

If Canada does proceed with an all-Canadian project on the Canadian side of the St. Lawrence River, the procrastination of Congress may prove costly to the United States. It would then be probable that Americans will pay the greater share of the cost of the project without acquiring the advantages of joint ownership and control. Americans would be using a foreign-controlled waterway vital to American commerce, and they would be beholden to the Canadians for its use at terms set by the Canadians.

Sectionalism has been responsible for the delay in action by Congress. Some parts of the country, including the eastern seaboard and the Gulf coast, have opposed it because they felt it would deprive them of the control they now have over international shipping. They don't want to see lake ports such as Superior and Duluth and Milwaukee become ports of call for ocean-going vessels which could, for example, load up at Duluth with North Dakota wheat and carry it without any of the rehandling that is now necessary to England or Greece.

The St. Lawrence seaway should be an international project, built by the United States and Canada together for the benefit of both. But it would be unreasonable to expect Canada, if it really wants the seaway to shelve the project just because the United States won't get in on it. If Congress won't authorize United States participation, Canada should go ahead with the project on its own and it should get the lion's share of the benefits from it. That apparently is what Congress is forcing Canada to do.

Boxscore for the Eighty-second Congress

EXTENSION OF REMARKS

OF

HON. GEORGE W. MALONE

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. MALONE. Mr. President, I ask unanimous consent that a debate on the subject Boxscore for the Eighty-second Congress, held on October 14, 1951, on the American Forum of the Air, be printed in the Appendix of the RECORD.

There being no objection, the debate was ordered to be printed in the RECORD, as follows:

THE AMERICAN FORUM OF THE AIR

BOXSCORE FOR THE EIGHTY-SECOND CONGRESS

ANNOUNCER Good afternoon. It's time again to join the American Forum of the Air, dedicated to the full and public discussion of all sides of all issues vital to you and your country.

This afternoon, the American Forum of the Air examines the Boxscore for the Eighty-second Congress.

Here with us today to add up the totals are two congressional teams: Senator ROBERT KERR, Democrat of Oklahoma; Representative JOHN ROONEY, Democrat of New York; Senator GEORGE MALONE, Republican of Nevada, and Representative LEONARD HALL, Republican of New York.

The founder and moderator of the American Forum of the Air, Theodore Granik, is convalescing this week, but here, to take his place, is Frank Blair.

Mr. BLAIR. The Eighty-second Congress came to life in the blackest days of the Korean war last January. With artillery booming in the background, Congress pushed aside many home-front bills and flashed the go-ahead signal to national defense and foreign aid legislation.

Did the Eighty-second Congress do too much, or hasn't it done enough? Today we will find out.

First a question for Senator KERR.

Senator, in your opinion, what has the Eighty-second Congress accomplished?

Senator KERR. Well, that is a very good question and I will try to answer it. The first session of the Eighty-second Congress has been a "P" session, "P" standing for preparedness, peace, prosperity, prevention, and I might add, probing. Never in time of peace, and only three times in war, has a session of Congress devoted more time or provided more money for the national defense. In addition to the appropriation bills, this Congress has passed or is enacting 28 major defense bills.

Out of this session of Congress have come the debates and the establishment of facts and principles which have proved that the Democratic administration's foreign policy is the best for America to follow; a foreign policy which gives us the best chance to achieve a lasting peace.

On the home front we have also met our responsibility in the form of flood control, bills for American agriculture, bills for the veterans of the Korean struggle, and the present emergency, the renewal of the reciprocal trade agreements, food to prevent famine in India and Yugoslavia and elsewhere, and then we have passed a new defense production act providing reasonable controls, a new defense housing act, and we are about to pass a vital tax bill, to the end that business is continuing, defense needs are being met, and we are going to come closer to the achievement of our goal—a pay-as-we-go basis—and without ruinous inflation.

And too, Mr. Blair, we have refused to spend all of our time watering last year's crops. The Republicans spend their present in the past—they refuse to build for tomorrow. They are too busy trying to tear down yesterday. We have refused to let the Republican leadership force us to devote all our time and energy to writing obituaries for the Government of Chiang Kai-shek. We just don't believe in putting past things first. We have refused to permit the tail, which is MacArthur, to wag the dog, which is Congress. We have refused to let the MacArthur advocates in the Senate lead us

into declaring war on Communist China. We have refused to go it alone with General MacArthur into an all-out war in Asia that would have handed victory to Russia on a silver platter. We have refused to let the elder Mr. Hoover lead us in a rout and retreat to the citadel of the Waldorf Astoria. We have refused to let the armchair generals, Bob Taft and others, neutralize and destroy the usefulness and the leadership of the most brilliant and able combined Chiefs of Staff in our history. We have stayed on the high road to production, prosperity, and peace, and refused to spend the summer in the labyrinth of detours into which the Republicans have constantly tried to seduce us.

Mr. BLAIR. Thank you, Senator. Senator MALONE, how would you answer that question?

Senator MALONE. I would simply say that whatever has been done can be blamed on the Democrats of the Congress. They are in full control of both Houses of Congress and the White House.

If this is a peace Congress, I have never seen a war Congress. This is the third Democratic war in my generation. I have been in both of the others, and maybe they will get down to me in this one. We are in a war in Korea, in which we have lost in killed, maimed, and wounded 160,000 boys. Our State Department won't let the boys win it, and they don't dare lose it, and so there is no end to it.

Now, for 18 years, our taxpayers have assumed that each piece of legislation proposed by the administration was a separate unit to be considered on its own individual merits. Although the taxpayers of this Nation have not liked this legislation, they have not associated it in its place in the over-all pattern.

What the public and the majority in Congress has not seen is the pattern of the plot which, taken as a whole, is eating the heart out of our economic system. High spots in the plot are: First, the recognition of Communist Russia in 1934 without any safeguards; second, the removal of the metal base for our money in 1934, laying the groundwork for unlimited spending; third, the application of the so-called Reciprocal Trade Act, dividing our markets with the foreign nations of the world; fourth, deficit financing resulting in printing-press money almost without limit; fifth, the sending of billions of dollars of taxpayers' money to foreign nations, on the Karl Marx principle, "From each according to his ability, to each according to his need."

The Eighty-second Congress, trained as it is to jump through the administration hoop at each suggestion of the President, apparently does not see this Fabian-Marxist pattern of a one-economic world, nor do they see that the financing of the governments in Europe by us is part of the plot.

The legislation passed by the Eighty-second Congress in 1951 included: First, a 2-year extension of the so-called reciprocal trade program, which continues to place in the hands of a thoroughly discredited State Department the power of life or death over the workers and investors of this Nation, through the division of the markets of this Nation with the sweatshop nations of Europe; second, appropriations of \$8,500,000,000 to Europe without conditions attached, such as provision for a United States of Europe and free convertibility of currencies, and integrity of private investments within the borders of the countries we help, and equal access to the trade of these areas, particularly those areas that we are committed to defend; third, a tax bill which continues the theory that taxes must be continually raised to siphon off the raises in wages and any dividend checks that a

taxpayer might receive on his investments, all on the theory that if an individual spends earned income in the market places on the necessities and comforts of life it will cause inflation, but if the Government spends it there will be no inflation. All of these things were initiated or continued through legislation of the Eighty-second Congress.

We are holding our economic structure together by continued "emergencies". If we should suddenly run out of emergencies, the excuse for deficit planning, for selling additional bonds, for printing more money, for constantly increasing taxes, our economy would crumble within 90 days. The administration has dissipated in a short 18 years the assets of our great Nation, assets built up over a century of time. If the national debt were to be transferred to the 48 States on a per capita basis, 38 of the States would owe more than the taxable value of the property within their borders. And the Eighty-second Congress is responsible for much of this.

That, Mr. Moderator, is the box score of the Eighty-second Congress.

Representative HALL. Mr. Blair.

Mr. BLAIR. Yes.

Representative HALL. I have listened with interest to what Senator KERR had to say. I noticed that he spent about one-half minute talking about the box score of the Congress and the other making a campaign speech. Well, I can understand that very well for the reason that if you look at the box score, Senator, you will find that the Eighty-second Congress has spent more time doing less than any Congress in history.

Representative ROONEY. Mr. Chairman.

Representative HALL. Just a moment. I want to finish my statement. I have the official box-score right here before me. I didn't pick the items on this. The clerks up there do that, and they list the major bills for the first session. There are several major bills, five of which have become law: trade agreements, India emergency food relief, defense housing, universal military training, and the Defense Production Act.

Mr. BLAIR. Congressman ROONEY.

Representative HALL. That is all we have done in this first session of Congress.

Representative ROONEY. Well, let me point out to you, Congressman HALL, a few of the things that have happened in this first session of the Eighty-second Congress. Before I do that, let me say to Senator MALONE that listening closely to his remarks, one would never realize that since 1933, the national income has gone up from \$40,000,000,000 a year to \$288,000,000,000 a year and that corporate profits, which were \$3,000,000,000 in the red in 1932, have gone up to plus \$46,000,000,000.

But, Congressman HALL, let me point out some of the things that this Congress has done. This Congress, with regard to housing, passed a bill to the extent of \$1,600,000,000 to provide housing in defense areas. It has renewed direct home-purchase loans for veterans. It has eased credit curbs for veterans in low- and medium-cost housing. It has appropriated \$50,000,000 for low-cost public-rental projects and slum clearance.

Senator KERR. Don't you know that those are not major items to the Republicans?

Representative ROONEY. I was just mentioning a few.

Senator KERR. Go right ahead.

Representative HALL. Can I break in there? I am a little bit surprised today because we have two leaders here from the Democratic Party—

Representative ROONEY. Thank you, sir.

Representative HALL. Mr. KERR and Mr. ROONEY, and I know that the keystone of the Truman Fair Deal program has been about three items. We have had the Brannan plan;

we have had the Ewing compulsory health program; and we have had the civil-rights program. And here we have two leaders of the Fair Deal party and they haven't even mentioned these.

Have you scrapped those now?

Mr. BLAIR. Mr. Rooney.

Representative ROONEY. You seem to forget the Old Deal. Don't you remember the Old Deal in 1932?

Representative HALL. I would like to have an answer to the question.

Representative ROONEY. Don't you remember when nobody had anything?

Do you think that people in their standard of living are a bit better off today than they were in 1932? Why, as the President said at a luncheon in San Francisco some weeks ago, you folks on the other side of the aisle think you should have 1951 profits at wages and hours of the first term of the McKinley administration.

Representative HALL. At that time we had our boys at home and not in Korea.

Mr. BLAIR. Senator Kerr, we haven't heard from you for quite a while.

Senator KERR. Thank you very much.

My friend, Senator MALONE, talked about this administration eating the heart out of the economic system of America, and that we are paying more taxes than ever before. Now, that last statement is true, but let me remind him that we have more left after we pay the taxes than we ever had before.

As my colleague said, our national income has grown to where it is now nearly 5 times what it was during the 12 years when we hardened under Harding, cooled under Coolidge, and hungered under Hoover. The per capita income of our people has gone up from less than \$400 until now it is above \$1,600 for every man, woman, and child in the Nation. Those are levels undreamed of and unheard of B R T. That means "Before Roosevelt and Truman."

Mr. BLAIR. But, Senator, do you attribute all of that to the Eighty-second Congress?

Senator KERR. I say that the Eighty-second Congress is of that pattern. When our good friend, Mr. HALL, over there from New York, talks about what the cardinal principles of the Fair Deal and the New Deal are, he is just another Republican that never did learn and never will know them.

Representative HALL. How about the answer to it?

Senator KERR. The cardinal principle of the Democratic Party is the welfare of the people. Go ask the people how they are getting along and you will find out.

Representative HALL. I would suggest to you, Senator, that Mr. Truman said that the Brannan plan, the compulsory health program, and the civil rights program were "musts." Now, what is your answer to that? You skip the answers very well.

Senator KERR. My answer is that Mr. Truman has never said that the Brannan plan was a "must."

Representative HALL. He certainly did.

Senator KERR. Mr. Truman has never said that the compulsory-health program is a "must."

Representative HALL. He certainly has. Where have you been?

Senator KERR. I have been where a number of things are happening and not where men are indulging in memories of the past.

Mr. BLAIR. Senator MALONE.

Senator MALONE. I think this is a very enlightening discussion and it would be an illuminating discussion if we stayed on the subject. Senator KERR, my good friend, speaks of the five-fold increase in the national income. The Democrat administration with the help of the Democrat majority in Congress has stolen one-half of the savings and the insurance and the incomes of the people of the United States by inflation

in the last few years. A Government agency reports that the dollar of 1939 is now worth 53 cents. Now, the facts are, if you will permit me to finish my statement—

Senator KERR. I will.

Senator MALONE. If you will please let me finish my statement now (I remember Senator KERR on other programs.)

Mr. BLAIR. Senator Malone has the floor, gentlemen.

Senator MALONE. I would say that by inflation you can have a \$500,000,000,000 income in a little while, but that doesn't mean anything if the value of the dollar goes down as the income goes up. I think we will possibly have a \$500,000,000,000-a-year income because we are going off the deep end of inflation.

Now, let's get back to other things we are doing.

England and France have a pact, a military and economic pact, with Russia. As a matter of fact, all of the 16 nations that we are financing in Europe have trade agreements with Russia and the iron-curtain countries, and they have been, from the beginning of the Marshall plan, sending everything needed to arm Russia and the iron-curtain countries.

The English trade with tin and rubber in China.

Representative ROONEY. Senator—

Senator MALONE. Will you permit me to finish my statement? In the Senate, we have to yield. I don't know how it is in the House.

Representative HALL. We can only speak for 5 minutes over there.

Senator MALONE. We are never going to be able to stop that trade between the Marshall plan countries and iron-curtain countries. They are trading now as usual. We had the Kern-Wherry-Malone resolution which would have stopped that, but the Democrat-controlled Eighty-second Congress replaced it with a bill that allows the administrator to confer on the Secretary of State the power to determine what they will be allowed to sell; and the Secretary of State has been on record at times that he doesn't object to this trade. So, what the Eighty-second Congress is doing is to bring about this situation. The taxpayers of the United States have furnished 60 percent of the material in Korea that has gone to shoot their sons.

Representative ROONEY. Senator MALONE, I have about as much respect for your judgment with regard to domestic issues as I have with regard to your ideas that Eisenhower is presently in Europe doing a blood-dogging job. You have opposed the entire matter of the North Atlantic Pact, the arming of a free Europe in order to beat our common enemy, and you have taken this position now for quite some time.

So that I can say to you that I have about as much respect with regard to your judgment on domestic affairs as I have on foreign affairs.

Representative HALL. Mr. Blair, can I break in here for just a minute?

Mr. BLAIR. Well, for just a second, Congressman.

Representative HALL. I can't do it in a second. I would like to speak on this prosperity that Senator KERR spends so much time on.

The prosperity we have today, Senator—and you know it as well as I do—is based on war and preparation for war. We had millions on relief in 1938 until World War II. Preparation for that war and preparation for this police action—I am sorry—in Korea—is the reason why we have this great prosperity that you are boasting about. Now, Hitler had that kind of prosperity based upon war and preparation for war. Mussolini had it for a while. Dictators and kings of old have had it.

I would certainly like to see this administration get down to a point where we have prosperity in normal peacetime. And you can't tell me that anything we have today is based upon anything but war manufacturing, and with that of course, we have our boys fighting in Korea.

Senator KERR Congressman, you are a very unrealistic thinker. You have this threat of war

Representative HALL. Yes.

Senator KERR. Now, it is even beyond the dreams of the Republican Party to provide a means to prevent the threat of war. Realism demands that we be prepared to meet it.

Representative HALL. Have you stopped any war?

Senator KERR. I will ask you.

Mr BLAIR Senator, will you hold that just a minute, sir? We will continue in just a minute. But first, I would like to take a minute, if I may, to pay tribute to the editors of the magazine Radio and TV Mirror, which is now on your newsstands. Now, this current issue of this magazine is devoted to NBC's twenty-fifth anniversary and is truly a story and picture record of our network. We on the American Forum are particularly pleased with the article on page 66, which deals with Mrs. Theodore Grank, the first lady of the American Forum. I would like you to have a copy of that magazine. Again, we express our appreciation to the editors of Radio and TV Mirror.

We will continue with this discussion in just a moment, but first, here is an important announcement.

Mr BLAIR We are ready once again, and Senator KERR you were saying—

Senator KERR. Well, thank you, I said that my Republican friends were unrealistic in their thinking. They know and we know that after 1932 this Nation had been driven to its knees. They know that under Democratic administrations we came back up out of the valley of the shadow of poverty, depression, and want. They know we were on the road to recovery and prosperity when World War II was forced upon us. They didn't want it—

Representative HALL. How many were on the relief rolls?

Senator KERR. They didn't want it and not even we wanted it. The challenge to the Democratic administration has come in being able to fight this war and win it, and in being able to meet the threat of war today and still keep prosperity.

Representative HALL. One little question, Senator. Is any of this prosperity you are talking about based upon the expenditures for the war effort?

Senator KERR. This prosperity—

Representative HALL. You can answer that in one word.

Senator KERR. It is based upon production and the welfare of the people—

Representative HALL. Where does that money come from?

Senator KERR. It comes from the production by the people, from the farmers and from the workers.

Mr BLAIR Senator MALONE?

Senator MALONE. Now, Mr ROONEY, I just want to call your attention to something about the Atlantic Pact and all such pacts. We had a Kellogg Pact. We had other pacts. The only pact that kept the pacts was us, whenever it became convenient, for reasons of the other nation's best interests, to break it, the other nation broke it.

The reason I am against all pacts that say we are automatically in war when another nation goes to war, is that we gain nothing; because a nation was with us in World War I, or World War II, they are not necessarily with us in world war III. I will call your attention to this. England's policy, voiced in 1858, by a great Prime Minister,

has never changed. It was reaffirmed by Churchill in 1945 when he said, "We have no permanent friendships or enmities; we have but permanent interests." That means that unless we support England's colonial system all over the world, we don't have England.

In 1945, Mr. Roosevelt, in one of his lucid moments, asked Churchill why he didn't get out of Hong Kong to save us future trouble. Churchill answered in words that rang around the world, "I did not become the King's first Minister to liquidate the British Empire."

Now, the United States started in Yalta when our President gave Manchuria to Russia, with no safeguards whatever, and this laid the groundwork for Korean trouble—leading to the "police action," causing 160,000 of our boys to be lying out there in graves or in hospitals.

Mr BLAIR Senator—

Senator MALONE. I just want to—

Mr BLAIR. We told our audience that we were going to discuss the congressional box score. I would like to get back to that subject.

Senator MALONE. That is exactly what we are discussing.

Senator KERR. That is the thing the Republicans want to discuss.

Senator MALONE. It is exactly what we are discussing, if you will allow me to finish.

Representative ROONEY. They want to talk about the past.

Mr BLAIR Senator MALONE, you may finish, and then we will get to today's topic.

Senator MALONE. I am on today's topic. What is this war today out there but today's topic, the accomplishment of this Congress?

Representative ROONEY. Senator—

Senator MALONE. I did not yield.

Mr BLAIR Senator MALONE has the floor. Representative ROONEY. He has had the floor now for the last several minutes.

Mr BLAIR. Go ahead, Senator MALONE.

Senator MALONE. We are going to be in Iran and in Egypt supporting the colonial system, according to Acheson, just like we are in Korea. Now, how did we get into Korea? We are in Korea because of trying to hold up something, in this case the division of Korea. We are going to get into more trouble by trying to hold up something else. We are supporting the colonialism slavery system of the empires, that is, the British, the Dutch, the Belgian, and the Netherlands. We are supporting the colonial system throughout the world, and there is no way in the world we can hold it up. Thus we are going to get into these police actions all around the world.

Representative ROONEY. I wonder if I could interrupt to say a word?

When you express the thoughts that you have just expressed, you are not expressing the thoughts of the responsible leaders of your own party. I happen to be one of the group who went in June to Paris to interview General Eisenhower and the people who were at the head of the NATO program, the North Atlantic treaty nations, and we found that most of the folks in charge of that program, beginning with Mr. Charles Spofford in London, and others, are all members, registered members of your party. You do not represent the thinking of Republicans such as Senator LONG of the Senate and many others.

Senator MALONE. I am quick to admit that I believe it is generally said that my thinking represents sound Republican doctrine.

Representative ROONEY. You are an isolationist, and you want to stay with that regardless of what we can do about it.

Senator MALONE. I say, let's extend the Monroe Doctrine. Extend the areas of the Monroe Doctrine. I am no isolationist, neither am I a fool.

Mr BLAIR. Do you gentlemen feel that the Eighty-second Congress spent more time on

national defense and items related to the national defense than on home-front legislation?

Representative HALL. I think I posed that question at the beginning.

First, I want to congratulate you, Senator MALONE, for keeping the floor from Senator KERR.

Senator MALONE. Thank you.

Representative HALL. Anyway, I posed that question at the beginning. I said that the keystone of Mr. Truman's domestic program is civil rights, the Brannan plan, and the compulsory health program, and I haven't heard Mr. ROONEY or Mr. KERR say anything about them.

Representative ROONEY. That isn't it at all. So far as I am concerned, there is no one any more opposed to socialized medicine than I am.

Senator MALONE. If I may interrupt—

Representative ROONEY. I beg your pardon, Senator.

Senator MALONE. I was just trying to pay you off.

Representative ROONEY. That is perfectly all right.

There isn't anyone in the Congress more opposed to socialized medicine than I am. I will have no part of it.

Senator MALONE. Not the Democratic administration.

Representative ROONEY. That is not an achievement of the Eighty-second Congress. We are prepared here to tell what the Eighty-second Congress has done.

Representative HALL. It is right here in this paper.

Representative ROONEY. So far as the Republican leadership of the Eighty-second Congress is concerned, their only program is to oppose. They are anti everything.

They are utterly bereft of the program. They will be bereft of a program when they get to the floor in 1952.

Senator MALONE. As I say, we are favoring the Monroe Doctrine, which has a record of 128 successful years.

Senator KERR. That was not in the Eighty-second Congress, Senator.

Senator MALONE. I did not yield. I was just going to say that we could recover the area with our Monroe Doctrine and thus we would not be dependent upon, nor committed to fight for, another nation's colonial system.

Mr BLAIR. The time is up. Thank you, gentlemen.

You have been listening to the boxscore of the Eighty-second Congress, I was told.

Our speakers have been Senator ROBERT KERR, of Oklahoma, Senator GEORGE MALONE, of Nevada, Congressman JOHN ROONEY, of New York, and Congressman LEONARD HALL, of New York.

This is Frank Blair, substituting for Theodore Grank, founder of the American Forum of the Air.

Resolutions Affecting Federal-State Relations Adopted by Governors' Conference

EXTENSION OF REMARKS
OF

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES
Saturday, October 20, 1951

Mr CARLSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD resolutions affecting Federal-State relations adopted by the Forty-third Governors' Confer-

ence at Gatlinburg, Tenn., on Wednesday, October 3, 1951.

It was my privilege to serve as chairman of the Governors' Conference at its meeting held at White Sulphur Springs in June 1950, and therefore, it is a distinct pleasure to call these resolutions to the attention of the Senate.

I urge the Senate to give serious consideration to the motion made by Gov. Alfred E. Driscoll, of New Jersey, seconded by Gov. James F. Byrnes, of South Carolina, in regard to the appointment of a special committee to confer with appropriate committees of the Congress for the purpose of securing the creation of a commission designed to clarify and simplify our Federal, State, and local relations.

This, in my opinion, is a most important step in the future preservation of our democratic form of Government.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

RESOLUTIONS AFFECTING FEDERAL-STATE RELATIONS ADOPTED BY THE FORTY-THIRD GOVERNORS' CONFERENCE AT GATLINBURG, TENN., OCTOBER 3, 1951

CIVIL DEFENSE

In view of unsettled world conditions today, an effectively operated civil-defense program is essential as a first line of security for the Nation. In case of enemy attack, all levels of government—Federal, State, and local—must be prepared to cope with the situation by means of adequate civil defense.

Because civil defense is an integral part of our national security, the Governors' Conference recognizes that guidance and over-all planning should come from the National Government through appropriate channels, including the civil-defense establishment and the Department of Defense. However, the governors' conference also wishes to state its conviction that the State governments and the governors in particular have a special responsibility to cooperate with the Federal authorities in dealing with civil-defense problems and to implement Federal policies and interstate civil defense compacts in order to protect the lives and homes, the farms and industries of our people.

In order to achieve a state of readiness, virtually all of the States have recently enacted basic civil-defense legislation and have established the necessary organization for civil defense. Many of the States have ratified compacts among themselves for effective interstate cooperation and mutual assistance in civil-defense activities. However, State and local civil-defense programs have been hampered by the failure of Congress to appropriate funds adequate for cooperative Federal-State civil-defense operations and stockpiling.

The governors' conference urges that the Congress of the United States promptly make adequate provision for a well conceived civil-defense program. We further recommend that all States which have not done so take immediate action to ratify the uniform interstate civil-defense compact as developed by the Council of State Governments and the Federal Civil Defense Administration.

In order that the enrollment of civil-defense forces may be facilitated, the governors' conference also urges that the Congress enact pending measures for indemnification of duly constituted civil-defense personnel who voluntarily assume civil-defense duties and who may be injured or killed in the performance of their duties. Such indemnification should be financed entirely by the Federal Government.

INTERSTATE COMPACTS

Many governmental problems that transcend State lines require common solutions

by the States working together within regions and throughout the country. Any lack of cooperation results inevitably in the transfer to the Federal Government of powers, duties, and functions which are State responsibilities. Much recent progress has been made by the States cooperating through the mechanism of interstate compacts, and a large number of such compacts were ratified at the 1951 State legislative sessions. However, the States on occasion have been delayed in securing congressional consent to the detailed and specific agreements entered into among the States.

Therefore, the governors' conference strongly urges that the Congress take prompt action granting consent to interstate compacts now pending before it, and that in the future there be enacted general consent in advance legislation permitting the States to enter into agreements among themselves in broad fields of action for which the States have primary responsibility under our Federal Constitution.

EMPLOYMENT SERVICES

The governors' conference recalls the extreme difficulty which the States encountered in securing the return of the State employment services following their "temporary" federalization during World War II. We now note there is legislation pending in Congress, H. R. 5044, which would permanently transfer the State employment services to the United States Department of Labor. The governors' conference is strongly opposed to any Federal legislation designed to accomplish this purpose.

PUBLIC ASSISTANCE

The governors' conference has taken no position on the advisability or propriety of publicizing welfare rolls. The governors' conference is, however, unanimous in declaring that the publicizing of welfare rolls is a matter for determination by the individual States.

STATEHOOD FOR ALASKA AND HAWAII

The last four meetings of the governors' conference have recommended passage of statehood bills for Hawaii and Alaska. The governors' conference again urges prompt action by the Congress to permit these two Territories to achieve statehood.

LAW ENFORCEMENT

The Attorney General's Conference on organized crime, the Senate Crime Investigating Committee, and the American Bar Association Commission on Organized Crime have produced reports analyzing the problem of crime control and pointing to remedies. Some States have taken action to strengthen State and local law enforcement.

In order that States may be assisted in taking steps to control such organized crime as may exist within their borders, the governors' conference requests the drafting committee of the Council of State Governments to prepare specific drafts of suggested State legislation designed to remedy any present deficiencies.

We insist, however, that the prime responsibility for the elimination of such evils as may exist lies in the vigilance of local law enforcement officials.

It is the sense of the governors' conference that public concern for local law enforcement should be invigorated by every legitimate means to combat the sinister menace of commercialized crime.

CRITICAL MATERIALS

Resolved, That the problem of procurement and allocation of critical materials, including particularly structural steel for hospitals, schools, public institutions, and highways, be referred to the executive committee of the governors' conference with a request that, consistent with the requirements of the national defense, appropriate action be taken looking toward the furnishing of such ma-

terials to the several States as quickly as practicable.

A motion made by Gov. Alfred E. Driscoll, of New Jersey, seconded by Gov. James F. Byrnes, of South Carolina, and passed unanimously by the governors' conference at the executive business session on October 3, 1951: "I move that the chairman of the governors' conference be authorized to appoint a special committee to confer with appropriate committees of the Congress of the United States for the purpose of securing the creation of a commission and appropriate formula, designed to promote a return to a working federalism with an accompanying clarification and simplification in the Federal-State and local relations, insuring a substantial reduction in the total cost of administering government while promoting greater efficiency and better service to the public and between various levels of Government."

General Overcomes His Modesty

EXTENSION OF REMARKS

OF

HON. BRIEN McMAHON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "General Overcomes His Modesty," written by Mr. Lowell Mellett, and published in today's Washington Evening Star.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

G. NERA... OVERCOMES HIS MODESTY—TILLS AMERICAN LEGION MUCH BIGGER AND BETTER STORY THAN HE TOLD BEFORE SENATE COMMITTEE LAST SPRING

(By Lowell Mellett)

If you are one of those who in the heat of argument sometimes say General McCarthy when they mean General MacArthur or Senator MacArthur when they mean Senator McCarthy, don't feel too bad about it. It is easy to get the two confused at times. That is not merely because the names sound so much alike. It is also because the men themselves sound so much alike when their voices run away with them.

For example, down in Miami the other day General McCarthy—I mean Senator MacArthur—no, I mean, well you know who I mean, the general—the general was making a speech to the American Legion. It was the sort of passionate self-justification that has become familiar, but, carried away by the cheers of his former companions in arms, he added something new. He said:

"There is little doubt that the yielding of Formosa and the seating of China in the United Nations was fully planned when I called upon the enemy commander in Korea on March 24 to meet me in the field to arrange armistice terms."

"The opposition I expressed to yielding Formosa and seating Red China, with the overwhelming support it received from the American people, unquestionably wrecked the secret plan to yield on these issues as the price of peace."

President Truman, asked about this at his press conference, said the general's statement was not based on fact and that the general knew it was not. There the matter might have rested, with some people believing the President and some believing the general. But someone in the Washington

bureau of the New York Times remembered testimony of the general in the hearings of the Senate Armed Forces and Foreign Relations Committees last spring when the general's summary dismissal was being investigated. The cause for the dismissal, it will be recalled, was the general's personal peace offer and ultimatum addressed to the Communist commander. It was charged that this message of the general not only was couched in language that was certain to cause its rejection, but that it jumped the gun on a planned peace proposal by all of the nations engaged in the Korean campaign and thereby destroyed the possibility of making such a proposal.

In the record of the hearings the Times man found that Senator MORSE, Republican, of Oregon, asked the general if his action could be considered in violation of administration policies. That, of course, would apply to any secret as well as nonsecret plans. The general—and this was only a matter of weeks after the disturbing incident and while all the surrounding circumstances must have been fresh in his mind—replied: "I don't believe there is the slightest validity in that comment What I said seemed to me to be in complete support of everything the administration was desirous of doing, with every directive outlining the missions that we had to consummate."

So the general last April thought that his bold bit of insubordination was in complete harmony with the administration's plans. Now he thinks it was something much bigger and braver, a one-man wrecking operation on a nefarious "secret plan." In other words, he confesses to being a greater hero than even he realized at the time or, in his modesty, cared to admit to the Senate committee.

Let's see if Senator McCARTHY can tie that.

Nevada's Place in America Today

EXTENSION OF REMARKS

OF

HON. GEORGE W. MALONE

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr MALONE. Mr President, I ask unanimous consent to have inserted in the Appendix of the RECORD the winning essay in the senior division of the State-wide American Legion Essay Contest in Nevada. It is entitled "Nevada's Place in America Today," and was written by Robert Quilan, a graduate of the 1951 class at Carson City, Nev., high school.

There being no objection, the essay was ordered to be printed in the RECORD as follows:

NEVADA'S PLACE IN AMERICA TODAY

I am the voice of Nevada, listen to me, America. Although my population is not as great as that of many other States, I still have an important role in this country.

My towering mountains, spacious deserts, and colorful bodies of water, add to the scenic beauty and help make me a popular tourist State. Some of my other attractions are short residence requirements for divorce, historical monuments, Lehman Caves, Lake Tahoe, Reno, the biggest little city in the world, and projects such as Hoover Dam and Ruth Copper Pit.

Keep listening America, and I'll tell you my history. I was born in 1864, just 87 years ago, and since that time, I have become more and more prominent in the eyes

of the United States. I first came into the limelight with my abundance of mineral deposits. Lately, however, agriculture and cattle raising have surpassed mining as my most vital business.

I pride myself on having no sales tax or inheritance tax. I depend on my existence through taxes received from gambling and property.

In the political field I have two very able Senators fighting for my cause at all times. Both hold very prominent positions in Senate committees at the present. They are GEORGE W. MALONE and PAT MCCARRAN.

Recently I have received more acclaim from the fact that my desert was used as an atomic testing ground for new atomic weapons. I was further honored when Great Britain asked to use some of my vast territory for her research tests also. These tests were conducted on my desert near Las Vegas, one of my prized possessions.

I hope to become even more prominent in the eyes of the people of this country in the near future and compare favorably with the best of all the other States.

Housing in Puerto Rico

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. LANE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the Christian Science Monitor, Boston, Friday, October 19, 1951:

COURT IN BOSTON TO SETTLE DISPUTE BETWEEN PUERTO RICO AND UNITED STATES BUILDER—ISLAND GOVERNOR REFUSES TO GRANT TAX EXEMPTION

(By W. Clifford Harvey)

By some strange quirk in the administration of Federal jurisdiction, the future of housing and slum clearance in Puerto Rico seems about to be settled in no other place than Boston.

Just why the Federal court in Boston should be asked to decide a housing controversy between the Government of Puerto Rico and a South Carolina builder operating in the island possession is one of those things that dates back to earlier American justice.

"Maybe it seemed the right thing to do back about the turn of the century," declared a Boston court authority, "to give Boston appellate jurisdiction over the island of Puerto Rico. By the same token, Philadelphia has appellate jurisdiction over the Virgin Islands."

BUILDER WELCOMED

When Leonard D. Long, of Charleston, S. C., was selected by the Federal Housing Administration to mass produce houses in Puerto Rico the island's governor, Jesus T. Piñero, welcomed him with Latin enthusiasm. Mr. Long had no way of knowing that a new governor would step in and attempt to block his work.

The Federal court of Boston now must decide whether Luis Muñoz-Marín and his one-party government now in power has the right to set aside the provisions of the previous governor under whom Mr. Long has been building houses. One of these provisions is vitally important—tax exemption for housing.

It all started when the Piñero government looked to Washington for help in solv-

ing its postwar housing shortages. Washington, in turn, looked to Mr. Long, who had built whole cities for war personnel in this country.

PERSUADED TO STAY

In 1947, he completed his first development in Puerto Rico and considered his mission accomplished—that of erecting 52,000 houses in the face of impractical building codes, official government opposition, foreign language barriers, and primitive conditions contingent upon an alien land.

None of these obstacles would have been serious in the United States. But in Puerto Rico they were nearly disastrous.

Yet, having finished his initial mission, Mr. Long was persuaded to stay on by the Piñero government, talking of bigger and better housing projects. From this came his second project—Puerto Nevo—a city of 4,428 houses and 35,000 persons rising from the levels of a cow pasture.

Mr. Long has convinced Governor Piñero that this project of homes selling for only \$3,995 without any down payment, and carried for \$30 a month, was feasible only if the builder could avail himself of a new island law permitting tax exemption.

SHIFT IN GOVERNORS

Before the project could be completed, Governor Marín was elected to office and Mr. Long's path became beset with new obstacles. The new governor did not favor Mr. Long. He has refused to honor Mr. Long's petition for tax exemption, as approved by the previous governor.

So, Mr. Long has gone to court. His case is being carefully watched throughout the United States by American businesses that have contemplated the opening of branches and new plants on the island.

Suit or no suit, however, Mr. Long's achievements in Puerto Rico have been amazing. Through mass production methods, he has achieved a rate of 30 new houses every day, each consisting of two bedrooms, combination living-dining room, kitchen, bath, and porch.

FIFTY MILLION DOLLARS FROM FHA

His apartment houses in four cities have swimming pools, restaurants, entertainment centers, snack shops, air conditioning, lounges, elevators, penthouses, incinerators, telephone, and electric services. He has brought \$50,000,000 in FHA expenditures to the island possession.

He has built 100 miles of sidewalks, 55 miles of paved streets, and 40 miles of water lines. He has used 3,000,000 square yards of plaster, 75,000 doors, 90,000 windows, and imported enough steel rod to build a fence around the entire island.

Mr. Long's basic philosophy is simple. "If a home is made available to the people at prices they can afford, they become capitalists," he said. "This means they become good citizens, more immune to the doctrines of communism and other isms tending to undermine progress and social security."

Soil Conservation Districts' Growing Responsibilities

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by H. H. Bennett, Chief, United States

Soil Conservation Service, at the annual meeting, Florida Association of Soil Conservation District Supervisors, Marianna-Graceville, Fla., September 19, 1951:

SOIL CONSERVATION DISTRICTS' GROWING RESPONSIBILITIES

It is a pleasure to be a guest today of you Florida soil conservation district supervisors here in Graceville. It is stimulating to meet this way with those who hold such an important and responsible position as you, individually and as a group, in the economy of your own communities, the State, and the Nation.

It is my conviction, as I have stated repeatedly, that the democratically constituted soil conservation districts represent not only the greatest land movement of all time but the most promising vehicle for taking advantage of the powerful force of landowners and operators working together as they do in the districts. It is through your democratic units of State Government that the soil and water conservation job on the farmlands of the Nation is being done in an effective and lasting manner—and in an economical manner—as never before achieved anywhere. The districts are in an ideal position for landowners and operators to work together and take advantage of counsel and assistance of one another, as well as of various local, State, Federal, and private sources.

This practical and realistic approach to the tremendous conservation job which is still ahead of us is most important. Our soil-conservation program is growing. It is not static. But it must continue to grow, and we must be capable of growing with it. My own observations convince me that, with few if any exceptions, those who are charged with supervising soil-conservation district affairs are entirely capable in this respect.

That is why I have selected the growing responsibilities of the soil-conservation districts as one of the main points of my remarks. Actually, the degree to which the supervisors of soil conservation districts exercise their responsibilities of leadership and direction in developing the programs and applying the work of their districts is of utmost concern to the Soil Conservation Service as an assisting technical agency. That, of course, is because we have no authority in any district, and we have no desire to run the affairs of districts, even though our ability to help get the conservation job done depends directly on efficient district management.

We need go no farther than Jackson County here to see how the soil-and-water conservation program has enjoyed a healthy and successful growth from the soil-erosion control demonstration project days of the 1930's to today's soil-conservation district operations. Jackson County leaders well may be proud of the fact that they and their neighbors in Holmes County voted the first soil-conservation district in Florida, the Holmes Creek district, and that the Chipola River district—your annual meeting host this year—likewise was one of the early soil-conservation districts to be organized in the State. From what I have had time to see in this area, as well as on our way across north Florida from Jacksonville through Tallahassee, your accomplishments in getting conservation on the land have been substantial. The main thing now, of course, is to push ahead vigorously with this work so well begun.

You conservation leaders of Florida all are to be congratulated on the progress of your district organization, with approximately 90 percent of all the farms in the State in soil conservation districts by July 1 this year, and 89 percent of all its farmland in districts. There is, of course, no point in my undertaking to review what you have been doing here in Florida; but I do believe it is worth

while to look for a moment at the encouraging record of soil conservation district accomplishment, Nation-wide.

By July 1, 1951, for example, more than a million (1,000,000) complete farm conservation plans had been prepared by district farmers and assisting Soil Conservation Service technicians. These plans provided for the needed conservation treatment and use of 275,000,000 acres of the Nation's farm and ranch lands. More than 140,000,000 acres already had received this combined conservation treatment in districts by that date. And detailed conservation surveys had been made on more than 376,000,000 acres.

It is useful to keep this record in mind, not because of any self-satisfaction in what we have done (although we are proud of it), but because it is a measure of our ability for future accomplishment. We admittedly are not yet moving fast enough with the soil and water conservation job, and are still suffering heavy losses of soil. But we are, nevertheless, moving ahead at a rate which is not at all discouraging. Moreover, we are now in a position to move faster, and we expect to move faster—within the limits of technical manpower and other available facilities—in getting conservation treatment on the land, through the intensified cooperation which has been provided with the agricultural conservation program through memorandum 1278, issued by the Secretary of Agriculture February 15, 1951, and in other ways with which you are familiar as a result of the accelerated planning and treatment procedures which already have been initiated.

As well as we can determine from our own Soil Conservation Service figures, the conservation job has been completed—up to the stage of maintenance and improvement—on 21.4 percent of the Nation's farmland needing protection. This does not include the spread of practices where, for instance, farmers look over the fence of their neighbors and seeing successful conservation work go ahead with similar practices themselves on their own land. We know there has been a great deal of this spread of practices but we don't know how much. Nor do our figures include the areas of grass established and other conservation practices farmers have put into effect under the agricultural conservation program in addition to the soil conservation district work. So, in my opinion, at least 25 percent of the job actually has been completed, and possibly somewhat more than that, although I am not prepared to say precisely.

An encouraging aspect with respect to the rate of progress is that it is increasing progressively. For example, in 1942, basic conservation measures were applied to something more than 5 million acres; whereas, in 1950, the same kind of treatment was applied to 26,000,000 acres. This increase was about 380 percent—nearly 5 times as much work done—with operating facilities increased for the Soil Conservation Service by only 50 percent. Where this complete type of conservation work has been carried out, as I don't need to tell most of you here today, per-acre yields have been increased almost invariably. This increase usually runs from about one-third up to 100 percent, or even more, over the Nation. The work is paying good dividends in the form of increased income taxes from these increased per-acre yields. Nobody has ever done this kind of work before.

You may be interested in some figures we have assembled, showing the consistent progress of accomplishment in soil conservation districts, the few oldest of which have not been in operation long enough yet, of course, to have completed basic treatment on all their lands. We find, however, that some already are starting to plan for celebrating 100-percent completion of their basic programs, with 16 districts having fin-

ished more than 80 percent of their work up to the stage of maintenance and improvement. Meanwhile, approximately 150 districts have completed 50 to 97 percent of their work, and approximately 300 districts have finished 25 to 50 percent. Among the younger districts, which naturally comprise the greater part of the total number, approximately 800 have done 10 to 25 percent of the basic job, and up to 10 percent has been completed in the other active districts, including some very new ones (approximately 1,100 districts in this group).

Looking ahead with respect to time that may be required to complete the job for the Nation, you may be interested in knowing that the total job (farmland area according to 1945 census) amounted to 1,098,000,000 acres, not counting roads, building sites, etc. Land treated for soil and water conservation, plus the equivalent in acres covered by our surveys and the equivalent in acres covered by our farm-planning work, by July 1, 1951, amounted to 235,000,000 acres, according to our records. This leaves the uncompleted job at something like 863,000,000 acres, as roughly estimated.

The original area of 1,098,000,000 acres consists of the following classes of land, as computed by extending soil conservation surveys to the problem areas in soil conservation.

Land in farms (1945 census), excluding farmsteads, roads, lanes, etc.

	Approximate acreage of land capability classes	Percent
I.....	61,000,000	5.6
II.....	210,000,000	19.1
III.....	242,000,000	22.0
IV.....	107,000,000	9.7
V.....	49,000,000	4.5
VI.....	197,000,000	17.9
VII.....	227,000,000	20.7
VIII.....	5,000,000	.5
Total.....	1,098,000,000	-----

When we carried our soil-conservation techniques from the soil-conservation experiment station plots out to the operating farmers within watersheds through erosion control demonstration projects, selected cooperatively with the States, we found in many instances that the farmers had been waiting for just this long-needed conservation information and technical assistance. As fast as they got acquainted with the work we were doing, they wanted more and more of it as fast as they could get it. At first—and quite naturally—they were rather slow to move; but now there are on file with the soil-conservation districts of the country nearly 200,000 more farmer requests for conservation farm plans than it has been possible to develop immediately. Here in Florida, I understand, you have 2,350 applications ahead. That is a healthy situation, but it serves to emphasize the growing responsibility of supervisors, technicians, and everybody else concerned to redouble our efforts in striving for the single goal of complete conservation on every acre of land needing it, in Florida and everywhere else.

I hardly need to remind anyone here today how many and varied are the problems which have confronted us and which we will continue to face in carrying this vital conservation job on to successful completion. By its very nature, the task requires the best brains and energies which everybody involved or affected has to contribute—farmers and their districts, State and Federal agricultural agencies, private interests ranging from banks to earth-moving contractors, from newspapers and radio stations to schools and churches. You district supervisors, as independently responsible officials of the district units of State government, are in the

most advantageous position possible for drawing on the assistance and support available from the various sources—extension and other educational institutions; service clubs and other urban interests; local, State, and Federal governmental avenues of assistance, and so on.

When Congress passed the first national soil conservation act and changed the name of the Soil Erosion Service to the Soil Conservation Service in 1935, we in the service, and in the Department of Agriculture, reached the decision that two main things were necessary to insure adequate progress: (1) that the technical services of trained conservationists should be made available to all farmers desiring such help; and (2) that some type of local government unit should be established to assist in bringing about necessary cooperative action and to place responsibility for getting the job done and maintained on the local farm people who are intimately associated with the land problem. Anybody who has taken the trouble to observe or to learn anything at all about the operation of the soil conservation districts since 1937 must agree, I am sure, that the soundness of this democratic concept has been amply borne out in their performance—thanks to the intelligent, responsible leadership of progressive landowners and operators like yourselves, the country over.

There is no use closing our eyes to the fact, however, that there still is room for improvement in many places. I am referring to the leadership and responsibility that district supervisors and farmers in the districts generally can and should, I think, exercise in order to assure maximum, economical results in their district programs. I do not mean to imply that anybody expects the district supervisors and cooperators to do all the thinking. But you can't hope to have the best possible help and service from those assigned to help you without the best possible direction on the part of the supervisors themselves. We must make the most advantageous use of the time and skills of the technicians working with the districts. It should be seen to that these men do not waste time looking after minor details—making unnecessary repeat trips to individual farms on trivial questions, etc.—while somebody else's farm planning and application of conservation practices wait.

The present period of emergency greatly increase the pressure and responsibility on all of us. What some people still don't seem to realize is the fact that men with guns and bullets can't fight without food, and that there cannot be enough food from poor land.

The soil-conservation districts—every supervisor, every cooperator, and every potential cooperator—should redouble their efforts in safeguarding our productive land. Every dollar of Government money available for soil and water conservation—whether from Federal, State, or other sources—should be budgeted and spent so as to make sure of its utmost contribution to real and lasting conservation.

Meetings like this one here at Marianna are important and constructive. I have always found such State district association meetings to be hard-working sessions by serious men with specific plans and purposes. That is why you are spending your time here devising means for speeding up the job of conservation, surveying, planning, and treatment. But, as I said at the national association meeting in Oklahoma City last February, the worth of no association or other organization can be measured on the basis of its occasional meetings alone, even when such a meeting is enhanced by a tasty barbecue dinner. Your association, and every board of supervisors in it, will need to be fully active and vocal 12 months in the year. There is great need to get out and get things done. You have a golden op-

portunity in this respect, with so many educational, planning, and other tasks awaiting your attention and action.

One of the best ways we have found for speeding up the application of the basic measures in a given soil conservation district is for every farmer to learn as quickly as possible how to carry out as much of his conservation work as he possibly can, and how to keep up his structures and maintain his other conservation developments, with a minimum of technical assistance. In that way particularly now when the time of our limited number of experienced personnel is so fully occupied in furnishing technical assistance to the increasing list of soil conservation districts and ACP participants—each technician can be freed for that much more new planning and assistance in new land treatment.

Also highly important in speeding up the conservation job is the teamwork of cooperating district farmers through neighbor group action. Natural groups of farmers within districts all over the country are doing this by planning together and working together, lending one another machinery and seed, and cooperating in conservation work in many other ways. The Soil Conservation Service is now working with some 20,000 of these natural groups. In a great many instances these groups are coming together in planning and application meetings, and they are helping the district supervisors and their own neighbors in routing equipment, distributing seed, and meeting seasonal farm needs. The more they work together, I heard a member of such a group say recently, the better they understand one another, the more cooperative they become, and the greater they enjoy life.

Meanwhile, the educational job which still confronts us as soil conservationists and conservation farmers is tremendously important. Not only is there the task of getting everybody to know about the problem and the generous and continuing returns that are being derived from conservation farming, but the job of getting them to understand that the work is still far from completion and demands our continuing best efforts. One of the gravest dangers is that of people being misled into the adoption of substitutes, short cuts, or panaceas for genuine soil conservation. By this time everyone should know there is no substitute, no panacea, no short cut. You will have to do the job yourselves—you can't hire substitutes.

It is important that you district supervisors in particular, as well as all of us who are engaged in soil-conservation work in any way, keep always in mind various basic facts which bear on our common problem and so largely determine our success in solving it. First among them is the basic principle that every acre must be treated according to need and used according to capability. And we need to be alert to certain misconceptions that still seem to prevail in the thinking of some people and groups, and be prepared to help dispel them. Some of these, briefly stated, are:

1. That soil conservation is of secondary importance, has already been taken care of, or can be postponed.
2. That there are short cuts to conservation, that farmers can do all the necessary conservation work without technical assistance, or that district farm plans are too technical for farmers.
3. That soil conservation costs more than it is worth.
4. That we have all the good land we need.
5. That soil erosion is an inevitable part of Nature's scheme.
6. That the job will never get done at the rate we are going.
7. That they themselves, or others that they recommend, can do the job better than it's being done.

8. That soil-conservation districts are not needed.

It is an essential part of your job and mine to be constantly on the alert and to acquaint farmers, business people, educators—everybody—with the true facts of erosion and conservation at every opportunity. We have, as indicated, made remarkable strides in soil and water conservation in recent years; but we still have not closed the gap between the rate of soil loss and the rate at which we are safeguarding our land through soil conservation. We are still losing hundreds of thousands of acres of land every year—probably not less than 500,000 acres—through the process of unnecessary erosion which damages many areas beyond further practical, immediate cultivation. That is because we are not yet practicing true conservation on all our land.

I mention these facts, not to discount in any way the fine progress that is being made, but by way of emphasizing the fact that we cannot at any time afford to be too complacent about the problem, so long as the main job still lies ahead. There is no excuse for our not going ahead with the job, at the fastest possible rate consistent with doing the work right and within the limits of available facilities. Today, we cannot plead ignorance of either the problem of erosion and water waste or effective methods of dealing with the problem. We have measured the size of the problem, located and mapped the various problem areas, and perfected the conservation tools for coping with the problem.

We cannot be satisfied with current progress, and must constantly seek improvements for continued acceleration of the conservation work. As I say, we have greatly increased progress, particularly in recent years, and propose doing everything in our power to maintain this progressive advancement. It is my belief, based on experience, that we could, with adequate facilities, get the job of applying the basic conservation measures to the land completed in about 20 years. After that, there would remain the continuing task of maintenance and improvement.

Right now—and probably as much as at any other time—there is much that all of us need to be thinking about, talking about, and doing something about, both as district officials and as assisting technicians. I feel that the importance of positive and vigorous leadership within the soil-conservation districts in bringing conservation treatment at the earliest practicable date to every acre of land still needing it cannot be overemphasized. This, of course, is neither more nor less than fulfillment of the original soil-conservation districts concept.

The Soil Conservation Service, for its part, works primarily with your districts at your request; and it cooperates, in turn, with the different agencies and groups with which you find it helpful to work. I am sure you are aware, for example, of the cooperative work which we have engaged in with the different branches of the Florida Agricultural Experiment Station, and with the contributions the research and findings at the stations have made to development of a sounder and more adaptable soil-erosion control and water-management program in many instances. Similarly, as you know, the work of the Soil Conservation Service nurseries, which have produced various outstanding results in conservation grass and legume development, is in cooperation with the experiment station and others at the agricultural college and branch stations.

I wish I had time to talk more about some of these developments—such as the discovery and spread of the Pensacola strain of Bahia grass throughout the Southeast, or the similar spread of blue lupine through the activities of the Soil Conservation Service and the soil-conservation districts of the South. A small supply of blue lupine seed was first obtained by the Service from the experiment station at Quincy, Fla. Your districts have

proved to be a most efficient medium for making available to large numbers of farmers over wide areas such highly worth-while contributions to improved agriculture. Doing this constitutes another of your important responsibilities.

Before I left Washington, I was looking over a number of reports from Florida on specific and outstanding accomplishments by different districts, farmer groups, and individual farmers in your districts—in group-drainage and water-control projects, sprinkler irrigation field trials, planting citrus groves on the contour, and various profitable experiences with grasses and legumes. They all are excellent and most encouraging in pointing the way in which your districts are moving. You know about such examples and experiences in your own districts, and I only hope you will not be at all hesitant in getting out and telling other people about these good works.

I know you are going to meet these and your other growing responsibilities which now have come to be expected of soil-conservation districts everywhere. As your Program for Greater Service sets out, the success of your districts depends on "the active initiative exerted by the members of their governing bodies with the assistance of all local leaders." We may sum up the overall job that has to be done something like this:

1. Complete the national land inventory at the earliest date facilities will permit
2. Complete the organization of the Nation's agricultural lands into soil-conservation districts and strengthen district responsibility and work with a scientifically developed soil-conservation plan for every farm in the country.
3. Urge active participation of all interested rural and urban groups—business, professional, and patriotic—in achieving Nation-wide conservation.
4. Make a real conservationist out of every farmer in the country.

That is a big order, but I am more confident than I have ever been before that we are not going to let anything interfere with getting the complete conservation job finished in reasonable time—in Florida and throughout the Nation.

Final budget figures, as finally submitted, including some extras totaled \$103,610,000,000 and the appropriations were \$4,522,000,000 below the President's budget estimates.

The House of Representatives, including the House Appropriations Committee and especially the Republican members of the committee and of the House of Representatives, have had a very considerable part in keeping the appropriations down, and I feel that they are entitled to great credit for it. The House of Representatives itself can feel very proud of the reductions that they have made. It has contributed very largely to the solvency of the United States.

I believe that now it can safely be said that the revenues of the Government will show at least \$12,000,000,000

increase in the fiscal year 1952 over fiscal year 1951 resulting very largely from the inflation which the President has promoted. With the new tax bill the very least that I can see for the net revenues is \$65,000,000,000 and I expect it will be \$67,000,000,000.

While the expenditures will be reduced as a result of the refusal of the Congress to give the President all the money he wanted and by reducing his estimates by \$4,552,000,000.

With the cuts that have been made in expenditures I believe that the President's estimate of expenditures of \$71,400,000,000 in January for the fiscal year 1952 will be reduced at least to \$65,000,000,000 and perhaps to \$63,000,000,000, and that we are unquestionably showing a surplus for the fiscal year 1952.

Appropriation Bills of the Eighty-second Congress

EXTENSION OF REMARKS OF

HON. JOHN TABER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. TABER. Mr. Speaker, pursuant to the unanimous-consent request granted today, I submit a table showing in detail the situation with reference to the appropriation bills that have been considered by the first session of the Eighty-second Congress.

I show separately on that table the items that were supplemental or deficiency to the 1951 budget.

It will be noted that the over-all budget estimates as submitted in January called for budget estimates then submitted or to follow during the session of \$109,095,000,000 in appropriations or reappropriations. The public laws which have been enacted call for \$99,058,054,395 or \$10,037,000,000 below the President's January figures.

I Speak for Democracy

EXTENSION OF REMARKS OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. HÉBERT. Mr. Speaker, I make no secret of the fact that I am very partial to the Jesuits.

I consider it a privilege to have been educated by the Jesuits in high school in New Orleans and to have graduated from the Jesuit High School in New Orleans with the class of 1920.

I believe therefore it is also understandable that I feel great pride in any accomplishment by a student or graduate of the Jesuit High School in New Orleans.

Recently, a young Jesuit student, George A. Frilot III, brought distinction to himself and honor to his school by being declared the winner of an oratorical contest conducted by the Junior Chamber of Commerce of New Orleans and called, I Speak for Democracy.

So impressed was I with the address delivered by this young man that I ob-

tained a copy of his remarks and now bring them to your attention.

I only wish more young men and more young women would have comparable appreciation of just what democracy means.

From this young man have come the following words of wisdom:

I SPEAK FOR DEMOCRACY

(By George A. Frilot III, Jesuit High School, New Orleans, La.)

This is the voice of Tyranny, speaking for democracy. I feel that I can speak for democracy, for I have known it since my first existence—known it as an enemy. I have hated democracy, and I have fought it. I have been the aggressor. I have routed armies and enslaved nations. I have plundered homes, seized fortunes, and from millions I have taken life. But I have failed. History will curse my name. I have learned my lesson, and learned it the hard way.

But the memory of my past will forever haunt me. I need but look back a few years, to a time when I had seized power in a free country, by a free ballot.

The place was Germany, the year was 1933. The rights and liberties of 80,000,000 people were jeopardized, but no one would act decisively. It was here that I began my work in the personage of Adolph Hitler. I had Hitler persuade Hindenburg that the country could be saved only if he, the leader of the Nazi party, were appointed chancellor of

Germany. By means of lies and treachery, it was accomplished. But I was not securely in power. Hitler's party did not have a majority in the Reichstag. So, a week before the 1933 elections, the Reichstag building was burned down. Hitler blamed his opposition—and the country believed him. It was 5 days later that the German people marched up to the polls and by an overwhelming majority gave Hitler and his party control of Germany. My reign had begun. I ruled Germany with a dictatorship, and I had gained my rule by the free vote of a free people. I had conquered Germany from within her bounds, and I had done so through the legal ballot of an irresponsible electorate.

There is no time now, no need, to recount the tragic story of what Hitlerism has since meant to Germany and to the world. It has been told and retold on the free press everywhere. It has been written in blood over the face of the world.

Think, America, think of it! You live in a democracy. There is no absolute power packed into the hands of an individual. Yours is a Government of the people, by the people, for the people. Yours is the finished product of western civilization. Your democracy has been founded on respect for the dignity of the human person. It means equal opportunity for all. It means the full enjoyment of every civil liberty: freedom of worship, of speech, of press, and of election. It means a government that is the servant of the people, not its master.

But you take too many things for granted. If only your family were suddenly transferred to a country ruled by me, tyranny, you would realize how essential these taken-for-granted rights are. You would find life a long nightmare of lingering fear, fear of the consequence of an impulsive word or even a timid remark, fear that a forbidden book might be found in your possession; fear that something you had done which was lawful yesterday might be a crime tomorrow, and one for which you would be tried in a secret court, without jury, without witnesses, without hope of acquittal.

You have the Bill of Rights. It secures the free ground you tread, the free air you breathe. There is not an instant by day or night that these hard-won rights do not protect you and guard you in every move you make, every word you speak, every thought you think. Guard this wealth of freedom with the same spirit of courage that moved Washington and Franklin, Jefferson and Hamilton. Eternal vigilance is the price of liberty. I know, I, Tyranny, democracy's antagonist, her mortal enemy, her very contradiction—I know only too well. That is why—I speak for democracy.

Hemorrhage From a Sore Toe

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES
Saturday, October 20, 1951

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Hemorrhage From a Sore Toe," which was published in the Montgomery (Ala.) Advertiser, October 18, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HEMORRHAGE FROM A SORE TOE

For more than 12 years the Texas-rich Jesse Jones was pleased to lend his name as RFC

Director and Secretary of Commerce to the Roosevelt administration. He abided until he was asked to abide not. Whereupon, sour as Cactus Jack Garner, he sulked home to regard his navel and his sore toe. The result of these galled meditations is Jones' memoirs. It is an unsparing attack on the man he called Chief for so many years.

So much to say howdy to Jones' spiteful motives. If he were as righteous as he protests, one wonders why he didn't delouse himself with a whoop and a bellow at the time instead of abiding the evil until decommissioned and until it became virtually a convention for men of his bent and circumstance to scorn Roosevelt.

But the fact that the book is bound in wormwood covers has nothing to do with whether Jones' allegations are true or false. Without such hemorrhages from sore toes neither newspaper exposés nor history could be written.

One chapter is entitled "F. D. R. Asks Us To Buy the Empire State Building." This building was a white elephant, partially owned by the Democrats Al Smith and Raskob. Jones testifies that FDR wrote him:

"We all know that the * * * building is a losing proposition, but on the other side, it is ideally located for a central office building."

Jones said he thought the price too high, and despite Roosevelt's spoken wish "to do something for Al Smith," evaded the use of RFC funds to bail the building out.

Jones' account of this incident may be the precise truth. But it is not entirely in harmony with an equally reliable account, Charles Michelson's *The Ghost Talks*. Michelson was the famous publicity chief for the Democratic National Committee. *The Ghost Talks* says:

"A friend came to me with a mass of figures and charts. * * * He demonstrated to me that the Government could save a huge amount in rentals by exchanging its various New York offices for a centralized headquarters in the big city, and he proposed that the Government buy the Empire State Building, at a figure \$7,000,000 less than it had cost to erect that white elephant."

"It sounded like a good business proposition, even though he offered me a \$50,000 commission if the sale went through."

"'Change that,' I told him 'to have 10 men contribute \$5,000 each to the Democratic campaign fund, and I'll see what I can do.'"

"Negotiations * * * were barren. * * * So I finally got to Jesse Jones and told him the story. He thought that in time something could be worked out, with mortgages or some other of the banker expedients, but * * * nothing happened. * * * The Government did not buy the * * * building, but rented some acres of the vacant floor space—and our campaign fund did not get the \$50,000."

That account does not discredit Jones' account, but it puts it in another light. Michelson wrote his book after his retirement and he had a rather neutral feeling about Roosevelt, admiring chiefly as the greatest of circus barkers. *The Ghost Talks* relates another story bearing on the Roosevelt ethics:

"We did not take all the money that was offered us. For example, one day an eminent gentleman called on me and told me he would produce \$200,000 for our campaign funds. * * * I mentioned it to the President. * * *

"'You know,' [Roosevelt] said, 'that that gentleman is a candidate for a high diplomatic position?'"

"'I believe he is.'"

"'Well, you know he is not going to be appointed to that place?'"

"'I know it now.'"

"'If the committee [Roosevelt went on] took that money he would have a right to as-

sume that he had bought something. So you will have to get along without it.'"

"I did not communicate any further with my \$200,000 man."

Thus the Roosevelt haters can gorge Jones' defamatory stories to their comfort, the fervent Roosevelt idolaters can cite the other kind to support their fixed notions, and those who are interested in true judgment will conclude that in general both stories are true mirrors of Roosevelt—that he was this way one day, that way the next day * * * like all great men and little men made of flesh.

Suggested Abolition of the Bureau of Indian Affairs

EXTENSION OF REMARKS

OF

HON. GEORGE W. MALONE

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. MALONE. Mr. President, in connection with Senate bill 2167, which I introduced September 22, and which provides for the abolition of the Bureau of Indian Affairs, I should like permission to insert in the CONGRESSIONAL RECORD at this time the testimony of Mr. Robert Yellowtail, of Lodge Grass, Mont., on February 26, 1948, when he appeared before a subcommittee of the Senate Interior and Insular Affairs Committee in hearings on S. 2037, a bill to transfer to the Territorial government of Alaska the administration within such Territory of laws relating to Indians and for other purposes, and Senate Joint Resolution 162, a joint resolution to repeal section 2 of the act of May 1, 1946—Forty-ninth Statutes, page 1250—and for other purposes. His testimony will be found on pages 334 to 339, inclusive, of the printed hearings.

Mr. Yellowtail, a Crow Indian, was formerly superintendent of the Crow Indian Reservation in Montana for 11 years.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

STATEMENT OF ROBERT YELLOWTAIL, PAST SUPERINTENDENT OF INDIAN RESERVATION

Mr. YELLOWTAIL. I would like to preface my impromptu remarks by telling the audience I was a superintendent in the Indian Service until 2 years ago, having been appointed shortly after President Roosevelt was inaugurated as President.

Naturally, I am acquainted with the problems on the questions being raised here, and I want to say to the committee in all fairness, that an Indian on an Indian reservation is a person with hardly any constitutional rights. Now that makes it pretty, pretty, pretty definite. An Indian on an Indian reservation cannot go to the superintendent of the reservation and secure his funds without his permission, Mr. Chairman. On an Indian reservation, an Indian's money is deposited to the credit of the superintendent of the Indian reservation and that superintendent or his many clerks in the Indian office keeps it in the Indian office and these are based on regulations in the Department of the Interior, having the force and effect of law. That Indian, Mr. Chairman, cannot go the superintendent of the department and demand his money without the superintendent's approval.

You can only find the counterpart to that power in Russia or in divided Germany or Italy, which we hope is being transformed.

Now, if that throws a little light on the subject—I make that assertion as one of the Government's employees who has not been out of the service over 2 years. I have a letter here on that subject that I would like to file with this committee. It is addressed to the Public Lands Committee, the Appropriations Committees of the Congress. Just let me read one or two things in it. Now, the different and many regulations, that is what he talked about a while ago, are as old as the Bureau itself, they are out of date, they take no cognizance of the Indians' individual rights or personal property. They give the superintendent absolute control of the people's money, authority for abuse, which is too great, and that is one of the complaints we are making to the Secretary of the Interior and to the Congress, to rectify the condition which Senator ECTON has stated here.

Now the property regulations that concern the land, the horses, that he talked about, your cattle and all that sort of thing—it is a crime and a shame in his case, and when an Indian—take myself for instance.

My deceased wife's allotment is an inherited allotment, and I have no authority to say who shall lease it up there without going to a superintendent, a total stranger, whom I never saw until a year ago and ask him in all humility can I lease that land up, and Mr. Superintendent, I think I can do just as well as you can do, and he is my successor.

Let me stop right there. I left the office, and the next day I had to go down and make that request of the superintendent who succeeded me. If that isn't an analogy that extends into the 7th degree, I want somebody in Washington to tell me.

We have to make that kind of request, and it is all found in your black book which I have found in the eleventh year as superintendent of the Crow Indian Reservation, the law and order book which he helped to formulate, perhaps.

Mr. COHEN. That was before my time.

Mr. YELLOWTAIL. And there is nothing more oppressive under the American flag than the treatment of the American Indians at this moment.

My mission here is to go before the Secretary of Interior and ask the Secretary of Interior, as the chief law officer of the Indian Bureau, "For goodness sake, in the interest of humanity, can't we be released from these iron-clad Stalinic regulations that they call Commissariats." And the flag that flies upon the Capitol Dome here, that says under the Constitution, every man shall have his day in court, every man shall have his personal rights, his property protected—that means absolutely nothing on an Indian reservation. When you come down to it, the Constitution and the Bill of Rights is a dead document on an Indian reservation. Then it is time for a committee of this sort. Because under the law, Supreme Court Justice White, speaking to Chief Lone Wolf, said, " * * * we do not want you to understand as implying the United States Supreme Court shunned the question. Relief must be sought by appeal back to the body and not to the courts." That is this body—the Senate—and the House of Representatives. Therefore, we are here, American citizens, begging the Congress of the United States after two world wars, who furnished 50,000 soldiers and 1 soldier to put the flag on Mount Suribachi, that Pima Indian has no more right than the rest of us have here. The gentleman down in Oklahoma, who had the Congressional Medal of Honor awarded to him for annihilating a large German force single-handed, up here has no more right on an Indian reservation than the rest of us, and has no more

right than the rest of them, having served the Government.

I have no more right than the rest of them, having served the Government as one of its agents for 11 years. So when we come to those questions—this is an Indian document and I want to present it to the chairman of the committee at this time as a most appropriate document on this subject, and I am telling all Members of this Congress it is authentic.

(The document referred to above is as follows.)

"THE INDIAN BUREAU'S MANAGEMENT OF THE AFFAIRS OF THE INDIANS OF THE UNITED STATES"

“(Submitted by Robert Yellowtail)”

“Senator Moore, of Oklahoma, discussing this subject before the Subcommittee on Indian Affairs of the Senate Public Lands Committee with respect of S. 405 said:

“For the last 15 years, the Indian Bureau has cost the taxpayers of this country approximately \$600,000,000, or an average of about \$40,000,000 a year. This Bureau is the trough at which about 11,000 Federal bureaucrats feed under the guise of supervising the lives of 390,000 people, 90 percent of whom are probably more capable of handling their own affairs than the bureaucrats.”

“The Seventy-eighth Congress made a survey of conditions among the Indians of the United States. The result of that survey is set forth in Report 310 of the Senate Indian Affairs Committee and is signed by Senators Elmer Thomas, Burton K. Wheeler, Dennis Chavez, and Henrik Shipstead. Under the heading, ‘The Indian Bureau Should Be Abolished,’ commencing on page 17, is the following statement of the committee:

“The further usefulness of the Indian Bureau has been challenged at various times during the past 50 years even by some of its own higher officials. Commissioner Rhodes was appointed in 1929 and proposed that he work himself out of a job by expediting the assumption of its functions by other departments of the Government. Certain well-informed Congressmen and others active in national life have challenged the further need for the Indian Bureau, but it has always been able to effect some compromise whereby it could continue and also become further entrenched and get an even greater portion of public funds and public services.

“The original purpose of the Indian Bureau was to fit the Indian into the commonwealth of citizenship, to help him to make adjustments to the developing situation in which they found themselves, and to help regulate governmental adjustments to them. It was intended as a service rather than as an administrative bureau. The Bureau was expected to recognize values in and to cooperate with missionary effort; to cooperate with the States and with the various functional divisions of the Federal Government in their relations to the Indians. It has few executive functions but gradually acquired such functions under a purpose which became dominating.

“As soon as it developed into a full-fledged administrative bureau, it began to set up functional divisions competing with missionary, State, and Federal authorities, functions, and sanctions; Indian schools were established, an Indian Land Division, Indian Inheritance, and other divisions were set up, until the Bureau became a miniature Federal organization. All of this made the Bureau functions more complex and completely clouded the original purpose which was to make the Indian a self-respecting, contributing citizen.”

“The Bureau has been concerned with building up a system instead of service; attempting to build self-perpetuating institutions, making material improvements for the Indian Service at the expense of Indian life;

furnishing physical relief that was not needed nearly so much as economic and civic encouragement; breaking down assisting agencies; segregating the Indian from the general citizenry; condemning the Indian to perpetual wardship; making the Indian the guinea pig for experimentation; grouping the Indians for convenience of supervision for which they are presumed to exist; tying him to the land in perpetuity; forcing a conventional type of education on him; attempting to compel all Indians to engage in agriculture and stock raising under the supervision of an extension department which is an end in itself.

“While congressional appropriations to the Indian Bureau hold the attention of the public, they are by no means the whole of the Bureau's resources for spending which may be listed under the following heads:

“1. Congressional appropriations to the Bureau from the United States Treasury.

“2. Indian tribal funds

“3. Permanent and indefinite appropriations from which the Bureau may use several million dollars annually.

“4. Transfers of funds from other Government agencies, including funds appropriated to the President and for the Office for Emergency Management. Such transfers to the Bureau have been enormous during the past 10 years. For instance \$19,034,550 from Public Works Administration alone in 1934. Other contributing agencies included Work Projects Administration, Civilian Conservation Corps, Agricultural Adjustment Agency, Federal Emergency Relief Administration, Farm Security Administration, Federal Emergency Relief Administration surplus relief, Emergency Conservation Works, and still others.

“5. Cooperative contributions from private foundations and institutions.

“Fair dealing by the Federal Government with the Indian tribes, and how shall we accomplish this, is the issue at the moment. The Supreme Court as long ago as 1886 spoke its mind upon the matter when it said ‘Because of the local ill feeling, the people of the States where they are found are often their deadliest enemies.’ *U. S. v. Kagama* (1886 118 U. S. 375, 384). We could go a step further and add. Because of the indifference, and often a hidden ill feeling generated by race hatred on the part of Indian Bureau officials and employees in the field and on Indian reservations and in reservation agency offices, who are paid from the people's Federal Treasury to minister to the needs and wants of the Indian people, there is now existing on nearly every Indian reservation in the United States, autocracy and tyranny of the fashion employed by Hitler and Stalin. The Indian soldiers who served in the Armed Forces and who helped to squash to earth tyranny, autocracy, and regimentation of the masses in foreign lands, returned to their homes on Indian reservations to find themselves face to face with the same kind of conditions under Indian Bureau rule.

“The Constitution with all of its guarantees of liberty, freedom, and home rule is a dead document and of no meaning on Indian reservations. Congressional awards and citations for heroism in the late war mean nothing to Indians on Indian reservations, as all must bow alike to the arbitrary dictum of reservation superintendents on every Indian reservation in the country. A winner of the Congressional Medal of Honor or the Indian Marine who assisted in hoisting the American flag on Iwo Jima means nothing to a reservation superintendent and his Indian Bureau regulations. To him, they all are still just Indians.

“The Indian Bureau until last year was manned by a personnel of 11,000. Consuming over \$40,000,000 of the people's money in a useless adventure which has not, and never

will, return value received, back to the Federal Treasury or the American people. Today, this same Bureau instead of reducing its demands upon the Congress for money, has increased its budget demands for the fiscal year ending June 30, 1949, to \$67,785,970. The breakdown of this request is as follows:

"Total available for expenditure for the fiscal year ending June 30, 1949

"General funds.....	\$52,843,835
Revenues from power.....	1,868,815
Revenues operation and maintenance collections irrigation projects.....	1,000,000
Tribal funds.....	12,073,320
Total.....	67,785,970

"The Indian Bureau is the most undemocratic institution under the American flag. Under its administration, the lives of the Indians under its control are regimented and regulated in totalitarian and communistic fashion. The dark days, the medieval form of existence, the feudal system which strangles economic independence and which regiments the Indian's life in every phase of his daily existence, is the kind of despotism he is forced to bow down to today.

"In their tribal state, and on Indian reservations, the Bill of Rights, and the Constitution, the Atlantic Charter and its four freedoms are all dead documents and have no meaning what over. The Indians by the act of March 3, 1871, 2079 Revised Statutes, were remanded to the generosity of Congress. They, since, have been governed by regulations from the Secretary of the Interior's office based upon acts of Congress. Hence, they are wards of the Government, and, in fact, serfs—still living under serfdom. This is their legal status today.

"Thirty thousand Indian soldiers served our country and fought for human liberty, security, and freedom in the war just concluded. Twenty thousand likewise, served our country in World War I. Yet, upon returning home after a conspicuous record of achievements upon foreign battlefields where they helped to smash the enemies of democracy and human liberty, they are forced by the Government they served and helped to preserve, to submit to the indignities of the autocratic and mail-fisted rule of Indian Bureau officials, who have the support of Federal law, and the courts of our country. Surely this kind of treatment of the Indians who are citizens of our country, makes mockery of the Constitution which guarantees human rights, liberty, and security, and also, of the frequent declaration of the leaders of our country, who have solemnly declared to the world, that ours, is a country where human liberty, security, freedom, and equal treatment before the laws of the land, is guaranteed to all alike.

"The Indian Bureau is a closed corporation. An iron sheet excludes the public from interfering in any manner with the inside operations. Its administrative policy is decided in secret by its top officials. The Indians, 400,000 of them to whom such actions are directed, are never consulted. They have no voice, not even a suggestion, nor are they or their tribal councils ever consulted in such matters. This is not government by the consent of the governed; nor, is it 'government of the people, by the people, and for the people.' Instead, it is government for the Indians, devised to suit themselves, by the top officials of the Interior Department, backed by the Government of the United States in Hitler fashion.

"The appeals for a redress of grievances by individuals or by the tribal councils of the Indians to the Interior Department, the

President, and the Congress, whether by petition or by personal appearances before the committees of the Congress have brought but little relief to the Indians—their appeals have invariably fallen upon the deaf ears of those responsible for Indian administration. Near total disregard of the appeals of the Indians has been the rule. Again, the Indian Bureau is the most undemocratic institution under the American flag.

"The Indian Bureau consumes \$40,000,000 of the taxpayers' money from the Federal Treasury every fiscal year—from July 1 to July 1, to carry on its conduct of the affairs of 350,000 American Indians. The record has been one of the shameful waste of the people's money in the prosecution of a shameful disregard of the human, political, and legal rights of the Indians of the United States, 50,000 of whom are veterans and, therefore, are members of, or entitled to membership in, the American Legion.

"Home rule," is the Macedonian cry of the Indians at this moment, and, if the over 50,000 Indian soldiers of World Wars I and II have not with their blood, purchased the right to select their own agents and employees who govern them, then, there is no justice for the Indians and such declarations are mere mockery and hypocrisy. Yes, they were good enough to be invited to don the uniform of our country and to fight and die on foreign battlefields far removed from their homes for democracy and human liberty and freedom which they are denied under our Government.

"Yes. It makes mockery of Lincoln's immortal Gettysburg speech wherein he declared 'Our fathers brought forth upon this continent a new nation conceived in liberty and dedicated to the proposition that all men are created equal.' And, likewise, the great inaugural speech of President Wilson when he declared 'The scales of heedlessness have fallen from our eyes, we have come to deliver to every man his just dues.' Also the Statue of Liberty holding aloft the flaming torch of liberty to all the world. And the inscription, 'Equal justice to all,' on the Department of Justice Building in Washington.

"The Indians as humans are struggling for.

"1 The protection of their civil liberties and rights

"2 The absolute independence of the individual

"3 Equal respect and protection under the laws of the land

"4 That government derives its just powers from the consent of the governed. The Indian Bureau should likewise consult the Indians in the administration of their affairs.

"5 The Indians are struggling for their economic independence, for their civil rights and equal protection under the Constitution, also, for the absolute independence of themselves individually, for a political and civil recognition of their right to assert and demand that.

"(a) They stand on an equality with the rest

"(b) They, too, can say that, 'This too, is my air, my water, my sunshine, my earth,' and that, 'I have the same right to life,' to hope, and to aspire for the better things in life and to labor and to enjoy the fruits of that labor as the Constitution guarantees alike to every citizen of this, my native land, and my country.'

"The Indians are now determined to shake off the shackles of the feudal system they have been living under—to demand the right, now, to say how they shall spend their money without the interference of the Indian agent and his numerous employees; to say how he shall use or lease his lands and

to whom he selects, and not to those selected by the Indian agent. These are the things that caused the five devastating wars this country engaged in for the protection of human rights. When, then, are the Indians denied that right? We rebel against this kind of treatment and are determined to carry out our fight to the last place of relief under our political set-ups and let those who disagree with us answer the question herein raised."

How To Win the United States Senate in 14—Ah, Simple—Lessons

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "How To Win the United States Senate in 14—Ah, Simple—Lessons," written by James Reston and published in the New York Times.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW TO WIN THE UNITED STATES SENATE IN 14—AH, SIMPLE—LESSONS—IF THEY LAUGH WHEN YOU SIT AT THE PIANO YOU CAN ALWAYS PLAY AMERICA

(By James Reston)

WASHINGTON, October 18—Though Chester Bowles, of Connecticut, and Philip Jessup, of New York, have had trouble getting confirmed by the Senate in recent days, most observers here believe that confirmation can be achieved by paying attention to a few simple rules.

Among those are the following:

1 Be sure you are for the things that are going to be popular 6 or 7 years from now.
2 Don't join anything, ever.
3 Don't let your wife join anything, either.
4 Don't get involved in foreign affairs questions at all if you can help it. If you can't help it, back the Monroe Doctrine and the open-door policy, and be against communism.

5. If you must have political convictions about foreign policy questions (which is not recommended), make sure the President sends your nomination to Capitol Hill at a time when your convictions are popular.

6. Be suspicious of the British. And if you know what they're up to today in northern Rhodesia, all the better.

7 Don't write books.

8 Master various clichés that are popular on Capitol Hill, including the following:

(a) I am for adequate defense, but we must not spend ourselves into bankruptcy.

(b) I am for helping other countries, but they must first prove that they are helping themselves.

(c) America cannot defend the whole world.

(d) Communism is merely socialism in a hurry and I hate both from the depths of my soul.

(e) I am not and have never been a Communist or a member of any Communist-front organization.

9. If possible, be Irish. This pleases Senator Pat McCarran, Democrat, of Nevada.

CAN YOU GET BARUCH?

10 Keep up with the Senate's favorites. A word of praise on your behalf by Bernard M. Baruch, for example, is worth maybe 40 votes. Similarly, if you have any friends who are unpopular on Capitol Hill, abandon them, or better, denounce them publicly.

11 Glorify the days when we had no entangling alliances. This proves you are a "sound fellow, longing for the happy, sunlit past."

12 Stay out of the Far East. If you go there, you will be expected to have views on it, and somebody is bound to disagree with any views you have. Ignorance about it, however, is no disqualification.

13 If possible, have at least one reformed Communist testify on your behalf, preferably Louis Budenz, former editor of the *Daily Worker*.

14. Never accept any invitation to any off-the-record meeting at the State Department without finding out first whether Harold Stassen is to be there.

This set of rules is not, of course, guaranteed. Many other rules apply simultaneously and all are subject to change without notice. For example, the Senate Foreign Relations Subcommittee voted down Dr. Jessup today and voted in favor of Ambassador Warren Austin.

Both Ambassadors have been associated with the administration's far-eastern policy. In fact, Ambassador Austin voted for the resolution in the United Nations under which the United States agreed that if a cease-fire were arranged in Korea the United States would discuss with the Chinese Communists such questions as the future of Formosa and whether the Communists should get into the United Nations.

Two rules apply in this case, however, that are not listed above. These are that Senate confirmation is much more certain if the nominee is (a) a former Senator, and/or (b) a Republican.

LOOK TO THE FUTURE

The first rule, however, is the important one, namely, that one must be sure to be for the things that are going to be popular 6 or 7 years from now.

For example, a man who opposed recognition of the U S S R throughout the 1930's is in clover, and anybody who favored letting the Germans and the Russians destroy one another in 1941 would have no trouble with the Senate at all.

Nevertheless, one cannot vouch even for those potential nominees who have the gift of prophecy, and the rules listed here must be regarded merely as policy guidance. Not even a former Republican senatorial prophet, without ideas or previous connection, can be sure of confirmation in the present state of affairs in Washington.

All the foregoing is merely unofficial advice, put forward in accordance with the terms of the following story, now current in the Capitol.

According to this story, an improvident grasshopper who made no plans for the winter went to an ant and asked him how he should live through the cold winter. The ant replied that this was easy: the grasshopper should merely turn himself into a cockroach every October when the frost came, find himself a warm spot behind a radiator or in some good kitchen, live there until spring and then turn himself into a grasshopper once more.

This scheme overjoyed the grasshopper until, at the end of the conversation he inquired:

"But tell me, how do I turn myself into a cockroach?"

"I'm sorry, I don't know about that," replied the ant. "I was merely giving you policy guidance."

William N. Oatis

EXTENSION OF REMARKS

OF

HON. GEORGE W. MALONE

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. MALONE. Mr. President, I ask unanimous consent to have a resolution on William N. Oatis, Associated Press Bureau chief in Prague, Czechoslovakia, who was imprisoned by the Communist Government of Czechoslovakia, without explanation, which resolution was passed by the Fraternal Order of Eagles, Aerie No. 487, Winnemucca, Nev., on September 10, 1951, signed by Vance G. Nelson, worthy president, and Harold E. Howland, secretary, printed in the Appendix of the RECORD. The resolution urges the Federal Government to secure the freedom of Mr. Oatis and to bar correspondents from the Soviet news agency Tass and all satellite nation correspondents from official Government press conferences until Mr. Oatis' release has been secured. I also ask unanimous consent that identical resolutions passed by the Fraternal Order of Eagles, Aerie No. 1213, Las Vegas, and by Aerie No. 1006, Carson City, Nev., be printed in the Appendix.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

RESOLUTION ON WILLIAM N. OATIS

Whereas, William N. Oatis, Associated Press bureau chief in Prague, Czechoslovakia, a free newspaperman who was performing his duties according to the standards and criteria of the free press of the world, was brutally snatched and imprisoned by the Communist Government of Czechoslovakia without explanation, and

Whereas Mr. Oatis was arrested and held in detention without access to friend, Embassy representative or trusted legal counsel, and

Whereas he was brought to trial and accused of "insisting on obtaining accurate, correct and verified information," which is the definition of the work of a free press, and

Whereas he was forced into admission of espionage because of his reporter's instinct for presenting the factual rather than the fictional; and

Whereas he was convicted and sentenced to 10 years of imprisonment by a trial which was universally condemned by all free nations as an outrageous "kangaroo court," completely bereft of the principles of justice and the dignity of the human being, and

Whereas, by its action, the Communist-dominated Czech Government showed its scorn for the principle of freedom of information and its hatred for our free world; and

Whereas representatives of the Soviet news agency Tass have the free run of the United States of America, and are permitted to attend press conferences at our national seat of Government, at which often much off-the-record information is discussed. Now, therefore, be it

Resolved, That Winnemucca Aerie, No. 487, of the Fraternal Order of Eagles, urges the Federal Government and its agencies to be unceasing in its efforts to secure the freedom of Mr. Oatis by honorable means, and we also offer our support and the vitality of our membership to the executive of the Asso-

cated Press in their campaign to secure the release of Mr. Oatis by the communication of the true facts of the case to the free peoples of the world, and be it further

Resolved, That Aerie, No. 487, of the Fraternal Order of Eagles, urges the Federal Government to bar the correspondents from the Soviet news agency Tass as well as all satellite nation correspondents from official Government press conferences where vital information may be revealed until the release of Mr. Oatis has been secured.

Adopted this 10th day of September 1951, Aerie, No. 487, city of Winnemucca, State of Nevada

Attest

VANCE G. NELSON,
Worthy President.

HAROLD E. HOWLAND,
Secretary.

RESOLUTION ON WILLIAM N. OATIS

Whereas William N. Oatis, Associated Press bureau chief in Prague, Czechoslovakia, a free newspaperman who was performing his duties according to the standards and criteria of the free press of the world, was brutally snatched and imprisoned by the Communist Government of Czechoslovakia without explanation, and

Whereas Mr. Oatis was arrested and held in detention without access to friend, Embassy representative, or trusted legal counsel, and

Address by Assistant Secretary of the Interior William E. Warne Before Service Clubs at Bismarck, N. Dak.

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address delivered by the Assistant Secretary of the Interior, William E. Warne, at a joint

meeting of service clubs at Bismarck, N. Dak., on October 18.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, ladies, and gentlemen, it is a pleasure to be here with you today, at a time when the State of North Dakota stands on the threshold of what I believe will be the greatest period of business expansion in its history.

The Department of the Interior is pleased to be a partner with people in North Dakota in the development of the mineral, land, and water resources that will be the base of your economic growth. Our agency has responsibilities in the fields of petroleum production and lignite development, in irrigation, and in electric power. From these fields will come the expansion that I foresee.

In all of these fields new industries will be established. Industrial development will fill what has been historically the principal need for a balanced economy in this State. Since the time of first settlement, North Dakota has depended on dry farming. Industrialization and agricultural diversification through irrigation will begin, I confidently expect, within the next 10 years. Through developments along the lines I have indicated, the needed bulwarks against the economic ills growing from dependence on one basic activity—dry farming—can be provided. The awful consequences which have occasionally stemmed from droughts and floods can be avoided to a great degree.

A second future, however, can be assured only through a balanced development of the latent resources. Signs of unbalance are already developing, and the time to take corrective action is now, while the problems have not yet become serious.

This afternoon I want to discuss with you some of the potentialities of the enormous lignite deposits which are found in North Dakota and to talk about problems in irrigation and electric power associated with developments of the Missouri River Basin project. The slow progress so far in irrigation development is the unbalancing factor to which I made reference a moment ago.

North Dakota has 600,000,000,000 tons of lignite in the ground, of which at least half is recoverable. This is approximately 10 percent of the entire world supply of lignite and constitutes some 30 percent of all the coal reserves in the United States. This tremendous resource is of great significance to the Nation as a whole as well as to you of North Dakota.

In many places lignite lies close to the surface and can be mined by open-pit methods. Despite this convenience, however, its widespread use still presents a difficult challenge to scientists and industrialists alike. The Department of the Interior, through its Bureau of Mines, has been, for many years, engaged in research in lignite utilization. The new laboratory of the Bureau of Mines at Grand Forks, N. Dak., is the Nation's leading center for lignite research. It must be admitted that plans for the use of North Dakota lignite are still in their early stages. Therein lies its challenge and the measure of its opportunity for the people of this State.

The Bureau of Mines, however, has gone far enough in the development of lignite processes so that they are now being applied by industrialists in Texas on a large scale. In that State a power company and an aluminum company are going to use lignite for aluminum production. Tar will be an important byproduct. Both aluminum and tar are commodities highly important in our current defense program. The Texas plants are being established in the heart of the area which leads the Nation in the production of two other important fuels—oil and gas. This is an indication of the favorable

competitive position which lignite may hold in relation to other energy sources.

Your North Dakota lignite lies relatively close to the iron-ore deposits of Minnesota and the mineralized area to the nearby West and Southwest. As additional technologies are developed, it seems reasonable to expect that processed lignite can economically enter the mineral and metallurgical fields not only as a source of power but also as reducing carbon, as electrodes, as gaseous reducing agents, and as a source of thermo-process energy.

Still other uses for lignite products may be found in supplying active carbon for sugar beet refining, in water purification, and as material for fuel briquets, a stable, storable and high heat-value domestic fuel.

In sight, but more or less over the horizon, are possibilities for the production of phenolics and plastics from them, disinfectants and animal dips, wood preservation materials, electrode and other special carbons, sources of materials for detergents, and many other specialized products.

Lignite is capable of bringing relief, eventually, to the present heavy demands on irreplaceable coking coals of the Appalachian area. Lignite can accomplish this by providing an alternate source of fuel for power and space heating. This is significant in view of our growing need to husband these coking coals, which are basic to the Nation's steel production. This production is, of course, a prime component of the American industrial civilization and the backbone of our preparedness program.

The key to these industrial processes is low-cost lignite such as you have in enormous quantities here in North Dakota.

I confidently predict that during the next decade many companies and individuals will be beginning to use lignite for the profit of themselves, and the Nation as a whole in pursuit of the opportunities which I have briefly outlined here. Why not some or much of this activity in North Dakota?

So much for the optimistic outlook for lignite. It is an outlook for new opportunities in North Dakota which can be matched by few other communities in the United States.

Let us look now at a few other reasons for optimism in North Dakota's immediate future. North Dakota has joined the ranks of the oil-producing States. The recent oil and gas discoveries in Williams County, northwestern North Dakota, have excited the interest of the Nation. The Williston Basin may some day be an important oil province, providing a much needed addition to our country's depleting petroleum reserves.

Another reason for optimism is the fast-growing development of hydroelectric power. Garrison Dam, upstream from you a few miles on the Missouri, is scheduled to start power production in April 1955. Fort Randall Dam, down in South Dakota, will be producing power by November 1953. A new unit at Fort Peck Dam, over in eastern Montana, is almost completed, and within a few weeks will add 35,000 kilowatts to the power resources of this area.

The Interior Department is charged by law with the responsibility for marketing power generated by all Federal plants in the Missouri River Basin, whether they be constructed by the Corps of Engineers or the Bureau of Reclamation. In the carrying out of this responsibility, our Department has begun construction of backbone transmission lines which will interconnect the major hydroelectric plants and carry their output to the major load centers. These high-tension lines are already a familiar feature of North Dakota landscape. Partial operation of North Dakota's Federal transmission loop will begin this winter. This loop interconnects Bismarck, Garrison Dam, the new steam plant of the REA cooperatives at Vol-

taire, Devils Lake, and Jamestown. The loop is about two-thirds completed now, and it will be in full operation next spring. Initially, pending installation of generators at Garrison, power will be fed into the loop from Fort Peck via the Federal line from there to Garrison.

In the marketing of Federal power the Interior Department is bound by law to give preference to cooperatives and public bodies. This is particularly significant to you of North Dakota. Your State does not rank high in percent of farms served by central electricity. As of June 30, 1951, 74 percent of the farms in North Dakota had electric service as compared with the national average of 84 percent. Ninety percent of Minnesota's farms are electrified.

The preference provision of the Federal power marketing law will be a highly significant factor in improving this situation so that North Dakota farmers will be on a par with those in other States. Make no mistake about it, the attacks which are now being made on the preference provision of that law by those who would give the lion's share of Federal power benefits to the private companies are sure to weaken the rural electrification program. So will stringent policies on taxation of cooperatives, which are being advocated by some who pose as friends of the farmers. We in the Department of the Interior are proud of our record in helping rural electric cooperatives get a successful start by supplying low-cost power under the preference provision. The North Dakota transmission loop will aid in furthering rural electrification in the territory through which it passes. We want to continue support of rural electrification in North Dakota as new sources of power become available.

Speaking of power, I feel obliged to cite a few of the rather disquieting facts about the Nation's power situation in general. They have a bearing on your situation as well. Ever since the beginning of the defense program I have maintained publicly that the Nation has faced and is facing a power shortage which demands extraordinary effort by both the private power companies and the Federal Government to rush to completion new power facilities. This is necessary to avoid serious curtailments in electricity consumption by domestic consumers, and still worse, by defense industries.

For making these statements a year ago I was attacked by representatives of the private power industry. Less than a year ago the then president of the Edison Electric Institute was quoted in the New York Times as claiming there was more than enough electricity to meet the heaviest possible demand. The Edison Electric Institute is the trade organization of the private power companies. The vice president of the institute in the same piece was quoted as saying that my public warnings of a power shortage sought to imply a condition that did not exist. Shortly afterward, a magazine which caters to the private power industry challenged me in an editorial entitled "Who Is Kidding Who?" to back up my warnings.

Here is what has happened.

In the Pacific Northwest vital supplies of electricity for aluminum production had to be cut off a month ago because of impending low water conditions. Fortunately, rains in that region have made it possible to restore this production in subsequent weeks.

Let me quote you a few statements made less than a month ago by a representative of the Defense Electric Power Administration, an agency made up principally of private utility employees who are helping the Government to solve the power problem. Here is what he said about the kind of power situation we now face:

"In the Pittsburgh area, electric furnaces used to produce needed alloy steel are being interrupted almost daily because of insuf-

ficient generating capacity. The denial to these steel plants amount to as much as 60,000 kilowatts.

"In the Carolinas, adverse water conditions have already caused curtailment of ferro alloys and aluminum.

"Load growth in the Gulf Coast, central and northwest Texas area have diminished operating reserves to a point where dependable capacity will not be available in 1952.

"Deficiencies in capacity as high as 80,000 kilowatts are forecast for the Cleveland area in the fall of 1952.

"Milwaukee faces a deficit of 40,000 kilowatts during the winter of 1952.

"The general area known as the Industrial North Central region (including Michigan, Indiana, Ohio, western Pennsylvania, West Virginia, and Kentucky) is expected to be short about 1,000,000 kilowatts before the end of 1952.

"At no time during World War II did the electric power supply picture look so threatening as it now appears for the fall and winter of 1952." All right, "Who was kidding who?"

Once more, the private-utility representatives have been caught in an attitude of complacency about the Nation's power supply. The Nation as a whole may suffer for it. I reiterate what I have consistently said since the beginning of the defense program, that our country faces the most severe power shortage in its history and that all power agencies public and private must proceed with all possible dispatch to remedy the situation.

Despite the threatening national picture on power, you in North Dakota can look forward to improvement stemming from the large Federal hydroelectric projects which I have described as being ready to add to the power resources of this region. The general outlook on power in this area warrants optimism for forthcoming growth of new wealth and profits for you of the business community in North Dakota. This stems directly from the power phases of the Missouri Basin project. The dams must be kept on schedule and the transmission lines must be built on time. In response to my request, the Bureau of Reclamation has completed a new power report for the Missouri Basin. Some of the additional opportunities to expand generating capacity that it cites must be seized if the growing needs of the area are to be met and this region is to be enabled to add to the national strength the full weight of its potential.

Let us turn now to a type of development for the economy of North Dakota which is the laggard. I refer to irrigation.

Irrigation has historically been the principal interest of the Department of the Interior in the development of the West. Irrigation is still a primary interest of the Interior Department as part of our program for balanced river basin development, which includes also flood control, protection of watershed lands, preservation and propagation of fish and wildlife, provision of recreation facilities, mineral development, and hydroelectric power.

Seven years ago the Congress of the United States approved a comprehensive plan for development of the Missouri River Basin. That approval came on the heels of the most terrifying drought in the history of the United States, which laid waste untold investments and caused awful human misery and suffering. The plan was intended to put the water resources of the Missouri River Basin to work to provide needed regional stability and to protect the people of this and adjoining areas from the terrible consequences of both flood and drought.

Since the plan was approved, we have made splendid progress in fields of flood control and hydroelectric power development. But I regret to say that our irrigation pro-

gram has not come along as fast as we had hoped. There are a number of reasons for this but I assure you that the Department of the Interior has never relaxed its efforts, and we intend to reach the kind of irrigation goals that this State and this region need so urgently.

In a year like 1951, when, if anything, North Dakota received too much rain, we are likely to forget the terrible consequences of a drought like that of the thirties. It is human, I am afraid, to take action to relieve our adversities only when they are upon us.

It would be a healthy thing, I believe, for us to look back 15 years while we are reveling in the warm, rosy glow of optimism for the immediate future of North Dakota.

In the worst year of the drought, more than half the people in North Dakota were on relief. The State lost more than 5 percent of its population. Businesses failed by the hundreds and the State was seized with a gloomy atmosphere of defeat and depression. The farmers in six counties in northwestern North Dakota were forced to sell nearly half of their cattle and over a third of their sheep and lambs. From 1930 to 1933 the farmers in these same six counties had to abandon 31 percent of their crops. The figure was greater than 50 percent in 1934 and 1936, the 2 worst years. Relief expenditures for the seven Great Plains States during the drought totaled a staggering billion and a quarter dollars. That figure still greatly exceeds all that has been spent in the many years since for Missouri Basin development as an offset against such adversities.

Communities in irrigated portions of the Great Plains grew and flourished throughout the drought. Scott Bluff County, Neb., which includes part of the North Platte irrigation project, gained 18 percent in population during the critical decade from 1930 to 1940. The city of Scottbluff gained 45 percent during that time, although the population of Nebraska as a whole declined almost 5 percent.

The statistics on the terrible effects of the great drought in North Dakota are frightening facts when we view them, as we must, in the light of the certainty that drought will come again to the Great Plains. It may be decades before we are visited again with a drought of that duration and intensity, but such a one might begin next year. Whenever it comes, we had better be prepared to meet its problems. There is no better insurance than irrigation, and year in and year out, irrigation will pay its way. The industries which will come to North Dakota as a result of developments in lignites, petroleum, and hydroelectric power will help greatly to ameliorate the effect of a drought. But North Dakota will remain dependent to a large degree on stable agriculture.

The plan approved by the Congress in 1944 contemplated the irrigation of 1,260,000 acres in North Dakota, a far larger acreage than that contemplated for any other States in the Missouri River Basin. I hate to have to say that so far not an acre in North Dakota has been irrigated under the 1944 authorization.

Through all of these years the Interior Department, as I have said, has exerted constant effort to go forward on an orderly schedule. The problems we have faced have been many and unique. One of the principal ones has been lack of a lively interest on the part of you people here in North Dakota in furthering irrigation development during these years of adequate rainfall.

Another obstacle has been questions which have been raised with respect to the suitability of some of the land in the original plan for irrigation development. The Interior Department cannot invest hundreds of millions

of dollars in irrigation facilities unless it is reasonably certain that the lands supplied with water can be made productive through irrigation. You know, of course, of the questions raised concerning the Bowbells block. After conferences in Washington last week, the Bureau of Reclamation and the State, through your governor, are to select a joint review board to pass judgment on the facts disclosed. Whatever the fate of the particular area in question, additional studies have disclosed that there are hundreds of thousands of acres in North Dakota of fine land that are irrigable and that meet any proper standards. The Missouri-Souris plan, itself, is still very much alive and could survive the loss of the Crosby-Mohall area. The Federal Government and you of North Dakota, however, would be foolhardy indeed if we should proceed with any specific construction except the best plan that can be devised to include land that is certainly, permanently usable under irrigation.

Still another problem is that of adapting our irrigation policies prescribed by law to the requirements of farmers in an area like this where sufficient rainfall for profitable dry-land farming is received in a substantial percentage of the years. Federal irrigation programs have had their greatest success in the areas of the West which are completely arid. In those cases, the value of irrigation was clear and farmers were quick to agree to repay the cost of irrigation facilities to the extent of their ability.

Not so in the Great Plains area. Here we must find ways of contracting with farmers which are satisfactory to them and which, at the same time, will also protect the Government's investment in irrigation facilities.

This problem is nowhere better exemplified than in the Heart River Division of the Missouri River project right at your doorstep. The Department of the Interior has constructed two reservoirs on the Heart River for irrigation and flood-control storage. They served remarkably well in alleviating flood damage, notably in the Mandan area, during the spring runoff in 1950. The irrigable lands of the Heart River Division are largely parts of farms utilized for livestock enterprises under dry-farm conditions, all privately owned. On Saturday, I intend to hold a public hearing in Mandan to get from the farmers involved their views as to how they would like to see irrigation development go forward. From this hearing I am hopeful that we can find a solution to the irrigation problem of the High Plains area. The farmers, we know, are eager to have irrigation, we in the Interior Department are eager to provide it. We are hopeful that we can find the answer.

Meanwhile, the Department has made good progress, though on a limited scale, in development of the Buford-Trenton project over near the Montana border on the Yellowstone River. In that area 12,000 acres have been brought under irrigation.

An irrigation contract recently has been completed with the Fort Clark Irrigation District, about 50 miles north of Bismarck on the Missouri River. It is a pumping unit in the Missouri Basin comprehensive plan.

Progress is being made. You can have confidence that the Interior Department will continue to work on the problem of North Dakota irrigation until satisfactory solutions are found.

The balanced development of lignites, petroleum, hydroelectric power, and irrigation will make North Dakota stronger and in doing so contribute a vital part to the strength of the Nation as a whole. That strength is important in these times when the clouds on the international horizon require a position of strength on our part. The time has gone when you of North Dakota can be complacent about the thousands of miles which separate you from the oceans in a critical international situation. Jet bombers

can reach you in a matter of hours from bases in the lands of potential enemies. The lands that separate you from the oceans, like the oceans themselves, are no longer barriers to the onslaughts of a determined enemy. Isolationism in that circumstance is just as wrong as complacency about North Dakota droughts.

All of us must realize that our welfare and security demand a program of assistance to our friends abroad. Strong as we are, we cannot go it alone. We have no sensible alternative other than stopping of aggression in other lands, whether it be by force of arms or the power of economic assistance. We have found strength in unity at home and we must seek it in a common purpose among the earth's free peoples.

The future of North Dakota is a bright one. It can't help but bring you better business conditions than you have ever before experienced. I know that you will take action to correct the few unsatisfactory elements in the picture. We in the Department of the Interior are ready to go down the line with you for a greater North Dakota.

One-Man Crusade

EXTENSION OF REMARKS OF

HON. HENRY C. DWORSHAK

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. DWORSHAK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "One-Man Crusade," published in the New Orleans State of October 19, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ONE-MAN CRUSADE

The Senate's stoutest foe of corruption in Government is JOHN J. WILLIAMS, of Delaware, who was little known in his native State, and unknown outside of it, when he was elected to the United States Senate in 1946. How he ever got into Congress is one of those inexplicables of politics. When destiny tapped him on the shoulder he was a small town grain and feed merchant.

In the Senate he remained silent for 2 years, with freshman propriety, but his inquisitive mind was neither silent nor inactive. Senator WILLIAMS was unobtrusively exploring corruption and malpractice in the Internal Revenue Bureau, following leads he had dug up himself.

When this hour for action came, a little less than 2 years ago, he presented the Senate one shock after another of the weird tax-collection laxities in the revenue department, always with quiet voice but a determination not to be silenced, nor diverted from his course.

What ensued in the shape of disclosure of political manipulation of tax collection, of favored treatment of big shot politicians and their allied racketeers, must be familiar to all who read the newspapers.

WILLIAMS prodded the Revenue Bureau into a clean-up. There were resignations, including that of the commissioner. There were dismissals. There were indictments. There were lamentable exposures of graft, corruption, negligence, favoritism.

The whole rotten mess now is being explored by Senate and House investigating committees, grand juries, and the courts. The inquiry was set in motion by the Delaware Senator. He pointed the probers at

the shocking fraudulence unearthed in Kansas City, St. Louis, northern California, Nevada, Boston, and the strong suspicion of it in Detroit, New York, and possibly other revenue districts.

Senator WILLIAMS has forestalled the loss of untold millions of dollars of tax revenue to the Treasury, by compelling more efficient collection and action against delinquents, and by ending the unholy alliance between political bosses and the Internal Revenue Bureau staff.

With a few more Members like him in the upper House, the problem of corruption in the Government might soon vanish.

The Need for Development of the Mulberry, Sipsey, and Locust Forks of the Black Warrior River, for Flood Control, Navigation, Hydroelectric Power, Soil and Water Conservation Is Urgent

EXTENSION OF REMARKS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. ELLIOTT. Mr. Speaker, as this first session of the Eighty-second Congress comes to a close, I desire to call the attention of the House to the great need for the future development of the headwater streams of the Black Warrior River. I refer to the Mulberry Fork of the Black Warrior, the Sipsey Fork, a tributary of the Mulberry Fork, and the Locust Fork of the Black Warrior.

These streams lie above lock and dam 17 on the Black Warrior, in Alabama, and with their tributaries they serve as drainage arteries for some 2,000 square miles of area, lying largely in Walker, Winston, Cullman, Blount, and Jefferson Counties.

These streams form the headwaters of the great Warrior-Tombigbee River system, and tie the high-grade coals of the Warrior coal field, and the steel of Birmingham, by water highway to the great gulf port at Mobile.

As the area served by these headwater streams—the Mulberry Fork, the Sipsey Fork, and the Locust Fork—grows in industrial importance, and in my judgment the coal, iron ore, limestone, clays, timber, and possibly oil of the area assure its continued growth, the need for developing these streams with an area-wide perspective will become increasingly acute.

These rivers should be developed with the objectives of flood control, increasing their navigation potentials, recapturing the kilowatts of hydroelectric power inherent in their racing waters, the conservation of water for increasing industrial uses, the prevention of soil erosion in the drainage area, and other allied purposes.

Mr. Speaker, in order to get the work started, on yesterday, I introduced H. R. 5797, which has been referred to the House Committee on Public Works, and for the enactment of which I will press with all the vigor and ability I possess during the next session of Congress.

As I see it, the streams of America are one of the greatest, if not the very greatest natural resource we have in this country. These streams should be developed for the use and benefit of the people of the United States. I am confident that the Corps of United States Engineers will find improvements on these streams, such as locks and dams, to be economically justified.

Mr Speaker, under leave to extend my remarks in the RECORD, I include a copy of my bill, H. R. 5797, as introduced on October 18, 1951.

H. R. 5797

A bill to authorize a preliminary examination and survey for flood control, navigation, hydroelectric power, water conservation, and allied purposes

Be it enacted, etc. That the Secretary of the Army is authorized and directed to cause a preliminary examination and survey for flood control, navigation, hydroelectric power, water conservation, and allied purposes of Warrior River and its tributaries, above lock and dam 17, Alabama, to be made under direction of the Chief of Engineers, and the Secretary of Agriculture is authorized and directed to cause a preliminary examination and survey to be made for runoff and water-flow retardation and soil-croscion prevention on such drainage area, the cost thereof to be paid from appropriations heretofore or hereafter made for such purposes.

Also, Mr Speaker, I include information about the Black Warrior, Warrior, and Tombigbee Rivers taken from a pamphlet prepared by the Office of the District Engineer, Corps of United States Engineers, Mobile, Ala., as last revised in May 1948.

BLACK WARRIOR, WARRIOR, AND TOMBIGBEE RIVERS, ALA.

GENERAL INFORMATION

Rivers included in the project. The river system that is improved and maintained under the project for the Black Warrior, Warrior, and Tombigbee Rivers, Ala., is composed of the Mobile River, Tombigbee River, Warrior River, Black Warrior River, Locust Fork of Black Warrior River, Mulberry Fork of Black Warrior River, and the Sipsey Fork, a tributary of the Mulberry Fork. The Warrior and Black Warrior Rivers are in reality the same river with the name changing at Tuscaloosa, Ala., the section below Tuscaloosa being the Warrior River and the section above Tuscaloosa the Black Warrior River. The two names are used to conform to the names used in the congressional acts authorizing the improvements of the two sections. These rivers, together with Mobile Bay, form a waterway from the coal fields of northern Alabama and the industrial district of Birmingham, Ala., to the Gulf of Mexico.

The lower limit of the project is on the Mobile River 4.75 miles above its mouth, at its junction with Chickasaw Creek and beginning at this point the portion of each river composing the system is as follows:

Mobile River, from Chickasaw Creek to the junction of the Tombigbee and Alabama Rivers, 42 miles.

Tombigbee River, from its mouth to the mouth of the Warrior River near Demopolis, Ala., 177 miles.

Warrior River, from its mouth to Tuscaloosa, Ala., 129 miles.

Black Warrior River, from Tuscaloosa to the junction of the Mulberry and Locust Forks of the Black Warrior River, 46 miles.

Mulberry Fork, to a point 46 miles above its mouth, 46 miles.

Sipsey Fork, to a point 5 miles above its mouth, 5 miles.

Locust Fork, to a point 22 miles above its mouth, 22 miles.

Total length of rivers included in the project, 467 miles.

Location: The entire river system lies within the State of Alabama, having its source in the northern part of the State and flowing in a general southwesterly direction and emptying into Mobile Bay at Mobile. Above Tuscaloosa the territory traversed is mountainous, while the territory traversed below Tuscaloosa varies from rolling to marsh land. The principal towns located on the system are Mobile, Jackson, Demopolis, Tuscaloosa, Cordova, and Port Birmingham. Port Birmingham, on Locust Fork 11 miles above its mouth, is connected with Birmingham by rail and paved highway.

Authorization of project: The first project for the improvement of this system was adopted in 1871, and covered the Tombigbee River below Demopolis. Subsequent to the adoption of the original project, the improvement of other sections of the system was authorized by various acts of Congress, and the act of June 13, 1902, merged all projects into the one project under the title, "Black Warrior, Warrior and Tombigbee Rivers, Ala." Various acts of Congress have since extended the project to its present limits.

The two most recent are (1) the River and Harbor Act of August 30, 1935, which added the Mobile River to the project and authorized the construction of a lock and dam at Tuscaloosa to replace three low-lift locks and dams, the construction of 12-foot crest gates on dam 17, and the dredging of a cut-off channel in the vicinity of Sunflower Bend on the Tombigbee River and (2) the River and Harbor Act, of March 12, 1945, which authorized the construction of a lock and dam near Demopolis to replace locks and dams Nos. 4, 5, 6, and 7, and an increase in the capacity of the spillway at lock No. 1 by increasing its length.

Black Warrior, Warrior, and Tombigbee Rivers—Table of locks

	Mile ¹	Year constructed	Length (feet)	Width (feet)	Depth over miter sills (feet)	Lift (feet)
Tombigbee River.						
Lock 1	101.6	1909	281.9	52.0	8.0	12.0
Lock 2	172.6	1915	296.0	52.0	8.5	8.8
Lock 3	195.6	1915	296.0	52.0	8.5	10.1
Lock 4	221.3	1908	285.6	52.0	8.5	10.3
Warrior River						
Lock 5	230.5	1908	285.6	52.0	8.5	9.8
Lock 6	257.3	1908	285.6	52.0	8.5	9.9
Lock 7	272.0	1903	284.7	52.0	8.5	10.0
Lock 8	298.9	1903	284.7	51.65	8.5	9.0
Lock 9	304.5	1902	284.7	52.0	8.5	11.2
Tuscaloosa lock	250.2	1939	490.0	95.0	10.8	30.0
Black Warrior River						
Locks 10, 11, 12 inundated.						
Lock 13	359.5	1905	285.5	52.0	10.6	11.1

Lock 15	369.8	1910	282.1	52.0	9.5	14.0
Lock 16	376.0	1915	285.5	52.0	9.5	21.0
Lock 17	377.4	1915	285.5	52.0	8.5	72.0

¹ From Government St., Mobile (Bankhead Tunnel).

TERMINALS AND COMMERCE

TERMINALS

There are two public terminals within the limits of this project and three public terminals at Mobile, Ala., immediately below the lower limit of the project, all of which serve traffic on this river system. The descriptions of these public terminals follow. Mileages shown represent the distance from the foot of Government Street at Bankhead Tunnel, Mobile.

Mobile, Ala., mile 0.25, foot of St. Michael Street: Character of facility: Municipal dock; served by Gulf Mobile & Northern Railroad and city streets. Purpose for which used: Interchange of package freight between barge, rail, and motortruck carriers. Owner: City of Mobile.

Mobile, Ala., mile 1: Character of facility: State docks; served by Public Belt Railroad and city streets. Purpose for which used:

Channel, locks, and dams: The primary objective of the improvement is to provide all-year water transportation from the high-grade coal fields of Alabama and the Birmingham industrial district of the Gulf Coast. This has been accomplished by the construction of a system of locks and dams and by dredging and snagging. The existing lock system consists of 16 locks and 15 dams, the extra lock being at dam No. 17. The lifts vary from a minimum of 8.5 feet to a maximum of 72 feet, the high lift being at lock and dam No. 17, where 12 feet were added to the height of the dam in 1937 by the construction of vertical lift steel gates on its crest. This lift of 72 feet is equally divided between two locks in tandem. All except one of the locks are constructed of concrete, the one exception being constructed of stone masonry. The lock gates are made of structural steel and are of the mitring type. All locks, with the exception of the one at Tuscaloosa, are approximately the same size, the controlling inside dimensions being 52 feet in width and 282 feet in length, and 8 feet minimum depth over miter sills, making the size of tow that can be handled in one lockage 50 feet in width and 280 feet in length.

The dams are all of the fixed type with the exception of dam No. 1 and dam No. 17. Dam No. 1 is equipped with A-frames which are raised and lowered manually. Dam No. 17 has vertical-lift gates operated by power machinery. Six of the dams are of concrete, one of stone masonry and eight of stone-filled timber crib type, and they vary in length from 299 feet to 1,170 feet.

A channel width of 100 feet and controlling depth of 8 feet is maintained throughout the year over the entire system. The existing project provides for increasing the depth to 9 feet, and the width to 200 feet, where practicable; the construction of a new lock and dam near Demopolis, and increasing the spillway capacity at dam No. 1.

Interchange of all freight between carriers. Owner: State of Alabama.

Mobile, Ala., mile 1, east bank: Character of facility: Electric track crane and wharf, served by railroad and United States Highway 90. Purpose for which used: Interchange of coal and ore between all carriers and also with storage yard. Owner: Federal Barge Line.

Tuscaloosa, Ala., mile 353.4: Character of facility: Derrick loading platforms, and warehouse (area 4,500 square feet); served by Belt Line Railroad and improved highway; purpose for which used: Interchange of miscellaneous package freight between barge lines, warehouse, rail and motortruck carriers; owner: City of Tuscaloosa, leased to private interests.

Port Birmingham, Ala., mile 408.1: Character of facility: Two electric derricks and warehouse (area 36,900 square feet);

equipped with overhead electric trolley system, served by tracks of Warrior River Terminal Co. and by paved road, purpose for which used Interchange of all commodities between barge, rail, and motortruck carriers; owner: Federal Barge Line.

In addition to the above public terminals, there are numerous private loading stations, consisting principally of derricks on the bank of the river, coal-loading chutes, and pipelines and pumps for handling oil. These privately owned terminals do not serve the general public. Of the privately owned terminals, the terminal owned by the Warrior & Gulf Navigation Co. is the most important. This terminal is described as follows:

Port Birmingham, Ala., mile 408.6: Character of facility Electric gantry cranes served by tracks of Warrior River Terminal Co. and paved highway, purpose for which used Interchange of manufactured steel, pigs, billets, ores, and sulfur between barges and railroad cars.

Tows and towboats: A typical tow consists of a towboat and seven barges, each of the barges being 25 feet wide and 140 feet long, with a draft of 8 feet when loaded, capacity of each barge being 500 tons. This size tow can pass through the locks in two lockages and also navigate the sharp bends with a minimum of delay in maneuvering. The recent increase in river traffic has resulted in some use of 11 barge tows instead of the 7 barge tows formerly used for through traffic. Although the larger tows have some difficulty in navigating the river and require three lockages to pass through the small locks, the gain in tonnage carried more than compensates for the added travel time.

Types of towboats used, include Diesel electric twin screw, steam twin screw, and Diesel and steam stern wheel. The dimensions of the towboats operated by the Warrior & Gulf Navigation and the Federal Barge Lines are 25 feet wide, 140 feet long, with a draft of 7 feet. The barges are of the hopper type and are used as open barges or with covers consisting of frames in portable sections that are covered with tarpaulins, the nature of the cargo determining whether or not the open or the covered barge is used.

COMMERCE

This river system in its unimproved state was navigable as far upstream as Demopolis, Ala., only about 8 months of the year, and as far upstream as Tuscaloosa, Ala., about 4 months of the year. Above Tuscaloosa there was no navigation except at extreme high water and then only by rafts. For these reasons commerce was very small. As the improvement of the system developed, commerce increased slowly until the year 1915, when lock and dam No. 17 was completed and placed the navigable channel within reach of the Birmingham industrial district and the coal fields of north Alabama. The trend-of-tonnage chart shows the movement of tonnage from 1915 to the end of 1946. Since the beginning of 1947 there has been a very pronounced upward trend and, according to preliminary information received from shippers, carriers, and other sources, the 1948 tonnage will probably equal or exceed the peak years of 1929 and 1941.

Prior to the improvement the cargo consisted principally of packet freight, rafted logs, lumber, cotton, and other farm products. Since the improvement there has been a considerable increase in the variety as well as volume of cargo, the principal items of cargo handled at present being gasoline, oil, sugar, sand and gravel, manganese ore, sulfur, canned goods, sodium sulfate, phosphate rock, fuel oil, crude rubber, fertilizer, coffee and salt, iron and steel, limestone, coal, pulpwood, barged logs, rafted stone, pig iron, lumber, slag, billets, fullers earth, and cotton. In the past downstream

tonnage represented about 80 percent of all river commerce. At present, however, due to the large upstream shipments of oil and gasoline, river commerce is nearly equally divided between up-bound and down-bound tonnage.

RECENT IMPROVEMENTS

TUSCALOOSA LOCK AND DAM

Location: Tuscaloosa lock and dam, completed in 1940, is located 350.2 miles above Mobile on the Warrior River within the corporate limit of the city of Tuscaloosa, Tuscaloosa County, Ala.

General description: Tuscaloosa lock and dam is the first modern structure with higher lift and larger lock to replace any of the present low dams and small locks for the ultimate development of the Black Warrior, Warrior, and Tombigbee Rivers for navigation.

The new lock and dam has a lift of 30 feet and replaces old locks and dams Nos. 10, 11, and 12 which were removed to provide a clear channel for traffic. The lock is constructed of concrete, has a clear inside width of 95 feet and is 460 feet long, with a minimum depth of 10.8 feet over the miter sill. It was designed to pass the largest standard tow for this river system in one lockage. A three-story concrete building located on the inside lock wall, houses the power machinery necessary for the operation of the lock gates.

The dam is a fixed-crest, gravity type, constructed of concrete and has a spillway 700 feet long. A fish ladder is located on the abutment at the right bank end of the dam.

Construction of Tuscaloosa lock and dam was started January 1937 and was completed and accepted on April 30, 1940.

CREST GATES ON DAM NO. 17, BLACK WARRIOR RIVER, ALA.

General: Lock and dam No. 17 was completed in 1915. It is located on the Warrior River at mile 377.4 above Mobile. In 1937, crest gates were constructed on the original dam which raised the pool elevation 12 feet and extended the navigable channel 13 miles into the rich coal field of north Alabama.

The gates are the vertical-lift type and are operated from two cars located on the bridge above the gates. These cars travel the length of the dam on a rail track and contain the Diesel-powered hoisting drums used to lift or lower the crest gates. There are 20 gates 52 feet in length and two gates 24 feet in length installed between concrete piers.

Stop logs are used to block the space between the piers when it is necessary to make repairs to the gates. The stop logs are handled by a revolving crane which is also used for removing drift that accumulates above the gates.

Benefits: The construction of these gates in addition to extending navigable water into the coal fields of north Alabama, increased the depth and width along other sections of the river above dam No. 17, which is of considerable aid in navigating the numerous sharp bends on Locust and Mulberry Forks.

Construction of these gates commenced in December 1935, and was completed on July 4, 1937.

SUNFLOWER BEND CUT-OFF

Sunflower Bend cut-off is located between miles 77.8 and 79.7 above Mobile on the Tombigbee River, in Clark and Washington Counties, Ala.

The combined length of the two cut-off channels is approximately 8,500 feet, which reduces the length of the river about nine miles. The channel was dredged to a depth of 11 feet below mean low water and has a bottom width of 150 feet.

Dredging was started December 1937 and was completed March 29, 1938. In addition to navigation benefits because of the shorter channel this improvement eliminates approximately 80,000 cubic yards of maintenance dredging annually.

IMPROVEMENTS AUTHORIZED

The River and Harbor Act approved March 2, 1945, authorized the construction of a new lock and dam near Demopolis and an increase in the capacity of the spillway at dam No. 1, by lengthening it 85 feet on the right bank. The proposed dam near Demopolis will consist of a gravity-type open spillway, 1,485 feet long, crest elevation 73 feet mal, a 40-foot lift lock 110 feet wide and 600 feet long. Demopolis lock and dam will replace existing locks and dams No. 4, 5, 6, and 7.

CONNECTING WATERWAYS AUTHORIZED

The Tennessee-Tombigbee waterway authorized by the River and Harbor Act approved July 24, 1946, will join the Tombigbee-Warrior waterway at Demopolis. This project, when completed, will provide a navigation channel not less than 9 feet deep with a minimum bottom width of 170 feet connecting the Tombigbee-Warrior waterway with the Tennessee River. Locks will be 110 feet wide by 600 feet long.

The Alabama-Coosa Rivers, Ala., project authorized by River and Harbor Act approved March 2, 1945, provides for a navigation channel 9 feet deep at low water from the mouth of the Alabama River to Montgomery, to be obtained by canalization.

AVAILABLE MAPS AND CHARTS

Navigation charts of the Black Warrior, Warrior, and Tombigbee project, Alabama River project, and the Gulf section of the intracoastal waterway, showing such features as connecting waterways, navigation aids, topographic and hydrographic features, bridges, overhead and submarine crossings, and other data have been prepared. These charts are separately bound and are available as follows from the District Engineer, Corps of Engineers, 2301 Grant Street, Mobile, Ala.:

Navigation charts of Tombigbee, Warrior, and Black Warrior Canalized System, price \$1.

Alabama River, Ala., navigation charts, price \$0.50.

Gulf Intracoastal Waterway, New Orleans, La., to Apalachee Bay, Fla., in 21 sheets, price \$1.

Alabama's Per Capita Income Increased 211 Percent 1940 to 1950; Her Vast Undeveloped Resources Indicate Great Growth in the Future

EXTENSION OF REMARKS OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. ELLIOTT. Mr. Speaker, the per capita income of Alabamians rose from \$269 in 1940 to \$836 in 1950, to triple from 1940 to 1950. This was a rise of 211 percent in 10 years, and compares with a Nation-wide rise of 150 percent for the entire period.

As we begin to be able to see the decade 1940 to 1950 in some degree of perspective, we are amazed at the tremendous economic growth of the Nation evidenced by an increase of the physical volume of output of more than one-half, an increase in population of 20,000,000 persons, and a reduction in unemployment from 8,000,000 to the present practical minimum of 2,000,000.

But, with all this, Mr. Speaker, Alabama still ranks fourth from the bottom

in average per capita income. This indicates again and again the need for greatly expanded industrial development, and increased processing by manufacture of its raw materials into finished products. Alabama's resources leave little excuse for her to remain a poor State.

Under leave to extend my remarks, I include an article styled, "State Income Payments in 1950," taken from the October 1951 issue of Alabama Social Welfare, published by the Alabama State Department of Public Welfare.

**STATE INCOME PAYMENTS IN 1950—DATA
RELEASED IN SURVEY OF CURRENT BUSINESS—
AUGUST 1951**

INCOME CHANGES OVER THE PAST DECADE

Alabama's per capita income has tripled in the last 10 years, rising from only \$269 in 1940 to \$836 in 1950. Even with this rapid increase Alabama still remains one of the poorest States, only 3 States having per capita income payments lower in 1950. It is somewhat heartening to Alabamians in noting that the percentage increase for Alabama (211 percent) from 1940 to 1950 in per capita income payments is much higher than it was for the Nation as a whole (150 percent). Per capita incomes have moved up at considerably above average rates since 1940 in the Southeast (which includes Alabama), Southwest, and Northwest—the three regions with the lowest income averages.

The last 10 years have been a period of tremendous economic growth for the Nation as a whole. The Nation's physical volume of output expanded by more than one-half, the population increased by 20,000,000 persons, and unemployment was reduced from 8,000,000 (one-seventh of labor force) in 1940 to 2,000,000 by the end of 1950, virtually a practical minimum in relation to the enlarged labor force.

In the southern and western areas every State received a larger share of the Nation's total income in 1950 than in 1940. In these regions the stimulus to income expansion during the war was unusually great, but, despite the impact of reconversion, these regions have largely retained, or actually increased the relative gains achieved in that period.

Government income payments increased threefold or more in the Southeast, Southwest, and far West between 1940 and 1950 and provided an unusually important impetus to total income growth in these regions. The chief element swelling total Government disbursements to individuals in these areas was the relatively large concentration of military personnel in them.

Agriculture was the only major income source in the Southeast and Southwest which did not advance at rates above the national average from 1940 to 1950. Of particular interest in this regard is the declining emphasis placed upon agriculture as an industry in these two areas. In 1940 nearly one-third of the employed labor force in the South was engaged in agriculture. By 1950 the proportion was down to one-fifth—a significantly larger reduction than that occurring nationally.

Even though per capita incomes have increased considerably since 1940 the dollar will not buy what it has in previous years. Recent releases from the Bureau of Labor Statistics indicate that the present purchasing power of the dollar is only 52 cents as compared with its value in 1935-39.

INCOME CHANGES FROM 1940 TO 1950

Per capita income payments to individuals were higher in 1950 than in 1949 in every State of the Nation with the exception of

one. The year 1950 opened on a strong note of recovery from the business downturn of 1949. Alabama's per capita income increased from \$767 in 1949 (revised 1949 figure) to \$836 in 1950; that for the Nation increased from \$1,320 in 1949 to \$1,436 in 1950—approximately a 9 percent increase in both instances. Percentage distribution of major sources of income payments in Alabama and the United States in 1950 were as follows:

	Alabama	United States
	Percent	Percent
Agricultural income	11.5	7.5
Government income payments	20.5	16.2
Manufacturing payrolls	20.6	22.6
Trade and service income	21.9	26.3

There was a 14 percent rise from 1949 to 1950 in Government income payments (15 percent for Alabama). The 1950 Government life insurance dividend disbursement was of considerable importance in swelling total incomes throughout the Nation. Because of its relatively uniform distribution, however, it had little effect on differences among States. As a result of the heavy concentration of military payrolls in the two Southern regions, together with the relatively large increase in them, however, these two areas scored above-average gains in income flowing from the Government.

**States ranked according to per capita
income payments, 1950**

United States	\$1,436
District of Columbia (1)	1,986
Delaware (2)	1,909

Defensive Japan

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. REES of Kansas. Mr. Speaker, I am including in the Appendix of the Record a statement of a constituent, Mr. William Douglas Leonard, of Wichita, Kans., wherein he expresses the opinion that agreement with Japan along the lines he outlines in this statement is essential at this time.

Last January our very able Hon. John Foster Dulles was empowered by the President of the United States to draft a peace treaty with Japan and given the title of Ambassador. After many months of conference with our now friendly nations and allies an agreement was reached by the majority of them, England, France, Holland, Australia, New Zealand, and others to sign said treaty on September 4 at San Francisco, Calif. All members of the United Nations are invited to attend the signing and as witnesses, but of course may or may not sign as they desire. Russia and one or more of her subjected nations may attend but will not be expected to sign and may state their objections, if any, but that is all the latitude to be allowed them. After the signing the approval of the United States Senate is necessary, but there is no doubt of the ratification.

By the terms of the treaty Japan is allowed a limited rearmament. Our troops, naval, and air forces to remain and occupy bases until Japan is in position to defend itself. While Japan becomes a sovereign nation, she in fact only becomes a weak defensive one. The treaty covers many subjects and is good as far as it goes but does not go far enough.

Immediately after the signing of this treaty the United States and Japan will sign a military bilateral treaty, providing that in case either nation is attacked the other will come to its defense, and so forth. This is excellent, placing Japan in a very favorable position but is not sufficient. A much stronger treaty is required by the present world status.

Japan armed to the teeth as the ally of the United States is the key to world peace.

Secretary of State Acheson claims the United States will be compelled to expend \$25,000,000,000 in Europe in the next 3 years to preserve the present unstable peace. The facts to be stated hereafter can do so with approximately one-fifth of that amount if commenced at an early date.

As soon as the Dulles treaty becomes effective, Japan becomes a sovereign nation and an additional bilateral offensive and defensive treaty should, be concluded with her, irrespective of the objections of any other nation, for a period of 25 years for the purpose of preventing the spread of communism in Asia and elsewhere if necessary to preserve world peace.

It would cost the United States several billions of dollars, (possibly 5) to supply Japan with arms, machines, tools, airplanes, munitions, and other instruments for war and for other necessary purposes.

Japan to grant the United States all bases for any purpose desired and agree not to bear arms against any other nation during the life of this treaty without the approval of the United States.

While not necessary it would be of great importance in the eyes of the nations of

Asia and the Communists in general if the President of the United States and the Emperor of Japan personally sign the treaty which of course has to be ratified by the United States Senate.

A militant Japan, armed to the teeth at the back door of Russia would turn the growling Russian bear into a timid white rabbit. Russia would plead for any kind of peace and in the years to come, sooner than expected possibly, communism would die a natural death.

Europe would be saved as Russia fears two wars at once, knowing we would have the whip hand in Asia and could devote our attention to our European allies. Russia also fears the eventual taking over by Japan of Siberia and her loss of domination of Outer Mongolia and Tana-Touva. She is too much afraid of Japan to ever attack her.

Japan has made wonderful progress in the manufacture of steel. All her factories are intact and ready for use for war purposes, awaiting machines and tools to commence work. A 7-day week will be looked upon as no hardship by its labor—only as a matter of duty.

Japan has from ten to twelve million fighting men ready and willing to fight, if called to; an unlimited number of skilled and unskilled labor. Her people are very adaptable and a few weeks of training can turn her ordinary labor into skilled labor.

The Nation can be placed on a wartime footing in a matter of weeks if provided with equipment and material.

Japan is, with one exception, the only Nation we can count on in Asia and desires more than anything to remain her place in the sun and in the family of free-loving nations and as our ally is willing to do anything asked of her. The mere fact of her being armed will be enough to tranquilize Asia as every Asian nation fears Japan and would fear to antagonize her.

The Book From Here to Eternity

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Saturday, October 29, 1951

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a letter written by Gerald Kennedy, bishop of the Methodist Church of Portland, Oreg., to the Christian Century, July 18, 1951, dealing with the book entitled "From Here To Eternity," written by James Jones.

There being no objection, the letter was ordered to be printed in the Record, as follows:

FROM HERE TO ETERNITY

"IT IS AN ANTI-UMT TRACT," SAYS BISHOP

SIR. I have just read From Here to Eternity by James Jones (Scribner, \$4.50). It is a first novel and promises to reach a new high as a best seller. Part of its appeal is a copious use of four-letter words and a frank discussion of (one might almost say a morbid fascination with) a soldier's sex experiences, which run all the way from adultery to homosexuality. It portrays a shameful sadism in an Army prison, and the only nobility to be discerned is in the stubborn rebellion of a few private soldiers against the whole military system. Here, in a word, is one man's description of our peacetime

army. Any number of former GI's have told me that this is about the way it was even in wartime, and a number of men with first-hand experience have assured me that it is even more difficult to maintain morale and morals during peacetime.

Now the thing that interests me in all this is the barrage of propaganda put down by UMT proponents which blithely ignores everything that From Here to Eternity reveals. I should like to ask these brethren if this is the way military life is, what are they proposing to do about it? Is there any guaranty that they will make it different? More serious than that, is there any way it can be made much better even if their intentions are entirely honorable? My guess is that, when military training becomes the central thing, everything else takes on a secondary importance and hence fares about the same as a snowball in you know where.

Before UMT is voted on by Congress—as it will be sometime soon—let every parent read the book and ask if this is the kind of environment he wants to throw about his son. And if you are still on the fence, read the book and ask for precise methods of preventing these degrading experiences being offered our sons. Let me stress that actual plans and procedures must be clearly defined and written into law that will convince our educators. The kind of generalities which have been characteristic of the UMT proponents so far can be trusted about as far as you can throw a tank.

James Jones may be horrified to hear that his book is regarded by a benighted bishop as propaganda against UMT. I have no doubt that this was far from his mind when he wrote it. But that is precisely what makes it a tract for the times. Our historic American faith is that the military represents a necessary arm of society to whom we owe our profound respect and our service. But that same faith, on the basis of plenty of evidence, assures that the military makes a very bad master. We ought not to deny that faith from here to eternity.

GERALD KENNEDY,

Bishop, Methodist Church, Portland, Oreg.

Address by Senator Chavez

EXTENSION OF REMARKS

OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address delivered by me at a luncheon of the Associated Third Class Mail Users, at Milwaukee, Wis., October 18, 1951.

There being no objection, the address was ordered to be printed in the Record, as follows:

Ladies and gentlemen: It is a great pleasure to come to Milwaukee at the invitation of Associated Third Class Mail Users to meet with you, the leaders in the mail-order field. My good friend and colleague in the United States Senate, OLIN D. JOHNSTON of South Carolina, had hoped to be here on this occasion, but as the first session of the Eighty-second Congress draws to a close, he, as chairman of the Senate Post Office and Civil Service Committee, finds it necessary to remain in the Nation's Capital to participate in the debate on a number of important bills which come under his leadership.

Senator JOHNSTON has never been to Wisconsin and both he and his lovely wife had looked forward to spending a few days in this great State. The demand for his presence in the Senate, therefore, has deprived him of the opportunity to meet you good people.

You will have other conventions and other meetings, and you will be missing a good bet if you do not invite Senator JOHNSTON to address you at some future time. He knows the postal picture better than most men, and you mailers are indeed fortunate that he is at the helm of a committee which handled legislation so vitally important to all of you.

I served for 10 years on the Senate Post Office and Civil Service Committee and was ranking minority member during the Eightieth Congress. When my party regained control of Congress in 1949, I had a choice of heading up either that committee or the Committee on Public Works. I chose the latter assignment, for, frankly, my own State of New Mexico is more vitally affected by public-works legislation than it is by postal legislation.

That is not to imply that New Mexico has no concern with postal matters. To the contrary. The mailman to us is more important than he is in more densely populated States. It has always been my view that a sound post-office system has been one of the major factors in the development of our great Nation. The vast reaches of the Western and Southwestern States have served to isolate many of our people. The department store is not a streetcar ride away.

The rancher cannot walk a block and get the afternoon edition of a newspaper. The lonely miner cannot get his supplies by local delivery truck.

All of these Americans must look to the post office to deliver the free press and essential products purchased from afar. They look to you mailers to supply many of their needs. You will be able to provide that service as long as we have an efficient postal service operating under reasonable rates.

One thing is certain—America would not be the great country it is today if the Congress had insisted that the Post Office Department operate at a profit.

And it is this very profit question which has caused us so much wrangling before our Post Office Committees and in the Halls of Congress. The Postmaster General has asked us several times to go on record to the effect that the Department is and should be a service organization; that deficits must be expected. I believe he is entitled to such a policy statement from Congress and it soon may become possible for us to give it to him.

The speaker who preceded me, James J. Doran, has pointed out that 39,000 district offices operate at a loss. These are the smaller post offices which service widespread rural and mountain populations. They can never be expected to operate at a profit. No one will question the right of the lonely rancher way up the canyon to have his mail delivered to him, but let us not delude ourselves into believing that a 3-cent stamp fully covers the cost of that service. The citizen has got to be subsidized not by one group of mailers but by all of the people.

If a private business corporation were operating the Department, the board of directors would undoubtedly vote to close down all offices which did not show a profit. That is standard operating procedure under the capitalistic system. But, can you imagine the roar of disapproval that would sweep across the plains and over the mountains of America, if millions of Americans were suddenly shorn of a service upon which they have come to depend for their very existence?

The question answers itself. No Congressman would ever vote to eliminate such

service Yet no one can deny that it costs a great deal of money to keep these 39,000 offices operating. Yet, it does, but so do a lot of other functions of Government. And I daresay, that outside of our expenditures for national defense there is no Government outlay of funds as warranted and profitably spent as the appropriation for the support of our great postal system.

That brings me to the bone of contention—How great shall the deficit be and which categories or mail are not and should now be paying more than they do? Here we get into that field of wrangling I mentioned before.

There is no rate making proceeding in America more important than that which concerns postage. Postal rates affect all of our people, the great and the small, the rich and the poor. Thousands of business organizations such as your own are vitally affected by any sudden increase in rates. As mailers, one of your most important cost items is postage. If we in Congress legislate unwisely, without full information or prudent study, our bad judgment will cause many of you to close your doors. Since the goods you market are produced by American labor, bankruptcy or depression affects thousands of American workers.

I have listened to a good many witnesses during my membership on the Post Office Committee, Government witnesses and businessmen alike. I believe I have a pretty good working knowledge of your problems and those of the Department. It is knowledge which has not been easily or casually acquired.

A decade of listening and study has been required to obtain that understanding. Since only a very small fraction of Representatives or Senators ever have the opportunity to study the postal problem so fully, their decisions presently must be based on the recommendations of the appropriate committees of Congress and the petitions received from the people in their own districts and States.

A vast volume of mail is directed to Senators and Representatives on the subject of postal rates. Undoubtedly, you gentlemen have generated some of it. In spite of all the words written on the subject, I believe you will find many of them confused because of the charges and countercharges constantly being made. Congressmen would like to make intelligent decisions on this most important of rate-making proceedings, but they lack the time and opportunity to delve into the question as deeply as they would like.

Postal rates are among the most difficult and complex of any of the numerous rates which Congress must assess. At the present time it is admitted by all concerned that the cost-accounting system of the Department is actually unable to tell us in any way the actual cost of handling any particular category of mail. The Department knows what the various categories produce, but is completely in the dark as to what it costs to handle a first-, second-, third-, or fourth-class delivery. The only thing it has been able to do is to arbitrarily apportion the deficit among the different classes—and this has often resulted in strange and irreconcilable figures. To note one example, departmental figures show that a third-class letter costs more to handle than a first-class letter—which is obviously impossible.

This being the case, I am opposed to rate making with such scanty and inaccurate information as the basis for setting rates for the entire postal service. In 1949 I wrote to the Senate Post Office Committee something which I feel holds true now more than ever, and I should like to quote from that letter. "Under the present circumstances," I wrote, "rate making is crude and arbitrary, with the less vociferous users of the mails,

and the general public, being in the poorest position to protect themselves. If we make rates now without a proper foundation of knowledge we may not only discriminate against the weak and force hardships and inequities on various groups, but we may start an inflationary spiral."

Before we make radical and unprecedented increases in the rates I feel that prudent and sober judgment dictates that we obtain all the facts and bring some searching insight into this problem.

I am opposed to the rate bill at this time, until we have the facts.

As you know, in the present session of Congress there was introduced a resolution sponsored by 9 members of the 13-man Senate Post Office and Civil Service Committee. I am told that Associated Third Class Mail Users were in the forefront sponsoring this legislation. The measure provides for a full study of the Post Office Department and the rate-making machinery. There is one charge consistently leveled at the Post Office Department—its failure to install modern business methods. Many experts feel that the adoption of these methods, including certain mechanization, would serve to so reduce the deficit that no rate increases would be required. I for one believe that there is a great deal of merit in these charges.

For that reason the resolution received my wholehearted support. The Postmaster General himself should welcome such a study. Certainly, if the joint committee created under the resolution, cooperating with representatives of the mail industry, comes up with some sound recommendations pointing the way to a substantial reduction in the Department's deficit, Mr. Donaldson should be happier than anyone. If he can give the American people better postal service at the same or lower rates, no one is going to kick very hard.

As many of you know, I participated actively in the debate on S. 1046, the bill to readjust postal rates. With respect to bulk third-class mail, I considered a 50-percent increase dangerous and unconscionable—and I said so on the Senate floor. I pointed out that this category of mail was increased 17 percent in the last rate bill and that the most which should now be asked was 25 percent. That is an over-all increase of 42 percent—a substantial hike in a very important cost item for thousands of small third-class users throughout America. I believe Mr. Donaldson made a serious error when he characterized third-class mail as junk mail. If, as he alleges, everybody who receives this deferred service, byproduct mail simply tosses it in the waste basket, then you gentlemen certainly are a pack of fools for throwing your time and money away so foolishly.

Your executive manager, Harry Maginnis, told me of a recent visit to Mr. Sheridan's office in the miscellaneous mails section of the Post Office Department. Mr. Sheridan is a fine young gentleman and nothing I say here will reflect ill of him. Mr. Maginnis informed Mr. Sheridan that he was there representing Breck's of Boston, a member of Associated Third-Class Mail Users, who had some problem or other having to do with a large mailing of their catalog. Mr. Sheridan remarked that he had just that morning received Breck's latest catalog and that he had ordered an item or two. The catalog had reached him via bulk third-class mail.

It is my contention that whatever medium is conducive to the marketing of products made by American labor is good for America and that all of us—the Post Office Department, the public, and Congress alike—should take a second look before we unjustly smear that medium. You gentlemen, through your business firms, are helping to make a better and greater America. I want all of you to know that you can count on my sup-

port whenever you are under unjust attack. As I have said, I know your problems, and I will always arise to defend you on the Senate floor whenever you are in the right.

Let me give you one parting bit of advice. A strong trade association is your most valuable ally. In any problem as complicated as postal rates, it is essential that you band together and gather the best information possible. Congressional committees are extremely anxious to hear from competent and expert witnesses. It lightens their burden and enables them to reach sounder decisions. In spite of the impression which has gained ground in some quarters, all wisdom does not repose within the walls of Federal bureaus. The representatives of Associated Third Class Mail Users presented your case intelligently and well. They have not made a nuisance of themselves, as many people sometimes do, but they have responded to the Congress' request for information in a speedy and cordial manner. I am only too happy to say this good word in their behalf.

In closing, allow me to quote from some of the statements I made when the postal rate bill was before the Senate last month. It sums up my philosophy on the postal question:

"One of the prime factors in developing our country has been the postal service. I stated earlier that when the founders of the Nation and those who gave us the written law of the land provided for post offices and post roads they intended to give service to the American people. It was not sheer caprice on the part of the founding fathers that they insisted on a postal service, and it is significant that the Postmaster General was one of the first Cabinet officers to be created along with the Secretary of the Treasury and the Attorney General.

"Recently we have heard comments that the Post Office must be run as a business, and that it should show a profit, or break even. This type of thinking is absurd and stems from ignorance. How would it ever be possible to develop such States as the Rocky Mountain States, or my own New Mexico, were it not possible for the remote farmer, lumberman, miner, to do his shopping and keep in contact with his friends and family via the mails?

"Of course the postal deficit is large. Much of that deficit is due to added burdens, subsidies for aviation, and other carriers, which have been tacked on to the postal budget. There is free Government mail. There are other burdens placed on the Department.

"Let us not be stampeded into an orgy of rate raising, only to discover that we have actually acquired no additional revenue and merely crippled the Department in the field of general public service, for which it was originally created."

Pawns, Not Satellites

EXTENSION OF REMARKS OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. SIEMINSKI. Mr. Speaker, satellites are obsequious dependents.

Is not an injustice committed on the floor of this House each time captive states bordering the Soviet Union are called satellites? They do not fawn to follow the foul fakers in the Kremlin.

Let us call them as we see them—pawns, not satellites.

Resolution of National Association of Railway and Utilities Commissioners, Resolution of Mountain Pacific States Conference of Public Service Commissioners, and Address Entitled "Valuation: the State Commissions, and Section 19A," by Clyde B. Aitchison

EXTENSION OF REMARKS

HON. ROBERT S. KERR

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. KERR. Mr. President, pursuant to the permission granted me during the course of the debate this afternoon, I submit for printing in the Appendix a resolution of the National Association of Railway and Utilities Commissioners; a resolution of Mountain Pacific States Conference of Public Service Commissioners, and an address entitled "Valuation: The State Commissions, and Section 19A," by Clyde B. Aitchison.

The resolutions and address are as follows:

CHARLESTON, S. C., October 18, 1951.

It is hereby certified that the annexed resolution was unanimously adopted by the National Association of Railway and Utilities Commissioners, at its annual convention, this day held

NATIONAL ASSOCIATION OF RAILWAY AND UTILITIES COMMISSIONERS.

GEO. H. FLAGG, *President*.

AUSTIN L. ROBERTS, Jr., *Secretary*.

"ANNEX"

"Whereas complete up-to-date valuation of the railroads is absolutely necessary for the proper functioning of the Interstate Commerce Commission in cost accounting, capitalization, regulation, reorganization, proceedings and other cases; and

"Whereas due to insufficient funds the Interstate Commerce Commission has been unable adequately to carry on this work, be it

"Resolved by the National Association of Railroad and Utilities Commissioners at its thirty-third annual convention, That it go on record as favoring such an increase in appropriation for the Interstate Commerce Commission, as will enable it adequately to bring and keep up its present valuation studies; be it further

"Resolved That the National Association of Railroad and Utilities Commissioners request the Committee on Interstate Commerce and the appropriation committees of the Congress, make every effort toward an adequate appropriation by the Congress for this purpose"

CHARLESTON, S. C., October 17, 1951

It is hereby certified that the annexed resolution was unanimously adopted by the Mountain Pacific States Conference of Public Service Commissioners in meeting assembled at Charleston, S. C., this day.

RALPH C. HORTON,

Chairman.

HOWARD FREAS,

Secretary.

"ANNEX"

"Whereas complete up-to-date valuation of the railroads is absolutely necessary for the proper functioning of the Interstate Commerce Commission in cost accounting, capitalization, regulation, reorganization, proceedings, and other cases; and

"Whereas, due to insufficient funds the Interstate Commerce Commission has been

unable adequately to carry on this work: Be it

"Resolved by the Mountain Pacific States Conference of Public Service Commissioners in meeting assembled this 17th day of October 1951, That it go on record as favoring such an increase in appropriation for the Interstate Commerce Commission, as will enable it adequately to bring and keep up its present valuation studies; be it further

"Resolved, That the Secretary and the State commissions of the conference request the Committee on Interstate Commerce and the appropriation committees of the Congress and the Senators and Representatives of the 11 Western States to make adequate appropriation for this purpose; be it further

"Resolved, That a similar resolution be prepared and presented to the executive committee of the NARUC for similar action at this convention.

VALUATION: THE STATE COMMISSIONS AND SECTION 19A

(An address before the National Association of Railroad and Utilities Commissioners, Charleston, S. C., October 18, 1951, by Clyde B. Aitchison)

The invitation to appear before you does not suggest the scope of this address. Having freedom of choice, I shall direct attention to a basic subject which recently has not received the consideration its importance should command. I shall recapitulate the early development and general concept of valuation as a factor in the rate-making process, the role of the State commissions, past and present, in that development; and shall call attention to pressing immediate problems which inhere in administration of section 19A of the Interstate Commerce Act, which provides for the valuation of the properties of carriers subject to the provisions of part I of that act. These matters are of concern to the States as well as the Federal Government. Many of the matters will be familiar and my remarks may be reminiscent, but I feel certain that some are but imperfectly understood and need to be stated clearly, and with greater force than I can command.

I

The concept of value as a basic factor in the determination of reasonable rates, or as a "rate base," evolved years before the enactment of the Interstate Commerce Act. It originated with certain early State commissions, and long antedated the famous opinion of Justice Harlan, *Smyth v. Ames* (169 U. S. 465), decided in 1898. This interesting fact was developed by the research of John E. Benton, for many years the able and forceful representative of the State commissions in Washington as general solicitor of this association after service as a member of the New Hampshire Commission and as Solicitor of the Bureau of Valuation of the Interstate Commerce Commission. Mr. Benton, speaking in 1937 at the exercises commemorating the semicentennial of the Interstate Commerce Commission, said:

"In this historic fair-return-on-fair-value rule, which in recent decades has been so often a stumbling block in the pathway of State regulation, and for which the United States Supreme Court is now so roundly condemned in some quarters, the Justice merely announced a rule which State commissions long before had developed for their own guidance, and extended the approval of the Court to elements, enumerated for consideration in applying that rule, which the reports of the State commissions showed they had long been considering.

"The State commissions, however, used fair return on value as a working rule, subject to other tests of reasonableness. It remained for a State legislature to make the rule statute law, and for the United States Su-

preme Court to engraft it upon the Federal Constitution."

Also interestingly, the cost of reproduction as a test of value gained a place in the famous fair-value rule of *Smyth v. Ames* because of the opportunistic argument of William Jennings Bryan before the Supreme Court, in his attempt to sustain the Nebraska maximum-rate law. His argument followed an earlier report of the board of secretaries in his State, who had applied cost of duplication as a test of value of railway property, instead of original cost. It was of common knowledge that the original cost of construction and the sums invested in the railways of the State during and following the Civil War were high, and swollen by wastes and rascalities which constituted a public scandal. The case came on before the court during the depression days of the nineties, and counsel for the State could well point out that whatever the cost of the road it would be far less if it were presently being constructed. In this way the court's opinion came to state that in ascertaining value "the present as compared with the original cost of construction" was to be considered.

But times change, and we change with them. A generation later, when railway construction costs had risen to a higher level, the railways seized upon and pushed to fantastic limits the cost of reproduction test, and thus turned this element of the rule to their advantage.

Without elaborating the point, it has seemed to me that the original cost versus reproduction theories were merely unconscious resort to marginal utility from the standpoints of the producer and the user of the service as a test of the worth of the transportation performed and utilized. Alfred Marshall would have said it was a question which blade of the scissors was entitled to the distinction of being the cutter. Again, those who urged the original-cost theory referred the public service to the law of agency, by which the principal (the public, users of the service) was bound to reimburse the agent (the carrier) for his reasonable outlays or reasonable use of his property for the benefit of his principal. Those who favored the fair-value test found analogy in the law of eminent domain—a forced taking of service, for which the Constitution insured fair compensation for the value of the thing taken.

Valuation and rate of return based thereon, together constituting fair return, became burning economic and political issues in the first decade of this century, in general simultaneously with enactment of numerous State statutes reducing passenger fares and freight rates. This movement was roughly contemporaneous with the agitation which brought about enactment of the Hepburn amendment of 1906, and the Mann-Elkins Act of 1910. Those acts gave the Interstate Commerce Commission for the first time workable powers for the fixation of freight and passenger charges by railroad. The same economic causes led to enactment of the 2-cent fare and the Cashman Act by the States, and to the vitalizing by Congress of the act to regulate commerce. During this period there were grave doubts as to the soundness of the financial structures and practices of the railroads, as to the accuracy and truthfulness of their accounts and records, and as to whether the roads were bearing their fair burden of taxation. These were times of investigations, and the facts developed engendered more investigations and more controversy. The value of the properties of the carriers, under the accepted rule in *Smyth v. Ames*, was a central point in all these controversies, but the facts were only imperfectly known, and many of the economic and legal theories governing their application were obscure, confused, and contradictory. Parenthetically, while we are now more sure of the facts, theories still remain in an enigmatical state.

So the Commissions, State and Federal, and courts and legislatures, as well as the carriers, in the first decade of the century generally took the fair-value test of *Smyth v Ames* as well settled as the law of the land. In applying the rule, there began the development of elaborate techniques for valuation ascertainment. The prime issue was confiscation, as in the *Smyth-Ames* case; secondly, it was recognized that value was a necessary factor in solving the problems of the infant art of cost-accountancy and determination of the relation between the cost and price of particular services. Incidentally, questions of taxation and capitalization were involved. The carriers had the advantage of the longer purse than the public authorities, and more experienced and better organized staffs of experts; besides, they had the most at stake and therefore could be more aggressive than quasi-judicial public authorities. The public authorities had to be consistent, the carriers were not under the same disability.

The original act to regulate commerce (sec. 20) required reports from the carriers as to "the cost and value of the carrier's property, franchises, and equipment." This provision is still in the act. In 1888 the Interstate Commerce Commission reported to Congress that it was impossible to secure accurate information or opinions as to cost, value of property, franchises, or equipment from the reports of the carriers. Even at that early date the Commission was well aware of the metaphysical difficulties in ascertaining value, and prophetically anticipated later contentions. " * * * a railroad property is not necessarily worth what it would cost to replace it, and, on the other hand, it may be worth very much more than that "

This was 40 years before *Smyth v Ames*, but long after John Stuart Mill had thought that valuation principles had all been well settled in the body of economic theory.

During this decade under consideration, many States set up valuation departments and vigorously undertook to get the information necessary to informed and effective action as to the rates and fares of their carriers, or to defend their orders. And the carriers, as the Commission said in its 1908 annual report, showed a growing tendency to meet attacks upon their rates by making proof, through their own experts and officials, of the value of or the cost of reproducing their physical properties. The Commission there painstakingly showed how unequal the contest was. From then on until in 1913 when Congress enacted the valuation amendment of the Interstate Commerce Act, successive annual reports of the Commission urged the need of an official valuation of interstate carriers, to be available in rate cases to complaining shippers, and also to the Commission by which such issues should be decided. It also urged that such an appraisal was a necessary predicate to an honest and informative balance sheet and to give of railway capitalization, over-all, and by light which would determine the propriety of railway capitalization, over-all, and by specific carriers. It said "the change which has gradually taken place in the past few years, as well as the increased responsibilities imposed upon the Commission by the amendment to the act to regulate commerce, makes continually clearer the importance of an authorized valuation of railway property, made in a uniform manner for all carriers in all parts of the country."

The States were forced to the same conclusion. Their rate proceedings were tremendous in scope and importance in their economic and political life. The State commissions were expected or required to appear in support of citizens of the States before the Interstate Commerce Commission, and to defend in the Federal and State courts State-made rate or service orders. The Fed-

eral Government, the States, and the shippers, as has already been indicated, were often outmatched by the well-organized carriers. This is shown by the 1908 report of the commission already cited. The commission referred to its recent experience in the hearings of the important Spokane case, then much in the public eye. The affected railroads had compiled and put in evidence elaborate and detailed valuations, in defense of the unsalable transcontinental rates. This testimony would have gone unchallenged, for want of any champion of adverse interests, but for the fortuitous circumstance that the Washington State commission then had well under way an appraisal of the railroads of that State, which included portions of the transcontinental routes in controversy. But for the production by the State of Washington of its own capable and resourceful expert as a witness, fortified by the results of the State's investigation, the record before the Federal Commission would have been left wholly one-sided, and but inadequately tested.

Obviously, if claims of the carriers are to be tested or met, it must be by the action of public bodies. This situation is as true now as when in the Spokane case the Federal Government found itself helpless, the shippers were powerless, and the State commission, which alone could be of aid, could meet only partially the needs of the situation. Said the Interstate Commerce Commission.

"It is obviously impossible for shippers who are the complainants in such cases to meet and rebut such testimony, or even intelligently to cross-examine the railroad witnesses by whom such proof is made. In addition to the large expense of retaining experts competent to make such investigations, neither the shippers nor their experts and agents under existing statutes have any right of access to the property of carriers, or to their records showing the cost of construction and other necessary information. The carriers, on the other hand, being in possession of the information, or having access to the records and to the property from which the information may be compiled and gathered, can use it or not in any given case as their interests may require."

II

The movement for a Federal investigation became irresistible. Over a series of years the railroads insisted upon increases in freight rates, and the 1910 general proposals of increases precipitated an amendment of the Interstate Commerce Act conferring jurisdiction upon the Commission to institute on its own motion proceedings of inquiry into the reasonableness of rates, and to suspend or investigation the effective date of tariffs filed by the carriers. The public interest became intense. Compared with more recent increased rate proceedings, what was then sought seems absurdly moderate. The revelation of serious financial irregularities added impetus to the movement.

A bill for the Federal valuation of the physical properties of the carriers subject to the act was passed by the House. The procedure prescribed was relatively simple. The Senate considerably modified the House bill, persuaded to do so by the arguments of public-minded economic experts, that investigation should reach each common carrier in such detail that every fact which possibly could be wanted by any court, regulating commission, State or Federal, taxing authorities, investors, or other person, would be found and made public, in form to be used before the Commission or in the courts. The result was a very elaborate act—far more meticulous in detail and in its procedural requirements than the more simple form of appraisal, such as that which the States of Michigan and Wisconsin had made for limited purposes. Through the years

much has been made of the absurd relation between the original estimates as to the cost of such an appraisal and that which was actually incurred. The fallacy is that the estimates of costs made were upon the basis of a simple type of appraisal, and not for the elaborate scheme which the Senate substituted for the House bill. Further, no one at that time could foresee the ultimate of the intricacies which the technique of valuation was to develop, or could imagine the bitterness that came to mark the conduct of so many phases of the general appraisal inquiry. What all concerned had in mind in agitating for a Federal appraisal was a much more simple form of procedure than was adopted.

The Senate view prevailed, and was expressed in section 19a. It provided elaborately for initial appraisals, and equally elaborately for keeping the appraisal up to date. The act cast upon the Commission the most stupendous task of engineering inventorying and appraisal that the world has ever known or is likely to know. An administrative organization had to be built from the ground up, within the limitations of the Civil Service Commission's regulations. Complexities and obscurities with resulting disputation as to the meaning of many parts of the valuation act added greatly to the difficulty of the work and by consuming valuable time in the planning stages, delayed ultimate completion. There is little wonder that former Commissioner Prouty, the Director of the Bureau, exclaimed, "I would rather undertake to write the Chinese alphabet backward than read the thing (i.e. the valuation act) anyway, because it doesn't mean anything after you have read it."

The valuation was intended to be for the benefit of the States as well as for the purposes of the Federal Government. Therefore, the individual States largely discontinued valuation work, and tendered their files and assistance to the Federal Commission. Both files and assistance were accepted gratefully, and the task went forward in a spirit of cooperation between the States and the Federal Commission. Many experts of the States became members of the staff of the Bureau of Valuation. As tentative valuations were issued, the States which could do so scrutinized the data submitted, and if necessary filed protests and produced competent and relevant expert testimony at the hearings. This was done in connection with the Washington representatives of the Association, throughout the course of the whole of the primary valuation program.

I think I can epitomize the general feeling of the State commissioners, of whom I was one, which led them to establish their valuation counsel at Washington. They had great confidence in the individual members of the commission and in the guiding heads of the bureau of valuation who planned and directed its work—Director Prouty, who had rendered brilliant service as a member of the commission; Commissioner Staples, of the Minnesota commission, who was virtually assistant director, and eventually succeeded Director Prouty, Commissioner Maltbie, of the New York Public Service Commission, for a short time while the work was being planned; Patrick J. Farrell, who was made solicitor for the bureau, after brilliantly overturning in the Supreme Court thirty-odd adverse opinions of the Commerce Court, one after another, Joseph W. Folk, chief counsel of the commission, a prosecutor and executive who courageously and effectively broke up many iniquities, and Dr. Charles W. Needham, former president of George Washington University. But the State commissions were fearful that the commission might be led or high-pressured to adopt unsound theories of valuation or be led to undue liberality either in details or over-all conclusions. It is but fair to say that what was dimly feared never materialized.

The Interstate Commerce Commission before getting too deeply committed to any valuation program or set of theories set down a series of hearings upon the basic principles and technical procedural questions involved. The members of a special committee of the National Association of Railroad Commissioners on the invitation of the Commission took an active part in these conferences and arguments. But it became apparent that continuance of this practice would become too much of a burden upon individual State commissioners, and that there was need for day-by-day representation of the generally accepted point of view of the State regulating authorities, especially in the period of development of practices and the initial formulation of valuation principles. After long consideration, the association, at the San Francisco convention in October 1915, determined that the States should be represented by counsel in the valuation program and at the hearings, and authorized the committee on valuation "to do any and all things which will enable the States to assist the Interstate Commerce Commission in reaching a fair and just conclusion in this most important matter."

The Washington office of the association was therefore established on a very modest scale on May 22, 1916, upon this cornerstone, and the committee designated as its counsel your present speaker. This enterprise was welcomed by the Interstate Commission with warmth and sincere encouragement.

A considerable period of time can be swept over in a single sentence: The original solicitor, and his successors, particularly Charles E. Elmquist, of Minnesota, and John E. Benton, of New Hampshire, participated actively and, I think, effectively in shaping the procedural course and the principles of valuation finally adopted.

Too much cannot be said for the devoted and effective service of the members of the valuation committee itself during the early years of the work. The members were in addition to the solicitor, Commissioners Elmquist, of Minnesota; Bristow, of Kansas; Eastman, of Massachusetts; Niles, of New Hampshire; Shaw, of Illinois; and Taylor, of Nebraska, with the president of the association, Commissioner Thelen, of California, as an ex-officio member.

The result justified the labor and expense. No one ran away with the valuation, or succeeded in high-pressureing the Commission. Defense of the public interest was not easy, for the sums at stake were stupendous, and members of the Commission's staff and representatives of public bodies had to oppose the keenest and most resourceful experts in the country. What Congress initially intended to be administrative investigations developed into bitterly contested and intricate litigation. Commissioner Eastman spoke of the "sorry spectacle of many of the valuation proceedings which have attended public-utility regulation in recent years. Often they have been characterized by a riot of prolonged, demoralizing, and more or less disgraceful controversies over violently conflicting claims, with 'high value' experts on the one side and 'low value' experts on the other. Enormous amounts of time and money have been expended with very little satisfaction to anyone concerned" (170 I C C 526).

The work was prolonged far beyond all expectation, partly because investigation was metamorphosed into litigation, and in part by the effects of World War I, which demoralized the staff of the Bureau of Valuation. Further delay was due to the determination of the Director General of Railroads that as to roads under Federal control, valuation should be held in abeyance. Nonetheless, the Commission decided its "guinea pig" cases, and set the pattern of valuation. But not until 1932 could the Commission complete the last of the 1,035 primary valuation

reports upon the 1,685 steam railroads originally listed for valuation. Many were of great volume and intricacy. The procedural complexities of the act and its demand for extremely detailed particularity had delayed final results and added greatly to the labor and expense of the valuation, and opened broad fields for dispute before the Commission and in the courts. Illustrative of the procedural detail is the requirement for service of a tentative valuation upon the Attorney General of the United States. That officer, representing the Government, did not protest or appear in the hearings upon any of them.

III

With the completion of the primary valuations came into operation the duty of bringing records to currency. Valuations to be of practical use must not become obsolete, and the vast amount of work performed in ascertaining the original valuation, inventories, and land records must be supplemented periodically so as to reflect current conditions at all times, as closely as practicable. The House Committee on Interstate and Foreign Commerce (see 1932 Annual Report, I. C. C., p. 89) clearly stated the principle: "The basic work, now completed at great cost, should not be permitted to become useless by reason of obsolescence just when it is becoming what it is designed to be, a practical working tool and guide for the Commission in its many regulatory duties, or to Congress itself when the railroad situation is become acute."

Therefore, the primary activities of the Bureau of Valuation from 1932 on were centered on bringing the inventories and land records of the railroads down to date, and on completion of valuations of communications companies, and much later, of pipelines subject to the act. As to the communications companies, that duty is now lodged with the Federal Communications Commission.

The House committee in speaking of the many regulatory duties of the Commission, evidently had in mind especially two very burdensome tasks which had been imposed upon the Commission by the Transportation Act, 1920, 7 years after the enactment of the valuation act. One was the rule of rate-making, added as section 15a of the act (since materially amended), and the other the recapture plan, which in effect required the Commission to test the rate of return of net railway operating income of every carrier for each year, with the object of basing a claim for recovery of one-half of any excess earnings over a stated percentage of value in any year, to be covered into the Public Treasury as a fund for certain designated purposes.

The valuations for rate-making or recapture purposes were to be brought to date, periodically, in like manner to the original valuations. How burdensome were the prescribed details of the like manner procedure has already been stressed.

Neither the rule of rate-making nor recapture worked practically, or proved to be founded upon sound theory. The world economic conditions fluctuated too wildly in the twenties and thirties of this century. The architects of the Transportation Act of 1920 could not foresee these changes, and their theory got out of fit.

Tremendous labor had been expended in the attempt to administer the recapture experiment, until it was repealed, retroactively, June 16, 1933. In the same act, the like manner procedural provisions of the original act were eliminated with respect to the revision and correction of the original valuations.

While the procedure for keeping valuations current has been simplified, the Commission has been given a definite mandate as well as a wide discretion. It is required that upon completion of the original valua-

tions, the Commission "shall thereafter keep itself informed" of all new construction, extensions, improvements, retirements, or other changes in the condition, quantity, use, and classification of the property of all common carriers as to which original valuations have been made, and of the cost of all additions and betterments thereto and of all changes in the investment therein. This is obviously a task of inventorying and verification. To "keep informed" is not the same as "to accept without verification." The Commission may keep itself informed of current changes in costs and values of railroad properties, "in order that it may have available at all times" the information deemed by it to be necessary to enable it to revise and correct its previous inventories, classifications, and valuations of the properties; and, when deemed necessary, may revise, correct, and supplement any of its inventories and valuations. These provisions apply only to the process of keeping valuations current as to properties originally valued: The "in like manner" provisions apply to new properties coming on for valuation.

To enable the Commission to carry out these provisions, every common carrier subject to part I of the act is required to make reports and furnish such information as the Commission requires. This power has been implemented by suitable orders, and the carriers in response have submitted an enormous body of material which, the act contemplates, shall be utilized by the Commission in order to revise, correct, and supplement previous valuation reports.

Repeal of the recapture provisions permitted a sharp reduction in the number of employees in the Bureau of Valuation. At the height of the field work and the making of inventories, the valuation force reached a total of 1,391, on December 31, 1917, and the staff remained at about that figure through 1920. Within 1921 and 1922 the staff was more than cut in half. But the recapture attempt required progressive recruiting of additions to the force until in the year 1932. In that year the last of the primary valuations was issued, but the force had been increased by the recapture work to 960 for 1931 and 1932. Completion of the primary valuations and the liberalization of the statutory directions for keeping valuations current enabled a cut in the force from 917 to 360 at the middle of the fiscal year 1934.

From that time until the present day the decreases in successive appropriations have continued, and have required progressive reductions in the valuation staff. The number of employees when these words are written is but 81. One-third of the valuation employees of 2 years ago have been dropped from the roll. It is difficult to determine what further cuts will be forced by the obscure provisions and the confusing legislative history of the current appropriation act. One construction would reduce the present staff—hardly entitled to be called a skeleton organization—from 81 to 51 persons. This would so reduce the force, already reduced to the stage where efficiency is well-nigh impossible, that even nominal or colorable compliance with the duties imposed by the valuation act would be impossible. The cumulative effect of this long-continued process of compounded declamation is most alarming.

Under conditions as they are, and even more so as they are threatened, the Commission's duties as to correction of its valuations and keeping informed of changing conditions cannot be performed with justice to the public interests involved or to the carriers themselves. In recent successive increased rate proceedings the carriers have shown that many important property changes have been made in the way of replacements and improvements, and by re-

tiring less efficient operating property. These items presumably have all been reported to the Commission, and the duty of the Commission is to keep itself informed concerning them so that it may revise or supplement its earlier valuations. An enormous amount of detail has thus been furnished to the Commission in the last few years, but for want of provision of a staff competent to police the returns and make necessary property inspections in the field, the valuation work is "falling lamentably behind." With the backlogs indicated, it is becoming increasingly difficult for the Bureau to prepare reliable data for use in the general rate-increase cases, or for other purposes. All previous experience has shown that acceptance of returns at their face value is not safe, or consistent with the public interest, or fair to the carriers which have gone to great expense to make the reports. Guardianship of the accuracy of the public record gives it probative and practical value. And beyond the testing and policing lies the practical need for revision of preexisting inventories, which is still another task of importance and magnitude. All these matters have repeatedly been brought to notice in the successive annual reports of the Commission.

The present situation has not entirely been brought about by the effort of Congress to retrench expenditures, or reprisal for lack of confidence in the integrity of the work. It is in large part, I think, due to acceptance of the thought that certain recent decisions of the Supreme Court, have so diminished in importance valuation and rate of return as factors in the rate-making process that they may be wholly ignored. The thought has been expressed that of all the functions of the Commission, the duty of keeping informed as to the value of the carrier property in the country could be abandoned or curtailed with least possible injury to the public interest. I disagree, both in economic principle and from the standpoint of what the governing statute requires from the Commission as administrative practice. By wishful thinking which has colored the reading of these recent decisions, we have lulled ourselves into a false sense of freedom from the need of considering matters which we desire to reject, and have rejected them without the necessary predicate for finding them to be useless as tests.

Too much reliance has been placed upon this sort of reading of recent decisions of the Supreme Court of the United States as to administration of provisions of the natural-gas acts, of which the *Hope Natural Gas* decision (320 U. S. 591) is a leading case. It has been read from those opinions that the Court has "discarded the eminent-domain theory and basis of rate making, as announced in *Smyth v. Ames* . . . and has gone back to the doctrine as originally announced in *Munn v. Illinois* . . . to the effect that rate making is price fixing through the exercise of the police power of Government." A reasonable end result is assumed to satisfy the Constitution (and the particular statute which governed), but nowhere has the Court said "The rule announced in *Smyth v. Ames*, and heretofore followed by us in many subsequent cases, is accordingly overruled." It might, or might not, be wholly desirable and consonant with justice and sound economic principles, for the Court to have overruled the case cited, but it has not done so.

The carriers still may show the value of their property and the rate of return thereon. Certainly, in administering the Interstate Commerce Act, the Commission must consider all the elements of value detailed in section 19a. Valuations made under that section are prima facie evidence of value for all purposes growing out of the Interstate Commerce Act. The Commission has had the humiliating experience of reversal when it substitutes its own concept of what the act

ought to be for what the law says it shall do. It was even rebuked in one instance, although the court itself had said in unmistakable language that the matter required to be found was "incapable of rational determination." It is perilous for those charged with protection of the public interest to ignore *Smyth v. Ames*, particularly with section 19a still the law and requiring findings as to the matters which *Smyth v. Ames* said should be considered.

In certain recent rate cases of great magnitude before the Commission summarizations of the elements of value prepared by the Commission's bureau have been received in evidence. But although received without forceful objection to their reception, their effect has been challenged in testimony submitted to cast doubt upon the accuracy of the estimates.

But if either the prudent investment or original cost test is to be followed, and they are not the same, and all other valuation elements required under section 19a should be considered as read out of the act by judicial construction, neither cost nor investment can be determined in the true sense of that word without adequate polling and testing of the returns that are made by the interested carriers.

These are and have been times of continued rising prices, and in recent years the carriers have been able to show the need for more revenue without invoking the constitutional protection against confiscation. But prudent administrators, charged with the duty of keeping informed as to value, must look ahead to the time when the trend of rising prices will reverse itself. When the inevitable process of deflation acts in, we will have the situation presented that reduction rather than increase in rates will again be in order. Then value and rate of return once more will become a central factor in the inquiry as it was in 1922, following the deflation of 1921.

Are either the Federal and State authorities now prepared to see that the public interest takes no harm when value is the significant issue to be determined? In answering, the terrific intricacies of the problems of accountancy, engineering, land appraisal, and law involved must be borne in mind. Every valuation issue involves each of these subjects, and each subject is conflicting and ramified. At the present time the Interstate Commerce Commission has no hearing examiner in its Bureau of Formal Cases qualified by past experience to undertake the important responsibilities of developing an adequate record in a complex, hotly contested valuation proceeding. Nor is there available an attorney in the general staff of the Commission who participated actively in the former valuation proceedings, and who, with the confidence borne of long experience with the subject, could undertake either cross-examination of what Commissioner Eastman called the high value expert, or to carry on the examination of experts from the Commission's own staff. Five men in the field are obviously incapable of keeping up with changes in land values all over the country. As far as the participation of this association is concerned, I take it from perusal of the reports of the Washington office and the proceedings of the annual conventions, that the interest of the association largely was turned away from common carriers with the abandonment of recapture and modification of the old rule of rate making in section 15a of the act. However, as to this, officers of the association can speak more definitely than can I. The State commissions severally cannot be expected to set up organizations comparable to those they maintained until the Federal Government undertook the valuation job. And, I understand, the experience of some of the State commissions in attempting to

apply to their communications cases the same valuation rules that have been followed in the natural gas cases, has not been fortunate, to say the least.

I do not think I can do a greater service to this association, of which I have long been a member, than to remind it of the admonition of its own committee. I quote from the report found in the 1915 proceedings, at page 370.

"In conclusion, we suggest that because of the wide experience of State commissions in valuations of properties of different classes of utilities for some or all the purposes herein specified, it is the solemn duty of the various State commissions to their States and to the Nation to render all possible assistance in the Federal valuation."

The greatest possible assistance which the States can render now will be in helping the Federal Government to carry on its valuation adequately and thus protect the public interest and carriers alike. To enable the Interstate Commerce Commission to perform its duties there should be provision for a continuing force, adequate and competent to make valuations in compliance with the law, that can be relied upon for any and all purposes for which the people of the States and of the Nation may desire to use it.

I have spoken hastily and in terms of restraint. I trust that neither my haste nor my restraint may tend to disregard of the seriousness of the situation which confronts us.

Statement of Joseph L. Rauh, Jr.

EXTENSION OF REMARKS OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. HOLIFIELD. Mr. Speaker, in the interest of presenting the whole truth in regard to previous mistaken statements heretofore placed in the CONGRESSIONAL RECORD, I am inserting a statement by Joseph Rauh, Jr. Mr. Rauh has requested my assistance in this matter in order to clarify the facts regarding the counsel fees paid to the law firm of Winthrop & Simpson.

STATEMENT BY JOSEPH L. RAUH, JR., COUNSEL FOR WILLIAM W. REMINGTON

On October 17, Congressman VELDE made certain statements concerning moneys received by the Remington defense from the Robert Marshall Civil Liberties Trust. The facts are as follows:

1. The Remington defense received \$20,000 from the Robert Marshall Civil Liberties Trust. Payment was made by two checks for \$10,000 each, which were made out to me and immediately endorsed by me to the firm of Winthrop, Stimson, Putnam, and Roberts, thus making it clear that they were not a fee to me. These funds were paid to Winthrop, Stimson to cover their actual expenses at the trial and on the successful appeal. No attorneys' fees were paid to me or to anyone else from the trust fund or otherwise. Mr. Chanler of Winthrop, Stimson took the Remington case as a matter of principle and without fee in the great tradition of his law firm and of its founder, Mr. Henry L. Stimson.

2. There is a confusion between the Robert Marshall Foundation, from which the Remington defense received no funds, and the Robert Marshall Civil Liberties Trust, which aided the Remington defense. They are entirely separate organizations and all of

the contributions listed by Congressman VELDE were made by the Robert Marshall Foundation except the one to the Remington defense. The Civil Liberties Trust has been strongly anti-Communist in its operations. Indeed, its chairman, James Marshall, is a very distinguished conservative lawyer in New York who has served that city well for many years as chairman of its board of education. The Remington defense never accepted 1 cent from anyone with even the remotest sympathy with or leaning toward communism.

3 Counsel for William Remington undertook his defense at great personal expense because they believed and believe him to be innocent of the charges against him. In a proceeding such as this, with the Government spending hundreds of thousands of dollars on the prosecution, it takes substantial sums to cover out-of-pocket expenses without any attorneys' fees whatever. It is the American way that every man accused of a crime shall have his day in court. Mr. Remington's case is still pending; so that he too may have his day in court, I am asking that this statement be inserted in the CONGRESSIONAL RECORD.

JOSEPH L. RAUM, JR.

Current National Problems

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. MORSE. Mr. President, pursuant to the permission granted me during the course of the debate today, I submit, for printing in the Appendix, an advance copy of a speech to be delivered by the Senator from Michigan [Mr. Mooney] before the Economic Club of Detroit, Monday, October 22, 1951.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

Judge Picard, distinguished guests, fellow Detroiters, I am very glad to come back to the Economic Club and talk with you this noon about some of the problems that are facing our Nation. The last time I spoke here, nearly 10 years ago, I was running a double tandem with Cliff Prevost as a fellow newspaper correspondent in Washington. Today, I have a new sort of responsibility and so has Cliff, who, if I know him, is having a great deal to say these days about the way the city of Detroit is running and by whom.

It is a trite phrase, gentlemen, but I honestly consider this a real opportunity. Our country is facing problems and dangers that it has never faced before. As a man who has had a considerable exposure to those problems, and who feels keenly aware of the danger not only to his own family, but to our system, our country, and our freedoms, I welcome the chance to discuss with you some of the broad phases of this picture as I see them.

When I have finished, I shall be happy to submit myself to as many, as specific, as searching questions as you have time for. I'll stay here as long as you will. I will do my best to answer them all, and if there are any that I can't answer, I will say so.

On some fundamentals I am sure we can all agree: First, we must prepare to protect our country and our freedoms against aggression which may come from the heart of the slave world in Moscow. Weakness would

be an invitation to disaster. Adequate strength will require single-minded devotion to that job, with absolute priority. It will mean a vast expansion of our atomic arsenal and a broadening of our atomic strategy. It will require sacrifice. It will, unfortunately, require great expense.

Second, we must not only be ready to win an atomic war if it comes, and we all pray God it never does, but we must make ourselves so strong that it would be the act of an imbecile—an obvious act of suicide—to attack us or our allies. I include our allies in that because, as I hope to demonstrate to you this noon, our allies are vital to our own strength. Mutual security in the free world is essential to our own survival.

Third, we must prevent our system from being destroyed from within the very process of building our military strength. That includes a program to check inflation.

It includes vigorous action to stamp out subversives and traitors within our shores. (I might say in passing that the determined efforts of our Government to quash that danger have greatly diminished it. J. Edgar Hoover's Federal Bureau of Investigation and other enforcement agencies of the Department of Justice have probably broken the back of the Communist Party in America. We must have a loyalty program, operating incidentally under the able chairmanship of a former Republican Senator from Connecticut, which is keeping this under close check.)

It includes the elimination of waste in Government, which in turn requires a basic revision of Congress' system of handling the Federal budget.

It is imperative that we get vigorous, intelligent and selective reduction in those expenditures of Government which are not essential. In writing a syndicated series of articles more than a year ago, I acquired some very definite ideas on how the economy job should be done, and how it cannot be done.

In essence, the story is this. You will never get real economy in Government by the methods and under the system which we have now on Capitol Hill. Congress must get expert advice. We must have staffs of men as familiar with the spending departments and agencies as the budget makers of those agencies themselves. Only that way can we tell where the budget can be cut and where it cannot be cut. I do not think that the way to save money is to make a slice of 5 to 10 percent off the top. That simply is not the way to do it. The results prove that it is not. It is not the way you do it in your business. It encourages padding. It is would-be economy in the dark.

We reported out of the Senate Expenditures Committee a measure called the McClellan bill which would set up such a system. It was sent back to another committee by action of the minority leader and we have just been able to get it out of that pigeon-hole. I hope that in the next session we will get action on it.

Speaking again of fundamentals, fourth—or perhaps first—we must have a high standard of ethics in Government. We must have in public life men who are primarily devoted to the public interest and not to their own interest or some selfish interest. We must root out of appointive or elective position those who would either despoil the people or who would deceive the people.

Ethics in Government should require the resignation of men in places of public and political trust whose practices may impinge on or violate the principles of clean Government. It requires equally the elimination of mink coats and fake composite pictures; of influence loans and of vicious character assassination carried on behind a cowardly use of the cloak of congressional immunity.

What else does achievement of a high standard of ethics in Government require?

Obviously, it does not require retirement from the public service of every official who is subjected to the third-degree methods of fear, ignorance, bigotry and smear. Obviously, it does not mean a gullible acceptance of every irresponsible charge made by the unscrupulous.

But I think we can agree that it does mean a strict separation of political leadership from influence exercised against the public interest in any instance, by anybody, in either political party. It does mean a refusal to accept pressures exerted upon public men against the public interest. It does mean a greater sense of responsibility by some of those of great private power who seek to exert such pressures.

Public officials do not bribe themselves. We must not forget that for every Government official who is corrupted, there is a businessman who has not only violated his own integrity but has contributed to the destruction of confidence in his Government.

Proper public ethics requires vigorous prosecution of anyone who has violated his public trust, whether he be in the Bureau of Internal Revenue or elsewhere. It also requires public contempt for those party leaders who shove forward professional political ax men to do their dirty work for them.

In other words, ethics in Government would end unscrupulous attempts to mislead the people, or to mislead the people, by anyone.

What we must have in the months ahead is an honest effort by the leaders of both political parties to bring the real issues before the country. That is the basis on which our leadership must be chosen.

In my judgment, the American people can tolerate no approach except the propublic approach. For today, our system, the way of life we have built up over the decades, our freedoms, and our very survival as a Nation are in real jeopardy.

Slippery forces springing from the selfishness and egomania of evil men have come upon the world before, but never until now, not even in the evil genius of Hitler, has such a menacing complex of a godless and unscrupulous will to dominate been linked with such a terrible war potential, with such a pervasive patience, and with the science which has shrunk distance and created the means with which to destroy civilization.

There is nothing facing us that we cannot overcome if we realize what we are up against and act accordingly. But we can meet this danger only if we face up to the real situation.

Let me say this with all the emphasis at my command: We cannot afford the luxury of illusions, or of catering to our prejudices.

We must face the facts of life today not as we should like them to be but as they are. We are confronted, if we should fail to build our strength, with the threat of atomic war which could destroy our cities and annihilate our civilization. And Detroit, of course, is widely discussed as the No. 1 target of Red atomic bombers.

We are confronted internally with the danger that by being soft and complacent, by clinging to outmoded and unintelligent provincialisms, we could permit the free-incentive system which has enabled us to build the greatest country in the world to be burned out by the terrible, destructive fires of inflation.

We can no longer afford to face politics and political issues as though it made no difference what we said or did because life would go on about us anyway. This is the first time—Isn't it?—that we in Detroit have been within the bombing range of airplanes from bases on enemy soil, planes we know they have, which could drop atomic bombs we know they have.

Our country has never been in a position where, in a period of half-war, we have had

to devote \$50,000,000,000 a year to the creation of military equipment. Never before, except in time of world war, have we had the economic problems caused by diversion of that much production from normal channels, the tax problems to pay for such a Military Establishment nor the necessity, entirely aside from any possible economy, of so much expense to pay for the strength essential to protect ourselves.

If I sound alarmed, let me assure you I am not alarmed. I am confident I firmly believe we have within our grasp the means to repel this threat to our country and to our freedom. Let me emphasize. There is nothing facing us that we cannot handle.

But we must not imagine that it is going to be an easy task; that it will be a comfortable task; that it will be an inexpensive task, that we can be complacent; that we can automatically assume we will be physically secure in the future as we have been in the past.

To meet today's threat, we must understand that the politician who says that we are handed emergency after emergency after emergency, as though our danger were synthetic, as though it were dreamed up from the depths of political manipulation, and that the Kremlin had nothing to do with the world situation, is either misleading the people deliberately or just doesn't know the score.

Our danger synthetic? Nothing could be further from the truth. Anyone who discussed today's emergency, as some of my colleagues have, as though it were fictitious, is insulting the intelligence of the American people.

We must have a program for survival. I believe we have that program. We are going to carry it out.

It is a program worked out, in its broadest international phases, jointly by a Democratic President and Secretaries of State and Defense, and some of the greatest Republican leaders of yesterday and today—albeit a minority wing of the Republican Party—guided until recently by the late great Senator of whom our State is so proud, who was big enough to change his opinions and to put country above party.

In its domestic phase, the program has been worked out and carried out by a Democratic President on a completely unpartisan basis with the help of some of the ablest businessmen of America—men like Charles E. Wilson who gave up a \$400,000-a-year job as president of General Electric to come to Washington to serve his country, like Eric Johnston, who is the owner of four independent businesses in the Northwest and whose knowledge and judgment on public questions is so well thought of that he was paid by a great industry \$175,000 a year in salary and expenses. And he gave that up to serve his Government.

It has been charged that this emergency program is socialistic. Is there anyone so out of touch with reality as to believe that either Wilson or Johnston is a Socialist—or has become a captive of Harry Truman's chain?

Today, our external program, embodying a strong course in international action against communism is under political attack. The equally strong course of internal action against inflation, conceived so that we will not be destroyed by the very process of strengthening ourselves against the external threat, is also under political attack.

I do not believe that our policy has been perfect by any means. I have often been sharply critical of some phases of it. No person—no program—can ever avoid all mistakes.

But I do deplore the fact that politics no longer stops at the water's edge. I do deplore the fact that men who, when the step was taken, recognized clearly and publicly the need for our leading United Nations

action in Korea, now descend to partisan criticism of that step.

I do deplore the words of those who call our mutual security program, which is absolutely vital not only for the survival of our allies but of our own country, a grandiose scheme to give away needlessly the money of the American taxpayers.

Let us not be fooled. Appeals to the natural impulse to get by without sacrifices if we can, will, if they are successful, destroy us. The false faces of political demagoguery can do more harm than those crouched behind them seem to realize.

What we must do, as I see it, is to distinguish clearly between our real danger and the phony "dangers" raised by those unable to grasp the magnitude of the real ones; by those desiring to make political capital by appealing to the preconceptions of certain groups of our people.

For example, if we exposed ourselves to Red aggression by failing to build our military strength, that danger would be very real. If we failed to protect our economic structure against the inflationary pressures generated by our military program, that danger would be very real.

If in the face of our huge necessary expenditures, we failed to exercise prudent and vigorous economy in less essential areas of Government, that could weaken our system. If we swallowed every irresponsible allegation about our national leadership, made on the Senate floor or elsewhere, that would endanger us, because it would—and I'm afraid it sometimes does—confuse and divide us.

If we should turn back to the Fortress America concept which seems to ride so actively and so close to the skin of some of our leading figures who have announced their renunciation of isolationism, that would put us in terrible danger, as I shall endeavor to demonstrate in a few moments. If we do not now carry out our program for survival, then we are not only in danger from attack from without but of regimentation and destruction of our system from within.

But we must not waste our attention and be diverted by mock dangers which do not exist.

For example, we have heard a lot of talk that our Government is leading us toward socialism or some other sort of un-American "ism." I assure you that is simply that—talk. Socialism is not coming to America because of the Government's participation in certain public services. Just think a few moments. Do you consider the delivery of mail socialism? The Government does it.

Do you consider public roads socialism? Do you now consider social security for the aged and unemployed, which was denounced in this city in the heights of the 1936 political campaign as "viciously socialistic," a factor that undermines (or strengthens) the structure of the country?

Do you feel it is socialism to control wages and prices at a time when huge expenditures for military goods will exert tremendous pressures on price levels?

Would it be better to let higher prices and wages and costs and still higher prices pyramid one upon another in ever-accelerating pace until our system toppled?

Some of you may feel that Detroit's ownership of its street railway system is socialistic. But it was advocated by a great newspaper in this town that I have never considered socialistic, and I know something about that newspaper.

According to Charlie Weber, the usually accurate reporter of the Detroit Free Press, the city government gives 433 different services to the people of this city. Does that make Al Cobo a Socialist?

You may recall the cries of "boondoggle" and "socialism" which arose when the Government undertook to build the great multiple-purpose dams on the Columbia and

Tennessee Rivers back in the thirties. Those were projects which never would or could have been undertaken by private capital because they had too many facets to be suited to private investment. They involved navigation; they involved flood control, they involved the irrigation of vast tracts of farm land; they affect erosion of the soil in large areas. They also created a vast supply of hydroelectric power.

Did these projects strengthen or weaken our free-enterprise system? Let's see.

They did involve the use of Government capital, but they also augmented the national wealth, they increased our power to produce. Since they were not suited to be developed by private capital, would the country have been better off if the Government had just skipped the whole thing? Should the resources have gone undeveloped?

Well, let's take a look at that one. Look at your industrial maps. Where are the great aluminum plants, which, of course, are owned and operated under private enterprise? What made those plants possible?

The great expansion of aluminum capacity was near these dams. That was no coincidence. That was the place, the only place, the power was available. And if the power hadn't been available, we wouldn't have had the aluminum and we might never have had the air fleet that we needed to win World War II.

Where are the basic atomic plants which are also operated by private concerns? Had you ever heard of Hanford, Wash., or Oak Ridge, Tenn., before the days of the atomic bomb? Of course not. And you never would have heard of them had it not been for the development of power that made it possible to split the atom which according to the estimates of the Joint Chiefs of Staff saved the lives of 750,000 American boys by bringing the war against Japan to an end.

Where did we get the electric power to create that fissionable material? We got it from those power projects. Yes, those public power projects in which the strength and the authority of the public undertook to develop the resources of our own country in a way that private resources never would or could have done it.

Did that make for a stronger, more secure America, or a weaker, more vulnerable America?

Is it not ridiculous to allege we are being taken into socialism by doing things which strengthen our free-enterprise system? By doing things that increase our standard of living under that system and giving more people a greater stake in preserving it? That system has given us the greatest productive power in the history of any nation of the world. It is never going to be changed or undermined unless we commit one of two terrible blunders.

The first blunder would be to permit sharp inflation of prices. If you really want government in your business, just turn loose this deadly spiral and drive prices and wages and costs up and up and up. That would not alone make cruel victims of the American consumer. It would not alone increase the amount of taxes we would have to pay, to obtain the same number of military items, by billions and billions and billions of dollars. It would not alone squeeze the small-businessman. It would not alone put the farmer back where he was in the early 1920's and then after a decade of chronic depression, in the early 1930's. It could also destroy the most powerful unit of our economy, those who (materially) have the most to lose if our system were destroyed. For inflation could destroy our system. How?

In today's situation, with the tremendous load of the debt piled up in the process of winning World War II overhanging us, with the tremendously greater social and economic pressures that have developed in our country in the last two decades, we might have after

the peak of such an inflation, a crash that would plunge us downward into a depression that would make the last one seem like the good old days.

If we allow that to happen, if inflation whirls our economic engine to such a white heat that it freezes and stalls, then millions once more will be out of work. Production will stall. And, incidentally, profits will melt away.

Then whatever party were in control of Congress, whoever were President would be forced, just to keep people eating, to put government into business to an extent never before approached at any time, even wartime.

Call it socialism. Call it what you will. It would do nothing any of us here today want to happen.

But there is another way that we could undermine our free system. That way is even more dangerous. For by following that route, the route of isolationism, we might not alone subvert our structure from within. We ultimately would find ourselves alone in the world to fight against a Red empire many times more powerful and more resourceful than the Kremlin is today.

That is the reason why I indicated to you a while ago that our international program is not based merely on a humanitarian impulse to rescue, at great expense to ourselves, the lives and countries of those people who believe in freedom as we do. It is equally essential to our own survival.

No real expert on actual conditions in Europe, be he Paul Hoffman, or "Ike" Eisenhower, or John Foster Dulles, or anyone you might name but would tell you that the Marshall plan saved Western Europe from communism. It was American leadership that provided not only the dollars and materials but the momentum and the hope which has enabled our allies (with all their faults) to build themselves back from the destruction and horror of war in the most remarkable economic and social recovery in the history of the world.

It is perfectly evident, I think, to anyone who has studied conditions with an open mind (and I, as most of you know, have had the opportunity of doing so at least once each year since the war, thanks to the broad approach on international questions of my former employer, the Detroit News) that France and Italy would be Communist today had it not been for the Marshall plan. That would mean a Red Europe. (What effect would that have, by the way, on Michigan's export business?)

Yet, we have had highly respected public figures advocating a retreat to "Fortress America," saying in effect that we would be better off to go it alone in the world; saying in effect that we are wasting our money when we help our allies; saying in effect that our industry and military potential is so great that we never need worry about our physical safety here. And if you think there are no longer any velled isolationists on Capitol Hill, I invite you to a careful scrutiny of the CONGRESSIONAL RECORD in recent months.

And, Detroiters, remember this: Just as we would have lost Europe by following the advice of those men then, so we can lose it in following them now. They will no longer counsel us to walk out on our allies. The folly of that would now be too patently obvious. But they continue reluctant. They continue to try to obstruct and undermine. They still seem to resist carrying out a program that is adequate to stop the Communists and erect a wall around the Red empire which ultimately will force it to crack up from within.

In my judgment, there is one great, big, glaring hole in the viewpoint of the velled isolationists. That is that our great industrial complex, which is the most powerful force for peace in the world today, and which

we are all proud to say centers in our city of Detroit, is self-sufficient.

Every one of you men in the automobile business knows that it isn't. You must have copper. You have to have nickel. You need tungsten. You require chrome. And most of all, as I have been telling Manly Fleischmann in every way but flying for the last few weeks, you sure do have to have steel.

There are 167 critical materials which we must import in order to keep our industry going. One of them is uranium. You all know why we need that. Another is manganese. You can't make a pound of steel without manganese.

I wonder what Mr. Fleischmann's problems would be today, or what the problem of the automobile industry would be today, if because we had cast away Europe and all of Asia to the Reds by failure to carry out an adequate international program, we were scraping the bottom of the barrel on manganese.

What would be the situation today when Detroit industry and Detroit unions and Michigan Senators went to NPA and asked for steel to keep our great plants going? Remember that if we had lost our allies, the Reds would have gained them. If we had followed the advice of the velled isolationists in 1947 and 1948, we would be facing a far deadlier and more powerful foe today.

And incidentally, if we make the mistake of turning for leadership toward those men who so grievously miscalculated before, we could find ourselves surrounded, outnumbered, outproduced, and outarmed in the future.

Failure to carry through our program of international leadership, of assembling the force of the free world against communism, and—with or without the label—we would find ourselves isolated. We would be confronted by the most menacing military force in history under the command of men whose single purpose is to enslave us and destroy our freedom.

What would we do then? First of all, to have hope of protecting ourselves, we would assuredly have to build a vastly greater force than has ever before been conceived. Today there are other free peoples on our side. Then the enemy would be much stronger. But—and here is the core of it—the very loss of allies which would make us the weaker of the two forces in the world, would strike a solar plexus blow at our great industrial power.

First. If we were cut off from our supply of uranium, we would be crippled in our attempt to carry out the program outlined the other day by Connecticut's great Senator BRIEN McMAHON for vast expansion of atomic energy.

This, incidentally, offers the best hope over the long pull of a substantial reduction in military expenditures.

Second, the lack of manganese and other critical metals would strike at the vitals of our power to produce. To build a military force such as we would then need would certainly require plenty of steel. Where would we get the manganese to produce even the steel needed to build that vast military force? And, if we were having trouble getting enough manganese and enough steel even to meet our military requirements, how many automobiles per quarter do you think Mr. Fleischmann could allot us steel for then.

How great then, do you feel, would be the wrench on the industry and on the people of Detroit?

How heavy then do you think the impact would be on the American farmer, if the buying power of his city consumer dwindled? What would then happen to the small-business man? What would happen then to the profits of our Detroit corporations, which

we are proud to say number among the greatest and most profitable enterprises in the world; corporations which have been doing quite well, thank you, under the modern American system of the 1940's and the 1950's while so many mental malaprops have kept on babbling about socialism in America.

But distort and weaken our system by shriveling its supply of steel and production would stall. Tides of unemployment would sweep across the Nation. When we needed to be strongest, our sinews would be sapped. And, whoever was President, whatever party was running the Congress, you would find the Government in the management of our system so deeply and inextricably that our freedom would have been automatically destroyed.

By blindness, by failure to do the things now that can be done to avoid any such situation, our own inflationists and isolationists would have proven his case for Karl Marx—that ultimately we would destroy ourselves. They would have handed a crushing victory to Stalin and his gang in the Kremlin.

Let me say again, for emphasis: I do not believe that America ever need get itself into any such predicament. But I do hope that when people talk about socialism and the danger of subverting our system, they will think about the factors that might really bring it about. I hope they will not continue to confuse themselves and the American people by bellowing as though they had been bitten every time the Government takes action to help stabilize and preserve the very free system to which we are devoted.

In closing, I should like to get back again to fundamentals. We may not agree on everything. But I think and I hope that all of Detroit, and all of Michigan, can agree on the five specific points of this program for survival.

(1) A military program great enough to make attack on us obvious suicide, (2) strong international leadership by the United States; (3) an adequate and effective program to check inflation; (4) responsibility and high ethics on the part of both public and private men associated with government, (5) the maximum amount of government economy which is possible without undermining essential functions of government or crippling our military program.

If we can unite on that program, if we can keep always in mind the fact that we are involved in a bigger and deadlier game today than ever before, and the fact that our enemies are fanatical, ruthless, devious, powerful, and infinitely patient; if, as individuals we always give this program for survival absolute first priority—as absolute priority as a draft board exercises when it lays its hands on the shoulders of a young man and if we never forget that we need God's help as well as our own utmost effort to win through, then we have it in our power to preserve our liberties, our system, our prosperity and, in the end, peace.

Policies and Practices of National Shipping Authority

EXTENSION OF REMARKS OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a report from the United States Maritime Ad-

ministration upon their stewardship of the National Shipping Authority.

There being no objection, the report was ordered to be printed in the Record, as follows:

UNITED STATES
DEPARTMENT OF COMMERCE,
MARITIME ADMINISTRATION,
Washington, D. C., October 15, 1951.
HON. WARREN G. MAGNUSON,
United States Senate.

DEAR SENATOR MAGNUSON: Reference is had to letter sent you under date of August 16 by Vice Adm. E. L. Cochrane, Maritime Administrator, acknowledging yours of July 27, in which inquiry was made as to policies and practices of the National Shipping Authority in the appointment of general agents and in the allocation of vessels to such agents.

Up to the present date we have appointed a total of 45 American shipping companies to act as general agents for NSA operated vessels. In making these appointments the following basic requirements have in all cases been observed.

1 The applicant must have a working capital of at least \$50,000 and a minimum net worth of \$300,000.

2 The applicant must have a satisfactory credit standing with the National Shipping Authority and the Maritime Administration, and must have no outstanding obligations to others which in the judgment of a prudent businessman would render its employment not in the best interests of the United States.

3 Each applicant must qualify as a citizen of the United States within the meaning of the Shipping Act, 1916, as amended (U. S. C. title 46, sec. 802) and section 905 (c) of the Merchant Marine Act of 1936, as amended.

4 Applicant must own and operate either in its own name or in that of a closely related company at least one vessel of not less than 1,500 gross tons under United States registry actively engaged in the ocean commerce of the United States.

5 Applicant must possess practical experience in the management and operation of steamships in the ocean commerce of the United States and employ an adequate and qualified staff of supervisory shoreside personnel capable of conducting, in the opinion of the Director, National Shipping Authority, an efficient and economical operation of vessels in the services required under its service agreement GAA-3-19-51. Appointments to date have been limited to companies with going organizations, capable of handling at least five Liberty-type ships without requiring any material increase in supervisory staffs.

6 Consideration has also been given to the applicant's degree of cooperation with policies of the United States as expressed in the Merchant Marine Act of 1936, Merchant Ship Sales Act of 1946, and other acts relating to the foreign commerce.

In connection with the above-listed requirements, we are enclosing a copy of our NSA Order No. 3 (AGE-2), which includes the formal application governing the appointment of general agents and berth agents, together with a copy of NSA Order No. 1 (AGE-1), which prescribes the form of general agency agreement under the terms of which the vessels are operated for our account.

To date a primary requisite to general agency appointment has been ownership and operation of United States flag tonnage, and each of the companies thus far appointed owns and operates at least one vessel under United States registry either in its own corporate name or in that of a closely related company. This is in line with our advice to all applicants to the effect that preference would be given to owners of American flag

vessels (copy attached). In this letter you will also note our statement to the effect that we could give no assurance of assignment of vessels to any individual company despite the fact that the company might meet all of the necessary requirements. It has been and is our belief that adherence to the ownership policy is justified during the emergency period of operation short of war or of full mobilization, in which we are now engaged. In this connection, the argument has often been advanced that we should allocate vessels to general agents on a pro-rata basis according to the number of American flag vessels owned and operated. We have not adopted such a policy for the reason that to do so would tend to concentrate an exceedingly large part of our vessel operations in the hands of a relatively limited number of companies normally engaged only in the berth or liner services. Then too, it does not necessarily follow that a large company engage in a multiplicity of operations with its own private fleet can at the same time give better care and attention to the operation of an additional group of vessels for Government account than can a capable and efficient smaller company whose principal activity is general agency operation. However, that is not to say that we have not made a substantial number of allocations to the larger owner-operators, since the opposite is the case, as is reflected in one of the attachments to this letter.

You will appreciate that when authority was granted to commence the operation of Government-owned vessels, space available in privately owned vessels was very short and, as a result, freight rates were increasing daily. Consequently, it was necessary that we place our vessels in the market with the least possible delay. To accomplish this we immediately assigned vessels to 17 companies which had acted as general agents for the War Shipping Administration and Maritime Commission and which, for the purpose of breaking out, stripping, laying up, and so forth, of our vessels, had retained their Agency agreements in active status. In this manner we eliminated a considerable delay which would have occurred in handling the administrative details of entering into new agreements. Subsequently, of course, all of these companies executed the new General Agency Agreement. They are as follows:

American Export Lines, Inc., American Foreign Steamship Corp.; American-Hawaiian Steamship Co.; American President Lines, Ltd., Bildberg Rothchild Co., Inc.; Diekmann, Wright & Pugh, Inc.; Farrell Lines, Inc.; Luckenbach Steamship Co., Inc., Lykes Bros. Steamship Co., Inc.; Olympic Steamship Co., Inc.; Pacific-Atlantic Steamship Co., Prudential Steamship Corp., South Atlantic Steamship Line, Inc.; T. J. Stevenson & Co., Inc.; United States Lines Co., Waterman Steamship Corp., Mississippi Shipping Co., Inc.

In the light of the then existing and prospective heavy ECA and other national interest shipping requirements, we proceeded to enter into general agency contracts as quickly as they could be processed with another group of 15 thoroughly qualified applicants, as follows:

American Mail Line, Ltd.; A. H. Bull & Co.; Coastwise Line; Grace Line, Inc., Isthmian Steamship Co.; Matson Navigation Co.; Moore-McCormack Lines, Inc., Pacific Far East Line, Inc.; Pacific Transport Lines, Inc.; Polaris Steamship Co., Inc.; Pope & Talbot, Inc.; Seas Shipping Co., Shepard Steamship Co.; States Marine Corp. of Delaware; Union Sulphur & Oil Corp.

All of this latter group, with the exception of the Pacific Far East Line and Pacific Transport Lines had also acted as General Agents for War Shipping Administration and operated large numbers of vessels for Government account in that capacity. The two exceptions are postwar steamship

owners and operators of a substantial nature who operate scheduled sailings from our Pacific coast ports. They were both qualified to charter Maritime Commission tonnage after the war and consequently were familiar with Government procedure and accounting practices. Appointments of the aforementioned 32 companies were made during the latter half of March and in early April of this year. Since that time it has been possible for us to proceed more slowly and to date we have approved an additional 13 companies, as follows:

Alcoa Steamship Co., Inc.; Alaska Steamship Co.; Stockard Steamship Corp., Eastern Steamship Lines, Inc.; New York & Cuba Mail Steamship Co.; A. L. Burbank & Co., Ltd.; General Steamship Corp., Ltd.; North Atlantic & Gulf Steamship Co., Inc.; Wessel, Duval & Co., Inc.; Arrow Steamship Co., Inc.; Bloomfield Steamship Co.; West Coast Trans-Oceanic Steamship Line; Orion Shipping & Trading Co., Inc.

Of this last group, all but four were wartime general agents of the War Shipping Administration. The four exceptions involve companies established since the end of World War II, and having substantial operating experience as well as ownership interest in the American merchant marine. They are: Arrow Steamship Co., Inc., which owns three vessels, Bloomfield Steamship Co., which owns eight vessels; West Coast Trans-Oceanic Steamship Line, which owns three vessels, and Orion Shipping & Trading Co., Inc., an operating company, which through its majority stockholders controls 13 affiliated companies which together own 34 American registered vessels. Stockholders of the latter companies also own substantial interests in 16 additional companies which own a further group of 22 vessels. Stock in the 29 corporations is owned more than 50 percent by United States citizens, and all of the 56 vessels fly the American flag. They are all managed and operated for the individual corporations by Orion Shipping & Trading Co., Inc.

Another matter in which you have expressed interest is the consideration which has been given to the appointment of "liner" companies as compared with "tramp" companies. In this respect, as in regard to many other phases of our activities, there have of course been advanced arguments in favor of preferential use of one or the other type of operator. Our operating activities to date have been solely of the "tramp" type. However, we have not selected our General Agents nor allocated vessels to such agents according to the type of vessel operations normally performed. Instead, and to the extent of our need for General Agents to date, we have endeavored to appoint all qualified companies which have made application to us. Not all of the established American liner companies have sought appointment. As to those which have, all have been appointed except for a few that for one or another reason are still under consideration. In this connection, it is of interest to note that certain of our liner companies holding General Agency appointments have of late formally or informally declined to accept further vessel allocations, either because of dissatisfaction with the amount of compensation being paid or because of unwillingness at this time to undertake the staff expansion required to adequately handle the additional workload involved in operating more vessels for our account. There is of course no question that the liner companies can adequately service the "tramp" type operations in which our vessels are engaged, since most of them have engaged in such operations either as a normal part of their over-all fleet operations, as bareboat charterers of Government-owned tonnage since the war, or

as General Agents for the War Shipping Administration during and after the war. Conversely, however, we do not hold eligible for berth agency appointment the "tramp" or non-liner type company, and if and when it should become necessary for General Agency vessels to engage in general cargo berth type operations, the cargo activities connected therewith will be entrusted to qualified and duly appointed Berth Agents.

You have also inquired as to the consideration given to foreign flag connections of applications for General Agency appointment. It is of course the case that a very large number of American shipping companies have foreign affiliations of one sort or another, such as ownership of foreign registered vessels, charters of such vessels, agency relationships, pooling agreements, etc. Affiliations and relationships of this nature are in the main directly attributable to the international character of merchant shipping, and by no means can all of them be said to be detrimental to the American merchant marine. Nevertheless, we have given very careful consideration to the nature and extent of such relationships in our consideration of General Agency appointments, and have appointed those companies involved in such relationships only after having arrived at the conclusion that the present and potential benefits derived from having their talents and organizations devoted to serving the Government far outweigh any possible detriments flowing from the foreign affiliations.

As concerns the consideration given to the manning of ships by the respective unions, it is our policy, insofar as it can reasonably be done, to maintain the preexisting ratio of union employment afloat. In other words, we feel that no one union group should be allowed to unduly increase its membership at the expense of another through the allocation of general agency ships. However, in the actual implementation of this policy we are confronted with many practical difficulties. We have mentioned that certain of our large and well-established liner companies have declined further general agency allocations, others have from time to time declined allocations because the reactivation work was to be done in areas too far distant from their headquarters. Still others have not wanted to take vessels at particular periods of time. We cannot allocate vessels solely in relation to the union element involved, but must at all times give consideration to equitable distribution between agents, their capacity and willingness in each case to handle additional vessels at a given time, and many other individual factors involved.

Despite these stated problems and difficulties, we feel that we have been able thus far to maintain our allocations on a basis of reasonable distribution as between the major seafaring unions involved, and in this connection we forward herewith a summary statement setting forth the number of vessels allocated to date together with the primary unlicensed union affiliation of each general agent. You will note that at the present time 18 of the companies are affiliated with the National Maritime Union, 9 with the Seafarers International Union, 15 with the Sailors Union of the Pacific, and that 3 maintain joint affiliations with the National Maritime Union and the Sailors Union of the Pacific. You will also note that to date 157 ships have been allocated to National Maritime Union companies, 84 to Seafarers International Union companies, and 115 to Sailors Union of the Pacific companies.

The use of general agency vessels thus far has been devoted entirely to the transportation of bulk commodities moving under voyage charter terms and conditions and to the transportation of military cargo for account of the Military Sea Transportation Service. In all cases, the use of general agency vessels

has been supplemental to the availability of American-flag privately operated vessels. In order to assure the proper implementation of this policy a procedure has been instituted whereby owners of all American-flag vessels furnish weekly reports indicating the employment and location of their vessels and stating whether they are interested in handling bulk commodities between given areas.

Prior to assigning general agency vessels to lift outward or homeward cargoes, we are thus reasonably assured that privately operated ships are unavailable to perform the services requested by the Economic Cooperation Administration or other appropriate agency. This applies to the outward bulk cargoes of grain, coal, etc., sponsored by the Economic Cooperation Administration and also to the relatively few inward bulk cargoes, consisting primarily of metallic ores. It is contemplated that this type of operation will continue to prevail during the foreseeable future. Should it become necessary to handle other than full shipload lots of bulk commodities, the berth agency principle in effect during War Shipping Administration days will be reinstated.

In regard to the rules governing the appointment of berth agents we refer you to article 3 (h) of the general agency agreement which reads as follows:

"The general agent (solely as agent of the United States and not in any other capacity) shall select its subagents, but any subagency agreement shall be terminated by the general agent whenever the United States shall so direct.

"In the event that any vessel assigned to the general agent under this agreement is allocated by the United States for use (1) in a service in which another operator (a United States citizen) maintained a berth operation with privately owned United States flag vessels on June 25, 1950, and is recognized by the United States as a regular berth operator in such services, or (2) in a trade, not served with privately owned United States flag vessels on June 25, 1950, or not served on the date of such allocation by a United States citizen who is deemed by the United States qualified to conduct an efficient berth operation, where the United States deems another operator to be qualified as an operator in such trade, such regular or other operator, as the case may be, may be designated by the United States as the berth agent of the United States to conduct such of the business of the vessel in such service or trade as the United States may require.

"During any period while any such vessel is assigned to a berth agent, the general agent shall be under no obligation to perform with respect to such vessel duties which are imposed upon the berth agent under the terms of the berth agency agreement prescribed by the United States."

The berth agency agreement has been drafted and will be published within the next few days. As previously stated, if our activities expand to the extent of requiring the allocation of ships for general cargo service, it is our intention to select companies as berth agents who qualify under the provisions of the article heretofore quoted. It is our policy, however, to give the liner operators every opportunity to provide service in their respective trades with their own or privately chartered tonnage, and, where such tonnage is not adequate, with ships chartered from the Maritime Administration pursuant to the Merchant Ship Sales Act of 1946, as amended by Public Law 591 of the Eighty-first Congress. The appointment of subagents is governed by article 3 (h) of the general agency agreement. Under this provision, the general agent has the right to select his subagents but we retain the right at all times to require the termination of any subagency appointment by the general agent whenever the circumstances are such as to make it desirable or necessary to do so.

In conclusion, may I again thank you for the interest which you have shown in our activities. Needless to say, as in all newly established agencies, we have made mistakes and it is possible that some inequities have resulted. However, to the best of our ability these have been or are being rectified and we hope to do a good job in the trying days that appear to be ahead of us.

Should you desire any further information on this subject or any other phase of our activities, I hope you will free to call upon me.

Sincerely yours,

C. H. McGUIRE,
Director, National Shipping Authority.

Universal Military Training

EXTENSION OF REMARKS OF

HON. HARRY P. CAIN

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. CAIN. Mr. President, on September 8 the National Broadcasting Co. presented a refreshing and stimulating program, the American Youth Forum, for the first time. This program was offered simultaneously by radio and television. The founder and director of the program is Mr. Theodore Granik, who has long been known throughout the country as the founder and moderator of the American Forum of the Air.

I was so fortunate as to have been a recent guest of the American Youth Forum. This favor permitted me to answer questions offered by some among a group of 60 intelligent and curious young Americans. Without reflection on any other current radio and television program, I believe that the American Youth Forum is an outstanding and extremely worth-while opportunity for the young people and their weekly guest. The program has no rehearsal. The young people are encouraged to ask any question and on any subject which is of concern to them. The American Youth Forum provides us older people with a splendid chance to listen to what young America has in mind. I do congratulate NBC and Mr. Granik for what they are attempting to do for young Americans.

Because of the interest which my colleagues may take in the form and character of the American Youth Forum, I ask unanimous consent that the script of the September 15 program, in which I participated, be printed in the Appendix to the Record.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

Guest. Senator HARRY P. CAIN, Republican, Washington.

Moderator. Theodore Granik.

Question. I want to know your views on universal military training.

Question. I want to know, should the United States recognize Red China?

Question. I want to know why General MacArthur was not invited to the signing of the Japanese Peace Treaty.

ANNOUNCER. There are a few of the questions young America is asking today. What are the answers? Youth wants to know. The National Broadcasting Co. presents the American Youth Forum, a program dedicated

to the principle that the future of America rests with the young people of our Nation. And to help resolve some of the questions in their minds, here is the founder and director of the American Youth Forum, Theodore Granik.

Mr. GRANIK. Tonight a distinguished United States Senator accepts our invitation to give the answers that youth wants to know. In our audience, to question Senator HARRY P. CAIN, Republican, of Washington State, are 50 young men and women brought here under the auspices of the American Legion.

Now, a few words about our guest. The Senator from Washington State is one of the most energetic men on Capitol Hill. He has been in the forefront on many important and divergent issues. A great admirer of General MacArthur, he was a leading questioner in the hearings on the general's ouster.

Senator CAIN has also started a battle on the domestic scene by proposing that Congress investigate the sport of boxing.

Just this week, he suggested that American authorities in Germany hold a Czechoslovakian railroad train and its 107 passengers until the Czech Government releases American newsmen William Oatis. In short, Senator CAIN covers the field.

Now, let's see how he answers the questions. Senator, we'll give you the choice and let you select the teen-ager to ask you the first question.

Senator CAIN. Ted, I was fascinated by each of the three questions that were posed. If that young man who is rising now would restate his question, about UMT, I would like to take a try at it.

Mr. LANGERMAN. My name is Sam Langerman.

Senator CAIN. I want to know how you stand on universal military training.

Senator CAIN. Sam, in a word, I am and have been and will continue to be for universal military training because in your name as well as mine I believe young Americans should be trained for life, not for death.

You ought not to forget that a distressing amount of the war in Korea is being fought by those veterans of World War II but thousands of other young Americans have died already and been wounded because they were not properly trained. It is the concept of those of whom I am but one who support the foundation on which UMT is built, that it will train so many young Americans for any future emergency that we shall make war that much less likely.

Mr. GRANIK. Do you want to come back for another question?

Mr. LANGERMAN. Yes, sir.

Senator CAIN. I also want to know why 4-F's like Mickey Mantle, who seem to be healthy on the baseball diamond, are not given desk jobs to relieve able-bodied men.

Senator CAIN. I cannot give you a satisfactory answer to that question. There has been established a subcommittee of the Armed Services Committee whose function is continually to examine the reasons which justify deferment for any so-called 4-F. I have a sympathy and understanding for your question. I cannot answer why those who seemingly are already prepared and able to carry on athletic endeavors are not called into the service for limited duty.

But let me say to you that until we do get an answer, you should not criticize people like Mickey Mantle and others who have walked up to their draft boards, taken their examinations, and been deferred on the basis of physician's reports. If anyone is to blame, it is the Congress of the United States and the Military Establishment, not those fine, young Americans like Mickey Mantle.

Mr. GRANIK. Young lady, you have a question?

Miss ARANOFF. Senator, I want to know, do you agree with the 18½-year-old draft?

Senator CAIN. Yes; I am strongly in support of it. As a matter of necessity, I would rather see an 18½-year-old American called into the service and trained to carry his share of the responsibility of this generation than to require those who fought so well and so valiantly 5 years ago to hold the fort in your name. I take it that you young people of this generation want to carry your share of a very monumental burden. I am for the 18½-year-old draft.

Mr. GRANIK. Go ahead, young lady.

Question: Don't you think UMT will make us a militaristic nation?

Senator CAIN. It is not my view. I must speak out of my own personal experience. When I was just about your age, I became a cadet in a military school. I spent five of the best years of my life in this school. I learned how to live with my fellows. I was exposed to discipline which I learned to respect. I began to understand how to use a weapon to protect myself when I was your age. Fifteen years later, when the time came that I was called to the colors and the service of my country, I was a much better equipped and trained young American to carry my load of obligations.

This training had not made me previously a militarist. I am not one today. I lived through World War II partly because I was lucky, but, in part, because I knew how to use the weapons to which I had been exposed as a youngster. I hope the same privilege comes to all of you young men.

Mr. GRANIK. Do you have a question on UMT, young man?

Mr. CAIN. My name is Matt Cain.

Senator CAIN. I am delighted to know you.

Mr. CAIN. I am no relation, Senator.

You say you favor the draft of 18-year-olds. I want to know. Do you favor the exemption of college students, and if you do, on what basis?

Senator CAIN. As a matter of fact, I did. I cannot remember exactly what happened to that proposal. The Senate of the United States supported not the exemption, but the deferment of those selected for special training in scientific and medical schools and technical schools of one kind or another. The House, as I recall, disagreed with this view. I think that in the conference the deferments were not agreed to.

Mr. GRANIK. Go ahead with the next question.

Miss HALL. Senator CAIN, you said you thought that 18-year-olds are old enough to be drafted. Don't you think if they are old enough to be drafted at 18, they are old enough to vote?

Senator CAIN. The State of Georgia has decided that question affirmatively. If I had the opportunity to vote in favor of giving the franchise to those who were expected to die in support of the franchise, my answer is that I would give it to you.

The question is not presently before the Congress. I would not duck my responsibility, but I will not sit here and give you a speech that it ought to be done tomorrow when in fact it is not presently being considered.

Mr. GRANIK. Go ahead, young lady.

Miss BLACKWELL. My name is Patricia Blackwell. I would like to know if you would support Senator McCarthy in 1952 in the primary and the election?

Senator CAIN. In the State of Wisconsin?

Miss BLACKWELL. Yes.

Senator CAIN. On the basis of Joe McCarthy's status as of this minute, I have every intention, if requested, of doing everything I possibly can to see that JOSEPH MCCARTHY, of the sovereign State of Wisconsin, is returned to the Senate of the United States.

Miss BLACKWELL. Does that mean you necessarily endorse his views or his methods?

Senator CAIN. Patricia, it does not necessarily mean that I endorse his methods. It certainly means without question that I en-

dorse his views. You either take Senator McCarthy or you discard him on the basis of both his views and his methods. With reference to that choice there is but one choice this Member of the Senate can make, and that is JOSEPH R. MCCARTHY, and I wish him well with reference to 1952.

Mr. GRANIK. Another question on Senator McCarthy?

Miss RYAN. Not on Senator McCarthy.

Senator CAIN. Please go ahead anyway.

Miss RYAN. I would like to know what the Senate is doing to ratify the Japanese Peace Treaty.

Senator CAIN. The Senate does not as yet have the Japanese Peace Treaty before it. The treaty was signed, as you know, by 59 nations, including Japan, in San Francisco just a few days ago. At his convenience, and he can do it any time he wishes, the President of the United States over a covering letter will submit the treaty for ratification to the Senate of the United States. I hope he moves in no great hurry.

Mr. GRANIK. Go ahead. You may come back if you like.

Miss RYAN. You said you hoped he moved in no great hurry. That opinion has been expressed by a number of people.

Do you think it is because people in the textile industry and the fishing industry are afraid of competition?

Senator CAIN. No; there is no relationship between the two. The peace treaty had no economic provisions in it. Trade and economic treaties will be signed in due time by the United States and by Japan, but those who urge not moving too rapidly in ratifying the treaty are thinking back to the mistakes that the Senate of the United States has made since the war in ratifying other treaties. Some of us in the Senate, though I don't know that this is the majority view, are anxious to know more about what Japan as a sovereign nation is likely to do with reference to signing a peace treaty with some government in China, Red China, or Nationalist China than we do now know. We think there is no great need for hurry. We moved in a great hurry when we signed the Italian treaty. Many of us who have signed it have regretted that signature almost from the day we agreed to that ratification.

Mr. GRANIK. There is a question about Douglas MacArthur.

Question: I want to know why Gen Douglas MacArthur was not invited to the signing of the Japanese Peace Treaty.

Senator CAIN. Young man, about 150,000,000 Americans in the United States, and I think you are raising a question which at least 95 percent of more than 150,000,000 people would express if they had that opportunity, would like to know the answer. There is no answer. Let me say it was suggested by Ted Granik that I am a devotee and a great admirer of General of the Army Douglas MacArthur. That is an understatement. I love him with an affection as man between man because he is one of the great citizens this world has ever developed or produced anywhere. But General MacArthur was the architect who created the atmosphere through which it became possible finally to have that gathering which was for the signing of the peace treaty out in San Francisco. The fact that he was not invited to watch the culmination and the consummation of one of the most magnificent jobs in all of history is, I think, something that should not be reflected on because there is no answer for it.

Mr. GRANIK. Another question on the same phase? Go ahead.

Mr. PELLONE. My name is Nat Pellone. I would like to know by what authority President Truman removed General MacArthur as Commander in Chief of the United Nations Forces.

Senator CAIN. I can give you only an inadequate answer.

Mr GRANIK The Senator listened to many days of testimony, weeks, in fact.

Senator CAIN I am, on the basis of conviction, in support of the strategy and tactics and views of Gen. Douglas MacArthur, but I always felt and have said so many times, the General MacArthur with reference to his position in the Army of the United States is no different from any other officer within that Army, be he a second lieutenant or a four-star general. From that point of view the President of the United States as the Commander in Chief of the Armed Forces of America, and he had ever legal and any other kind of right to remove General MacArthur.

With reference to your United Nations question, many people are still in doubt as to whether or not after the United Nations had delegated to the United States the command function in Korea the President, unilaterally, on his own authority, had the right to remove General MacArthur without consultation with those who created General MacArthur's position. That is the best answer I can give. The question is not being pressed at the present time. I suppose there is no book to which one could refer for a conclusive answer.

Mr GRANIK The young man there is bubbling with a question.

Question On this college deferment question I want to know if you think it is good to go to college for a year and then be drafted? Wouldn't it be better if these tests were given upon graduation from high school?

Senator CAIN I am not qualified to answer that question as well as I would like to. As I remember the issue when it was before the Senate it seemed very important to me that a number of young Americans could conveniently and wisely be deferred in order to carry on certain technical studies, after which they must be called to the colors to serve their period of time.

Mr GRANIK You have a question, young man?

Mr BECKER I was wondering what you expect to find out with these inquiries into boxing, Senator CAIN.

Senator CAIN That is a domestic question out of which I derive a great deal of satisfaction. The Senate has one important national and international question after another every day. Occasionally one likes to think of the importance of clean sports. I became interested in the International Boxing Club because a man whom I knew, Harry Matthews, by name, and by reputation perhaps the greatest light heavyweight in all of the world, has successfully been prevented from having a title fight.

I likewise was interested in Archie Moore, a distinguished Negro fighter who has been the No. 1 challenger for the light heavyweight title for some 12 years and never been given a chance. The Senator from Idaho, Mr. WELKER and myself thought, it proper to raise the question of why if the International Boxing Club is going to present a bout for which you are expected to pay very good money—\$30 in New York the other night—

Mr GRANIK That is what a friend paid for my ticket.

Senator CAIN That you are not given a first-rate contest rather than a second-, third-, or fourth-rate exhibition, as you recently got when the light heavyweight champion presumably defended his title against Bob Murphy a red-headed Irishman who ought to be complimented for his courage, but sent back to a boxing school so he can learn what to do. Our boxing inquiry seeks to provide every qualified challenger with a chance to fight for the championship.

Miss STEVENS My name is Mary Jane Stevens. I would like to know how can the average American pay check afford the pay-as-you-go taxation program?

Senator CAIN I do not think it can. If I am right in saying that it can't, then we find

ourselves in the greatest financial dilemma this country has ever been faced with. I agree with you that we cannot raise taxes sufficiently high to pay our way as we go in this defense program, but because the needs of defense are outstanding, that only means we are going to have to continue to spend money, young people, we do not have. And who is going to pay those debts? You of your generation, not of mine. I share your concern. I like and respect your question.

Mr GRANIK Go ahead, Miss.

QUESTION If the American pay check cannot afford to pay taxes that high, how can the American pay check afford the high prices which are in effect now and which will be higher as price controls are weakened?

Senator CAIN I have never written a book on this question, but it would take the length of a book to try to answer the question of high prices as I understand it. I don't claim to be an authority, but there are too many dollars in circulation because of the literal spending of billions and billions of dollars for defense and for other things, more dollars in circulation than there are domestic or consumer goods. Competition merely requires that you spend more dollars for the product that you want. The people in the lower levels are the ones who suffer the most.

QUESTION Didn't you vote in favor of the National Defense Production Act which weakened price controls?

Senator CAIN Yes, I did.

QUESTION Couldn't controls have lowered prices, or, at least, kept them from rising?

Senator CAIN The only thing that price controls, so far as I know, can do, is to stabilize, and with many exceptions at that, prices. Price controls in themselves have absolutely nothing whatsoever to do with lowering prices. Might I say with reference to this aspect of a price-control law or proposal, prices can be rolled back, but any time you roll back a price you do a benefit to one segment of your society and you confiscate the property and the inventories and the resources and the profits of other segments of your society. You can only believe in roll-backs if you are one of those who benefit. But you cannot if you are one of those who suffer as no government should require you, an American citizen, to suffer.

Mr GRANIK Young man, you have a question on roll-backs or price controls?

Mr KENNEY My name is Edward Kenney. I want to know why on the occasion of General Marshall's resignation as Secretary of Defense, you stated that no military man should accept the position of Secretary of Defense.

Senator CAIN I was the only member of the Armed Services Committee of the Senate. There may have been others who shared my view who made such a comment, but I made it because when the National Security Act of 1947 was written and approved by the Congress, and signed by the President, it included in its legislative history a solemn declaration that the best interests of this country would be served by maintaining a balance within your Military Establishment of things military and things civilian. Young man, you can only do that if you have a civilian as the Nation's Secretary of Defense. I paid my respects to Gen. George C. Marshall, the soldier. I expressed my undying cheer that a soldier cast as he was as Secretary of Defense had been retired to private life. For as long as I am in the Senate, I will never give my vote, and will always use it against any soldier who is nominated to fill a job which somebody sitting right out there presumably, and I hope, will be qualified to fulfill some day.

Mr GRANIK I think there is a follow-up question.

Mr KENNEY Senator, who is better qualified to serve as the Secretary of Defense and have charge of the Nation's defense than a man of present or previous military experience?

Senator CAIN That is an entirely different question. What you are saying is that the people of the United States, 150,000,000 strong, should have no person representing them who stands between them and the military. I think the adoption of the suggestion you have in mind, which, by the way, a good many people actually believe in, would give rise to a legitimate fear that at some time in the future which we hope will never happen, the military would take over the operation of the United States of America. This, to my mind, is much less likely and presumably will never happen if we have civilian Secretaries of the Army, the Navy, the Air Force, and over them, one of the finest civilians that we can find as Secretary of Defense.

Mr GRANIK You have a question, young man?

Mr BARRISH Senator, my name is Robert Barrish. I want to know your views as to the propriety of Senator BENTON's resolution to expel Senator McCarthy from the Senate because of his conduct unbecoming a Senator.

Senator CAIN You know that we are all pretty good friends in the Senate of the United States.

Mr GRANIK That is an exclusive club.

Senator CAIN If sometimes we do not always respect each other as individuals, but very generally we do, we always respect the seat which a sovereign Member of the Senate of the United States occupies. I think in being just as cautious as I can, that all I ought to say is that the Senator from Connecticut [Mr. BENTON] had reason to know, because there was no reason for the introduction of the resolution in the first place, that the citizens of the State of Wisconsin will judge the merits of JOSEPH R. MCCARTHY. Mr. BENTON knew that the resolution was never going anywhere. It was introduced to play to the weaknesses and the prejudices of tens of thousands of Americans who in not knowing JOE MCCARTHY, thought they did not like him. I am against the resolution, and in that instance I would take Mr. BENTON on for argument here or anywhere else, 6 or 7 days a week.

Mr BARRISH, Senator CAIN, Senator MCCARTHY has made some rather slanderous remarks about high Government officials—I don't think I need name any—which he cannot exactly prove. Don't you think those statements serve only to undermine the public as to those officials? It does not give the people a very good opinion of those officials.

Senator CAIN That is a very good question. I think there is a logical answer.

For weeks if not months I have read and heard commentators and columnists in this country saying that Senator JOE MCCARTHY of Wisconsin, only made such comments about others when protected and covered by the immunity provided to him in the Senate of the United States. About 3 weeks ago I went home to the State of Washington where I had the very great pleasure of introducing JOE MCCARTHY before an audience in the city of Spokane and within 24 hours before an audience in the city of Seattle. JOE MCCARTHY said nothing different in the State of Washington than he has said on the Senate floor. I don't know whether his comments are based on fact or not, but out in the open JOE MCCARTHY has said to these people, "You are guilty of this, that, and the other thing." Now, it is for those people to rise and sue him if they wish to support the comments made by these commentators and other news reporters. My thought is that very few of them will dare to rise and deny in a court of law what JOE MCCARTHY has maintained against them.

Mr GROSS My name is Phil Gross. I would like to know why only nine Members of the Senate were present to vote on the \$6,000,000,000 military construction bill which included a provision for a \$19,019,000

hand-out for President Truman's home town of Grand View, Mo. for an airport.

Senator CAIN. I cannot answer your question. We live in a very strange and a very bewildering day in which the Congress is confronted with problems which if taken individually 25 years ago would have aroused a national controversy and a national discussion over each of them. Now, they come so fast that if some Senator or some small group of Senators will not create an actual controversy over a bill, that practically by unanimous consent at the end of an afternoon a bill such as the one you discuss was and will be passed.

Mr. GROSS. Yet, Senator, this was brought out in the House of Representatives in debate that this was a \$19,019,000 appropriation and which later has been proved, or rather charges have been made that land speculation has played a part in this hand-out.

Senator CAIN. Without burdening you or taking time from anyone else, I would say with respect to the particular item that you have raised a question about, I am not familiar with it. I read about it in the paper after that bill was brought up.

Mr. GROSS. You were not present to vote on that bill?

Senator CAIN. I think I was, to show how these things work. My mind tells me I was one of a handful of Senators who late in the afternoon agreed to the passage of the bill.

Mr. GROSS. And it was a voice vote.

Senator CAIN. As I recall it I do not approve of the method. But I was guilty of being a part of it.

Mr. GRANIK. Go ahead

Mr. HILL. I would like to know whether you think Soviet Russia would take an active hand in the Korean war if the U N forces should be able to drive the North Korean and Chinese back to the Manchurian border?

Senator CAIN. To over-simplify the question, my feeling has been since the war in Korea began. No. What I do think now is that as every successive day goes on with its fighting in Korea the likelihood of Russia taking a hand in that Korean war becomes more likely. I thought the time to have won that war was shortly after we first entered the war for in several months we accumulated forces between ourselves and our allies sufficient to that task. With the entrance of Red China, that is when we should have made the big effort against our enemies, the North Koreans and the Red Chinese. Now that we have entered an uncertain and confusing period of negotiations, goodness knows how many other forces, including Russia, are likely to begin to take a part in the war.

Mr. GRANIK. You have a question.

Mr. KIRBY. I would like to know what measures have been taken in order to fulfill the relations of the Crime Committee. I was personally appalled at what they proved, and I would like to know about it.

Senator CAIN. All I can tell you is all I know as a result of the Crime Committee hearings. The Crime Committee itself offered various pieces of legislation to the appropriate standing committees of the Senate. Some of those committees presumably are holding hearings on the questions raised by the proposed legislation. That happens to be the status, and no action has yet, to my knowledge, been taken on any of the recommendations. It does take time. Whether or not it could be done more rapidly, I am not qualified to say.

Mr. GRANIK. Young lady.

Miss VANSIVER. My name is Gloria Vansiver. I understand you are a former paratrooper. I would like to know your opinion of this Korean war from the fighting man's point of view.

Senator CAIN. What time is it? There are only 3 minutes to go. All I can say from

the fighting man's point of view is, if I understand him correctly, he wants to be supported by his Government and his allies with two things—the tools with which to fight and the encouragement which will permit him to go ahead. That fighting man, or he who yet lives, has never forgotten, nor will he ever, that last November, before the Red Chinese entered the war, our forces were on the shores of the Yalu River, and months and months later we are back on or about the thirty-eighth parallel. This situation nauseates the fighting man and every fighting man who ever lived. That is the best answer that I can give in a hurry.

Mr. GRANIK. Ten seconds.

Miss BURRELL. I want to know: Do you think that the world will ever find a remedy for war?

Senator CAIN. Yes. If and when the world, and let us all believe the same thing because there is only one answer: Total disarmament. Anything short of that will continue for economic and political reasons to cause more wars in the future.

Mr. GRANIK. I wish we could continue, but our time is up. Senator CAIN, thank you for answering questions of our teenagers tonight. I know all agree from the nature of the questions the young people of America are keenly interested in problems of our Nation and the world.

Our thanks to the American Legion for their support in this new program, the American Youth Forum.

The young people who questioned Senator CAIN tonight were brought to our Washington studios as part of the activity of the Nation-wide youth program of the American Legion.

This is Theodore Granik saying good night from our Nation's Capital.

ANNOUNCER. This has been the American Youth Forum, a new program dedicated to the youth of America. Tonight's guest was Senator HARRY P. CAIN, Republican, of Washington State.

The American Youth Forum is founded and directed by Theodore Granik, and was presented from the NBC Television Theater in Washington, D. C.

Overhauling Our Reservist Policy

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. BENDER. Mr. Speaker, the serious dislocations of family life which have been caused by the current policy of our armed services in recalling reservists, active and inactive alike, should be eliminated by the new reserve program in the works. As matters now stand, many men in their thirties, who have served up to 4 years in the Armed Forces and have just begun to get on their feet financially have been summoned into service at great personal and financial loss to their families.

The program which the House has passed would classify reservists in three groups: Those who are Ready, Stand-by, and Retired. Only those in the first classification can be called at the determination of the President. In order to enroll the others, the Congress would be required to decide how many would be called, and when.

Such a policy will restore to the Congress much of the authority seized by

the President and his military departments in recent years. It remains for Congress now to take one additional step and to provide that no men may be used outside the continental limits of the United States for military purposes without congressional action.

The John H. Kerr Dam

EXTENSION OF REMARKS

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. CANNON. Mr. Speaker, may I interrupt the proceedings on this crowded last day of the session, to pay a much deserved tribute to one of the outstanding Members of the House, our colleague, the distinguished gentleman from North Carolina, Judge KERR.

By solemn act of Congress, the great dam now nearing completion at Buggs Island, on the boundary between the Old Dominion State of Virginia and the Tar Heel State of North Carolina has been named "The John H. Kerr Dam."

No action by the Congress could have been more appropriate. Judge KERR has envisioned this great enterprise for many years. As he witnessed the devastating ravages of uncontrolled water courses through these two States and the resulting erosion of their fertile soils carrying away to the sea vast areas of some of the most productive land in the world, he conceived the idea of meeting the situation by impounding the runaway waters and rehabilitating the farmlands, and at the same time producing for this important section of the South cheap electric current to supply all needs of its cities and farms, homes, and factories, thus contributing immeasurably to the progress and prosperity of his native State and her progressive neighbor.

His position on the Appropriations Committee, where he has served as ranking member for many years, gave him opportunity to keep in touch with similar flood-control work over the Nation and he has constantly and unceasingly labored with departments, economists, engineers, and colleagues until today he has seen his vision materialized and this vast project, one of the notable utility, conservation, and engineering plants of the world, come into being and begin its beneficent service to mankind.

Judge KERR is one of the most influential and best loved Members of the House and in his long service here has contributed in many ways to the welfare of his section of the country and to the country at large. When the South was suffering from crop specialization, and its products were largely confined to cotton and tobacco, he added a new product to southern agriculture and industry. Cultivation of the peanut had been so curtailed by competition with the products of coolie labor shipped into our markets from China as to be practically negligible. Judge KERR secured the enactment of a tariff law through which this crop has become one of the most

important produced south of the Mason and Dixon's line. As result of this legislation Judge KERR is known throughout the South as the father of the peanut industry. And today, with the enactment of this law, the civil functions appropriation bill of 1951, he becomes also the father of the John H. Kerr Dam. I congratulate Judge KERR and I congratulate the Congress of this richly merited tribute conferring honor on one to whom honor is due.

Columbia, the River of the West

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address entitled "Columbia, the River of the West," delivered by Mr. W. L. Williams before the thirty-eighth annual convention of the Pacific Coast Association of Port Authorities.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, distinguished guests, the Port of Portland Commission and the Commission of Public Docks of the City of Portland jointly extend to our visitors a hearty welcome. We are honored indeed to have the privilege of being hosts to this convention.

Perhaps I should, before commencing my talk, take the opportunity to add my few words of congratulations to those who have worked so diligently to bring this gathering together. They, throughout the years, have given much of their time and talents to build and maintain an association of port authorities on the Pacific Coast where we can all meet on a common level, air our views and work harmoniously toward the betterment of our respective ports and continue the fostering of overseas and other water-borne commerce.

Naturally I shall take as my theme this afternoon "Columbia, the River of the West"—its importance to us who live in the Northwest, its importance to you who live in California and other Western States, and indeed to everyone who lives in the United States. Here perhaps there would be no point in elaborating or emphasizing the importance of the natural and inherent features of the Columbia River in connection with the over-all defense preparation of our country and the free world.

Over the years we have been living in what we like to term the free-enterprise era, and we have come to recognize that we have the right to choose the kind of lives we should live. We have taken as a matter of fact most of the blessings that have been bestowed upon us, and yet we are reluctant to acknowledge that most of the benefits and privileges we now enjoy came as the result of the labors, disappointments and accomplishments of our predecessors. We have almost come to believe that the system we live by is of our own making. As prosperous as we all are, we have become slightly jealous of each other's prosperity, and in the process of sniping at each other, we are becoming blinded to the sinister menace that threatens our very existence.

How strange it is to hear intelligent people proclaim the disadvantages of a world port located in fresh water 100 miles from the sea such as Portland, Oreg., is; to publicize and ridicule a Columbia River bar that does not exist, and to slander the very basis of one of our greatest economic advantages—a highway broad and deep reaching from the ocean to the far reaches of our hinterland—by referring to our sea approaches as being the graveyard of the Pacific. Yes, you have heard all of this, so have I.

I have a very vivid recollection of my first sight of the Columbia. This was 30 years ago. I saw her through the eyes of a sailor—how beautiful she was, how sweet her breath, and what depth of character. No wonder I never left her since. I recall how deeply impressed I was with the possibilities and potentialities of this great area. I was sold as thousands of other have been sold since. I stayed and I have never regretted it. Since that time I have been either directly or indirectly connected with some phase of her maritime development. Any contribution I may have been able to make is just a mere token of gratitude for the privilege of being here, of being accepted by people like yourselves.

It would be inappropriate indeed to start reading into this informal talk the statistical records of the four major areas of the Pacific Coast or to attempt to compare the maritime record of one area against another, or to start proclaiming the advantages gained by the use of one port as against another, we will leave that to the chambers of commerce. We all have advantages, the greatest of which is that we all belong to the Pacific Coast. Let there be no misapprehension, unless the Pacific Coast works as a unit on its over-all development we are quite apt to find other areas taking away some of the things that are inherently ours.

We have witnessed, even since the end of the last war, a sharp decline in commercial trade handled through the ports of the Pacific as compared with prewar records. Even at that, there seems to have been a reluctance among the sister ports of the Pacific Coast to cooperate with each other for the benefit of the whole. We seemed to want to justify this foolish approach on the basis that it was the era of bitter competition, and that instead of closing ranks, each should go out on its own systematically to drive the business away from the other. It is gratifying to know that this condition has not lasted too long, and that—through the efforts of this and other organizations—port bodies, transportation agencies, and chambers of commerce are now acting in unison under the auspices of the Western Transportation Council to promote the economy of the Pacific coast as a whole. How much more effective it is to sit around the table together to discuss and settle minor differences on the broad approach of mutual confidence for united we stand divided we will fall. By the way, what a service the Pacific Coast port authorities could perform if, in this convention at Portland, Oreg., a code of ethics were adopted based on the three C's—common decency, common sense for common good.

I have observed in my travels abroad that the great maritime nations stress above all the importance of continued development of their ports and harbors. Show me a country or an area that has grown in stature, and I will trace back that success through the portals of its harbors to the avenues of world trade. Conversely, history has shown us that decline and decay of countries usually sets in around the seaboard.

I have drifted away somewhat from my original thought of speaking of where the Columbia River fits into the over-all scheme of western trade promotion and the common welfare. We even hear serious sug-

gestions of the best possible means to divert some of our pure, clear water, which we have in abundance, to you poor, parched Californians. We have no particular objection to help promote such a scheme—we are not selfish in that regard—we would just as soon start exporting some of our water after it had completed its work irrigating our lands, transporting our river commerce, and generating electric power which in time we also plan on having in exportable quantities. With some of our power and water, just think what it would mean to your highly developed manufacturing and agricultural areas. Not a bad thought and certainly one that should harmonize with our basic thinking.

During the era when Spain and England were vying for world-wide trading supremacy—when their mariners were out seeking new lands—a startled Old World heard rumors of a great new land bordering on the Pacific Ocean, rich beyond all dreams in natural resources and abundant in game. It was also said that beyond a doubt a great river existed which, when discovered, would bring to the country that planted its flag upon its shores, a prize so rich as to dwarf the wealth of the Indies. It was inferred that there also might lie a short cut to and from Europe that would reduce the hazards of the tedious and dangerous passage around the Horn, or up by the tortuous route through the Pacific Islands. As word got around, the river was actually named before it was discovered, and it was spoken of as "the River of the West."

Well, that was not a bad guess for those old fellows. Could they but glimpse the river of the west as we know it today, and trace back through the pages of history the successive harvests of prosperity that have been reaped directly attributable to it, they surely would recognize the modesty of their original evaluation. The wealth is yet untouched, the prize still greater than ever. No doubt, future generations evaluating our foresight and wisdom will probably gasp at our limited imagination.

Looking back over the past 30 years, what intrigues me most is that I have been privileged to witness the great transition of the River of the West from that of a magnificent river drawing through its tributaries the run-off of the eternal snows of the Rockies to that of a great highway of commerce, served by ships of all nations, distributing their cargoes to the far reaches of the world, succoring the famished and helping mankind in general.

I am not unmindful of the blood, sweat, and tears that it has taken to reach the point where we are at today. Nor do I forget those determined pioneers who made their own clearings on the banks of the Columbia and Willamette Rivers sufficient to build their shelters and to till a few square yards of ground. But I must also pay my humble respects to many of my own generation—men of foresight and courage, men who knew the real meaning of cooperation, men whose broad vision saw the need of a deep-water channel from Portland to the sea, and the building of waterfront facilities capable of accommodating the largest deep-water vessels serving the Pacific coast. I should here also mention the pioneers who have in most recent years blazed the trail for modern transportation to the upper Columbia and Snake Rivers, it now looks as if the fruits of their efforts are ripening, for it will not be long before we will have almost slack-water navigation to the very doorstep of that tremendous wheat country of eastern Washington and Oregon—truly a broad basket if there ever was one.

It would be rather difficult to put into simple words what this great river and its tributaries mean to the economy of the Pacific coast. Perhaps we can, by scanning a few simple facts, understand better the reasons why people of this and past

generations have faced the future with such determination, faith, and confidence.

One need go no farther than an ordinary map to discover that the area drained by the Columbia and her tributaries is larger than France, twice the area of the British Isles, or almost equal to all eastern seaboard States from Maine to the southern boundary of the State of Virginia. Trace the meandering of the main stream from its headwaters 2,600 feet above sea level in the Canadian Rockies, down through the gorges and fertile plains of eastern Washington and eastern Oregon, through the Cascades and on to the ocean at Astoria—a distance of approximately 1,200 miles.

Without much difficulty one can learn that as of today over 4,000,000 acres of what used to be unproductive land is being irrigated and under the magic touch of the sweet water of the river have sprung to life to give further health and happiness to man. Nor is this all—an additional 5,000,000 acres is yet to be irrigated, and when this comes into bloom there can be no doubt as to the additional benefits we will all obtain.

Now, this means people and more people. Never has the prospect been brighter. From all over this great land of ours vigorous men and their families will come to till the soil and reap the harvests of this abundant land. The fruits of their efforts will find their way into the channels of trade—new communities, new cities, greater cities will spring up. A great empire, indeed, is in the forming.

If by chance there should be in our minds, one just has to survey the record of population increase to recognize the trend. Between 1940 and 1949 the population increase in the Pacific Northwest has 44 percent against a 13 percent over-all increase in the United States. What better proof do we need?

Earlier in this talk I touched briefly on the matter of hydroelectric power. Here we have one of our greatest potentials—the very lifeblood of modern industrialization. We all recall when the first great dam, Bonneville, was projected to produce the fantastic figure of 500,000 kilowatts there were many who predicted that this kind of power was not needed and could not be used. Nevertheless the great dam was built, and what a boon it proved to be when practically overnight we were thrown into the greatest war man had ever known, and what a contribution it made to our ultimate success. There is no telling how history might have changed had it not been for the hydroelectric power production of the Columbia. With the building of Bonneville and the lessons learned thereby, man's harnessing of the mighty river moved forward to meet the ever-increasing need for power and more power. The great industrial plant began to take shape. Other great dams were projected and built or are building. Still further plans were made and are being made. There seems to be no limit to the demand for industrial hydroelectric power. Thus what seemed to be a far-off dream a few years ago has developed into a very live realization today, and yet the storehouse of potential wealth is bulging at the sides.

From Bonneville with its 500,000 kilowatts we have, in a very short space of time, moved to Grand Coulee, McNary, Hungry Horse, Chief Joseph, Rock Island—the equivalent to nine Bonneville in kilowatts produced. "More and still more" the demand cries out: We must have Ice Harbor, the Dalles, and Hells Canyon Dams too and others besides. What a story, what a river. And this is not all. Even by the most conservative estimate, there remains still untapped within the United States boundaries power potential of 30,000,000 kilowatts, equal to 60 more Bonneville Dams, and maybe one-third more in Canada.

I have endeavored to wind into a brief and simple narrative the story of the River of the West. The human mind can barely conceive the background through the mil-

lions of years of its existence, much less solve its mysteries, nor can it peer into the too far distant future with any reasonable degree of accuracy. All we know is that this magnificent system of rivers, born with the making of this world of ours, has flowed on and on throughout the ages. In terms of time man has watched the flow but for a fleeting moment. In that brief moment he has conceived and created instruments of usefulness by harnessing the river for the use of man.

The gods of nature have been generous with their gifts, the Good Lord has indeed smiled on us here in the West. If my enthusiasm for this great Columbia and the Pacific Northwest country appears to be tense and deep, it is because I see in it a vision of still greater glory and promise.

I know of no better way to conclude this brief talk than to recite the words of the poet who wrote:

"Land of the empire builders,
Land of the golden West
Conquered and hailed by freemen
Fairlest and the best
Onward and upward ever
Forward and on and on,
Hail to the land of Heroes,
My Oregon.

"Land of the rose and sunshine,
Land of the summer's breeze
Laden with health and vigor
Fresh from the western seas.
Blessed by the blood of martyrs,
Land of the setting sun,
Hail to thee land of promise—
My Oregon."

Statehood for Alaska and Hawaii

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. LEHMAN. Mr. President, I ask unanimous consent to insert in the Appendix of the Record a letter which appeared in the New York Times of October 2, 1951. This letter urges that the Eighty-second Congress pass the Hawaii and Alaska statehood bills, as an important factor in our defense of the Pacific. My own position on these matters, I think, is well known to my colleagues. I ask for the printing of this letter in the Record because I believe it reflects the beliefs and hopes of many people in my State.

There being no objection, the letter was ordered to be printed in the Record, as follows:

ACTION ON STATEHOOD BILLS ASKED

TO THE EDITOR OF THE NEW YORK TIMES

The majority leader of the Senate recently called to the attention of the upper chamber the fact that two important pieces of legislation still await action and approval. These are the bills to provide statehood for Hawaii and Alaska. No assurance was given, however, that this legislation can achieve any priority on the calendar before Congress adjourns next month.

The Eighty-first Congress gave considerable attention to the statehood bills: extensive hearings were held, the House passed H. R. 49 (Hawaiian statehood bill) and generally the legislation was looked upon with favor in the Senate. President Truman gave his blessing to the bills and sent a

letter to the chairman of the Committee on Interior and Insular Affairs urging passage of the bills.

Despite the sanguine outlook, the Senate managed to delay a vote on the bills, and they died when the Eighty-first Congress finally adjourned.

We are fighting today in the Pacific, and we are building up our military strength as rapidly as production will permit. Yet the Congress continues to lag on one of the most important components of our Pacific defense: the incorporation of Alaska and Hawaii into the Union.

It is now up to the leadership of the House and Senate to cut through the red tape and make certain that this "must" legislation is not lost in the final shuffle.

KENNETH HASKEILL MANTEL,
Brooklyn, September 25, 1951.

Fifteen Years of Progress

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the Record, I include the following:

FIFTEEN YEARS OF PROGRESS—THE AGRICULTURE CONSERVATION AND RELATED PROGRAMS IN OKLAHOMA

The agricultural conservation program encourages and assists farmers in the use of soil saving and soil improving methods. Visual evidence of the progress that has been made under this program during the past 15 years can be noted on individual farms in all sections of the State.

Terraces have been used to protect the sloping fields on thousands of Oklahoma farms. This is one of the practices that begins immediately to stabilize or protect farm land and continues to add accumulative benefits over a long period of time. Though terraces have been built to protect more than 2,000,000 acres of Oklahoma cropland since the beginning of the agricultural conservation program in 1936, it is estimated that this type of protection is needed on an additional 9,000,000 acres. In developing the agricultural conservation program for recent years, greater emphasis has been placed on speeding up the terracing work.

Construction of farm pond dams provides multiple benefits. From the standpoint of increased livestock production, well-spaced watering places give better use of the forage on pasture land and help to prevent the overgrazing that occurs around watering places that are insufficient to serve the area. The better cover of forage which results aids materially in preventing erosion on pasture land.

Farm pond dams, by holding excess water in the upper reaches of drainage basins, also aid in preventing erosion and flood losses in downstream areas.

While some 90,000 farm-pond structures have been completed during the 15 years of agricultural-conservation-program operations, there is need for an additional 90,000 to 100,000 structures for which acceptable sites are available. The additional structures would contribute greatly to livestock production, and better utilization of pasture areas which do not now have livestock water.

FOOD IS NO RICHER IN MINERALS THAN THE SOIL FROM WHICH IT COMES

Of 46,000 soil tests made over a 3-year period covering most counties in Oklahoma,

\$9,000 showed some degree of phosphorus deficiency. Of 48,000 soil tests made in Oklahoma, 34,000 revealed a calcium deficiency. Our mineral account is overdrawn. If we are to continue spending our soil fertility we must make mineral deposits. Healthy animals and nutritious plants cannot be produced on mineral deficient soils. In addition to improving the quality, greatly increased volume of crop production is often secured by application of the needed minerals.

Under the agricultural-conservation program during the period 1936-50 limestone has been applied to 1,300,000 acres of land on 58,000 farms. Under the program during the same period 1,900,000 acres on 74,000 farms have been treated with phosphate. Soil tests to determine deficiencies are required before program assistance for mineral application may be obtained.

Lime: One of the primary benefits from the agricultural-conservation program is its effect of encouraging farmers to use practices which are new to an area and which would not otherwise be readily adopted or used. Only limited use of the liming treatment for soil had occurred from many years of teaching and demonstration of the benefits from limestone application. Beginning with the agricultural-conservation program of 1936 there has been a consistent and sometimes spectacular increase in the use of agricultural limestone on Oklahoma farms.

PHOSPHATE

The use of phosphate has steadily gained in favor with Oklahoma farmers. Encouraged in the early program years to make use of phosphate under legume crops, through the share-the-cost provisions of the agricultural-conservation program, and recognizing the possibilities for increased production from this method of fertilization, farmers have sharply increased their demands for phosphate in each year of program operation. There is no indication of a lessening in the demand for phosphate.

Known deposits of phosphate materials in the United States are sufficient to last for 2,000 years or more. The problem thus becomes one of getting the materials in form for use and transported to the areas where needed at a cost farmers can afford to pay. The assistance given farmers under the agricultural-conservation program for use of fertilizers and minerals also serves as encouragement to private business for development of sources of materials, arranging for processing, and providing distribution outlets for the materials. For example, in Oklahoma there has been a private capital investment, in quite recent years, of more than a half-million dollars in fertilizer plants at two locations.

INCREASING LIVESTOCK PRODUCTION--PASTURE IMPROVEMENT PRACTICES

Per capita consumption of meat has increased greatly since the prewar period with the heavier demand for meat by consumers contributing to higher meat costs. The increase in livestock numbers since the start of the last war has failed to keep pace with consumer demand. A constantly increasing population will tend to build demand for meats and dairy products still higher in future years. Under these conditions, the expansion of livestock production can play a big part in future Oklahoma agriculture. Ready markets for all the meat and milk that can be produced will favor shifts toward greater livestock production. An increased supply of livestock feed and forage will be an essential part of any program for increased livestock production.

The agricultural conservation program has carried a number of pasture improvement practices during the past 15 years, such as seeding or reseeding adapted grasses, overseeding grasses with legumes, brush control, and weed mowing, application of needed minerals and others. Pasture improvement

practices have met one of the needs of Oklahoma farmers.

VETCH ADDS NITROGEN

Research has shown that nitrogen from the air can be stored in the soil faster during the cool months of the year. Oklahoma farmers have found that, in vetch, they have an excellent cool weather legume. Our soil scientists estimate a vetch crop in Oklahoma, which reaches a good growth and is left on the land until maturity, will deposit in the soil on each acre approximately 70 pounds of nitrogen. At current fertilizer prices this is equivalent to \$8 worth of ammonium nitrate.

The table below, which gives the acreage seeded to hairy vetch, serves as the best evidence that Oklahoma farmers are fully recognizing the value of vetch as a soil builder.

Vetch acreage

	Acres
1940.....	10,849
1941.....	11,099
1942.....	26,614
1943.....	48,362
1944.....	32,662
1945.....	43,590
1946.....	58,551
1947.....	79,222
1948.....	82,701
1949 (95,000 acres harvested for seed).....	213,269
1950.....	297,828

Vetch is recognized not only as an excellent soil builder and winter cover crop, but also as a good cash crop and a valuable supplemental pasture and hay crop. Good financial returns have been realized by Oklahoma farmers through harvest and sale of seed. Oklahoma now leads all States in the acreage of vetch planted for seed harvest.

PRICE-SUPPORT PROGRAMS

In the past 15 years price-support programs have had a two-fold function in contributing to the welfare of both consumers and producers. Price supports have encouraged abundant production by protecting farmers against loss through disastrous price drops. Abundant production, in turn, benefited consumers by assuring ample supplies of food and fiber, as well as by tending to combat excessively high food costs in periods of high demand.

Price-support programs have as their primary purpose the securing of a fair return to farmers for the commodities they produce. Farm prices have held close to the lowest level provided under support programs.

The better income enjoyed by farmers under price-support programs has materially benefited all industry and a large portion of the Nation's labor force. The more stable income to farmers has kept them in the market for a great variety of manufactured articles, thus contributing to high level employment and greater industrial production.

During World War II years, when price ceilings were in effect, agricultural prices remained well below the highest levels permitted under price-control legislation. This is in sharp contrast to the price picture for many nonagricultural products.

THERE'S A JOB TAKIN CARE OF

Farmer interest in soil-saving work usually grows as soon as he sees an erosion problem cured or a field improved on his own land by use of an approved agricultural conservation program practice. This increased interest often shows up in the form of additional practices carried out by an individual farmer in excess of the limited amount of financial assistance that can be offered.

The educational value alone of practices carried out in Oklahoma farms during the past 15 years moves us a great step ahead in the big job of properly protecting and caring for soils.

AND THAT'S NOT ALL

In addition to the conservation practices treated in earlier sections, farmers have,

during the past 15 years, under the provisions of the agricultural conservation program—Stripcropped 376,000 acres as a protection against wind erosion.

Contour farmed intertilled and close sown crops on 15,000,000 acres.

Have grown green manure and cover crops on 9,000,000 acres to improve fertility and add organic matter.

Have carried out protected summer fallow operations on 3,500,000 acres of cropland for moisture conservation.

Have from year to year carried out other approved practices as specified in annual agricultural conservation program provisions as best adapted to their farm and farming operations.

The Crime of Genocide

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. LEHMAN. Mr. President, the Serbian National Defense Council of America has prepared a documentary pamphlet entitled "The Crime of Genocide," adding to the accumulation of evidence concerning the practice of genocide by the Fascist puppets in Yugoslavia before 1945 and describing the current efforts of the Soviet Union to scuttle the genocide pact designed to punish such practices in the future. I ask unanimous consent that excerpts from this pamphlet, digested by the officials of the Serbian National Defense Council, be printed in the Appendix of the Record.

There being no objection, the statement was ordered to be printed in the Record, as follows:

EXCERPTS FROM THE PAMPHLET, THE CRIME OF GENOCIDE

It is inconceivable that civilization can survive if the world is to allow nations, races and religious groups to be exterminated. This world must be made safe for a diversity of nations, religions, races and cultures.

GENOCIDE HAS DESTROYED SOME 20,000,000 PERSONS IN THE LAST 50 YEARS—THE WORLD MUST FACE THE PROBLEM OF GENOCIDE IN THE TWENTIETH CENTURY

While the nineteenth century was marked by the liberation of the individual and his entrance into political life, as well as by a strong movement of national liberation which helped many nations to achieve their unity and independence, the twentieth century is a century in which collective violence directed not so much against men in their individual capacity, but against entire nations, races and religious groups has become typical.

Therefore, the world should now focus its primary attention on the phenomenon of the mass extermination of human groups and should organize collective measures to meet collective crime of great dimensions and fatal consequences for mankind.

GENOCIDE COMMITTED ON THE SERBIAN PEOPLE

For centuries the Serbian people have stood in the Balkans as a bulwark of Christian civilization against invaders and oppressors. As a consequence of their stand, great losses have been inflicted upon them in the course of centuries. * * * Genocide in its worst and most destructive form, however, was inflicted upon the Serbs in 1941-45 by the members of the Croatian Fascist movement, the Ustashi. In 1941, after

the invasion of Yugoslavia by the Axis, a Croatian puppet state was created by the Axis under the name Independent State of Croatia and all power was given to the Ustashi. In that state, which comprised about 3,500,000 Croats and over 2,000,000 Serbs, the odious crime of genocide was perpetrated on the Serbian people by the Ustashi and large segments of the Croatian population.

This crime was not a consequence of aggression but was organized and directed against the Serbs as a nation and as a religious group with the aim of wiping them out and creating an ethnically pure Croatian territory, according to Ante Pavelic, the head of the Ustashi who became head of the Independent State of Croatia.

APPEAL TO HUMAN CONSCIENCE

The tragic experiences of the Serbian people are offered here not in a sense of recrimination but with the constructive purpose of awakening the conscience of the whole world to the necessity of adopting the law against genocide.

It is up to the nations of the world, and especially the leading democracies, to make the choice between indifference which amounts to encouragement, or decisive action by ratifying the Genocide Convention and indicating the moral and legal repudiation of the greatest crime against civilization.

The Genocide Convention deals with national, racial, religious, and ethnic groups, that is all inhabitants of a country belonging to the same nationality, religion, or race.

The above provisions find full application to the genocide perpetrated by the Fascist, Croatian Ustashi, on the Serbian people. The leaders did not conceal their intent to destroy the Serbian national group.

Dr. Mile Budak, member of the Cabinet of Ante Pavelic, stated publicly: "One part of the Serbs we shall kill, another we shall deport . . ." On May 28, 1941, the head of the Ustashi at Banja Luka, Dr. Viktor Gutic, referring to his conference with the head of the C. A. S., Ante Pavelic, stated that . . . "In the shortest time possible there will be no trace left of the Serbs, and the only thing that will remain of them will be a bad memory. . . . Tomorrow I will begin to tighten up. Spines will be broken. . . . There will be no mercy."

The massacres were carried out in various ways: by invading villages and towns and killing people in their homes, or after assembling them in schools, town halls, or horse stables. . . .

Sometimes they were assembled in churches. The massacres carried out in the Serbian Orthodox Church in Glina between May and August 1941, belong undoubtedly to the darkest chapters of human depravity in modern times.

Babies were torn from their mothers' arms, and while they were held by their feet, they were swung forcibly against walls, smashing their heads before their mothers' eyes . . .

The mutilations defy all imagination. Limbs were cut open, salt put inside the wounds and then the limbs were tied together and bandaged. Tongues were torn out, ears, noses, and genitals cut off. . . .

Eyes were gouged from living men. Some of these eyes were sent to Zagreb to Ante Pavelic on whose desk the famous Italian writer, Curzio Malaparte, saw them in a basket. Malaparte mistook the eyes for oysters, but Pavelic explained to him that it was 40 pounds of human eyes, a gift from his faithful Ustashi.

Cases are known where Croatian Ustashi would proudly wear necklaces of human eyes and tongues cut from their Serbian victims. . . .

The crime of genocide perpetrated on the Serbs was neither a spontaneous phenomenon nor the result of a clash of armies at war. It was the execution of a previous conspiracy adopted as a program of the

Ustashi political movement. . . . In the late evening of April 9, 1941, a speech of Ante Pavelic proclaiming the Ustashi revolution was broadcast. It was followed by a fiery speech by Andrija Artukovich who instigated the Croats not only to kill the Serbian officers and soldiers, but even children in their mothers' wombs. The next day, a Croatian government was formed in which Artukovich was appointed minister of interior. . . .

. . . the Convention requires implementation through domestic legislation of every nation concerned. The law-making body of every nation has to adopt legislation, and only through this type of legislation will the Convention operate upon the citizens of every country. Domestic legislation must be enacted in accordance with the constitution of every country . . . article I, section 8, point 10, of the United States Constitution says: "The Congress shall . . . define and punish piracies . . . and offenses against the law of nations." Genocide is a crime against the law of nations, and as such is clearly within the scope of the American Constitution . . .

Some people have claimed that since in American law treaties are the supreme law of the land, the mere ratification of the Genocide Convention becomes automatically binding on American citizens. This is incorrect because the Genocide Convention as a treaty will become supreme law of the land with all its provisions, including article V which requires domestic legislation. It is well established by decisions of the United States Supreme Court that a treaty provision which is made dependent on legislative action does not take effect as the law of the land until such action is taken. (See *Foster v. Nielsen*, 2 Pet. 253, and *U. S. v. Percheman*, 7 Pet. 513.) This position was taken by the subcommittee of the United States Senate Foreign Relations Committee which has recommended ratification . . .

Article VI provides also for the possibility of punishment by an international criminal tribunal. This provision, however, does not constitute an obligation but is a matter of choice for every government . . .

Article VI makes it clear, and this should be emphasized, that the Genocide Convention, as submitted, does not imply that the United States is obliged to deliver its citizens for eventual trial for genocide by an international criminal tribunal. . . .

HOW THE SOVIET UNION FIGHTS THE GENOCIDE CONVENTION

In order to divert the attention of the world from Soviet genocide, the Soviet delegation proposed a resolution on November 20, 1947 (U. N. Document A. C. 6/201) to the effect that the United Nations should disregard the resolution of 1946 calling for a genocide convention and rather treat genocide as one of the crimes against humanity, which appear in the Nuremberg judgment. The Soviet Union preferred this solution because crimes against humanity do not deal with the specific matter of the destruction of nations, races, and religious groups and do not show but rather permit concealing the intent of the destruction of specific human groups.

Moreover, the Soviet delegation urged on November 20, 1947, in the U. N. the adoption of a code of offenses against peace and security of mankind, obviously with the intent to protect their territorial acquisitions under a Pax Sovietica. (U. N. Document A/P. V. 123, p. 152.)

A memorandum concerning a draft of such a code was recently prepared . . . and issued as a document of the United Nations (No. A. C. N. 4/39). Taking in account this document the United Nations International Law Commission prepared a draft code of offenses against peace and security of mankind, which contains provisions which for all practical purposes permit to indict states for tolerating on their territory national and

democratic liberation movements (art. 1, points 4 and 5 of the Draft Code of Offenses Against Peace and Security of Mankind).

In such manner all those who in the free world are fighting for the liberation of their countries from the Communist yoke and all those free countries which are helping them and fighting Soviet aggression and genocide, might find themselves indicted as offenders against the peace and security of mankind.

Therefore, it appears that if the democracies do not show enough vigilance the Soviet Union might succeed in her plans to scuttle the genocide convention, despite the fact that it came into force.

Leaders of Free Poles Salute Polish-American Journal

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article from the Polish-American Journal of October 20, 1951:

LEADERS OF FREE POLES SALUTE POLISH-AMERICAN JOURNAL

August Zaleski, legal president of Poland: "On the occasion of the fortieth anniversary of the Polish-American Journal it gives me great pleasure to congratulate your achievement and to wish you and your staff continued success in the good work you are doing for the cause of Poland."

"It is extremely important that the American people who are today preeminent in the defense of the liberties of all humanity against Russian-Soviet imperialism should be well informed about the rights and aspirations of the Polish people. I am sure that the many millions of American citizens of Polish descent will play a very important part in this respect."

"It is of paramount importance for public opinion in America to realize that the last two world wars have started as the result of their imperialistic endeavors of one nation to seize the hegemony first in Europe and then in the world. Now another great power is attempting to do the same. This new attempt must be withstood without putting the previous offender in a position to start a new bid for hegemony. But such a result can be attained only by restoring freedom and independence to the now subjugated countries of eastern-central Europe. Only if Europe again consists of free and independent nations can it unite for the maintenance of peace."

Gen. Roman Odzierzynski, Prime Minister of the Polish Government in exile:

"It is with real pleasure that I am sending you, on the occasion of the fortieth anniversary of your distinguished newspaper the Polish-American Journal, my best and most sincere wishes for continuous success and prosperity. I am fully aware that for the past 40 years it has faithfully defended the rights and interests of the Polish Nation, and truly represented thoughts and feelings of the American Polonia. In this manner, it has remained loyal to its new as well as to the old country."

"May I be allowed to stress at this instance that during the 20 years of its independent existence, Poland has proved herself to be the sole bulwark of liberty of all the nations inhabiting Eastern and Central Europe, when in 1939 Poland lay prostrate

under the heel of two allied imperialisms, German and Soviet, the independence of all the nations between the Baltic and the Black Sea, also quickly collapsed.

"This gives me the opportunity to declare that the United States of America which has always been the champion of freedom and free democratic institutions, always possessed, and will continue to possess, a faithful ally in the Polish Nation.

"In conclusion, may I say that we Poles in Great Britain fully appreciate the highly valuable role which the American Polonia is playing in its struggle for the restoration of liberty and independence of the old country. But, when thinking of Polonia, we are also bearing in mind the role of the Polish press in America. For this reason, I greatly appreciate the work done by your distinguished newspaper whose anniversary we are commemorating today."

Lt Gen. W. Anders, CB, commander in chief of the Polish armed forces in exile

"On the fortieth anniversary of the existence of the journal widely known during the last 3 years under the name of the Polish American Journal I wish to present to this publication my sincerest congratulations for, and deepest appreciation of, its tireless and fruitful work.

"The Polish American Journal not only steadfastly defends the interests of Americans of Polish ancestry but also devotedly serves the Polish cause, championing the fight for the freedom of the Polish nation suffering now under the cruel Communist domination.

"In the present fateful times the activities of the Polish American Journal are of great importance and have special merit not only as concerns the informing of the American public opinion about Poland and Polish problems but primarily as the means of sustaining and of fostering the Polish spirit of patriotism and soldierly morale.

"I send the Polish American Journal my warmest wishes of further achievements and prosperous development."

Lt Gen. Izidor Modelski, Ph. D., former Under Secretary of Defense in the Polish Government in exile

"DEAR EDITOR: I am glad to extend my congratulations and friendly good wishes on the occasion of the fortieth anniversary of the Polish American Journal.

"You should be proud of being the first who perceived that besides serving the interests of the Americans of Polish ancestry in the Polish language it was also necessary and very important to have some independent intermediary messenger to the other Americans just in English.

"You did it perfectly, and I wish you that more successes will follow your constant endeavors to win the sincere American friends Poland needs so much as not to be harmed again on the international stage and to make the other Americans more acquainted with the Polish past and contributions paid by the Poles to the common cause of the free world."

Tomasz Arcelewski, chairman of the executive board of the Polish Political Council:

"On the occasion of the fortieth anniversary of the Polish American Journal, I am sending my sincere congratulations and best wishes.

"I hope that you will continue to work for a better Polish-American understanding and to serve the interests of Americans of Polish ancestry."

Gen. Tadeusz Bor-Komorowski, former commander in chief of the Polish home army "I would like to express my best wishes to the Polish-American Journal on the occasion of its jubilee.

"You are doing an important service both for the United States and for Poland, fighting vigorously for the cause of liberty. The support we are getting from the Americans of Polish descent, organized in the Polish

American Congress, and from the Polish American press, is of tremendous importance to the people of Poland and of other enslaved countries of central and Eastern Europe.

"The Polish-American Journal serves this purpose very well indeed."

Jerzy Kuncewicz, chairman of the Polish Peasant Party, Freedom; vice chairman of the Polish National Council:

"For centuries the idea of human rights and freedom has been a link between the Polish and the American peoples.

"In the coming days of struggle against the Communist oppression we hope for such help from the American heroes in liberating our country as was, once, given by Pulaski and Kosciuszko to the courageous sons of young America fighting for her independence.

"The Polish-American Journal was and still is championing the cause of freedom most effectively. The grateful thoughts of all freedom-loving Poles go to its editors and staff in the paper's well-deserved jubilee year."

Air Power and Morality

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Saturday, October 30, 1951

Mr. SPARKMAN. Mr. President, my attention has been called to an article written by Mr. Eugene F. Wilson, entitled "Air Power and Morality," in which Mr. Wilson sets out a proposal for transforming the airplane into an instrument of peace and freedom. I do not offer the article with complete agreement, necessarily, but I believe it is quite thought-provoking, and I commend it to the careful reading of the Members of the Senate.

Therefore, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows.

AIR POWER AND MORALITY

(By Eugene F. Wilson)

Some of the most brilliant minds in the Department of Defense are reported to be asking: "Is our strategy right?" They are said to question the wisdom of a military policy which places almost sole dependence upon "population bombing."

Wilbur Wright died regretting that he helped to create the airplane. For he saw it used, not primarily as the dreamed-of agency of commerce, but as the fiery chariot of war. Discovery of the principles of mechanical flight toughed off a resurgence of barbarism and a return to military policies so bankrupt as to threaten the survival of civilization.

Indiscriminate bombing of civilian populations is poor strategy, false economics, bad politics, and worse morals. Stupid leadership has brought western Christian civilization to the verge of extinction. Lacking the directive force of moral precept, it has been unable to define any long-term objective, political or otherwise, or any military strategy other than that of destroying everything within its path. This was the strategy of Genghis Khan and of the Dark Ages.

Future historians may well adjudge "population" and "strategic" bombing as the classic blunder of all time. And the climax of this folly, the atomic bombing of Hiro-

shima, may have revealed such irreverence for human life on our part as to have cost us the moral leadership of the world. Despite our air superiority—or, more precisely, because of its misuse—our civilization, once considered the loftiest in evolution of the human spirit, now stands on the defensive.

Our vaunted material superiority, flanked right and left and breached in the center by hordes of Asiatics, has begun to assume some aspects of the Maginot Line. Threat of an atomic stockpile dwindles as a deterrent to a barbaric enemy who refuses to oblige us with suitable tactical targets, to say nothing of the inviting strategic objectives which we offer him. A sterile air policy has infected our military and naval policy and our foreign and domestic policies as well.

Dread of such an outcome long pervaded aviation circles. Bitter controversy has raged ever since that December day in 1903 at Kittyhawk when the Wrights demonstrated mechanical flight. One school, led by the Wrights, visualized the airplane as primarily a vehicle and thus a potential boon to civilization. The other, led by the military, saw it as a revolutionary weapon.

The original prophet of population and strategic bombing was the Italian Gen. Giulio Douhet. As early as 1909, he tried to interest his government in the potentiality of air bombardment of urban areas as a cheap short-cut to power. In 1921, he said in his book *Command of the Air*, that "a body of troops will stand fast under intensive bombings but workers in a shop, factory, or harbor will melt away after the first losses."

This doctrine found ready acceptance among military minds of an era which produced Balbo and Mussolini, Goering and Hitler. And disciples continued to preach it even after experience proved otherwise. Citizens of London, Berlin, Tokyo and other cities not only failed to melt away but reacted with fanatical resistance. The A-bomb at Hiroshima appeared to support the theory but it is now known that the Japanese had already decided to surrender to pressure of sea blockade.

Sober second thought now suggests that blockade might have been more efficient in the long run. Certainly, it would have been more economical because we are still pouring out treasure to rebuild institutions we battered down. One thing is clear: neither our natural allies nor our late enemies relish the idea of being liberated by our atom bomb tactics.

The Russians exploit our lapse, claiming that their use of military aircraft is confined to tactical support of ground forces and that instead of threatening to use atomic bombs against civil populations, they apply atomic energy to the construction of public works. Thus does godless leadership exploit to its own advantage precepts of western Christianity which the west has forgotten. Grandmother Russia puts on a good act in the international Red Riding Hood drama, while we have let ourselves be cast in the role of the villain.

In placing sole dependence on the explosive force of an uncontrollable weapon, we have neglected the most potent force in our possession—the catalyst of moral principle. To get back into character, we must first reassert adherence to principles of human conduct which made us what we are. For example, we might announce our intent to ban the use of all weapons against civil populations and confine their use to legitimate military targets. This is not the usual impractical suggestion of outlawing weapons or of limiting armaments, but rather a return to their proper employment.

Such a program takes for granted maintenance of a military air force capable of effective reprisal against a potential disturber of peace. It calls for a statement of fundamental national objectives which should be

publicly debated and supported. First requisite is restoration of individual freedom, especially in trade, and this implies freedom of movement to all, by land, sea and air. Under this doctrine, the mission of armed forces would once more become that of guaranteeing the security of trade routes. Then, just as the Great Chinese Wall crumbled beneath the feet of private traders, backed by Britain's benevolent sea power, so would the Iron Curtain rise one day to welcome the western ideal of a fair break for the other fellow.

Then would come the opportunity sensed by the Wrights at the dawn of this century. Just as the Berlin airlift reversed the role of the bombing blitz, so might airlift come to its own as the catalyst for a new era comparable to that which began with the geographic discoveries of the fifteenth century. Here Pax aeronautica might replace Pax Britannica, and therein lies one example of hope in the air.

Natural Gas Pipelines Failure and Causes as Reported to the Federal Power Commission

EXTENSION OF REMARKS

OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. HESELTON. Mr. Speaker, in connection with the consideration of H. R. 88, which I filed on January 3, 1951, I have now received and wish to make available a report of the results of an inquiry made by the Federal Power Commission having a bearing upon the problem of safety in connection with the use of natural-gas transmission pipelines.

At this time I want to include the text of the explanatory material which is as follows:

Shortly after the Federal Power Commission indicated its support of H. R. 88 to the Congress, it was realized that the committee investigating H. R. 88 would desire some definitive information with regard to failures which have occurred and may occur on natural-gas transmission pipelines. Consequently, a letter of inquiry was sent to 28 of the major natural-gas pipeline companies subject to the jurisdiction of the Commission. These companies were chosen on a basis of miles of transmission pipeline and the region in which their facilities are located.

The results of this inquiry have been tabulated by the staff of the Commission and accompany this memorandum. It should be noted at the outset that these answers do not constitute a solution to the problem of pipeline failures nor do they indicate in any manner how failures may be prevented in the future. These answers show some of the causes of failures and some of the safety problems which must be considered in the design of pipeline transmission facilities.

The first tabulation accompanying this report is entitled "Pipeline Failures and Causes." To better understand this tabulation, a short explanation of each item shown on the tabulation follows. These explanations will be of the major headings across the top of the tabulation.

Code: This merely designates by a number the pipeline company reporting.

Failure during: Under this column for each company reporting are the words "op-

eration" and "testing." This indicates whether the failure occurred during operation of the pipeline or whether the failure occurred while the pipeline was being tested. Testing usually takes place before facilities are placed in operation and on other occasions when question exists as to the ability of facilities to perform as designed.

Period: This is the period in years which the report of the company covers. In general, a period of 10 years is shown. The questionnaire of the Commission to the companies requested that the information be on a 10-year basis. The art of construction of pipeline has progressed materially, and it was felt that a period longer than 10 years would give undue weight to failures on pipeline systems which were constructed in a manner quite different from the practice of the industry today.

Weld: This subdivision covers three types of welds in which a failure may have occurred. The three types are as follows:

Acetylene: Prior to the development of the present portage electric welding generators, field methods of joining lengths of pipe included welding by means of the so-called acetylene process. This weld was produced by the burning of the acetylene gas by means of a special torch. The flame thus produced caused the melting of a special steel rod, which molten metal fused with the metal contained in the lengths of pipe to be connected forming a continuous steel pipeline.

Electric: Present-day practice in the industry calls for the construction of pipelines by means of electrically welded joints. The field welding of a pipeline is similar in all respects to procedures which would be followed in a shop. It is believed that the electric-welding process is sufficiently known to all so that further explanation is unnecessary at this point.

Shop: In fabricating steel into pipe, a number of different methods are employed. One method is the bending of a long steel plate into a cylinder and the joining of the edges of the plate by means of an electric weld. Where a failure in a weld of this type occurred, it is listed under shop weld.

Couplings: Prior to the widespread utilization of electric welding, lengths of pipe were joined together by means of couplings. This was a device whereby two rubber rings were installed on either side of the proposed joint. These rubber rings were compressed into a steel sleeve by means of steel rings joined by bolts. Whereas a welded joint makes a continuous length of steel pipeline, use of couplings constituted a series of short lengths of pipe not rigidly interconnected. The pipe is free to move in these couplings. A failure of the line could occur at one of these couplings by corrosion of the bolts or of the steel ring in back of the rubber ring or the rubber itself could deteriorate and fail. Such a failure would be classified as a blow-out.

Another type of failure which can occur at a coupling is that classified as a pull-out. As previously mentioned, in a pipeline joined together by couplings, the individual lengths of line have a certain degree of freedom of movement. The causes of movement of pipelines are many and varied. Where such movements occur and the pipe physically moves outside of the coupling, such a failure would be classified as a pull-out.

Machinery: Under machinery are listed two types of pipeline failure. In general, pipelines are buried in the ground at a depth sufficient to protect the line from damage from ordinary farm machinery. This applies chiefly to the larger sized pipelines which are constructed across farming areas. Many of the older lines, particularly in areas west of the Mississippi River and in regions where farming was not productive in years past, many pipelines were laid in very shallow ditches or, in some cases, on the surface of the ground. In such cases, machinery used for construction of new roads could very

easily damage the pipeline. Even though a line might be constructed in a trench with normally adequate ground cover, the construction of new roads where cuts through a hillside are to be made to eliminate steep grades makes it conceivable that road construction machinery could damage a pipe line.

The chances of such a failure occurring are quite remote since the pipeline companies employ men to patrol their lines, and these men could inform company officials of such construction in a particular area. Therefore, under machinery there are listed the two classifications of failure one under "road," which are failures due to road-machinery operation and one under "other" which are failures caused by other types of machinery.

These other types of failures are those which were caused either by farm-machinery, stripping operations, bulldozers grading an area, or construction machinery other than road-building equipment.

River crossings: In the construction of a long transmission pipeline, it is necessary to cross many creeks, streams, or rivers. In some cases the pipeline is carried across the water by means of small, specially constructed overhead bridges or carried on a large highway bridge. In general, the pipelines are laid in a trench under the stream bed. River crossings constitute one of the major problems in pipeline construction. Flood conditions of the waters may cause washing out of the banks of the stream. These wash-outs expose a portion of the line going into or out of the stream bed. Such wash-outs generally result in a failure of the pipeline on the stream bank. These excessive flow conditions may also cause the river bed to be scoured off the top of the buried pipeline and cause failure of the line. Therefore, under river crossings, these are listed as failures caused by a wash-out.

In some cases, it has been necessary for pipelines to be constructed under rivers which are also utilized as anchorage areas for large ocean-going vessels. Two failures were reported as being caused by vessels dragging their anchors and the anchors pulling out the pipeline. Ice conditions in a river may also damage a pipeline. One such failure was reported. Damage caused by these two means have been classified as other. It will be noted opposite company code No. 1 that there are 22 failures listed under river crossings "other." The causes of these failures were reported as unknown by the reporting company.

Pipe: The tabulation lists four different types of failure of the pipe itself. Natural-gas transmission pipelines, being constructed of steel are subject to corrosion. Many of the older pipelines were installed in the ground without any protective measures being taken against corrosion. In addition to oxidation (rusting), steel is subject to corrosion from soil chemicals and electrolytic action. Stray electric currents set up either by the composition of the soil or from electric-power sources will travel along a pipeline. At some point, due to ground conditions or the construction of the line itself, these currents will leave the pipeline. At such points as the current leaves the pipeline, the currents carry away a part of the steel from the line. Present-day practice calls for the protection of pipelines insofar as economically possible from corrosion damage. Failures reported as being due to corrosion of the pipeline either chemical or electrical are listed under "corrosion."

In the construction of a pipeline, individual lengths of pipe must be handled numerous times between the point of fabrication and actual installation in the ground. Each handling of the pipe length constitutes a hazard of damage to the pipe length. The transportation of the pipe by rail or by truck may also be considered a hazard insofar as

damage to the individual length of pipe is concerned. During the construction of a pipeline and after the line has been laid in the ditch, the machinery used in constructing, handling, and covering the pipe may in some way or another cause the pipe to be damaged. Pipeline constructors and owners attempt to guard against damaged lengths of pipe insofar as possible. It is, however, impossible to obtain perfect results. Failures to pipelines which the reporting companies have been able to attribute to damage to the pipe in handling have been listed under "damage."

A number of failures were reported under "split" pipe. These are failures in the pipe itself and not in the longitudinal weld which are reported under the general heading "weld-shop." Steel is not a homogeneous material. Between its original molten state and its fabrication into plate, it is possible that certain foreign materials are not completely eliminated. These substances in the steel structure cause weakness. In fabricating steel into pipe, particularly where a longitudinal weld is employed, it is possible that the welding action may damage the steel plate itself and even if the weld were true, a failure may occur at some short distance from the longitudinal weld where the weakness caused by welding action occurred. Whatever the cause, where the pipe itself ruptured, such failures have been listed under "split."

It is not possible to construct a pipeline that is perfectly straight. Bends of some kind are necessary. Some of these bends are fabricated in shops and transported to the construction site. Other bends are made by the construction crews in the field. The shop bends are subject to corrosion, damage in transit or from construction machinery, or to the same causes of failure as those which are listed under "split." Field bends are subject to the same failure potentials plus the fact that they are not fabricated under as ideal conditions as obtained in a fabricating shop, however, field bends are generally not as radical in degree as those fabricated in a shop. In other words, a field bend does not make as sharp a turn as a shop bend. The reports submitted to the Commission did not permit of a further breakdown as to whether or not the failure occurred in a shop or a field bend, therefore, all failures in this category are simply listed as a "bend" failure.

Auxiliary equipment. Under auxiliary equipment are listed failures which have occurred on any part of the system other than the line pipe. This includes failures which occurred at control valves, metering stations, etc.

Unknown. Under the general category of "Unknown" are listed the failures which cannot be placed in any of the foregoing captions. The number of such failures is comparatively small.

Total. In the column headed "Total" are listed the total failures for each company for those occurring during operation and during testing with a final total of all failures for each of the reporting companies.

On the last page of this tabulation are shown the summaries of the total failures during operation and the total of the failures which occurred during testing broken down into the various types of failures. There are also shown the grand total of all types of failures during operation and during testing. In addition, there is shown the percentage which each type of failure bears to the grand total of all failures. It will be noted under the column headed "Total" that approximately half of all failures occurred during operation and the other half occurred during testing. This figure is a little misleading.

It will be noted that for reporting company code No. 14 there were 661 failures during testing and all of these 661 are listed as

shop failures. Special mention must be made of these 661 shop failures. This particular pipeline was laid during World War II for oil transportation. In order to meet the exigencies of the wartime conditions and to complete this pipeline at the earliest possible date, testing of the pipe was eliminated. In addition, the pipe fabricator was also faced with the same necessity for speed which resulted in a product which apparently was substandard. When this particular pipeline system was converted to natural-gas usage after the war and failures became prevalent, the company systematically set about to test the complete pipeline. The 661 failures reported were discovered during this extraordinary testing program.

It is evident that the inclusion of these 661 failures distorts to a marked degree the final result as shown by the tabulation. If the 661 failures were to be eliminated, the total failures during operation would increase from 49½ percent of the total reported to approximately 80.6 percent of those reported. In other words, the testing of a pipeline prior to placing that pipeline into operation does not eliminate 50 percent of the possible operating failures, but, according to the reports submitted to the Commission, eliminates approximately 20 percent of the possible failures. Similarly, if the 661 failures of this one company were eliminated, the percentage of failures in each classification would be increased. In other words, the percentages shown in the very last line of the tabulation would all be increased approximately 60 percent with the exception of the figures shown under "weld shop," which would decrease to approximately 15 percent.

The second tabulation contained in this report is entitled "Cause and Extent of Damage Caused by Pipeline Breaks." One of the questions contained in the Commission's questionnaire was the extent of damage to property other than that of the pipeline owner that resulted from the failure. Another question was distance from point of failure that damage to property of others resulted. The answers to these questions are summarized on this tabulation. The extent of the dollar damage was not given in all cases. It must be remembered that many miles of pipeline are constructed in regions where little or no farming is carried on. In addition, failures in farm areas can take place during nongrowing periods of the year. As a result, failures may occur which do little if any damage to property other than that owned by the pipeline company.

Under the column headed "Distance from point of failure that damage resulted" are figures which give some indication of the destructive force unleashed by each failure. It was the intent of this question to determine the distance on either side of the pipeline that damage or destruction to property of others occurred. The answers received indicate that many of the reporting companies gave a longitudinal distance along the axis of the line as the answer to the question. Therefore, the figures shown under this column are wholly inconclusive.

The third tabulation summarizes the failures which caused either death or injuries. It is believed that this tabulation is self-explanatory.

As mentioned at the very outset, the answers to the questionnaire submitted by the Commission to the pipeline companies do not constitute a means whereby future failures of pipelines can be eliminated. These results can merely be used at this time to indicate possible points for further study in order to reduce the number of such failures. Pipeline design and construction practice have changed materially in the past 15 or 20 years. Such progress in the arts will eliminate many causes listed herein as already exemplified in improve-

ments from welding failures because of electric-welding superiority to acetylene welding. Although the first tabulation tends to indicate a greater number of electric-weld failures percentage-wise than those that occurred in acetylene welds, the picture is not a true one, since there are undoubtedly a far greater number of electric welds installed than there are acetylene welds. As previously mentioned, the picture as to possible weld failure is greatly exaggerated because of the failures which occurred because of a war-installed facility. Again it would appear that a shop weld is not as good as a weld made in the field. It must be remembered, however, that for every field weld there would be at least six times the equivalent length in shop welds. The same type of analysis would also apply to couplings since they are no longer employed as a normal method of pipeline fabrication. Each individual type of failure reported requires analysis in the light of present-day construction practices.

Included in this report are failures from companies which operate primarily through sparsely populated areas. Insofar as possible, pipeline companies tend to avoid traversing populated sections. However, with the increasing demands for natural gas, natural gas pipelines have and are entering the more populated areas and are coming in closer proximity to dwellings and other structures. Therefore, it would appear that if some of the causes of failures which have occurred in the past are not eliminated the damage to property and the danger of life may increase.

The Unfair Preference for Public Power

EXTENSION OF REMARKS

OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. POW. Mr. Speaker, for some time there has been gathering strength, among our State public utility commissioners, a movement in opposition to the so-called preference clause in various Federal statutes, whereby public power developed at the expense of the taxpayers must be sold under a system of unfair discrimination in favor of public agencies such as municipal plants, public utility districts, and cooperatives.

Last May in Seattle a group of western States commissioners passed a resolution condemning the preference clause as an unfair burden on the customers of tax-paying, business-managed electric utility companies. The leader of this movement was the president of the Idaho Public Utilities Commission, the Honorable H. N. Beamer, who expressed his position in an excellent article published in a recent issue of *Public Utilities Fortnightly*.

In view of the fact that this resolution of the western utility commissioners was subsequently endorsed by a group of New England commissioners, and on October 18 at Charleston, S. C., by the national convention of the National Association of Railroad and Utilities Commissioners, I believe the Members will read with profit and interest the text of President Beamer's article, upon which, I understand, the Charleston resolution was

largely based. I therefore ask unanimous consent to insert the article in the RECORD as it appeared in the Public Utilities Fortnightly of September 13, 1951.

THE UNFAIR PREFERENCE FOR PUBLIC POWER
(By the Honorable H. N. Beamer)

A paramount function of utility regulatory commissions is to see that electric users are supplied with ample electricity at reasonable rates and without discrimination.

All commissions, both Federal and State, obtain their jurisdiction and authority from their enabling statutes, which prohibit preferences and discrimination. No commission would, or lawfully could, permit a supplier of electric power to favor one town over another, either as to rates or availability of service; or allow benefits to be denied customers in one area that are granted to those in another, or permit that preference be given (for reasons of political expediency or otherwise) to any group or locality.

Surprising it is, then, that various Federal statutes not only permit, but require that preference and discrimination be the rule in the sale of electricity from Federal power plants constructed by the United States Government, with taxpayers' money, for reclamation, flood control, navigation, and other purposes.

This policy stems from so-called preference provisions in Federal statutes, requiring that preference (and, more recently, priority) in the sale of project power be given to public bodies, municipalities, cooperatives, public-utility districts, and other similar agencies and organizations.

The statement, sometimes made, that such preferences in power sales are the result of long-established Federal policy—having had their origin in an early Reclamation Act of April 16, 1906—is inaccurate and misleading. That act (which dealt with the withdrawal of lands for town-site purposes) merely provided that whenever a development of power was necessary for irrigation, or an opportunity was afforded for the development of power under any such project, the Secretary of the Interior was authorized to lease any surplus power or power privilege for a period not exceeding 10 years, giving preference to municipal purposes.

That preference was based upon the use of power, and was for the benefit of the power user—that is, the municipality itself, as a consumer of power for street lighting, water-works, and other service needs—and not upon the manner of distribution, or the type of agency which distributes the power to consumers.

Present Federal preference requirements, on the other hand, give no consideration whatever to the consumer of power, but are based entirely upon the type of distributor involved. Therefore, they are a discrimination against customers of regulated utility companies, in favor of those who obtain their service from preferred distributors—as they deny to citizens and taxpayers the benefits of Federal power developments unless they are served by so-called preference agencies.

This policy should be thoroughly reviewed by Congress. Federal power plants are built by public funds provided by all the taxpayers of the Nation, and electricity from such projects should be made equally available to all citizens and electric users. As it is, the public agency preferences are forcing a change from private to public ownership of distribution facilities, and unless this trend is halted, socialization of the electric industry is bound to result.

In December 1937 David E. Lillenthal, then a Director of the Tennessee Valley Authority, testified before a congressional appropriations subcommittee as follows:

"Mr. WIGGLESWORTH You think there is a field for profitable operations by existing

companies alongside the TVA, under this program?

"Mr. LILLENTHAL. I think there is no question about that.

"Mr. FITZPATRICK In other words, you do not want to go in and destroy the investments of citizens who have already put their money in these electric companies, and there is no intention of so doing.

"Mr. LILLENTHAL. That is exactly correct.

"Mr. Lillenthal said further:
" * * * the law * * * provides that while we might sell power to public utilities and municipalities and cooperatives and industry, we must give the municipalities a preference.

"Now, we have no control over that municipal preference which is provided in the law, and we are bound to carry it out. But I do not foresee the calamitous consequences that have been indicated follow from that statutory provision."

Even then, TVA's monopolistic program was under way, and its 1938 report refers to its "negotiations to acquire existing electric systems and avoid duplication and competition." The results have been that some 30 electric companies have been put out of business in the TVA service area (which extends far beyond the confines of the Tennessee Valley), to establish the greatest electric power monopoly that the country has ever known—not by the Power Trust but, of all things, by a corporation created by the Government of the United States.

The public agency preferences, as presently existing and administered, had their beginning in the Tennessee Valley Act of 1933, which provides that in the sale of TVA power, preference shall be given to States, counties, municipalities, and cooperative organizations.

Next in point of time was the Bonneville Project Act of 1937, in which the preference provisions have been carried to a greater extreme than in any other legislation. Similar provisions are contained in other statutes and, with one exception, these preferences govern the entire field of power sales by Federal agencies from Government plants.

The law setting up the Boulder Canyon project in 1928, as amended in 1940, provides a different policy covering the sale and disposition of project power, with the stated end in view that as large a portion as possible of the project costs shall be repaid from power revenues. It provides that the Secretary of the Interior may contract for delivery of power at the switchboard to States, municipal corporations, political subdivisions, and private corporations, and contracts shall be made with responsible applicants who will pay the price fixed with a view to meeting the revenue requirements as provided in the act.

The Boulder Canyon acts recognize the equal rights of all citizens, as electric users, to obtain power from Federal projects for their needs, regardless of whether the distributor which serves them is a preference agency or a public utility company. And although the congressional policy for the sale of Boulder Dam power is a source of irritation to the Department of the Interior today—having been referred to by one high Interior official as "the screwball policy of the past, embedded in concrete, steel, and copper at that dam"—the fact remains that the Boulder Canyon project is recognized as being financially successful and economically sound, due in part, at least, to the principles of equal and fair treatment of both publicly and privately owned utilities, and their respective customers.

In contrast, the preference and related provisions in the Bonneville act merit examination. Section 4 begins with the statement that "In order that the facilities for the generation of electric energy at the Bonneville project shall be operated for the benefit

of the general public" (a laudable objective, but with a left-handed approach that, if the matter were not so serious, would be somewhat humorous in view of what comes later), "the Administrator shall at all times, in disposing of electric energy generated at said project, give preference and priority to public bodies and cooperatives."

Section 4 goes on to state that in order "to preserve and protect the preferential rights and priorities" of preference agencies, if "there shall be conflicting or competing applications" for Bonneville power from a preference agency on the one hand, "and a private agency of any character on the other," the application of the preference agency shall be granted—and this regardless of public necessity or any other consideration, except the fact of preference classification. Section 5 provides that when contracts are entered into with public utility companies, such contracts may be canceled if, in the judgment of the Administrator, the power is likely to be needed to satisfy the requirements of preference customers, to the end that their "preferential rights and priorities * * * shall at all times be preserved."

One may well pose the question: What part of the people are not a part of the general public in the Pacific Northwest? The answer obviously is: Those electric users who are not served by preference agencies.

Bureaucratic administration of the preference and priority to public power agencies goes far beyond the law. As evidence of this, reference need only be made to the Memorandum on Power Policy to All Staffs of the Department of the Interior, issued by the then Secretary of the Interior on January 3, 1946, in which it is stated:

The following principles are designed "to implement the congressional policy." They will guide all staffs and officials of the Department who deal with power:

Under the heading Operation and Sales, the first directive reads as follows:

a. Active assistance, from the very beginning of the planning and authorization of a project, shall be given to the organization of public agencies and cooperatives in each project area. The statutory objectives are not attained by merely waiting for a preferred customer to come forward and offer to purchase the power.

The policies and practices so established have been carried forward by succeeding Secretaries, and are a part of the Department of the Interior's and Bonneville Power Administration's basic philosophy and procedure today.

Agency action and administration have extended the preference provisions so as virtually to exclude the customers of regulated electric companies from effective participation in supply of power generated at Federal plants. They are being utilized under policies and practices which, if engaged in by any power supplier other than agencies of the Government itself, would be in outright violation of State and Federal regulatory statutes, and might well be considered as combinations and conspiracies in restraint of commerce and trade under existing laws. BPA has consistently refused to enter into reasonable-term contracts with utility companies, and the active assistance of its representatives has been carried to the extent of open agitation and propaganda for formation of public power groups as potential customers.

The ideology behind the preference provisions was severely criticized by President Harry E. Polk of the National Reclamation Association, at the annual convention held at Salt Lake City in November 1940. He said:

"With the pooling of power that is planned under basin-wide development, every State should be entitled to its just share of power created at major dams, without any threat

of reprisal because of its choice in the operation of its power business—whether it be through private or public ownership.

"There is something constitutionally wrong in a situation in which the Federal Government can come into any area, build dams, flood productive lands to provide protection for downstream States, generate power at those dams, then tell any State that the major portion of the power will go to preferred public-power agencies in other States unless that State is willing to go public power."

The Socialistic implications of the public-power preferences are beginning to receive the recognition that they deserve. At a meeting of the Missouri Basin Interagency Committee in April 1951 the committee was urged to seek modification of existing Federal laws. As reported in the Sioux City (Iowa) Journal on April 19, 1951:

"The suggestion was made before the river development policy group by a long-time river-program supporter, George R. Call, of Sioux City. Call is a director of the Mississippi Valley Association and a member of the advisory board of the Federal bureau of Reclamation."

"Call appeared before the interagency committee asking how additional power could be obtained for Sioux City for defense industries. He was told that sale to private companies could be made only after demands of rural-electrification associations were satisfied."

"It is disturbing when businesses moving to the Midwest want power and we have to tell them it's not available," he said. "If we are going to be limited, I don't know how any man believing in free enterprise can support the river program."

At a meeting of western public utility commissioner representatives at Seattle, Wash., in May 1951, the following resolution was adopted:

"Whereas provisions contained in various Federal statutes give preference to public bodies and cooperatives in the sale of electric power produced at Government power plants, which preferences unjustly discriminate against numerous citizens and electric users who are served by electric utility companies under State commission regulation; and

"Whereas such preferences have been and are being used to foster and expand public power projects to the detriment of the customers of regulated utilities; and

"Whereas the benefits of power produced at Federal projects should be made available to all users of electricity on equal terms; Now, therefore, be it

"Resolved, That the Congress of the United States be urged to adopt a Federal power policy which will make the power generated at Federal projects available to all citizens and users without discrimination; and that the provisions contained in existing statutes relating to the disposition of electric power and energy from Federal projects be rescinded."

To this, I subscribe. The right to obtain Government power should be in accordance with the requirements of public convenience and necessity, and not on the basis of ideologies imposed by law.

Federal power projects are costing the taxpayers of the Nation not millions, but hundreds of millions of dollars. These monumental developments are tax-free, and have all the low-interest credit and borrowing power of the Federal Government behind them.

Power users—as American citizens and taxpayers—are entitled to equal treatment from Government agencies, even though their electric needs are supplied by the private enterprise system.

Meat Price Controls

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. MULTER. Mr. Speaker, upon receipt of a letter from the National Live Stock Producers Association, dated September 27, 1951, which was sent to all Members of Congress, I immediately contacted the Office of Price Stabilization and asked for their comments.

I am now in receipt of a letter from Mr. DiSalle, the Director of Price Stabilization, which completely refutes the statements contained in that letter.

In order that there may be no further misunderstanding about this, I am placing in the RECORD both letters, which are as follows:

NATIONAL LIVE STOCK

PRODUCERS ASSOCIATION,

Chicago, Ill., September 27, 1951.

To Members of Congress

GENTLEMEN: In a telecast originating in San Diego, Calif., on September 25, 1951, Michael V. DiSalle, Director of Price Stabilization, attempted to place the entire blame for his unworkable meat controls on the livestock and meat industry. We are enclosing copy of the press release prepared by OPS which we hope you take the time to read carefully.

Coming from an official who is the Director of one of our Government agencies, these statements cannot do otherwise than to arouse the indignation of all of us who know something about the livestock and meat industry. We wish particularly to call your attention to pages 2 and 3 of this OPS press release where Mr. DiSalle has made some especially vicious statements concerning what he calls dishonest practices of livestock producers.

As you know, most of the livestock marketed in this country is sold at markets which are under the jurisdiction of the United States Department of Agriculture and where all marketing practices are regulated by that Department under provisions of the Packers and Stockyards Act. Mr. DiSalle is presuming to tell the American public that he knows more about livestock marketing than another Government agency which has been charged by Congress with the regulation of livestock marketing practices over a long period of years.

The facts concerning livestock marketing practices can be obtained from the Livestock Branch of the United States Department of Agriculture. We think it would be in the interest of an efficient defense program for Congress to obtain these facts and release them to the public.

Very truly yours,

NATIONAL LIVE STOCK PRODUCERS

ASSOCIATION,

P. O. WILSON, Secretary-Manager.

ECONOMIC STABILIZATION AGENCY,

Washington, D. C.

HON. ABRAHAM J. MULTER,

House of Representatives,

Washington, D. C.

DEAR Mr. MULTER: This refers to your letter to Harold Leventhal, chief counsel, Office of Price Stabilization, dated October 5, 1951, enclosing a letter from Mr. P. O. Wilson, secretary-manager of the National Livestock

Producers Association, dated September 27, 1951. Mr. Wilson's letter referred to a speech made in San Diego, Calif., on September 25, 1951, in which I discussed meat price controls.

Mr. Wilson apparently misunderstands my statement as a blanket indictment of all livestock producers for dishonest practices. Mr. Wilson observes that most of the livestock marketed in this country is sold at markets under the jurisdiction of the Secretary of Agriculture. He states that I am presuming to tell the American public that I know more about livestock marketing practices than another Government agency charged by Congress with the regulation of livestock marketing over a long period of years. He recommends that Congress obtain the facts concerning marketing practices from the Livestock Branch of the United States Department of Agriculture.

It is clear that my statement was not a condemnation of the entire meat and livestock industry. It explicitly separated the honest and cooperative members of the industry from the chiselers. For example I said "Time after time individual members of the industry have come into my office, stating their willingness to cooperate." Reference was made to the "honorable people in the meat industry," and the "many packers [who] have told me that the regulations issued by the Office of Price Stabilization are workable and do not impose unfair restrictions or impossible conditions on the industry." But they felt the program was doomed because of the large number of people within the industry who not only would not cooperate with a control program, but who even in normal times engaged in a great many sharp practices.

It is also clear that I was not presuming to tell the American people that I know more about livestock marketing than the Department of Agriculture. On the contrary, not only was there no explicit or implicit criticism of the Department of Agriculture in the statement but a number of the charges made by me were based on facts obtained from the Department of Agriculture, which has always conscientiously attempted to discover and prosecute the violators of its regulations and which in my judgment has done a good job. Thus the facts which Mr. Wilson recommends that Congress obtain from the Department of Agriculture will substantiate my charges.

The first explicit charges of dishonest practices adverted to concerned short weight violations. In the Chicago market alone the Department of Agriculture has recently uncovered between 55 and 60 cases of improper market weighing. Similar improprieties were found in Kansas City.

Moreover, the Department of Agriculture has jurisdiction over only 340 posted markets, at which about 65 percent of the livestock is marketed, out of a total of some 2,000 markets in the United States. Thus, the Department has no jurisdiction over or responsibility for some 1,660 markets.

A number of the practices adverted to are of the sort which occur at these smaller markets. For example selling cattle as "fully fed" which have been fed only long enough to get a deceptive cover is the sort of practice that might occur at a country buying station or small nonposted market. The same observation is true of misrepresentations of hogs as "corn-fed" when they actually were not. Information about these practices has been obtained from honest members of the industry or discovered by our enforcement officers.

Other practices mentioned also concerned activities over which Agriculture has no jurisdiction and for which it has no responsibility. The sharp practice of meat whole-

salers and retailers referred to fall into this category. Information as to these violations and others was obtained by me from the many honest members of the various production and distribution levels of the meat industry who conferred with or complained to me. Investigation by the OPS enforcement staff has also been the basis for and confirmed many of these statements.

With reference to misleading grading, it was stated that slaughterers may, on self-graded meats, represent the meat as better than it is and that retailers sometimes lead the customers to believe that meat is a higher grade than it actually is. The Department of Agriculture's grading requirements are permissive, not mandatory. The Office of Price Stabilization's grading requirements are mandatory. Thus, no criticism of the Department of Agriculture can be inferred from these statements. Furthermore the misleading grading referred to is by self-graders and retailers. In this context, the Department is not involved at all. The truth of such charges has also been borne out in numerous cases by reports from members of the industry and confirmed by OPS investigations.

The charges that water, ice, and cereal are sometimes added in the preparation of hamburger, that lungs, melts, tripe, and illegal amounts of cereal are used in processed meats and that excessive fat is left on retail cuts did not imply any criticism of the Department of Agriculture. These charges were limited to the activities of certain nonfederally inspected operators and small-shop keepers. The Department has no duties relating to sharp practices by these persons, no obligations as to retailers and no jurisdiction at all over activities solely in intrastate commerce.

The most impressive confirmation of my charges is furnished by the results of an intensive enforcement drive in the last 2 weeks. OPS enforcement agents uncovered 1,849 alleged violations of its meat regulations by 740 meat firms. The investigation has already resulted in injunctive action against 85 firms and the filing of four criminal complaints. A total of 1,953 packing plants were inspected. This indicates that between 37 and 38 percent of the firms investigated were in violation.

If you have any further questions concerning my statement, I will be very glad to answer them.

Very truly yours,

MICHAEL V. DISALLE,
Director of Price Stabilization.

Nothing Sure but Death and Taxes and Tax Collectors

EXTENSION OF REMARKS OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. BENDER. Mr. Speaker, in medieval times the tax collector was an object of universal scorn. His job was based upon his ability to drain taxes out of every source and he kept a portion as his own. In modern times the tax collector has become an administrative official, and he has been popularized as a good fellow who does his duty no matter how much it hurts—the other fellow.

From every indication on the current scene some of our collectors appear to be reverting to the old-fashioned gentry. In the St. Louis inquiry it now appears that the Secretary of the Treasury, Mr. John W. Snyder, talked to the Federal judge conducting a grand-jury investigation implying that the Treasury Department could do the job of cleaning up things by itself. Sweat on, Mr. Taxpayer, sweat on.

The Accomplishments of the Eighty-second Congress, Their Importance and Significance to the Peoples of the United States and of the World

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. EVINS. Mr. Speaker, as we approach adjournment of this, the first session of the Eighty-second Congress, I know that all of us must be reflecting upon our achievements and accomplishments during the almost 10 months of our labors and work together during this continuous session.

It has been my custom and privilege to return to the district which I have the honor to represent, following adjournment—to report to the people, to visit and talk with them, discussing with them the work of their Congress. I have never failed to find them very much aware of the issues of their Government and informed of the problems which are involved in the proper and efficient operation of the largest Government on earth. I have made it a practice, as a part of my obligation as a Member of Congress, in reporting to the people of the district, to give to them an accounting of the work and the accomplishments of the Congress.

I know that many will ask, "What have been the accomplishments of the Eighty-second Congress, thus far?" In answer to this proper inquiry, I feel that it can be said that "the accomplishments of the Eighty-second Congress have been of almost unprecedented importance and significance. They have been far-reaching and of great significance in the present and future role which the United States has been called upon to play in the pursuit of peace which is the aim and aspiration of the freedom-loving peoples of the world."

The accomplishments and achievements of the Congress have been vital to the defense and security of our own country and of great importance toward bringing about order and stability throughout the world. The Congress has measured up to the challenge of making our country strong and prepared. This has been the field in which this session of the Congress has primarily worked—

for peace and security both at home and abroad.

To sustain my statement in this regard let us review some of the specific actions during this historic session.

DEFENSE AND SECURITY

Since the outbreak of the Communist aggression in Korea—a threat to freedom and liberty everywhere—and following the emergency declared by the President—the Congress has directed its energies and attention to the problems of preparedness and defense—to the cause of peace and the security of our Nation. As all citizens of our great Nation know and recognize, freedom and liberty are priceless—peace does not come cheap and security is not a matter of luck.

The Eighty-second Congress, in full reflection of the deep desire of all citizens of the United States to attain peace and security, has taken the most immediate steps toward that attainment—that is, the providing of the necessary funds for the building up of our defenses, and for the attainment of America's peace and security.

More than that, the Congress—also in reflection of the decent impulses of the people of the United States—has provided the world of free nations with the inspiration and the will to exert their own best efforts toward a firm and determined stand against the threats of Communist aggression. The forthright actions of the Congress to build up our Nation's defenses and to assist other nations—who only a short time ago were flat on their backs and devastated far more—constitute an important and historic step forward in the field of peace.

The actions of the Congress in this regard represent steps in the enlightened self-interest of our own Nation—the making of friends and allies. We are constructing an impregnable military defense through building our own Army, Navy, and Air Force into the most powerful in the world.

To assure our own adequate military defense, the Congress voted funds in the amount of \$56,000,000,000 for the building up of the military forces alone. These funds, the largest defense appropriation ever voted, will go toward the creation of an Air Force of 95 wings, an Army better trained and equipped than any other army in the world, and a two-ocean Navy—the world's most powerful—with a super aircraft carrier in each ocean.

Included with this appropriation are funds for necessary research and development in the field of atomic energy, jet propulsion and every modern device which would give our Nation added strength and security.

Toward the attainment of military superiority, provisions were made for adequate funds for the development of the great Air Engineering Development Center in Coffee and Franklin Counties in Tennessee, and for the expansion and development of Sewart Air Force Base, at Smyrna, Rutherford County, Tenn. Funds for this latter purpose in the

amount of \$15,000,000 have been authorized and \$9,000,000 of this sum appropriated is now available. In addition, the Military Installations Construction bill includes appropriations for other similar projects throughout the Nation. The Oak Ridge atomic plant, also in Tennessee, and other atomic plants, the new hydrogen-bomb plant and similar projects have been provided for and strengthened.

FOREIGN AFFAIRS

World War II proved that no nation may isolate itself and withdraw from the world and selfishly find security. Time and modern civilization have drawn us closer together and made neighbors of all the peoples of the world.

In recognition of that fact, Judge Cordell Hull, of Tennessee, when Secretary of State, conceived what is now known as the Reciprocal Trade Agreements Act for furthering good will among nations through the medium of friendly trade and commercial relations. This has been called one of the greatest instruments for permanent peace ever set forth. The Congress, during the session just ended, has again extended this great act, restricting its benefits only to Communist-dominated countries.

In a further effort to protect our shores from invasion and to provide a buffer against further Communist aggression in Europe, Congress approved a further extension of the mutual-security program for military aid to European nations—our allies and friends in Europe—in the building up of a European Defense Army under the command of General Eisenhower. Funds in the amount of \$6,000,000,000 were voted to further this program. Passage was based on the belief that Europe, in its present economic condition, can provide men more readily than it can arm them and a dollar spent to build up Europe's defenses now will be as valuable—or more so—as a dollar spent at home for defense at this time. The main objective, under this measure, is to keep war away from our shores—to build up a defensive wall of strength against the further spread of Communist aggression. Under this program, our Nation will furnish arms and equipment for European troops. This assistance is turning weak nations into strong nations—buffers against communism—all in our own best interest.

ECONOMY—INFLATION—CONTROL

On the home front and affecting our civilian economy, one of the foremost legislative measures passed was the Defense Production Act.

This law has a twofold purpose. First, adequate production for the military build-up and for essential civilian requirements, and second, the prevention of run-away inflation.

As civilians learned during World War II, a high rate of military production calls for diversion to the Armed Forces of the greater portion of our vital materials, thus reducing substantially the amount of such materials which can go into the manufacture of civilian goods. As shortages of civilian goods are thus created some form of price controls is

considered highly desirable and essential to prevent ruinous run-away inflation.

Under the bill written by the Congress in this respect, controls are provided without an undue restriction of private enterprise. The full impact of the drain which military production will take from the total output of civilian goods will not be felt until 1952 and 1953 but the Congress in moving at this time to impose moderate controls has thus checked and forestalled an inflationary build-up which would rob our citizens of the fruits of their labor and their savings. Inflation, which would throw our Nation into economic chaos, would be encouraging to Communist aggression and, therefore, it must be prevented by every proper means possible.

AGRICULTURE

Provisions were made for the continuation of the great work of the Department of Agriculture—such beneficial programs as soil conservation, rural electrification, rural telephone service, agricultural credit programs, and for agricultural production, marketing, and research.

Funds for the continued operation of the Agriculture Department in the amount of \$720,000,000 for the fiscal year of 1952 were appropriated. While this amount is slightly under what was appropriated last year, the reduction represents economy cuts and does not impair or curtail essential services rendered by the Department. The production of an adequate supply of foods and fiber was never more highly essential and agriculture legislation enacted during this session was directed toward meeting the present great requirements for these commodities.

TENNESSEE VALLEY AUTHORITY

Congress made adequate provisions for the continuation of the work of the Tennessee Valley Authority. In consideration of the annual TVA appropriation Congress rejected all proposals to cut funds for this vital agency. Efforts to cripple the TVA did not succeed. Such a victory for the TVA was a tribute to the success and the necessity for this great development both from the standpoint of defense work and from the point of view of domestic needs within the area of the Tennessee Valley. In the budget for the current fiscal year, the sum of \$248,000,000 was requested for TVA and this sum was approved in full, representing a great victory for the friends and supporters of TVA and the Tennessee Valley Authority.

Still another victory for TVA was achieved by the supporters of this program in bringing about the defeat of an attempt to impose a tax of 3½ percent on TVA power distributed by municipalities. This was a poorly disguised attempt of the enemies of TVA to cripple the program. The defeat of this provision in the general revenue bill represented a resounding victory for TVA supporters over the powerful private power interests.

VETERANS

Much legislation of great benefit has been enacted in the interest of our veterans—not the least of these benefits being the extension of veterans rights and

benefits to include the Korean war veterans.

One of the first benefits to be voted in behalf of the Korean veterans was the \$10,000 free life insurance policy for all men serving in the Armed Forces subsequent to June 25, 1950—the date of the start of hostilities in Korea. Our Korean veterans will have the privilege of converting this insurance policy into permanent national service life insurance—by the payment of a small premium—upon honorable discharge from the service.

Another major action was the extension of benefits of Veterans' Administration hospital and medical care to veterans of the Korean fighting. Provision has also been made for providing increased compensation and pensions to \$120 per month to veterans having permanent and total disabilities. Assistance in the purchase of automobiles for amputee veterans has been extended.

As our Korean veterans are being rotated and returned home—the Congress is making every effort to bring their benefits in line with the benefits heretofore extended to other veterans. At an appropriate time, Congress will make provision for extending other provisions of the GI bill of rights to our Korean veterans—thus granting educational and other benefits similar to those granted to veterans of World War I and World War II.

SMALL BUSINESS

One of the most beneficial portions of the Defense Production Act was the establishment of a Small Defense Plants Corporation for the direct aid and assistance of small-business enterprises of the Nation during this period of emergency.

As authorized by the Congress, this service is to be a consolidation of a number of small-business services rendered by various agencies of our Government—this consolidation effecting a substantial economy in operations. It will, in effect, merge and consolidate all small-business offices into one for the purposes of, first, aiding small-business concerns and small manufacturing companies to obtain defense contracts or subcontracts; second, giving information on procedure for obtaining such orders and interpret regulations and directives in the mobilization program; third, fairly distributing among large and small business the supply of critical materials so that small business will receive its fair share; and, fourth, aiding in the financing of small-business expansion and retooling so that maximum participation in the defense program may be achieved.

POSTAL RATE ADJUSTMENTS AND SERVICE

The Congress for several years past has sanctioned an annual deficit in the Post Office Department under the belief that the post office performs an essential and basic service to the people of the Nation. Over the years, however, this deficit has grown so that, despite the essential nature of the postal service, it was deemed desirable in the interest of economy to reduce this operating deficit as much as possible.

Since many of our postal rates have been in need of modernization, the Congress undertook to bring some rates in line with services rendered in its effort to reduce the deficit. This action took the form of the elimination of the postal subsidies which have heretofore benefited large business concerns—such as mail-order houses—but not individual citizens. Principal among these increases was the raising of rates on certain types of fourth-class mail matter—such as books and magazines—and heavy freight parcels, shipped within city limits from first-class offices. This latter provision does not apply to second-, third-, and fourth-class offices and mailing to and from rural routes.

The price of the old penny postal card was raised to 2 cents after it was found that 95 percent of all postal cards sold are used by business firms for advertising and soliciting business and that the Government takes an actual loss of 1 cent for each postal card sold. The special delivery rates were raised but all other first-class letter mail rates were unchanged. These rate adjustments, it is believed, will help to reduce the Post Office Department's operating deficit and put the Department on a more efficient operating basis.

TAXES

The question of a tax increase proved to be a most controversial subject during the course of the first session of the Eighty-second Congress. Members of Congress took up this issue with reluctance and hesitation because of the heavy tax load already being carried by our citizens—but also with a full sense of responsibility that the tremendous cost of the defense program must be met somehow and that a pay-as-you-go program is the wisest course. The majority of the Members of Congress were of the opinion that our boys fighting in Korea should not have to come home to pay the bills for defense and face the costs which the conflict against Communist aggression entails. The feeling was that the program of defense and security should be financed on a current basis so far as possible and not leave the indebtedness to future generations.

The taxpayers of our country would have, in the course of normal events, expected that the tax rate would be lowered rather than increased. The national tax rate was lowered following World War II, but upon the declaration of a state of emergency at the start of hostilities in Korea, the pressing necessity arose to step up greatly our defense program with resulting increased costs.

Therefore, a tax increase was deemed necessary. The President requested a boost of \$10,000,000,000 in taxes. The House approved a boost of \$7,000,000,000 and the Senate a boost of \$5,000,000,000. When the bill went to conference a compromise of approximately \$6,000,000,000 was worked out. This increase was far below the amount which the President had requested, but it was as high as the Congress felt should be imposed, believing that further economies should be effected in the operation of the Government rather than taxes increased.

INVESTIGATIONS

One of the primary functions of the Congress—in addition to its function to legislate—is the duty and responsibility to investigate. Without proper and full facts and information through investigation, the Congress would be unable to legislate wisely and properly in the interest of all our people. This applies with respect to the enactment of laws to extend benefits and to correct inequities and plug loopholes and also to the matter of the proper functioning of the departments of the Government.

There have been numerous investigations in a variety of fields during this session of the Congress.

Among the investigations may be listed the inquiry into the facts surrounding the dismissal of General MacArthur from his command on the Pacific. Also, the Senate crime investigation in which it was disclosed that the criminal element has infiltrated into legitimate businesses and that crime syndicates are in operation in our large cities. Much corrective legislation has been proposed following the crime investigation.

The RFC investigation has resulted already in changes and improvements being made in that agency. The investigation of the Maryland election will result in many changes being made with regard to the conduct of political campaigns and elections—changes which will bring about a higher standard of ethics in the conduct of State and National political campaigns.

The national investigation of the operation of the veterans' education and training program which disclosed many instances of irregularities has resulted in the savings of millions of dollars to the Government—as well as the assuring of a better and improved training program for our veterans.

One of the byproducts of all these investigations has been the fact that, by and large, the great majority of our Government employees and public servants are not included in the dishonest class but are scrupulous, loyal, and honest public officials. The exposure of some bad apples in the barrel has focused attention on the fact that the vast majority of the apples are not bad, but are sound and good. All should not be condemned.

UNITY

There have been divisions and disagreements in the Congress—and this is inevitable in the exercise of our democratic form of government—but on the important issues, national defense and security, the Congress has demonstrated a firm unity.

This same unity is evident among the people of the country who have placed national defense and security and the winning of the war in Korea above everything else in our national life today.

The times call for the exercise of unity, the welding of our citizens into a solid front against the threats of communism and Communist aggression. Only through unity did our country grow into the greatest Nation in the history of the world, and only through a demonstration of basic unity of our people and

faith in our institutions and our Government will our country remain strong.

There is not the slightest doubt that our Nation will survive the present conflict and emergency, and, in surviving, will grow to even greater heights, as the United States assumes its rightful role of leadership and destiny. The road ahead to peace and security will demand the best of the people of our Nation.

Texas Tidelands and the 48 States

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. TEAGUE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the remarks of Mr. M. K. Weitzel, secretary, Statewide Tidelands Committee of Texas, made at the convention of the Missouri State Chamber of Commerce at Jefferson City on October 8, 1951:

Mr. President, ladies, and gentlemen of the Missouri State Chamber of Commerce, if Gov. Allan Shivers could be here today, he would feel equally honored, as I am on this occasion. Governor Shivers sends his invitation to visit the State of Texas. We like to entertain people from Missouri. When people from the "Show Me" State come to Texas, we are forced to prove our Texas brags, just between you and me, most of the time we can do it.

The tidelands controversy is not an oil company fight. The State of Texas is not the cat's paw for the oil companies. The bylaws of the Statewide Tidelands Committee of Texas, which I represent, absolutely forbid the acceptance of any funds from any oil company for the prosecution of this effort to regain our submerged lands. I make these statements to spike the guns of the opposition.

The oil companies who hold leases in the Gulf of Mexico made contracts in good faith with the State of Texas. We believe in the sanctity of those contracts. We are making every valid effort to live up to our agreement with respect to those contracts. We know that the oil companies have gone so far as to propose a compromise in this controversy in order that they may proceed with their drilling operations. But, much as we respect the sanctity of a contract, Texans will never willingly accede to a compromise on this great issue.

Speaking of the sanctity of contracts, the recent Supreme Court decision which, in effect, turn over our submerged lands to the Federal Government, also abrogate the solemn contract entered into between the United States and the Republic of Texas when Texas was admitted to the Union in 1845.

Congress had the choice of admitting Texas, taking over her public lands, and paying off the public debt of Texas. Congress chose to admit Texas with the new State retaining its public lands and paying off its own public debt. Other nations have cause to consider whether we, as a Nation, acknowledge the sanctity of our international agreements, when our Federal Government so lightly disposes of an agreement with one of its own components.

But, to get on with our discussion, for over 100 years, every coastal State had enjoyed

the ownership of their submerged lands without any question. That ownership was bolstered by international law, the common law, and 53 decisions of the United States Supreme Court. It wasn't until 1933 that any question was raised with respect to the ownership of the marginal seas. Then, some smart lawyer conceived the idea that a killing could be made, if the ownership of the marginal seas could be put in question. Lease applicants began to bombard Secretary of the Interior Harold Ickes with applications.

To the earliest of these, Mr. Ickes replied that it was settled law that California owned the submerged lands along her coast and that such submerged lands could not be appropriated without the consent of California. But the lease applications continued to pour in. Pressure was brought on Secretary Ickes from these speculators, their lawyers, and political friends. Mr. Ickes and his successors have succumbed to the pressure.

Incidentally, one of the most flagrant examples of these lease grabbers was exposed in the September 24 issue of Time magazine. He is no other than E. L. Cord, something of a financial genius who eventually got into a little ruckus with the Securities Exchange Commission.

Cord has been scouring the country, looking for the heirs of veterans of some of our old wars. He is buying up the land scrip which was issued to veterans, so that he can file claims on public land. Some of this scrip was issued to veterans of the War of 1812. Using this scrip, he is now filing applications on thousands of acres of California and Louisiana submerged lands.

Cord contends that the oil companies, who made good-faith leases with the State of California, are mere squatters since the United States Supreme Court enunciated the so-called paramount rights doctrine. Fantastic as this scheme appears, the Department of the Interior has not yet denied Cord's applications.

Now the Federal authorities are screaming that the States of California, Louisiana, and Texas are holding up production of vitally needed oil for national defense. The irony of all this is that, even should the Federal Government prevail, the leases will merely be transferred to the same big oil companies under Interior Department control. I'm sure you all remember the unwholesome stench of the Teapot Dome oil scandal.

The Federal authorities forget to tell the American people that Texas, California, and Louisiana were developing the oil resources of the marginal seas when the Federal Government precipitated this controversy by filing suit against the State of California.

They forget to tell the American people that development of the oil resources in the submerged lands of Texas and Louisiana are at a complete standstill because the chairman of the Interior and Insular Affairs Committee of the United States Senate has constantly bottled up a bill which would restore full ownership of marginal seas to the several States involved.

They conveniently forget that the States of Texas, Louisiana, and California established an unparalleled record during World War II for the production of oil. These States stand ready to surpass their record if international events require it.

The proponents of Federal ownership have come up with another joker. They say it's a dirty shame that three States should hog tidelands resources. Senator Lister Hill proposes that the submerged lands be turned over to the Federal Government, and that the revenues be put in a special fund. A National Advisory Council, another nest of bureaucrats, would then be set up to disburse these revenues to the several States for school purposes.

The Federal Government is like a gigantic octopus with a thousand tentacles. Each of these tentacles is squirming and wriggling into every crevice and cranny of our economic endeavor, seeking new tax sources which it can suck dry. This school fund scheme of Senator Hill's is just a new tentacle.

It is time we began to whack off some of these tentacles. Then, our State, county, and municipal governments would have some tax sources with which to carry on their legitimate functions.

Then, our school systems would not have to look to the Federal Government for Federal aid to education. Then, the mothers and fathers of this country would retain their voice in what is taught to our boys and girls. Then, we need not fear that our children will be indoctrinated with the party line as it is dictated from Washington.

Actually, Senator Hill is stealing some Texas thunder. For years the revenues from our public lands have been put into our permanent school fund—a stockpile of capital to assure the education of our children when the oil and gas is gone.

The decisions against California, Louisiana, and Texas have announced a new concept of law. This concept of paramount rights is not defined in law. Not one of the three decisions actually measures the extent of the dominion which may be exercised by the Federal Government with relation to the properties involved.

But the United States Supreme Court did say that the claims of California, Texas and Louisiana were mere property rights—get that—mere property rights which must give way to the necessities of national defense. No one denies the Constitutional power of the Federal Government to commandeer our property, or our very lives, when the national defense so requires. But, as a result of this four-to-three decision of the Supreme Court, it appears that whenever a mere property right collides with the requirements of national defense, the Federal Government may ignore the Constitution and exercise its power of eminent domain without compensation. Do you wonder that Texas is trying to mobilize the citizens of every State against this unprecedented attack upon our Constitution?

Several attempts have been made to pass legislation which would remove the cloud on the title of the States. The first time there was any discussion of legislation to restore title to the States, President Truman pointed out that the matter was before the Supreme Court, and that legislation would not be necessary, since it was a judicial matter.

After the decision was rendered in the California case, legislation in the House of Representatives and the Senate was passed, by a large majority, restoring full title to the States. This legislation was vetoed by the President. In the Eighty-first Congress, the House of Representatives again passed legislation restoring title to the States. This legislation died in the Senate in the waning days of the session.

Again, on August 9 of this year, the House of Representatives passed full State ownership legislation by a majority of 285 to 109. Senate consideration has been delayed by Senator O'MAHONEY. Meanwhile, the proponents of Federal ownership assert that these legislative attempts to restore title to the States are usurpations of the Judiciary and destructive of our system of checks and balances.

However, the Supreme Court, in the California case, of all places, recognized that this matter was one for the legislature. Mind you, in the very first case enunciating the "paramount rights" doctrine, the Supreme Court said:

"Article IV, S3, Cl 2 of the Constitution vests in Congress 'Power to dispose of and make all needful Rules and Regulations re-

specting the Territory or other Property belonging to the United States.' We have said that the constitutional power of Congress in this respect is without limitation. *United States v. San Francisco* (310 U. S. 18, 29 30).

"Thus neither the courts nor the executive agencies, could proceed contrary to an act of Congress in this congressional area of national power." In spite of these judicial pronouncements in the very case at issue, Senator O'MAHONEY still thwarts Senate consideration, and President Truman still threatens to veto.

There is a multitude of evidence that the issues in this controversy are national in character and consequence. We believe that the inland waters of every State are imperiled by these "paramount rights" decisions. We believe that the ports, docks, wharves, recreational areas, fisheries, sand, gravel, and mineral deposits of whatever character in the submerged lands of navigable waters are imperiled by these decisions. We believe that the "paramount rights" decisions are the entering wedge to the nationalization of all natural resources.

Of course, you will want to know if there is any legal basis for this line of thinking. Well, let us take the United States Supreme Court case of *Illinois Central Railroad v. Illinois*, 146 U. S. 387. In substance, this case holds that the Great Lakes and the submerged lands thereunder partake of the same character as that of coastal waters.

Now, it follows that, if the Federal Government can take over the submerged lands of the Coastal States, by virtue of the Illinois case, they can likewise take over the submerged lands of the Great Lakes of the Nation. From there it is but a step to Federal assertion of dominion over all inland waters.

Our Federal officials, including Attorney General McGrath, insist that the Federal Government is not interested in taking over inland waters. They insist that the "paramount rights" decisions are not authority for such confiscation. Can we relax our vigilance because Mr. McGrath assures us that inland waters are not in danger?

Despite Mr. McGrath's assurances, a suit has been instituted in California against water-rights owners—small farmers, mind you—on the Santa Margarita River. When the master-minds in the Pentagon purchased land and water rights for Camp Pendleton, they underestimated their water requirements.

Now, the Department of Justice has brought suit against water-rights owners on the upper reaches of the Santa Margarita River, to rectify the Pentagon errors. These farmers and their predecessors have held these water rights for over 80 years.

The Department of Justice is using personnel of the United States Marines to serve subpoenas on some 12,000 landowners on the Santa Margarita River. If this isn't police-state methods, nothing is. And what is the theory of law being used in this case?

Despite Mr. McGrath's assurances, the suit is bottomed on the "paramount rights" doctrine. Here is an example of mere property rights being confiscated by the National Government. And please note the suits are directed at inland waters.

Is there any other evidence that the submerged-lands controversy is a national issue? About 4 months ago, the Maritime Commission sent up a trial balloon. It proposed that, in view of the national emergency, it should take over the Port of Houston. In the past 35 years, the city of Houston has developed from a port of relative unimportance to the third greatest seaport in the Nation, in point of tonnage.

The chamber of commerce, the municipal government, the Houston Port Authority, all joined in common defense and sent a delegation to Washington to protest this confiscatory proposal of the Maritime Commission. The trial balloon burst in midair. But,

knowing government bureaucracy as we do, we realize that the issue is merely dormant and not dead.

I urge you to give this incident some serious thought, in view of the shipping installations all up and down the Missouri and Mississippi Rivers, which you folks have built. And please note—the Houston Port installations are on inland waters, and it is wharves and docks, not oil, that the Maritime Commission is proposing to confiscate.

Is there any more evidence of confiscatory schemes? The State of Mississippi has recently made some leases on her submerged lands, despite the paramount rights decisions. Consistency would make it incumbent upon Attorney General McGrath to sue the State of Mississippi. It is not improbable that Alabama and Florida will likewise lease some submerged lands for mineral exploration.

The Dow Chemical Co. in Michigan is now producing vital chemical products from the submerged lands of Lake Michigan—products as vital to the war effort as is petroleum. To be consistent, Mr. McGrath will have to institute a suit against Michigan. In short, instead of having 3 malefactors, Mr. McGrath will soon have 48.

At a dinner of the Smith County Bar Association in Tyler, Tex., early this summer, Attorney General McGrath made the statement that suit would be instituted against any State if products vital to the national defense were discovered in the submerged lands of any State.

Every State has submerged lands. Missouri, for instance, has 258,560 acres of submerged lands in her navigable waters, with millions of dollars invested in wharves, docks, and recreational improvements in the State, to say nothing of the known sand, gravel and other mineral and marine wealth. From the standpoint of the area involved, Texas has only 3,854 square miles at stake in marginal seas, while Michigan has 38,459 miles at stake on the Great Lakes.

The people of Michigan, and their representatives, are aroused and fighting mad. Actually, Texas has only 2.9 percent of the submerged lands of the United States, but we will fight just as zealously for that 2.9 percent as Michigan will fight for her 28.9 percent.

Are there any more examples of Federal attempts to usurp the sovereignty of the States and take over their resources? Let's have a look at another one in Texas, on the Brazos River. During the spring rains, the Brazos River is a rampaging gully-washer, destructive of people, livestock, and agricultural crops. Erosion is a major problem along this river.

During the fall and winter rains, the river again goes on the rampage. During the summer months, this river is virtually a dry stream; a yearling steer could wade it without getting its belly wet. During the summer, there is a genuine shortage of water for all purposes.

So, the folks along the Brazos, at a point just west of Fort Worth, formed a water district. Consulting engineers planned the necessary dam and outlet works to curb the destructive power of the Brazos River during the spring and winter and to provide an ample water supply for domestic, industrial, and agricultural purposes during the summer.

The water district arranged for financing in accordance with the estimates of their consulting engineers. Mind you, all this was done at the local level, under State statutes. But the busy little bureaucrats in Washington descended upon this local project and stopped it cold. They instituted a suit to prevent continuance of the project on the grounds that the Brazos River was navigable, and hence under the jurisdiction of the Federal Government.

As a result, officials of the water district and their witnesses spent months in Washington to prove that the Brazos River was not navigable. The Brazos River folks won their case, but meanwhile, the river continued on its destructive rampages and the area was deprived of a water supply during the months of their greatest need.

Worst of all, materials priorities and the advancing cost of materials combined to the end that this worthy project, inspired by grass-roots people, may never be built. They fell victim to the power-hungry bureaucrats of the Federal Government.

The folks of Texas are quick in their sympathies. We fully appreciate the tragedy of the floods along the Missouri. On a lesser scale, we have the same problem on the Colorado, Brazos, Trinity, and Nueces Rivers of Texas. But the long-term results of the floods on the Missouri may not yet be apparent.

The tragedy is that the destruction of lives and property is going to generate an insistence upon control of the Missouri River. Fear of a recurrence of the recent destructive floods may cause the people of Missouri to relax their vigilance.

As one citizen to another, I beg of you not to be mouse-trapped by any gratuitous schemes which will provide water conservation and flood control at the expense of your hard-won liberties.

Despite the fact that I may be running counter to some firm convictions among this audience, I am going to take the liberty of saying that, while I approve in principle most everything recommended by the Hoover report, I certainly do not concur with the recommendation that all public works and construction be concentrated in the Department of the Interior.

The Department of the Interior and the Bureau of Reclamation have a lurid history and a dangerous philosophy of centralization, a disdain for State and local rights, a high-handed, dictatorial disregard for the individual, which should be feared and fought by every freedom-loving citizen in the land.

Let me revert to this scheme to divide our oil revenues in the submerged lands among all the States for school purposes. All the States are friendly components of a great nation. I don't see why we should fight over who owns what.

After all, it's just a geologic accident that Texas has mineral deposits in her submerged lands. It's just a geographic accident that Missouri has her magnificent climate and her fertile fields. And it's just a biologic accident that Missouri is the birthplace of the Missouri mule—and the President of the United States.

In past years, I have been closely associated with chamber of commerce activities. I know the caliber of men and women who associate themselves with chamber of commerce work. And I am positive that, if and when you recognize the national aspects of this controversy, you will roll up your sleeves and make this fight your fight.

You may question your power to be of any help. Whatever you do, you will be in good company. Let me name the national organizations that have passed resolutions and requested Congress to restore the tidelands to the States.

First, there is your own national organization, the United States Chamber of Commerce. Incidentally, the entire State of Texas is proud that your national organization saw fit to elevate Deck Hulcy, of Dallas, to the national presidency of the United States Chamber of Commerce.

In addition to your own great organization, the following organizations have joined in this fight:

The Council of State Governments.
The National Governors' Conference.

The National Association of Attorneys General.

The National Association of Public Land Officials.

The National Association of County Officials.

The National Conference of Mayors.

The American Association of Port Authorities.

The American Bar Association.

The American Title Association.

The United States Junior Chamber of Commerce.

The National Reclamation Association.

The National Water Conservation Association.

The American Municipal Association.

The National Institute of Municipal Law Officers.

You can be of great help in this controversy. You can let your Senators and Congressmen know how you feel about this matter. You can bring this matter to the attention of your editors and publishers throughout Missouri, in order that they may publicize the grave national consequences of a Federal triumph in this controversy.

I should like to quote from the address of Gov. Allan Shivers before the American Bar Association in their convention in New York on September 17, 1951. Governor Shivers, on that occasion, said:

"The ideology of the tidelands decisions, and the administrative policies reflected in it, are merely glaring examples of a trend toward a type of statism that is repugnant to me. It does not appeal to any citizen who believes in the States assuming their proper responsibilities and retaining their due rights."

Ladies and gentlemen, I believe that those words exemplify the attitude which every citizen should take toward this great national controversy.

Our Internationalist Foreign Policy Is a Sure Road To Victory—For Stalin

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 17, 1951

Mr. BUFFETT. Mr. Speaker, I have discussed this peril before. On March 18, 1947, 5 days after Mr. Truman made his first challenge to the Russians, I spoke in the House with this title "Is Truman Playing Into Stalin's Hands?"

It seemed clear then, and events since relentlessly confirm the conclusion that the administration foreign policy follows a pattern that will bring self-destruction to America with a minimum cost to the Kremlin, except patience. To sustain this awesome judgment, let me go back a bit.

In outlining in March 1947, the probable consequences of the Truman Doctrine, I made what many pooh-poohed then as an outlandish set of forecasts.

Here they are:

First. Peacetime conscription—arrived June 1948.

Second. War in Korea—arrived June 1950.

Third. Return to large-scale deficit financing—arrived 1951.

Fourth. Reestablishment of OPA—arrived January 1951.

Fifth. Deterioration of the dollar by renewed inflation—arrived 1950-51.

Sixth. Economizers "would be branded as Stalin lovers"—arrived 1951—the Senator Douglas affair on the Senate floor, September 10, 1951, is exhibit A on this item.

Seventh. "Truth-telling will generally disappear"—arrived officially with President Truman's shocking censorship order, September 24, 1951.

ADMINISTRATION STRATEGY MUST PLEASE STALIN

The foregoing list is only part of the inevitable consequences I pointed out then. I report them at the risk of seeming immodest, simply to demonstrate that our present unhappy situation should not surprise anyone. We are reaping what was sowed.

To claim that our policies since 1947—as before then—have been unsatisfactory to the Kremlin, is to disregard both the evidence and the gains they have made.

Yet, neither in 1947 nor now, do I question the motives of President Truman. My exposition relates entirely to the unsound nature of the administration's efforts to preserve this Republic.

If you had been in Stalin's shoes in 1945, what would you have done? If you were as canny as he proved himself to be in World War II, you would say, "Our most important goal is to get the United States to overextend itself—and keep overextended."

To sharpen this concept, let me create an illustration from American business.

Suppose you were a small independent auto maker and wanted to get strength to match General Motors. I think you would decide quickly that the only way you might catch up with the great General Motors organization would be if General Motors were enticed into dissipating its resources and organization in far-flung and weakening corporate adventures.

If General Motors did that, the inevitable end would be reorganization or bankruptcy in short order. In the political field, this is what the administration policy is now doing. It has America attempting to finance, police, and control the behavior of the non-Russian world.

Can you imagine a more fantastic objective or a more certain road to national suicide? I cannot.

OUR POLICY TAKES US TOWARD ECONOMIC SUICIDE

Mr. Speaker, we have been following the policy that Stalin needs, which is the steady undermining and destruction of American freedom and American economic strength. Even yet, almost every week sees our commitments abroad expanded, and our strength further dissipated. We are activating Lenin's boast, "I shall force the United States to spend itself into destruction." Is not that now clear?

And Stalin's timing has been skillfully designed to accelerate this purpose. Korea was a good example of his timing. An old adage says, "Let sleeping dogs lie."

If Stalin did not want us to spend tens of billions on a vast rearmament program, would he have moved south in Korea in June 1950? I believe not.

He could anticipate what the response would be in Washington—and if he were trying to lull us to sleep, that action would have been the last thing he would have done—especially with MacArthur close by in Japan.

GIGANTIC MILITARY SPENDING HERE SUITS KREMLIN

The sound conclusion, thereby, becomes that the present armament program in America is not in reality objectionable to the Kremlin. Their clamor and protestations about it are simply a smart smoke screen to conceal their satisfaction, and to exploit its terrific propaganda advantages.

Our colossal military exertions can contribute mightily, and ultimately decisively, to their twin goals: The destruction of freedom in America and the socialization of American enterprise. Stalin knows what these evils are doing to American free enterprise.

It is said that Washington's death resulted from the stupid medical practice in vogue at that time of "bleeding the patient." Already weak, the body of the Father of our Country was reportedly drained of its remaining strength by the ill-conceived practice of bloodletting.

It would be a strange irony of history, if the country he founded should go to its doom via a similar stupidity.

But who would dare say today that we are not on that road?

FREEDOM FOR AMERICAN YOUTH IS GONE

Personal freedom for our youth has been wiped out by peacetime conscription. No amount of sugary propaganda can change that truth. This servitude nullifies the personal freedom pledged in the Declaration of Independence—for a segment of our people that cannot defend itself. Peacetime conscription is also Article 132 of the Soviet Constitution.

Economic independence is fast becoming a receding mirage for our middle classes, as the rotting of the dollar proceeds. Personal freedom becomes impossible for most people when the currency is ruthlessly debauched. That is happening in America—now.

The gnawing of the rats at the foundation of a structure is usually not visible on the surface. When the structure tumbles in, it is too late to do anything about it.

So it will be when the flight from the dollar begins in earnest. That flight will come if deficit spending and printing-press currency continues without end.

INFLATION IMPERILS FRUGAL MIDDLE CLASSES

The end of that road has not varied in 4,000 years, despite new and bigger OPA's. It means savings, insurance, and pensions will shrink to a small fraction of their original value.

But perhaps you say, "Wait a minute. The Kremlin must be frightened at all our military preparations. Surely they do not want us to build up a war machine that can, in the event war eventuates, wreck their country."

This contention is the pivotal idea on which our present foreign policy rests. How sound is it?

First of all, how many signs indicate that the Kremlin is growing frightened? Do you find such evidence in their ac-

tions? The State Department cannot find it, because they are daily becoming more vociferous in attacking the behavior of the Russians. Where is the evidence? Can you find any? I cannot.

All right, then, what is the Russian view of our defense effort, including our increasing number of military alliances in the four corners of the globe?

Of course, we cannot see into their minds, but, like a good football team, we should try to discover our opponent's strategy.

Suppose the military overload and operation rat hole everywhere proceeds without effective resistance by Americans either to the loss of personal liberty or to socialism replacing capitalism?

STALIN CAN BE VICTOR WITHOUT WAR

That will mean that by relatively peaceful tactics, cunning needling, and the clever help of accomplices in the Fair Deal—now enrobed in the mantle of anticommunism—Stalin will have brought us to socialism and communism without even a direct shot being fired.

Stalin is not sacrificing his seed corn—the youth of the land—in any indecisive conflicts 8,000 miles from Russia's heartland. We are.

If, however, the American people ultimately begin to resist vigorously growing casualty lists and all-out militarism, plus inflation and corruption, war with Russia could result at any time.

War has often arrived when a ruling group, internally frustrated, provoked conflict abroad in order to silence opposition at home. A foreign foe makes those in power almost irresistible. History is replete with this maneuver.

Then the America of liberty, free enterprise and Christianity would be gone for sure. Immediately, our remaining freedoms would be curtailed to the point of extinction. The seductive propaganda and occasional terrorism of recent years would be replaced by most of the procedures practiced in totalitarian states.

Perhaps the most devilish, certainly the most tragic aspect of this course, is the fact that it has been a primrose path so far.

MANY DRUGGED BY "FOOL'S GOLD"

Thus far the admonitions of wise people like Herbert Hoover and General MacArthur have gone unheeded.

The phrase "I never had it so good" is on millions of lips. Business is good, more people have more things than they had before—"the goose hangs high." Only those with loved ones lost in Korea or in that slaughter zone now, plus those already ground down by inflation, are paying for our national sins.

Too many are like the marijuana addict at the ecstasy stage of his binge. And, like the dope addict, they are secretly terrified at the prospect of normal conditions.

SOME NECESSARY GOALS

What can be done? A book could be written on this question, but certainly four objectives are imperative:

First. A resurgence of responsible individualism. That means all-out support to those in and out of Government who are fighting to expose the incom-

petent or disloyal persons who steer us into one crisis after another—without end.

Second. Vigorous patriotic resistance to the schemes to militarize us and have America finance and police the world. We destroy ourselves if that inflationary overload continues on the present scale. A drastic contraction in our dollar hand-outs and military outlays is imperative. No man can run 5 miles at the speed of a 100-yard dash. We must contract military spending in order to avoid fatal economic regimentation at home.

The obvious scheme to deploy our young men in ground fighting over Europe and Asia, if war eventuates, is a reckless gamble with America's most precious resource, a resource in which other nations have overwhelming arithmetical superiority.

Third. A house cleaning at the polls in 1952. Nothing will do more to preserve human liberty everywhere than a genuine Republican victory in 1952. That victory is imperative, if the two-party system on which liberty depends is to be preserved. We must nominate and elect Republican candidates not selected by the fair deal or their fellow travelers who profess to be Republicans, but whose actual political allegiance is to the Socialist philosophy of the administration. The Republican Party must be courageous enough to offer a genuine alternative to the national socialism of the Democratic Party.

In foreign affairs the sense or nonsense of our fighting and financing wars on a world-wide basis should be made the clear-cut, thoroughly debated issue. The answer would be decisive. The voters would determine whether our young men were destined to live decent lives in the American way or to have just decent burials under a global military machine.

Fourth. We must secure widespread understanding of this awesome truth—that Americans will lose more than all other peoples put together from another global conflict.

This consequence would happen regardless of the military outcome. The cruel consequences of World War II have affected only a relatively small number of American homes so far. It will not be so in the case of another global war.

ADMINISTRATION TALKS AGAINST COMMUNISM,
BUT EMBRACES ITS ACTIONS

The greater peril to America is in Washington, not in Moscow.

Undoubtedly President Truman believes he is a modern Sir Galahad in his recently assumed role as the world champion of anticommunism.

But his administration is rolling us hell-bent toward the collectivist goals of militarism, inflation, socialism, and human servitude. Actions, not words, are the true measure of the performance of the Truman administration.

A policy that results in war with Russia probably assures the collectivist philosophy of world-wide dominion. Communism has been the only victor in two World Wars.

Communism was nothing but a back-alley conspiracy until World War I enthroned it in Russia. The Second World War multiplied its power over two con-

tinents. Another global conflict can end with its evil, materialistic concepts strangling human decency everywhere in the world.

And so America must reinstall in high places a determination to achieve peace, which means that those people with influence must begin to work courageously for peace while there is yet time.

Mr. Speaker, our foreign policy is foundering in the quicksands of over-commitment, and that failure imperils our very existence.

If our children, and our children's children, are to have the blessings of liberty, we must as a nation heed the simple wisdom voiced by the greatest leader of men of all time—the Man of Galilee—who counseled against attempting the impossible in these words:

For which of you, intending to build a tower, sitteth not down first, and counteth the cost, whether he hath sufficient to finish it?

Lest haply, after he hath laid the foundation, and is not able to finish it, all that behold it begin to mock him saying,

This man began to build, and was not able to finish (Luke xiv: 28-30).

Americanism Means Fair Play

EXTENSION OF REMARKS

OF

HON. ISIDORE DOLLINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 15, 1951

Mr. DOLLINGER. Mr. Speaker, Walter Winchell, in a recent article, brilliantly and succinctly described that great American sport—baseball—and its influence on American life and ideals.

The sports engaged in by the people of any nation reflect the national character. That we make heroes out of those engaged in a peaceful game bespeaks our fundamental beliefs in peace and the inalienable rights of freedom and equality for all. As Mr. Winchell so aptly says, the words "Americanism" and "fair play" are synonymous, and of this we can be proud.

Following are excerpts from the article which appeared in the Daily Mirror of October 4, 1951:

THE PLAYOFF, POLO GROUNDS

The manifold meanings of the national pastime are the source of its magical lure. It is economic and artistic, emotional and spiritual, philosophic and psychological. Baseball is a commercial enterprise for players, yet it frequently becomes a brilliant poetic drama for sports writers. The enthusiasm it generates has offered a more effective emotional therapy than psychiatry. And for many Americans it represents an act of faith: Catastrophic changes sweeping the world never disturb the changeless pattern of the game. It is the essence of joyous normalcy. The ball park becomes an island of innocent excitement in a world of wild despair. It is the sunny fortress of youthful memories amidst the threat of a dark future. The walls enclosing the field temporarily block the horizons of a civilization flashing with perilous lightning. Thus the game becomes a symbol of the mainspring of life: Hope. For the national pastime is an expression of a national aspiration—the pursuit of happiness.

A nation can be judged by its sports as well as its politics. Baseball reflects the national character. It is not merely an ornament of our society, but an integral part of our culture. And that cultural legacy is handed from one generation to the next. It is significant that what we value most about our sports is sportsmanship. That word defines Americanism: Fair play. And it is inspiring to realize that we make national heroes out of those engaged in a peaceful game.

The children of this Nation are never instilled with ambitions to conquer the world. They would rather hit a home run.

Washington Daybook—Forrestal Diaries to Play Part in Fight Against Taft in 1952

EXTENSION OF REMARKS

OF

HON. WAYNE L. HAYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks, I include the column known as Washington Daybook which was released on October 8, 1951, and appeared in numerous newspapers around the country. This particular article is related to the part the Forrestal diaries play in Senator Taft's campaign. I think it is extremely interesting and that the public knows that the 1948 campaign was not unanimous from the point of view of all Republicans.

The article follows:

WASHINGTON DAYBOOK—FORRESTAL DIARIES TO PLAY PART IN FIGHT AGAINST TAFT IN 1952

(By Reed Blaine and Marietta Duke)

WASHINGTON—GOP opponents of Ohio's Republican Senator ROBERT A. TAFT are anxiously waiting for publication of the Forrestal diaries which are now appearing in some papers because of a very interesting report that the late Secretary of Defense makes on a letter sent by TAFT to President Truman after the 1948 Presidential election.

Under the date of December 20, 1948, Forrestal wrote:

"The President mentioned the fact that he had a letter from Senator TAFT, congratulating him on the election and saying, while the Senator might disagree on certain matters with the President, he would do everything possible to cooperate. Taft in his letter also mentioned the fact that 'as the President might gather, neither he nor his wife were particularly disappointed in the result of the election.'"

This is indeed a damning bit of the past for Mr. TAFT, or "Mr. Republican" as GOP National Committee Chairman Guy Gabrielson wants him called, to be faced with at this time.

It is evidence offered by a man who has at times been a hero for many Republicans, even those from the Navyless Midwest, in the fight 2 years ago over the B-36 bomber, that the regular candidate of the party regulars for the Presidency in 1952 did not give his wholehearted support to the party candidate in 1948.

For this letter that Forrestal cites as written by TAFT to Truman in effect tells Truman that TAFT was glad that Truman defeated Tom Dewey for the Presidency.

Dewey is today one of the leading proponents for nominating by a draft if necessary,

Gen. Dwight D. Eisenhower for the GOP candidate for President next year.

The fight between the pro-Ike and the pro-Taft forces is deep and bitter. It has flared up occasionally. But when this evidence is generally revealed, the flare-ups of the past will look pale beside the bonfire that it will ignite.

Indeed, certain members of the Eisenhower faction who already know about it but are not yet talking are swearing that they will no more work for Taft than Taft apparently did for Dewey. That means, they say, not at all. Some even talk of bolting the GOP entirely.

After the publication date of the diaries, the split will really be in the open.

Elaine Exton on Educational Study and Career Preparation in the Armed Forces

EXTENSION OF REMARKS

OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. SIEMINSKI. Mr. Speaker, I believe that parents of teen-age boys across the Nation would worry a lot less about their youngsters going into the Armed Forces if they could realize that this period of service can, in many instances, contribute positively to their future.

For the information and guidance of all concerned, and especially for these worried parents, Mr. Speaker, I ask unanimous consent to insert in the CONGRESSIONAL RECORD excerpts of an article by Miss Elaine Exton. It appears on page 34 of the School Board Journal for October 1951 and is called Continuing Educational Study and Career Preparation in the Armed Forces.

I am told the material in the article has been reviewed and cleared by top officials in charge of the education sections of the information and education divisions of the Army, Navy, Air Force, and Marines. Accordingly, I list it below:

WORD FROM WASHINGTON—CONTINUING EDUCATIONAL STUDY AND CAREER PREPARATION IN THE ARMED FORCES

(By Elaine Exton)

Young people joining the United States Armed Forces seldom realize that in entering military service they become eligible to participate in the largest adult education program in the world. Nonetheless their service gives them access to more than 6,500 different courses from the first grade through college levels in numerous academic, technical, and vocational fields.

After entry into the Armed Forces they soon find that in accordance with their individual interests and experience they may sign up for classes or correspondence courses in off-duty hours that will help them in their jobs—in or outside the service—indulge in a hobby, or earn credits toward high school or college graduation. They find, too, that whether on land, afloat, at the battle front, in a remote outpost, in America or overseas, no effort will be spared to provide them with the facilities for continuing desired studies in their spare time.

Off-duty education

These voluntary educational opportunities are offered service men and women not only to make each one's period of military duty as useful and educationally productive as possible but also as a means of raising the educational level of service personnel so as to increase their efficiency and value.

Though distinct from required training conducted for purely military ends, off-duty education is officially considered as an auxiliary to such training. As explained in Army regulations "the serviceman must be capable of absorbing and utilizing the training necessary to make effective use of the complex weapons and machinery of present warfare, a requirement which demands continual emphasis upon the mental development of the individual."

However, within certain limitations, a young person in the armed services can advance his education in high school, college, and/or vocational fields at a very nominal cost. This has made it possible for many youths to take college work who, for economic or financial reasons, might not have found it feasible to attend college during civilian life. Also, as a result of study in the off-duty educational program, which had its beginning in 1941, it is estimated that more than 2,500,000 servicemen have received some civilian academic credit, a circumstance that has enabled many to go on to college without having to return to high school classrooms.

An Armed Forces report for the period ending July 1, 1951, shows 148,384 servicemen—soldiers, sailors, marines, and airmen—taking correspondence courses through the United States Armed Forces Institute and an additional 28,000 marines receiving instruction through the United States Marine Corps Institute. Participants in group study classes conducted by 1,459 civilian and 1,555 military instructors numbered 50,710 and 19,296 persons were enrolled in classes conducted by civilian colleges and universities (14,484 of whom were in this country and 4,812 overseas), as of March 31, 1951, the latest date for which this information is available.

Preservice advisement

Facts as these make it important for American schools to furnish preinduction educational advisement to their students. As defined by Dr. Charles W. McLane, director of the American Council on Education's Commission on Accreditation of Service Experiences, this includes assisting the student to develop an educational plan and giving him reliable information about the educational programs open to him through the United States Armed Forces Institute and the Marine and Coast Guard Institutes as well as through other available off-duty facilities.

"He should be told, too," he adds, "that the services operate many formal training schools for which academic credit may be granted by civilian institutions and that almost every military unit has an information and education office where he can go to talk over his educational interests and obtain advice on courses to take while in service and how to submit this experience later to a civilian school or college for academic credit."

In cases where, despite anything the school can do to dissuade a young person from dropping out prematurely, he decides to enter military service or accept a full-time job before graduation, he should be encouraged to discuss his situation with the principal or guidance counselor to find out if he can be allowed to complete the requirements for his high-school diploma during his military duty. The student should also be reminded that it is the established policy of the Armed Forces to encourage young people to obtain

as much civilian education as possible before entering military service or taking up a career.

Literacy training

The low educational level of many young Americans reported in Education, an Investment in People, a United States Chamber of Commerce publication which disclosed that "14 percent of our population over 25 years of age have had less than a fifth-grade education and that in the States of Louisiana and South Carolina 35 percent have had less than five years of schooling," is showing up now in the large number of young people rejected for military service because of mental deficiency and in the equally dismaying number of those inducted for whom the Army finds it necessary to provide a basic education.

Since the North Koreans erupted into South Korea in July, 1950, 296,000 American boys, the equivalent of almost 15 infantry divisions (counting 20,000 men to a division) flunked a simple fifth-grade intelligence test. Under the Selective Service law then in effect 13 was the minimum score for passing the Armed Forces qualification test. This standard has been dropped to 10 under the new Universal Military Training and Service Act thus making some 150,000 men originally rejected for failing to pass an I. Q. test now eligible for duty.

Persons entering who cannot read and write English with facility or who have had less than five years of schooling are sent through basic military training and then assigned to school full time by their commanding officers until they have successfully completed the fifth grade. This training is compulsory.

All services have plans for providing literacy education to men requiring it, at the outset of their military duty, in the event of full mobilization. Up to now the Army, which depends largely on the draft to fill its ranks, has had the lion's share of the problem. Last year 9,200 and during the first six months of 1951 a total of 11,000 young Americans in the Army were graduated from fifth-grade classes.

CORRESPONDENCE INSTRUCTION

United States Armed Forces Institute

The United States Armed Forces Institute (USAFI) authorized initially by the War Department in December 1941, as an Army institute to provide a correspondence school for enlisted Army personnel, is now cited as a successful example of military unification. After the Navy's request to share in its services was granted in September 1942, it was renamed USAFI. Now its useful facilities are also made available to Marine, Air Force, and Coast Guard members regardless of rate or rank.

The original offering of 64 courses at secondary and junior college levels has been expanded to encompass more than 6,354 courses in academic, technical, and vocational subjects that stretch from elementary to postgraduate study. Some 325 of these courses are available from USAFI itself for a single \$2 registration fee per serviceman. The remainder may be taken, for about half their normal cost, through 47 cooperating colleges and universities under contract with USAFI.

Subjects range from American Government and Art Today to Typewriting and Trigonometry and include such practical ABC's as Auto Mechanics, Business Law, and Carpentry.

Several overseas USAFI's have been established outside the continental United States. These use materials from the parent institute but process the papers and tests completed on the spot. The Air Force maintains USAFI-Alaska, the Navy operates USAFI-Guam, while the overseas USAFI's in Hawaii, Japan, and Europe are under Army supervision. Both the European and Far

East Army commands use USAFI mobile units to take educational materials to remote outposts.

A Mobile USAFI Railway Unit sponsored by the Eighth Army Troop Information and Education Section brings schooling to American servicemen in Korea as close to the front lines as the tracks will carry it—sometimes within earshot of artillery fire.

The three-man team in charge of this train administers tests and examinations to applicants and enrolls them in USAFI courses. The main car, reports Pacific Stars and Stripes, is equipped not only with a large library of books and magazines, but with a shower for soldier students to wash away the grime and dust of battle before settling down to reading or study.

The United States Armed Forces Institute (Madison, Wis.) is the only agency authorized to issue official reports on USAFI courses and test results. It is also the sole source for reports on achievements in all other courses conducted under the Armed Forces education program in which USAFI or non-USAFI materials and tests are used—with the exception of the Marine Corps Institute (Washington 25, D. C.) which handles all records on the offerings in its own curriculum and courses conducted by civilian schools and colleges on their own campuses or at military installations.

Any student wishing to submit study carried out while in the service for academic credit toward a high school or college degree, or the school itself, can, as circumstances indicate, request that USAFI, the Marine Corps Institute, or the civilian institution concerned forward his record of accomplishment to the school. Since marines are only permitted to enroll in USAFI courses when comparable ones are not available through their own institute, a marine who has utilized Marine Corps Institute facilities will have to write there for his record on courses taken under their auspices.

The actual granting of academic credit on the basis of the submitted data is, of course, a matter to be determined by the civilian school itself.

United States Marine Corps Institute

The Marine Corps Institute (MCI) which celebrates its thirty-first anniversary this year, is the oldest school of its kind in the Armed Forces. Like USAFI, it furnishes correspondence-type courses on high school, college, and vocational-technical subjects. Based on standard texts these are prepared, brought up to date, and the related lessons and examinations graded by marines who are chosen for their educational qualifications and work under the general guidance of civilian staff instructors. The USAFI faculty, on the other hand, is composed entirely of civilian educators.

All United States Marines as well as other military personnel attached to and serving with Marine Corps units may register for one or more Marine Corps Institute courses free of charge. The current enrollment is close to 28,000. Some 11,000 lessons are received monthly at the institute's Washington headquarters.

Group study classes

Many military units in all branches of the armed services supplement correspondence offerings with voluntary group study programs at duty stations. Such instruction is based on demand. Classes are organized on a given subject when 10 or more servicemen (15 in the Navy and the Marine Corps) have signified interest.

RESIDENCE COURSES

In the United States

The off-duty program of the Armed Forces also utilizes the civilian school system of our Nation to help its personnel progress toward educational and vocational goals in

which they have expressed interest. In conformity with prevailing needs and the facilities available local commands arrange with nearby educational institutions for courses at their own base or on a college campus.

More than a hundred American colleges and many high schools have such arrangements with the various services.

If a serviceman wishes to attend late afternoon or evening classes at a nearby accredited university, junior college, or civilian high school, he can apply to his commanding officer for tuition assistance from appropriate funds. All services now pay three-fourths of any tuition costs incurred for such courses, or up to a maximum of \$7.50 per semester hour, \$5 per quarter hour, or \$22.50 per Carnegie (high school) unit. Other expenses are met by the student.

In distant lands

When foreign assignments prevent men in service from attending recognized institutions of higher learning in our own country, it is often possible for them to continue their studies in American university centers set up for their use abroad. First to enlarge its campus to provide educational facilities for service students in distant lands was the University of Maryland which established six such centers in Europe in October 1949.

The present overseas enrollment in more than 50 University of Maryland centers located in Germany, England, France, Trieste, North Africa, and Newfoundland exceeds 4,000. Completion of satisfactory work in them entitles students to residence credit leading up to a B. S. degree which can be granted without their having to live on the University of Maryland's American campus.

Courses in these and similar centers abroad are usually available to personnel in all branches of the service and to American civilians employed by the military services and the State Department. Most are assigned only one instructor at a time. After teaching a three-semester-hour course in his specialty in a 2-month period he changes places with a colleague who has been lecturing on a different topic in another of the sponsoring university's overseas centers.

In the Far East, where the University of California (Berkeley) brings to military personnel in Japan, Guam, and Okinawa a similar program to that available to United States troops in Europe through the University of Maryland, these instructors after finishing their "teaching tour" fly from one assignment to another and are called "Flying Professors." United States servicemen stationed in the Far East may also attend classes at Sophia University in Tokyo.

The University of Hawaii and the University of Alaska offer comparable opportunities in those Territories. Louisiana State University established similar college centers for the Caribbean area in July 1951. American International College at Springfield, Mass., provides for Air Force and other military personnel in the Azores, Bermuda, and at Dhahran in Saudi Arabia instruction that is equivalent to the courses on its own campus.

Final semester plan

An additional incentive for completing college work while in the service is available to Air Force members who are within six months of attaining a baccalaureate or master's degree at an institution in our country. They may request temporary duty at an American school or university for a maximum of six months to complete final semester residence requirements, providing they signify that they intend to remain in active duty for at least 18 months after completing their academic assignment.

While attending college for this purpose, a student-airman without dependents receives a quarters allowance of \$45 a month as

well as a basic subsistence allowance of \$22.50 a day. He pays his own travel, tuition, and textbook expenses. The Air Force is the only service branch sponsoring a program of this kind at present. Due to the Korean emergency the Army has had to suspend its final-semester plan and in the Navy educational opportunities of this type are provided for through its professional officer training program.

Accrediting educational service experience

In addition to the civilian-type education activities just discussed, the information phase of the Armed Forces Education and Information program contains many educational elements, especially the projects emphasizing citizenship education and current issues in national and international affairs.

Moreover, the training programs of the armed services for military purposes run into thousands of additional courses. Some of these are entirely military without academic counterpart in civilian education, while others include instruction of academic value.

Perhaps several hundred in all include substantial academic content and have been evaluated for credit by the Commission on Accreditation of Service Experiences established by the American Council on Education to assist educational institutions and National, regional, and State organizations in the evaluation of the educational experiences of military personnel.

Women's National Democratic Club

EXTENSION OF REMARKS

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. CANNON. Mr. Speaker, in response to the request of a member of the Women's National Democratic Club, I am including in the RECORD the address of welcome delivered by Mrs. Madeline Maloney on the occasion of the annual Missouri Day luncheon at the Women's National Democratic Club House, in Washington, D. C., October 18, 1951:

WELCOME

Comes once a year Missouri day,

And we're just bursting with pride
To honor our great and wonderful State
Best of all in the Nation wide

For we have everything in it
That man could ever need
To make for personal happiness
In thought and word and deed.

We have rivers and lakes and mountains,
And plains and valleys green,
With orchards and farms and gardens,
And cornfields in between

There are mines of zinc and iron,
Enough coal to heat the earth
Cattle, horses, and mules,
And pigs of generous girth.

And the people of this great State
Have had their place in the sun:
Frankie and Johnnie, and Mark Twain,
Jesse James with his big bad gun.

Thomas Benton, George Vest, and Champ Clark,
And of course, we wouldn't be human
If we didn't point with pride
To our great President, Truman.

I know you could never "show me"

Any States that can compare
With our own Imperial Missouri,
The heart of the Nation so fair.

Now, a real welcome to you,
Who break bread with us this noon,
Then on with our interesting program
Tempus fugit all too soon.

Message of Pope Pius XII to the Bishops of Poland

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following message of Pope Pius XII to the bishops of Poland:

To the Venerable Brothers, Archbishops, Bishops, and Ordinaries of Poland enjoying peace and communion with the Holy See

VENERABLE BROTHERS Greetings and apostolic blessing.

It is now 5 years since you, venerable brothers consecrated to the Immaculate Heart of the Blessed Virgin Mary your dioceses and your whole nation. Therefore, because of our love for the ever strong and faithful Poland, we express to you what, during some time past has been the object of our reflections in order to renew the lively confidence which you then placed in the Mother of God and the mother of men, and with which you may remain intrepid among such great dangers.

First of all, we feel with you a sense of sadness because not all the bishops who were present at those memorable ceremonies are still living. Cruel death has taken away August Cardinal Blond, outstanding for the wisdom and value of his works, who led along a hard road the flock committed to his care, and fashioned the spirit of the newly resurrected Poland. He spent his life in the service of his country, of the church, of the vicar of Christ and of God. We have more recently mourned the passing of Stephen Cardinal Sapieha, who, strong and courageous, never retreated before pressure or violence, and "who in his life propped up the house and in his days fortified the temple . . . and took care of his nation and delivered it from destruction" (Ecclesiastes 50: 1-4). He was "as the tree which is planted by the running waters" (Psalms 1. 3), a tree bearing fruits and very firm which was looked upon with confident joy not only by Poland but by the whole of Christianity.

There have passed away also the Bishop of Luch, twice exiled, the Bishop of Czestochowa "Guardian and Legate" of the miraculous image of the Blessed Virgin of Czestochowa, and finally the Bishop of Wroclawek who suffered so much during the recent war. We raise to God fervent prayers that all these pastors who have done so much for Catholicism be granted eternal light and peace. To you dear brothers, we wish increased strength and virtue, following their lofty example. Experienced in adversity, as good soldiers of Christ, lift your eyes up to the mountain from whence there will come to you the necessary help, to that mountain which your fathers called "Jasna Gora" to the mountain on which the Mother of God and your queen established her sanctuary and from whence her maternal image smiles on the suppliant multitudes.

HISTORIC EVENTS

Well knowing your ardent piety and devotion to the Virgin Mother of God, we can imagine how keen was your sorrow at not being present in Rome when, for the glory of Almighty God, in veneration of Christ, to increase the adornment of His mother and to fill the whole church with joy, we proclaimed the dogma of the Assumption of Mary into Heaven. Rightly joyous because of so great an event, we hoped to see you here since we knew full well that already for a thousand years your most noble nation has been bound by the closest ties to the Mother of God assumed into heaven and that you are aflame with an ardent devotion to her that it is incomparable. Indeed, as soon as the mystery of the cross was preached in your country, at once the Poles venerated and loved the Mother of God with sweet and affectionate respect as their own mother and the patroness of their country. The first church erected at Onieznio by the illustrious Prince Mieszko, with the consent of our predecessor John XIII, was consecrated in honor of Mary, Virgin assumed into heaven. That temple was later the mother and the head of other innumerable churches resplendent with that same title.

With intimate joy did we see and converse with your venerable brother, Stephen Wyszynski, Archbishop of Gniezno and Warsaw, when he came to Rome to venerate the tombs of the Apostles. In him we embraced and greeted all of you. He expressed to us the loving veneration of the Polish nation, and assured us that the reverence and faith with which your people, following the example of their forefathers, are united with this See of Peter, have not in any way lessened. He told us also of the immense work, done in spite of all forms of difficulties, with which you, with the efficacious support of the priests and the faithful have reconstructed your country ravaged by war, and of the concern for the development and purity of the Catholic religion.

The Christian education of youth and all that concerns a just solution of the social question, where arise very great difficulties and the most pernicious dangers, no doubt form the object of your concern and your anxious cares. Do not lose courage. May God strengthen your courage. God will help the courageous, and the Mother of God, your Queen, will not refuse Her aid to a people which enjoys Her maternal protection. Your celestial Mother and Patroness whom you, for long centuries with the ardent affection of loving children honor in the sweet hymn *Bogu rodzica-Dziewiczy* (Mother of God and Virgin) will certainly lead the Polish nation to a peaceful haven after the dark storms. Recall how many times during the centuries, with the evident assistance of the Blessed Virgin, Mother of the Saviour, your people have won astounding victories. The echo has not yet died away of that battle of Jasna Gora when a few monks and valiant knights of Mary forced the mass of enemies to abandon the siege and retreat beyond the frontiers of Poland. To that same heavenly Queen of Jasna Gora the famous Jan Sobieski, who with his exceptional courage, liberated Christianity from the age-old threat of enemy invasion, entrusted himself. Later, as if foreseeing the calamities that were to befall Poland, the Polish bishops placed a golden crown on the miraculous image of Our Lady of Jasna Gora, a crown received from our predecessor Clement XI, and entrusted the tottering kingdom during the unfavorable period of your history to the protection of the Mother of God.

PRESENT STRUGGLES

The Blessed Virgin, assumed into Heaven, invoked with supplicant prayers, gave to your newly arisen country which had found itself threatened in its existence and was passing through days of mortal fear, marvelous aid

against the wicked attempts of the enemy, which was witnessed by our late predecessor Pope Pius XI. We ourselves, during the raging recent war, saw clear signs of the piety and confidence of the Poles in the Mother of God. Amid the smoking ruins of Monte Cassino they erected an altar after the victory and adorned it with the image of the Blessed Virgin. Shortly after that they saved from fire and destruction the holy house of Loretto struck with incendiary bombs, regardless of the danger to their own lives. In acknowledgment of that we recommended that these courageous soldiers, defenders of the temple of Mary, be decorated with papal orders.

The battle still rages. Your "struggle is not against flesh and blood but against principalities and powers, against the rulers of this world of darkness, against the evil spirit hostile to supernatural things" (Eph. 6: 12). You are repulsing heavy enemy attacks. But the Mother of Mercy, cause of your certain salvation, who will never fail you, is watching over you. She, the mighty Virgin, conqueror of the powers of hell, will bring you magnificent triumphs and will preserve intact the treasure of inestimable value, the faith which you received from your forefathers. She will truly show herself worthy of the hymns of praise that you sing in her honor "Thou art terrible to the devil as an army well arrayed, be a refuge and safe haven for Christians." With every right should noble Poland confide herself to her sure patronage and place in her hands the hope of a better future. Thus strengthened and fortified, "living you the name of the Lord and the mouths that sing His praise shall not be closed" (Est. 13, 17). Wishing you this, venerable brothers, from our heart. We pray Almighty God for your intentions and plans. As a pledge of supernatural assistance to you, to all the clergy who work with you, to the monks and nuns of the contemplative and active life, and to all the faithful committed to your care, we impart the apostolic blessing with the most ardent love.

Given in Rome, at St. Peter, September 1, 1951, thirteenth of our pontificate

PIUS PP. XII.

Dead Ashes of Bright Promises

EXTENSION OF REMARKS

OF

HON. WAYNE L. HAYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks, I am including an article by Thomas L. Stokes entitled "Dead Ashes of Bright Promises" which appeared in the Washington Star of October 19, 1951. This article sets forth in detail the fact that Congress has failed to meet the wetback threat to American free labor as I, for one, felt sure they would fail when we heard the great promises when the wetback bill was passed originally. I am glad to note, Mr. Speaker, that my able colleague, Representative McCARTHY, of Minnesota, is still fighting to see that we have a stronger control bill. I would like to associate myself with Representative McCARTHY in his efforts to fight for free American labor against illegal Mexican labor which is flooding the country and working for starvation wages thereby taking jobs from American citizens.

The article follows:

DEAD ASHES OF BRIGHT PROMISES—BOTH PRESIDENT AND CONGRESS HAVE FAILED TO MEET WITH VIGOR PROBLEMS AFFECTING SEVERAL MILLIONS OF PEOPLE

(By Thomas L. Stokes)

At about this stage of events, when Congress comes toward the end of a session, you can—if you are curious and not easily discouraged—sift the dead ashes of once bright and glittering promises held up before you by the gentlemen of Congress when they were campaigning for election.

There are, of course, the inequities in the more publicized major measures affecting all of us. Such, for example, as the revenue bill that jumps up the little fellow's taxes, even including his beer and cigarettes, while doing nothing about the big oil corporations' excessive depletion allowance, a fat deduction—just a symbol of numerous other inequities. Or, for another example, the failure of Congress to protect the consumer properly in the inflation control law.

Those are obvious. Not so obvious are lesser publicized matters.

Among these is the failure of both the President and Congress to meet with sufficient vigor a big human problem that affects directly a large section of our country and several millions of people, and ramifies in its indirect effects to the whole Nation.

This is the problem dramatized in newspapers and magazines in recent months involving the wetbacks, that army of Mexican migrant workers who cross the Rio Grande illegally and follow the crops on the big ranches and plantations of the Southwest and South. They are herded together in insanitary hovels and shanties, exploited on low wages, and create conditions that not only are hazardous to their own health and well-being and that of the communities where they subsist, but lower wage and living standards of native American farm workers, many of whom are driven from their natural habitats to find work elsewhere.

You may recall that, when President Truman several weeks ago reluctantly signed a bill passed by Congress to regulate the wetback traffic, he found it so inadequate that he summoned congressional leaders to the White House and announced afterward that they had promised to seek enactment of supplementary legislation to help meet the wetback invasion and its harmful derivatives. These included increased appropriations for the Immigration Service to hire more agents for the border patrol to tighten enforcement; for the Labor Department's Farm Placement Division to improve domestic recruitment of farm workers; for financing reception centers for entry of legal Mexican workers, and a bill fixing penalties for hiring illegal workers. As for the last, you'd be surprised at the substantial and prominent plantation and ranch owners who work illegally admitted Mexicans.

This penalty measure is safely buried, beyond chance of action. As for the appropriations, that for the Immigration Service had been cut more than half, from \$6,500,000 requested to \$3,000,000, when last heard of in the pell-mell rush for adjournment, while the \$386,000 for domestic recruitment had been slashed to \$75,000, and \$2,800,000 for reception centers had been cut in two. Final results may show even further reductions.

So much for promises—though how anything else might have been expected by President Truman is hard to see. For on this problem he was facing a skillful Southern Democratic faction which is seeking to protect big plantation owners on cheap labor. The southerners were able to enlist enough Republicans in the familiar coalition pattern.

Meanwhile, something else very interesting has occurred to reveal the belligerent resistant attitude of the big farmers. This is creation of the South Texas Association which is raising a \$50,000 fund to lobby

against the appropriations and the penalty bill, assessments being fixed at 10 cents an acre, or higher if necessary. Affiliated with it are local chambers of commerce, Farm Bureau units, and the Texas Citrus Commission, a State agency. The aim of this move is to prevent the Immigration Bureau from fully enforcing the immigration laws along the Texas-Mexican border, it is charged by Representative EUGENE MCCARTHY, Democrat, of Minnesota, who led the fight in the House for a stronger wetback control bill originally. He said that if the lobby is successful the result would be a relatively free flow of illegal wetback Mexican labor into Texas, a complaint echoed also by the National Farm Labor Union, AFL, headed by H. L. Mitchell, which has fought an uphill battle to protect exploited farm workers.

The South Texas Association also announced its intention to lobby with the Mexican Government. This has been called to the attention of the Justice Department by Representative MCCARTHY as a possible violation of the Logan Act, which forbids an American citizen from carrying on intercourse with foreign governments to defeat measures of the United States.

Champions of Fundamental Justice

EXTENSION OF REMARKS

OF

HON. ROBERT CROSSER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. CROSSER. Mr. Speaker, throughout all history mankind has sought for true happiness, but generally has failed in his quest. Nevertheless it has constantly become clearer that success in this search requires the realization of absolute good.

For ages, men of understanding and good will have sought to realize absolute good and so make possible the enjoyment of true happiness. Invariably, in their earnest search for the good, the true, such men have learned that practically complete consciousness of those elements of life, which we call freedom of mind and equality of rights, is first required in order to experience the rapid development and realization of all the other virtues of being.

Throughout the centuries men have protested because the few persons with little or no effort on their part have acquired fabulous quantities of what is essential for human life and comfort, while on the other hand the great mass of humanity has struggled early and late for enough only to assure mere existence. At first men were perplexed by such inexplicable injustice, and yet it was not long before these harassed throngs of humanity sensed the existence of universal wrong as the cause of their suffering.

It is heartening to know, however, that, notwithstanding the age-long injustice, there have been some eager hearts and noble minds striving to expose and to abolish the indescribable injustice which has oppressed the human race.

Yes, it is wonderful to know that self-sacrificing men and women have persisted in their earnest efforts and unself-

ish devotion to the general welfare, although, notwithstanding their sincerity, they have generally misunderstood the cause of the distress, and have, instead, misinterpreted the evidence of the injustice and so have, mistakenly, proclaimed the symptom or evidence of wrong to be the cause itself of injustice.

In view of such almost unvarying and universal failure in earlier efforts to understand the seeming lack of harmony between human experience and the fundamental principles of justice, it was not surprising that Henry George's *Progress and Poverty*, with its emphasis on individual freedom and equal rights, should have engaged the attention of innumerable thoughtful people. The author did not mistake symptoms for cause, but by his unanswerable logic and irresistible appeal, he aroused for the cause of economic righteousness in the great majority of all who heard and understood the incomparable Henry George, the ardent zeal for service to their fellowmen.

Among those who were destined to be influenced by the great mind and the earnest and logical appeal of Henry George, in his brave effort to undo the wrong, which throughout the centuries had distressed and blighted the lives of countless millions of human beings, was a young man named Tom L. Johnson. Although he had known hardship as a boy, he had nevertheless from his early twenties on through his thirties enjoyed remarkable success as a street-railway operator. Before he was 30 years of age, Johnson controlled street railways in both Indianapolis, Ind., and Cleveland, Ohio, and consequently was required to travel regularly by railroad between the cities just named.

On one of his trips the train commodity vendor had dropped in Mr. Johnson's seat in the chair car, a copy of a book entitled "Social Problems" by Henry George. Later the news butcher returned, noticed that Mr. Johnson had not examined the volume and mentioned that fact "Oh, No!" said Mr. Johnson, assuming that the volume treated of the problems of the social evil, "I am not interested in such matters."

The Pullman conductor, an acquaintance of Mr. Johnson, told the latter that the book discussed a different and very important subject, and that he was sure Mr. Johnson would like it. Mr. Johnson bought and read the book. He said later that he had read the book almost without stopping. He then bought all of the other books of which Henry George was the author and studied them thoroughly.

When Johnson had finished reading George's famous book entitled "Progress and Poverty," he had in reality accepted as a new religion, the principles stated therein. He not only had acquired a new enthusiasm, he was actuated from then on by a burning desire to be helpful to his fellow man.

Not long after he had become converted to the principles presented in *Progress and Poverty* he took the train from Cleveland to Brooklyn, N. Y., and went to the home of the great author and philosopher, Henry George. When

the door was opened by the writer himself, Mr. Johnson introduced himself as Tom Johnson, stated that he had read Mr. George's *Progress and Poverty* and that he was greatly impressed by it. He told the famous author that the book answered the questions which had often bothered him, that its arguments were unanswerable from a logical standpoint, and that its lofty tone was most inspiring. He then explained that he desired to help and would like to know from Mr. George what he should do. He said also "I can make money if that will help." Mr. George replied that, of course, money was helpful in promoting a cause such as that discussed in "*Progress and Poverty*" but his advice to Mr. Johnson would be that he should enter politics. Johnson immediately said that that was impossible, and on being asked why, answered: "Because I cannot make a speech."

Mr. George then asked if Mr. Johnson had ever tried to make a speech, and the latter answered "No." He was then told by the great author that he had better try before declaring his inability to speak. Shortly afterward, while Mr. Johnson was on a brief vacation, the Democrats in Cleveland nominated him as their candidate for Congress, for the Twenty-first District of Ohio, at that time represented by a Republican. Almost immediately the Republicans issued a challenge for a debate between Theodore Burton and Tom L. Johnson. Thereupon two men, who, by party leaders, had been named as a congressional committee for Mr. Johnson, called upon the latter to warn him not to accept the challenge. Mr. Johnson then protested that he could not refuse to debate. He insisted that he had no right to the nomination if he could not defend the principles for which he stood.

The committee, after further effort to persuade Mr. Johnson to refuse the challenge, evidenced a feeling of futility and said that if he were to accept, he would be responsible for his defeat. Johnson insisted upon acceptance, but in doing so, said that as the challenged party he had the right to name the terms of the debate. The opposition said: "Very well, that will be satisfactory." Johnson then stated that the terms of the debate were to be these: "Each party should have altogether an hour, 10 minutes of which to be devoted to opening statements, the remaining 50 minutes should be divided into 5 minute periods." This was readily accepted by the Republicans. Johnson also said that the subject of the debate should be the Protective Tariff Against Free Trade, the latter being supported by Johnson. The opposition said that that subject was most satisfactory. The debate began in halls in the business part of Cleveland where such halls could be secured, but after only a few days it was found that the halls could not accommodate the crowds which attended the debate.

Mr. Johnson learned, in the meantime, of a man who was using a large tent for exhibition purposes, and he arranged with the owner for the use of his tent for the remaining nights of the campaign. In a short time the people of

Cleveland became so interested in the discussions that the contest in the Twenty-first Congressional District occupied practically their whole interest, and when the votes were counted it was found that Johnson had been elected in a Republican district by more than 4,000 majority.

When the newly elected Congressman had arrived in Washington to assume his duties he was placed on the District of Columbia Committee of the House. This gave him an opportunity to advocate an investigation of land valuation in the District of Columbia. He insisted, of course, that it is absolutely necessary to determine the true value of land in order that taxes may be justly levied.

Mr. George came to Washington to be immediately available for consultation by his enthusiastic disciple while the latter was leading in his great legislative struggles for the equitable principle of land tenure.

Mr. Johnson soon attracted support from such public spirited Members of Congress as Judge McGuire, Jerry Simpson, John DeWitt Warner, Tracy of New York, and Harter of Ohio. In a short time Johnson's investigation of the District of Columbia's land valuation began to receive attention from the newspapers in general.

Mr. Johnson also became very active during the discussion of the tariff bill in the administration of President Cleveland. He denounced the tariff bill as a betrayal of his party's promise for real tariff reduction. This action on Mr. Johnson's part was used by his enemies in Cleveland to defeat him. He continued, however, to denounce the prohibitive tariff in caustic terms and was called a traitor to his party because he opposed the bill as a surrender to the special interests.

Upon leaving Congress he arranged to devote the remainder of his life to the promotion of the great cause advocated by Henry George. He disposed of practically all of his private business holdings so that he would be free from any entanglements in the effort he planned to make for the sacred principle advocated by George. He felt, also, that he could promote the cause better as the chief executive and political leader in a great city than as a Member of Congress. He was elected mayor of Cleveland on April 1, 1901.

He was reelected three times and finally was defeated in 1909. Shortly before Mr. Johnson's first election as mayor on April 1, 1901, proceedings were begun by the city administration, then in authority, to convey to private interests the city's rights in the lake-front property. Mr. Johnson was earnestly opposed to the transaction, and secured an injunction preventing the city from going on with the proposal. That injunction was to expire on April 4, 1901.

When it became apparent that Johnson had been elected mayor, he pleaded with the election officials to do everything possible to complete the official count before the time stated for the expiration of the injunction. The count was completed a little before 10:30 a. m. of April 4. Johnson immediately took

the oath of office, filed the bond required to qualify as mayor of the city of Cleveland. He then proceeded to the office of the mayor where he was greeted by Mayor Farley with the salutation, "Well, Tom, when do you plan to take over?"

Mr. Johnson said that he did not desire to hurry Farley about getting his personal belongings out of the office, but that he, Johnson, had already qualified as mayor and therefore would assume his official duties at once.

He arranged for the repeal of the ordinance against which he secured the injunction and there was no longer any danger of Cleveland's losing the lake-front property.

It would require volumes to tell of the long battle which was immediately started by Tom L. Johnson to restore what he explained to be the rights of the people in the streets of Cleveland. A number of franchises which had been granted in the years gone by were expiring, and Mr. Johnson, of course, was fully aware of that fact. That was why he planned his great effort to assure street-railway service on terms just to the people. The old companies, of course, would not accept the renewal of franchises which required them to operate at a 3-cent fare, and Johnson refused to yield on that question.

Mr. Johnson then tried to induce others whom he had known in the street railway business, in previous years, to come to Cleveland, and to accept a franchise on terms that would provide for a 3-cent fare. He succeeded in persuading a number of persons sympathetic enough with his low-fare idea to invest their money for the operation of the lines on a 3-cent fare basis.

Mr. Johnson, however, was very much obstructed in connection with his low-fare program because of the hesitancy of people generally about investing their money when a great concern like the Cleveland Electric Railway was fighting furiously against the idea of operating at 3-cent fare. Consequently, during a lull in the struggle Johnson was making toward his ultimate goal of municipal ownership of street railways, Edward W. Scripps, the principal owner of what was then known as the Scripps-McCrae papers—and a man of wealth, discussed with Mr. Johnson the practicability of operating streetcars on a 3-cent fare basis. Having been completely assured by Mr. Johnson that the stockholders in such low-fare companies would not lose money, he asked Mr. Johnson whether or not he would join with him (Scripps) in making a public guaranty to protect against loss all who might buy stock in the low-fare companies, which were to operate in the streets where the old companies' franchises had expired. Mr. Johnson did join with Mr. Scripps in such an undertaking.

Immediately the old companies' lawyers went into court and secured an injunction against the granting of a franchise by the city of Cleveland to a low-fare company on the ground that as the mayor of the city he could not lawfully sign such an ordinance because of his financial interest involved in the joint guaranty signed by himself and Mr. J.

Scripps. This was one of the most harmful injunctions that had been granted against Johnson, and retarded seriously the efforts Johnson had been making to put his plans into effect.

I have already indicated that everything possible was done by the opposition to frustrate Johnson's efforts. In all there were between 55 and 60 injunctions secured by the street-railway interests of Cleveland, although many were ultimately dissolved. Every effort Johnson would make seemed certain to be followed by an injunction requested by the old street-railway company.

Toward the latter end of the long struggle, it became necessary for the low-fare lines to reach the center of the city, and the old street-railway company resorted to every device to prevent the success of this effort by the low-fare company. It was clear that if the low-fare lines could operate their cars from the west end of the viaduct to the public square in the center of the city, most of the low-fare company's troubles would be over. The old street-railway company was always ready, however, to request an injunction.

On one occasion, however, Johnson conceived the idea of working at night and of having the rails, ties, and trolley poles all delivered when it might be possible that nobody would be thinking of running to the court for an injunction. The trolley poles consisted of two 2-inch by 4-inch pieces of studding nailed together to serve as posts and long enough to reach from the ground to the height of 2 feet above the level of the trolley wire. These poles were supported at the bottom in barrels filled with heavy slag in the bottom and surrounding the end of the poles. In the midst of the hurried effort, however, the officers of the court came to serve an injunction to stop the work and the job was therefore not finished in time.

It seemed to those of us who were intensely in earnest concerning the struggle which Johnson was making to establish low fares that success was certain when suddenly Mayor Johnson was attacked along new lines.

During his third campaign for the mayoralty, in which Congressman Theodore Burton was his Republican opponent, the head of the old street railway system had made an agreement with the street railway workers which provided that if the old street railway and its allies should defeat Johnson in the campaign, the wages of the company's motormen and conductors would be increased to the extent of 2 cents an hour. As already explained, Mr. Johnson defeated Burton.

Immediately after election, negotiations for the settlement of the controversy were conducted by Mayor Johnson, representing the city of Cleveland, and Fred H. Goff, a prominent attorney, representing the old street railway interests. By the terms of the settlement, the ownership of all the street railway properties in the city was to be consolidated in the Cleveland Railway Co.

The Cleveland Railway Co., by the terms of the agreement, was to lease to the Municipal Traction Co., which was

a holding company, organized for the purpose of taking over all of the street railway lines previously operated by the various companies. The Municipal Traction Co. was to operate the street railway lines and pay to the old company 6 percent on the shares of stock which had been stipulated and approved by the two negotiators. The most important part of the agreement provided for the granting of a 25-year franchise to the Cleveland Railway Co., covering not only all the streets on which, prior to the agreement, the old Cleveland Electric Railway Co. still held franchises, but also included the streets where the low-fare companies had their tracks and low-fare companies' lines, which under the agreement, were to be conveyed to the Cleveland Railway Co., which in turn included the same in the aforesaid lease to the Municipal Traction Co. The "security franchise," as it was called, was to become effective in favor of the Cleveland Railway Co. if and when the Municipal Traction Co. should fail to carry out its promises.

Shortly after the Municipal Traction Co. began to operate the street railway system of Cleveland, the head of the Street Railway Union, with headquarters in Detroit, argued that the terms of the said agreement of the street railway workers with the old street railway system for 2 cents an hour increase in wages were assumed as a matter of law by the Municipal Traction Co., which, therefore, was legally bound to pay the same.

Mr. Johnson explained that it would be difficult, at the beginning of operations, for the Municipal Traction Co. to reduce fares to 3 cents as promised and at the same time to increase wages by 2 cents an hour. He proposed an adjustment according to which the Municipal Traction Co. would furnish the men with two uniforms each year and also give them a raise of 1 cent an hour at the beginning. The offer was rejected, however, and the old companies' men filed a petition for a referendum vote on the security franchise. By a narrow vote the security franchise ordinance was voted down.

All of this created such confusion in the minds of the voters, which together with the gross falsehoods of the opposition during the mayoralty campaign, which immediately followed, resulted in the defeat of Mayor Johnson.

He was disappointed, of course, but he never wavered in his efforts for his sacred cause. He never lost sight of the glorious harmony which he felt sure would be ultimately established and recognized. Almost to the end, in his addresses, he spoke feelingly of this rule of harmony to which he figuratively referred as the "City on a Hill."

Mr. Johnson lived a little more than a year after his defeat, when he finally passed away on April 10, 1911. His remains were taken to Brooklyn, N. Y. From the time the funeral procession started from Mr. Johnson's Cleveland residence until it reached the railroad station where the casket was placed on the train, a distance of more than 5 miles, both sides of the streets all of the way to the railroad station were jammed

by crowds of people, to help whom, Johnson had struggled so nobly and unselfishly. The reawakened consciences of even those who had temporarily deserted their great leader, caused them to grieve deeply. Strong men wept unashamed as all that was mortal of the people's champion moved slowly to the train which was to carry the body to Greenwood Cemetery in Brooklyn, N. Y., where his remains were interred near the grave of his great prophet and hero, Henry George.

As we have followed in our minds the noble but strenuous effort of Tom L. Johnson, the great disciple of Henry George, we cannot have failed to recall Mr. George's own words when he was asked about the likelihood of success for his cause. He said no one could tell just when complete success would be achieved, and then added these significant words: "But it will find friends, those who will toil for it, suffer for it, and if need be, die for it. This is the power of truth."

Even if he had lived and witnessed Mr. Johnson's efforts, Mr. George could not have described more accurately the course of his disciple's wonderful effort, climaxed by the fulfillment of George's prediction that his cause would "find friends who, if need be will die for it." "This," said George, "is the power of truth."

My friends, especially you who have been earnestly devoted to the all-important principle announced and expounded by our great leader, Henry George, I hope that by taking the time to relate some details in the interesting and important experiences of Henry George and his beloved disciple, Tom L. Johnson, I have not disappointed you, you who rightly feel that the principle of land tenure for which these leaders struggled and died, is more important than all else. I am aware of your feelings, to which I have just referred, but I am sure also that you will agree that since this year is the fiftieth anniversary of Johnson's great effort to apply the philosophy expounded by Henry George to municipal government, we should pay tribute to these illustrious men.

There have been other earnest converts to the just system of land tenure advanced by Henry George, converts who could accurately state the George proposal in detail, with all its glorious advantages but who did not possess the power manifested by Henry George and Tom Johnson. Why was it then that Mr. George and Mr. Johnson manifested such impressive power in connection with their cause? Why were they so irresistibly attractive to all those who came within their presence? My answer is that from the very beginning of their conscious lives these men felt themselves in the universe where good only exists. To them it was illogical to even suppose that the Creative Power, in establishing an harmonious universe, could have failed to provide what is required to assure the perfect happiness of mankind.

Confidently, and expectantly, therefore, did these great men peer with true vision to discover the good which they felt to be universal. In other words,

they sought the truth, otherwise called the real, instead of accepting false appearances. This is called inspiration by some, and according to the correct understanding of the word, they were inspired. Those whose worth we celebrate tonight disregarded false appearances. The mental fog which to most persons seemed to distort the good, the true, to these leaders did not even seem to be.

They then saw, with their real vision, the unity of Creation, the brotherhood of man, in other words they saw the universe as the reality, the truth of being itself, Truth which is all life and hence is the brotherhood of man.

Yes, Truth, the embodiment of all good, Truth, another name for all reality—the realization of the Truth is the goal of all mankind.

Throughout all history we find, on one hand, the erroneous belief in the reality of selfishness as opposed, on the other hand, to the glorious manifestation of the unity of creation, the universal brotherhood of man. This states the real nature of the seeming conflict in the universe but the apparent strife is generally looked upon as a struggle for supremacy by one or more groups of humanity with mistaken notions as to self-interest.

Notwithstanding this general misunderstanding, a few great men have nevertheless been able to expose this fallacious assumption and to demonstrate the fact that the greatest obstacle to the realization of truth and justice has been the aggressive denial of the equal rights of all, inherent in man by virtue of his very existence.

To understand the true nature of the power and influence of Henry George and Tom Johnson one must, indeed, consider their achievements from an almost metaphysical standpoint.

It was clear to the great understanding of these men that all that is real is good, and according to the law of life and the creative power is available to every human being. George and Johnson were sneeringly called idealists—and so they were according to the definition of the term by Thomas Carlyle. Carlyle said: "The ideal is the real well seen." They rightly felt that the unjust distribution of wealth and its allied evils were the consequence of the violation of the law of equal rights established by the Creator of all that exists. They regarded the earth as the apparent but inexact likeness of the true universe and therefore urged the universal recognition of the just principle of land tenure. These pioneers in the crusade for absolute justice for all men, advocated this concrete application of the truth, which has been emphasized as the right of all men to equal rights in universal good. They advanced the principle that since the earth and all human beings are the creation of the one Supreme Power, then certainly, as a matter of morals and logic, the people of the earth, as children and heirs of said Power, have equal rights in the earth.

They reasoned that since the earth is the common heritage of all mankind, what is known as the economic rent, that is, the value of the yearly possession of land, belongs in common, as economic

rent to all the people. Each individual paying such rent to Society should and would, of course, be assured exclusive possession of the land as long as he should continue to pay the rent.

According to this principle, the self-interest of every man would induce, yes compel him to make the most efficient possible use of the land in his possession, in order to enable him to pay the economic rent. This would soon put an end to unemployment, because no one could afford to hold land out of use and pay the economic rent, and he would, therefore, be compelled to make the most efficient possible use of it. This would create a demand for labor and the demand for workers would relieve the pressure among workers seeking employment at other places.

In other words, involuntary unemployment would cease in a short time, and then the compensation of workers would be determined on the basis of justice. It was because their clear vision enabled George and Johnson to explain so simply this great but fundamental truth that they have received the appreciation and praise of hosts of grateful people throughout the world.

The marvelous achievements of every true defender and promoter of human rights have been due to their awareness of the fundamental cause of the wrong which they opposed.

Emphasis, of course, could be placed by supporters of the George philosophy on the simplicity of the George tax plan, that it is easier to collect and free from temptation to the crime of perjury and misrepresentation prevailing in other systems of taxation. There could also be stressed the freedom from annoyance by the ridiculous formalities connected with excise, personal property, sales taxes, and so forth. These explanations and statements of advantages, although correct, would mean little to those in great distress because of want or fear of want, resulting from the prevailing but fallacious system of land tenure permitting special privilege and the monopoly of mankind's heritage.

Mr. George's plan would, of course, assure to the person continuous possession of land during the time the possessor thereof will have continued to pay to the Public Treasury for the privilege of holding the land, the economic rent, the value of its yearly possession.

I know, however, that I need not contend at any length with this audience that the only tax that should be tolerated is the tax on land values. I cannot, however, refrain from again calling attention to the fact that the great champions of humanity, the unwavering opponents of the greatest of all injustices, namely the monopoly of the earth, were successful in their efforts because they exposed the fallacy and disapproved of systems providing for the distribution or redistribution of wealth in accordance with personal, although official, discretion.

It will be found, too, that the tremendous effectiveness of men like George and Johnson, is due to the fact that they engaged in the struggle for right, because it was right and not because of any vain desire to show their skill and

talents, but rather because without their planning they were in the very center of all consciousness, and so, in reality had a feeling of at-oneness with all life. Such men, so to speak, are caught up by a spiritual wind which advances them willy-nilly in a great cause, which may possess them, rather than to be striving to perfect the technique of human efforts according to conventional and superficial standards.

Such men, fired with zeal for the good and true, men who are indeed inspired, inevitably arouse the admiration and gratitude of their fellow men, and leave an indelible record in history.

O my friends, how joyful is the thought that with the realization of the great ideal of Henry George, then no longer will injustice and hardship plague mankind.

Released, then, from the power of the oppressor, no longer the victim of want and forever free from the awful feeling of want and the fear of want, men will joyously obey their noblest and best impulses. In their spirit of freedom and with gladness men will embrace the inspiring principle of justice and eagerly devote their hearts and minds to expressing the harmony of life. Then from the earth will vanish the meanness, the envy, the jealousy, and hatred which now blight our harassed civilization.

Along the grand highway of life, with songs of joy pealing from their hearts and the spirit of justice shining from their eyes, will march the sons of men in the glorious cause of brotherhood. In joyous assemblage, then, men will be truly free men and the grandeur of creation will be manifest throughout the land.

The National Hospital Survey and Construction Program

EXTENSION OF REMARKS OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks, I include the report of Dr. John W. Cronin, Chief, Division of Hospital Facilities, United States Public Health Service, presented at the College of Medicine, University of Cincinnati, Department of Preventive Medicine and Industrial Hygiene, on December 19, 1950:

THE NATIONAL HOSPITAL SURVEY AND CONSTRUCTION PROGRAM

(By John W. Cronin, M. D., F. A. C. S., Chief, Division of Hospital Facilities, U. S. Public Health Service, Washington, D. C.)

The hospital-construction program is of vital interest to all of us as individual citizens and as physicians because it is expected it will be a \$2,000,000,000 program of providing health facilities. As taxpayers and as physicians we have a vested interest. In the latter part of the 1930's, when we were beginning to prepare for the role we were to play in World War II, it began to be very apparent that there was a great need for hospital services in many areas of the United

States. Due to shifting of population groups to new and rapidly growing areas of industrial and military mobilization, the medical-care needs of these areas were a major problem. Other needs such as those related to schools and housing also required immediate measures. The Lanham Act was passed and, according to one of the provisions of that act, Federal funds became available for the building of hospitals. It was soon apparent, however, that there should be a sound, long-range plan for the acquisition and utilization of hospitals throughout the Nation. Representatives of the health and hospital fields, both in and out of Government, jointly set forth to study the problem and to seek a means of improving the hospital-care facilities throughout the country.

The Commission on Hospital Care was organized and began its studies. Impressions soon were replaced by facts. The facts revealed the true state of affairs as an acute shortage of hospital beds and a lack of facilities to provide modern medical care. Physicians were leaving the rural areas for the more urban areas. Hospitals were not always available in areas where the needs of the people indicated they should be located. The leaders in the field of health and hospital services, as well as those of the American Hospital Association and the American Medical Association joined with the representatives of the consumer public in sponsoring a movement which led to the passage of Public Law 725, Seventy-ninth Congress—the Hill-Burton Act—on August 13, 1946. This act, in addition to providing Federal funds in the amount of \$75,000,000 annually for a period of 5 years, also provided that the elements of sound local community and State survey and planning, as well as State and local control be established. Federal funds were not made available for construction purposes until the States had surveyed their needs and developed plans directed at meeting the needs at the local community level.

Each State was required to designate a State agency. In all but six States at present the State health department is the designated agency. In the remaining six States there have been established official State agencies as units of the State government. Each State was required by law to establish a State advisory council on hospital construction. These councils, like the Federal Hospital Council, are composed of members of the health professions and also members of the consumer public. Each State also was required to prepare and submit to the Surgeon General for approval a State plan for hospital construction which is mandatorily revised each year. The respective State plans have been of great guidance in locating hospital construction within the State on a planned basis related to relative need for hospital and health facilities as between service areas. The State advisory councils have been very helpful to the State agencies in many instances.

On the basis of the State plans and the Federal regulations required by Public Law 725, Seventy-ninth Congress, communities began to plan hospitals utilizing the provision that one-third of the cost would be borne by the Federal Government.

The allotment made to the respective States was prescribed in the law. The important factors controlling each State's allotment were the population and per capita income of the State. The State plans established a method of priorities for projects based on need for services.

Hospitals are acquired by a four-step method:

First, the community applies to the State agency for a hospital. The State agency investigates the community in relation to its need for and size of hospital desired and either approves the project, defers, modifies, or rejects it. If it approves the hospital then

the project is referred to the regional office of the Public Health Service for study and consideration for approval by the Surgeon General's representatives.

Second, when the State agency and the Surgeon General have both approved the project then the community must show that it has its share of the estimated total cost to match the Federal share. It must also give reasonable assurances that it has sufficient funds with which to defray the anticipated operating-cost deficiencies for a 2-year period. This plan must also be approved by the State agency and the Federal Government.

Third, the community then must show clear title to the property and submit reports on soil investigations of the site. These also must be approved by the State agency and the regional office of the Public Health Service.

Fourth, the final step is the submission of the architect's schematic plans, construction drawings and all essential plans to the State agency and then to the regional office of the Public Health Service for approval. When all four parts as described have been approved by the State agency and the Surgeon General's representatives then a contract document to which the signatures of the sponsor, the State agency official and the delegated official representing the Surgeon General is drawn up. The Federal share for the project is set aside in the Federal Treasury. The sponsor then advertises for and receives bids, accepts the lowest one (or shows just cause why the lowest bid is not acceptable) and lets the construction contract. The total process may require several months to complete before the hospital construction is actually begun. The construction itself, depending on the size of the hospital, frequently requires many months to complete. The first Federal payment may be made after the construction of the hospital is 25 percent complete and the State has certified that an inspection for payment purposes has been made and the work found to be in conformance with the approved plans. There is no restriction on the number of payments that can be made but usually payments average about four to a project. The law specifically forbids the Federal Government from operation of any of the hospitals under the Hill-Burton program.

It was apparent after 3 years of operation of the program that many of the A priority areas were not acquiring hospitals because the community could not raise its required two-thirds to match the Federal one-third of the project cost. As a result on October 25, 1949, the Eighty-first Congress passed Public Law 380 which was approved and signed by the President as an amendment to Public Law 725, Seventy-ninth Congress.

This amendment liberalized the original law in the following ways:

(a) It extended the program until June 30, 1955.

(b) It increased the contract authorization from \$75,000,000 for each subsequent year of the program to \$150,000,000.

(c) It permitted the States to set their own Federal share at not less than one-third but not more than the State's allotment percentage. No State could acquire more than two-thirds of the total project cost from Federal funds.

(d) It permitted the States to adopt either (but not both) a flat percentage of Federal participation for all projects or adopt a variable type of Federal share (based on need, economic status, and other relevant factors) for all projects.

(e) It provided a method of assisting projects which were begun outside of the Hill-Burton program but on which construction had been stopped due to lack of finances. These were identified as hardship cases.

(f) It raised the minimum Federal allotment to a State from \$100,000 to \$200,000 per annum.

(g) It provided authority for research, demonstration, and studies in methods of more adequate medical care.

(Other technical amendments were also made.)

In 1950 the sum of \$150,000,000 was appropriated and allotments were made to the 48 respective States, Virgin Islands, Alaska, Puerto Rico, Hawaii, and the District of Columbia.

The following factual outline is of interest.

1. Six States adopted a variable rate for the Federal share.

2. Sixteen States give State aid in addition to the Federal share.

3. The average Federal share is now 47.2 percent.

4. All States have submitted and had approved their State plans.

5. As of September 30, 1,489 projects have been approved; 791 are approved and under construction; 398 are initially approved but not yet under construction.

6. The total estimated cost of all projects as of September 30, 1950, is \$1,032,005,950, the Federal share is \$380,204,879.

7. Three hundred projects have been completed and are in operation.

8. Of all projects approved 75 percent are for general hospitals, 16 percent are for public health centers, 5 percent are for mental hospital projects, 3 percent for tuberculosis projects, and less than 1 percent are for chronic disease projects.

9. The general hospital projects account for 86 percent of the total funds and a like percentage of the Federal share of the costs. The public health centers take last place in the share of construction costs largely because of their relatively low cost per project.

10. In general the average bed cost is \$13,500, the average square foot cost is \$17; the average cubic foot cost is \$140. It is estimated that these have increased about 15 percent due to current economic and international situation.

11. One-half of the general hospital projects are for completely new hospitals. The balance is made up of replacement of old buildings or for additions or alterations to existing ones.

12. Most of the new hospitals are being built in small towns and the smaller cities, at least 70 percent of the new general projects are located in places with population below 5,000. Only 12 percent are in communities of more than 10,000.

13. The projects for replacing, altering or adding to already existing hospitals are generally from the larger cities; only one-fourth are from towns with less than 5,000 population.

14. The new general hospital with less than 50 beds accounts for two-thirds of the new general hospitals being built. Only 1 out of 10 new general hospitals will have 100 beds or more. On the other hand, most of the hospitals being replaced, added to, or altering their present buildings are medium-sized or larger hospitals.

15. Nearly two-thirds of the hospitals with less than 50 beds will have between 20 and 35 beds. Some of the smaller projects have but 10 and 16 beds and could be called community clinics rather than general hospitals. However, they do meet specifications for a hospital in that they render 24-hour service.

16. Two-thirds of the hospitals under 50 beds are in towns of less than 2,500 people. Nearly all are in towns of less than 5,000 population.

17. A little more than one-third of the Federal money being used for all new general hospital projects is for small facilities of less than 50 beds. This is not surprising, since we know that the larger institution because

of more elaborate and more complete facilities costs more per bed than the small institution.

18. Over one-fourth of the hospitals under 50 beds are being located in areas which heretofore had no general hospital, another one-fourth are in areas where some facilities exist but where they are completely inadequate to meet the need for hospital care. Most of them are in rural areas, according to the State's classification.

There are dangers in building small hospitals, and these must be considered in the administration of the Hill-Burton program. Methods of avoiding them must be worked out in a feasible, practical way. Small hospitals cannot always provide the variety of service that can be given in larger hospitals.

Low occupancy rates are frequently found in the small hospital. There is a relationship between demand for hospital care and the ability to pay for it and the lower the financial resources of the community the lower the use of the hospital beds. Due to relatively low income of small towns and rural communities charges for hospital care must be kept comparatively low. As a result the small hospital in a small community has found it difficult to set aside sufficient funds for the purchase and maintenance of modern equipment, or for the employment of specialized personnel. The temptation given to a small hospital staff to perform services beyond their skills may bring harm to the patient.

There is a real need for the small facility in many small communities and rural areas. We do not believe in the indiscriminate building of small hospitals in all rural areas. We do believe that the provision of such facilities where they can effectively serve their purpose of bringing needed medical services to the population is acceptable. This requires careful study and sound community planning. Small hospitals should not stand alone but should share with the larger hospitals of the hospital service area and accept services and assistance as well as render services and assistance to those hospitals. This is the basis of the coordinated and integrated hospital system. It is the keynote of modern medical care. Such plans as the Rochester, N. Y., plan; the Bingham Associates (Massachusetts) plan, and those in Virginia, Michigan, Kansas and North Carolina among others are pointing this way.

The Division of Medical and Hospital Resources works very closely with the Division of Hospital Facilities in the Public Health Service in developing guide lines for the national hospital construction program. When we realize that for nearly 20 years the hospital plant of this country lay dormant we know the need is great. In the depression years money was not available for hospital construction; during the war years materials were used for purposes other than hospitals. The normal attrition rate for hospitals is estimated at \$75,000,000 per year. At \$13,500 per bed that means a 6,000 bed loss per year. A review of the State plans shows that we now have about 1,000,000 beds and based on the formula toward which we can build as stated in Public Law 725, Seventy-ninth Congress we need 900,000 more beds for normal peacetime. (The formula is roughly 4.5 beds per 1,000 population for general hospitals, 2 beds per 1,000 population for chronic disease; 5 beds per 1,000 population for mental and 2.5 beds per average annual death (1939-44) for tuberculosis; and one health center per 30,000 people.)

With the onset of the Korean incident on June 25, 1950, the need for and value of all our health resources became greatly enhanced. The Hill-Burton program will undoubtedly in time be geared to new and greater responsibilities in line with the defense of the Nation. Its scope and content will be changed to meet the need. It should

not be forgotten that we are only slowly making an inroad on our normal peacetime need.

The trends of the national hospital program can be summed up as follows:

1. The development, slowly but surely, of hospital services in needy areas, especially in rural areas

2. The establishment of the hospital as the health center of the community.

3. The regional coordination of hospital services.

4. The coordination of hospital and public health services.

5. The strengthening of the centers of medical education through acquisition of facilities to permit these centers to play their vital and much needed role

6. The demand for the general hospital to be more truly general and include services for the mental, tuberculous, and chronic type of patient.

7. The realization that prepayment plans for hospital care are the only sound feasible plan.

8. The fact that good planning, good design and construction, and good administration is the basic tripod of success for hospital services to the patient.

9. The programs of basic research and consultation are imperative to each aspect of that basic tripod.

10. The need for and value of regional health councils to determine health needs of the region and community, evaluate existing facilities, and determine methods and means of acquiring the needed additional facilities and services.

11. The fact that local community, State, and Federal groups can successfully work together toward a common goal and achieve it

12. Modern medicine demands a health promotion, health maintenance and health conservation type of program, rather than just the treatment of disease.

The objectives of the national hospital program are being reflected in the trends being manifested. In short, the objective is to make possible the provision of quality medical care as economically as possible to those receiving it and as conveniently as possible for those who have the responsibility of providing it to the patient.

The cut-back of \$550,000,000 in the appropriation for the operation of the Federal Government during the fiscal year 1951 included \$75,000,000 of Hill-Burton funds. The effect on the States is to require a great deal of replanning and reconsideration of plans already made. This is currently being done. Many communities which had planned on acquiring hospitals may have to have their projects postponed until a later year.

The Division operates through the 10 regional offices where a typical staff consists of a program director, a health program representative, an architect, a construction engineer, and a mechanical engineer. The staff at headquarters is divided into a Program Operations Branch consisting of individuals trained in medico-socio-economic aspects of hospital services; the Technical Services Branch made up of architects, construction engineers, mechanical engineers, specification and estimates experts, wage-rate authorities, electrical engineers and others; the Equipment Section with trained equipment personnel; the Program Evaluation and Reports Branch with personnel trained to obtain adequate reports and to evaluate them; the Information Section and the usual administration, fiscal, and budget personnel. A very close liaison is maintained with professional groups throughout other divisions of the service as well as non-Federal governmental and private organizations since the national hospital construction program in its ramifications directly and indirectly affects our daily lives and professional

careers. The national hospital construction program is a fine example of how the local community, State and Federal Government can cooperate in achieving a common goal of better medical care for those who need hospital services.

Attack at Midnight

EXTENSION OF REMARKS

OF

HON. ALBERT P. MORANO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the Record, I wish to include the following two editorials from the Bridgeport (Conn.) Post on the subject of unmonitored disc-jockey commentators who broadcast opinions on a wide range of subjects and who are free from regulations prohibiting vilification, malignment, or broadcasting unqualified opinions on important subjects on their after-midnight shows:

SPECIAL RIGHTS FOR JOCKEYS?

A disc jockey, as we understand the term, is one of those gents who play musical recordings in radio stations and who, between records, talk about everything under the sun. This is called in the trade ad libbing, from the old musical term which allowed a performer to interpret music according to his own taste or pleasure.

Some of these record spinners are humorous and intelligent, especially when they talk about matters (or platters) with which they are familiar. But there are others. These fellows get into politics, sound off about persons in public life, and express half-baked opinions on national and international problems, to the disgust of vast segments of their audiences.

The obnoxious stuff cannot be laughed off because they do have a big audience and there are still some people who believe almost everything they hear. There has been a tendency to confuse the ramblings of disc jockeys with those announcers who read the news dispatches.

The material they have been ad libbing is their own and it vanishes as soon as it is spoken. Congressman ALBERT P. MORANO has asked the Federal Communications Commission to put an end to this feature of their activity. Our Congressman wants to know if these radio station employees have a special right to broadcast, unhampered by scripts, records, or monitoring of their spoken opinions. What right have they, he asks, "to delve into political harangues and personal opinions?"

The question was put up to the Fairfield County Representative by Bernard Yudain, managing editor of Greenwich Time, who said that in one of these running commentaries from a New York station, he was subjected to "a vicious personal attack." When he tried to get a transcript of the broadcast he was told that no record was kept, nor was the program monitored, or supervised.

The editor said he had been attacked personally because his newspaper had opposed a certain Government expenditure for recruiting. The newspaper is a permanent record of this opposition. There is no record of the disc jockey's criticism.

This unfair and weak method of operation could be corrected by the issuance of one directive by the FCC ordering radio stations to make tape recordings of all the ad lib pro-

grams These could be filed for a reasonable length of time and if no complaint were registered, erased and used again.

It is a very simple and inexpensive job, and one that would give the public full protection against personal attack.

IRRESPONSIBLE BROADCASTING

Congressman MORANO has asked the Federal Communications Commission to look into the status of disc jockeys who make their comments over the air without any supervision or without any transcript or record being kept of what they said. He wants to know why this special privilege, leading to possible misuse of the air waves should be accorded to these men when other broadcasts are carefully supervised and transcripts are kept.

The matter was called to his attention by Editor Bernard Yudin, of Greenwich Time, who had been told by several persons that he was viciously attacked and personally maligned over the air waves by one of these disc jockeys. When he tried to investigate he found that the radio station involved had no record whatsoever of what the fellow had said.

The trouble began, it seems, when Yudin wrote in a newspaper column that he thought it a waste of public money for the Army recruiting service to hire disc jockeys and crooners to gain recruits.

What red-blooded male was ever seduced into the Army by a crooner? At the risk of being put on the proscribed list we heartily second Editor Yudin's motion. In fact, we think this is a typical piece of "dem" nonsense—"dem" in this case not being an abbreviation for "damn" but from Democrat—meaning the present administration in Washington.

And while the recruiting service is so hard up why doesn't it recruit the crooners and disc jockeys themselves? Send them to Korea—nobody will object. In fact, they might be formed into a special unit, "The Item Bomb Brigade."

Separation of Subsidies From Air-Mail Pay

EXTENSION OF REMARKS OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr WOLVERTON. Mr Speaker, it is my hope that early in the next session the House may pass a really effective bill to separate subsidies from air-mail pay.

At present payments for carrying the mail and subsidies to the airlines are lumped together in one sum, all charged to the Post Office. Neither the President, nor the Congress, nor the taxpayers have any means of knowing how much those hidden subsidies are.

This separation reform was recommended 3½ years ago by the Committee on Post Office and Civil Service, headed by my distinguished colleague, the gentleman from Kansas [Mr. REES]:

It is the recommendation of the committee that the subsidy element in airmail pay be separated. It has been suggested that this could be arrived at by accounting procedures in the Post Office Department. However, this procedure would not eliminate the basic objection which is that, under the present situation, we have an administrative board allocating public funds through which

basic public policies are established without action directly by the Congress. The better solution is to make provisions for subsidies directly to the Civil Aeronautics Board (H. Rept. 1958, 80th Cong, 2d sess., by Mr. REES.)

Last year the Committee on Interstate and Foreign Commerce favorably reported a very effective bill to separate the subsidies from the mail pay, thus relieving the Post Office from carrying this heavy burden, and also bringing the subsidies into public view where the Congress can pass upon them.

During our period of adjournment, I hope all members will study this report from the House Committee on Interstate and Foreign Commerce by the distinguished gentleman from Texas [Mr. BECKWORTH], House Report 3041, Eighty-first Congress, second session. It covers only 15 pages and it gives an excellent analysis of all the issues involved.

I hope that the Committee on Interstate and Foreign Commerce will again report favorably the same legislation described in this report, and that a really effective separation bill will finally be enacted.

This will put another worth-while reform, recommended by the Hoover Commission, on the statute books.

News Suppression

EXTENSION OF REMARKS OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. BERRY. Mr. Speaker, under leave to extend my remarks in the Record, I include excerpts from a letter to me received from Mr. J. Robert Knecht, of Rapid City, S. Dak., in which he says on the subject of news suppression:

This idea of news suppression is actually a foolish thing. For the past month we have read of air battles between the MIGs and Sabre jets: Always the same story—no American losses, but always several Russian planes being shot down. This just isn't possible, no matter how superior our air equipment is. If you would check into this I am sure you would find that we have lost considerably more than are reported.

Consider casualties. Always at least 10 to 1 in our favor. This does not make very intelligent reading either—lists reporting missing men who, in all probability, are dead.

During the last war I saw many things in different lands that our papers wouldn't report, nor would they ever obtain this information because the government suppressed it. As an example. Find out how many men ever came back from the Persian Gulf Command during the last war, until they were no longer needed—even though they were on the verge of mental and physical breakdown. Also, find out about the price of fuel oil purchased from the British at the Port of Abadan Refinery. Find out about the barge rentals in this area.

On the subject of deficit spending Mr. Knecht has this to say:

Being a businessman, it would seem logical that if I have to meet my bills then any other business—Government included—should meet theirs. Therefore, if the Government

keeps on a deficit spending spree and people lose faith in the business ability of the Government, which I believe some people are already starting to do (witness the rise in personal savings and decrease proportionately of defense bonds purchased and other Government bonds) then if this follows a pattern and something isn't done soon, the Government cannot borrow enough money from the people to pay the interest and principal due on former obligations.

Investigation of the State Department

EXTENSION OF REMARKS OF

HON. GEORGE MEADER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr MEADER. Mr. Speaker, an editorial which appeared in the Washington Post underscores the necessity for a penetrating investigation of the Department of State.

This editorial, entitled "Obfuscation, Inc.," takes the State Department to task for "double talk" and the growing deception that might be described as the cult of the disingenuous answer.

The editorial poses this \$64 question: "Is it any wonder that Congress and the country lose faith in the administration's words?"

The entire editorial is as follows:

OBUSCATION, INC.

Secretary Acheson's firm statement of support for the British position in Suez should dispel some of the wishy-washiness that has characterized the American pronouncements to date. It was high time that we let both London and Cairo know just where we stand. But Mr. Acheson's clarification by no means atones for the double talk of a highly placed Government official who briefed correspondents early this week about the proposed international command in the Middle East. This official, who declined to permit the use of his name, emphasized repeatedly that the plan for such a command does not envision sending American divisions to the Middle East, nor will there be any firm "commitment" of American air and naval forces requiring congressional sanction. At the same time he ducked the question whether the United States will support British resistance if Egypt attempts to throw British troops out of Suez.

Yet at the very time this official was speaking, the terms of the proposed NATO extension were being announced in London. The London communiqué makes it very clear that under this revision the American military commitment would be extended to cover not only Greece and Turkey but also the whole eastern Mediterranean, including such bases as Crete and Cyprus. And how, pray tell, is it possible to extend the NATO guaranty to these areas without also extending the commitment of NATO members, including the United States, to send troops if necessary to protect them? And how can the United States support the British position in Suez if one of its officials tells all and sundry that we have no idea of using troops?

Altogether this little semantic exercise in "when is a commitment not a commitment" reminds us of Secretary Acheson's disastrous assurance to Congress in 1949 that the United States did not contemplate sending troops to Europe. The double talk is a part of a growing deception that might be described as the Cult of the Disingenuous Answer. Is

It any wonder that Congress and the country lose faith in the administration's words?

Mr. Speaker, on Wednesday, August 1, 1951, I offered a resolution in the Committee on Expenditures in the Executive Departments urging a penetrating investigation of the Department of State, including but not limited to its organizational structure, its procedures, its personnel, its performance and its relationship to other Federal agencies. My discussion on this resolution on the floor of the House appears on page 9318 of the *CONGRESSIONAL RECORD* for Wednesday, August 1, 1951.

I inserted in the Appendix of the *CONGRESSIONAL RECORD* on page A6082 my letter to the chairman of the Committee on Expenditures in the Executive Departments setting forth my reasons why such an investigation should be undertaken.

The committee has not acted on my resolution, although the chairman stated that authority existed and appropriations were adequate for the committee to undertake such an investigation if the chairman elected to do so.

The editorial above referred to is simply another instance of the public awareness of the lack of candor with which the State Department conducts the foreign affairs of the United States.

Previously we had been treated to the rather unsavory spectacle of an admission by the Secretary of State, Dean Acheson, before the Senate committee investigating the MacArthur dismissal that the State Department had deliberately falsified in a public statement regarding Formosa. This situation was called to the attention of the House by the Honorable PAUL W. SHAFER, of Michigan, in the *CONGRESSIONAL RECORD* for June 6, 1951.

I would like to offer for the record another example of lack of candor in one of the lowlier offices of the State Department. In January 1945 it was my privilege to act as counsel for a subcommittee of the Senate War Investigating Committee conducting an investigation of military installations and supplies in North Africa and the Middle East. This subcommittee consisted of the former Senator James M. Tunnell, of Delaware, and former Senator Harold H. Burton, of Ohio, now associate justice of the Supreme Court of the United States.

The subcommittee took considerable testimony regarding the airport at Rabat-Sale at the capital of French Morocco. The subcommittee sought to ascertain how much investment the United States had in the improvement of that airport and received estimates ranging from \$50,000 to \$1,000,000. This testimony was developed in a hearing in Casablanca on January 1, 1945. The testimony also showed that the day the American forces abandoned the Rabat-Sale airfield, the British obtained a lease on that airport from a French officer for use of the airport until further order without charge and without any limitation as to its use. We were further informed that the British proceeded to use the field as a terminus for trans-Atlantic flights.

When the subcommittee returned through Casablanca approximately 2

weeks later, the American consul at Casablanca informed the subcommittee that the British consul had inquired of him about the subcommittee's interest in the Rabat-Sale airport. The American consul then proceeded to tell the subcommittee almost boastfully that he had denied to the British consul that the subcommittee had had any interest in the Rabat-Sale airport or had made any inquiries regarding it.

That episode impressed me because the subcommittee had not requested the American consul to conceal its interest and certainly had not requested him to lie about it. His attitude was one that as a matter of course he regarded it as proper to be deceptive.

It is because of such practices on the part of the State Department which the editorial in the *Washington Post* so severely condemns that the American people and, indeed, the rest of the world have come to have such a low opinion of our Department of State. I suppose there are those who believe that diplomacy is synonymous with deceit, devious methods, double dealing, and double talk. The American Congress, however, should not accede to any such views without thoroughly exploring all alternatives.

Certainly confidence in the pronouncements of an agency is the basis for its influence and the acceptance of its leadership. When confidence in the integrity of an agency is destroyed, its usefulness is destroyed.

The American people are entitled to a State Department of which they can be proud, not one for which they must hang their heads in shame. The Congress cannot escape its responsibility to the people of the United States to do all within its power to strengthen and build up the agency through which we conduct our relations with other countries of the world in these critical times in international affairs.

Times Change

EXTENSION OF REMARKS

OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. BOW. Mr. Speaker, under leave to extend my remarks, I wish to include in the *CONGRESSIONAL RECORD* the following editorial from the *Canton Repository*, Canton, Ohio, of Thursday, October 18, 1951:

TIMES CHANGE

Senator TAFT's bid for the Republican presidential nomination in 1952 has revived an opinion put into circulation by his opponents many years ago and kept alive by their diligent efforts.

They want as many people as possible to believe that the Ohioan would make a bad campaign if he ran for the presidency. They concede he would know what he was talking about, that he would be intellectually honest and that he has one of the keenest minds in public life. But they harp endlessly on the theme that Senator TAFT would make a bad campaign.

All this started with the invidious comparison between the late Franklin D. Roosevelt's charming manners as a campaigner and the Senator's dry, factual presentations of his viewpoints. While Mr. Roosevelt lived, there was a high premium on his particular brand of charm in politics, just as there was a high premium on flute-like radio voices. But times change.

Charm did not save either Mr. Roosevelt or the country from failure to think through the consequences of many policies undertaken in the name of charm. It did not offset the repercussions of intellectual dishonesty. By 1950, when Senator TAFT ran for reelection in Ohio, voters in his own State had found something they valued vastly more than charm—a political candidate who talked intelligently about the issues and was not afraid to say what he thought, even though his voice failed to be fruity. A thumping majority of Ohioans found Senator TAFT to be utterly charming in 1950.

Voters in other States would be just as receptive to his kind of fact-discussing campaign if he ran for the presidency.

No Magic Weapons As Yet

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the *Christian Science Monitor*, Thursday, October 18, 1951:

WISDOM FROM MR. LOVETT

Only a fortnight or so ago Secretary of Defense Robert A. Lovett performed a useful service in shepherding the Joint Chiefs of Staff into a better team approach to budget decisions. Now, on his first major public appearance since taking his new post, Mr. Lovett makes a contribution to general sanity by admonishing the national convention of the American Legion that although development of fantastic weapons is being pressed, no magic is yet in sight.

The enemy in Korea, therefore, and any armed aggression elsewhere still must be met with orthodox arms, greatly improved, and with men better trained to use them. Timed with the convention and Mr. Lovett's speech is the President's appeal to the Legion for continued support of the basic idea of universal military training.

Needed as are Mr. Lovett's warnings as an antidote-in-advance for unnecessary and unjustified disillusionment, there is another and more positive side of the picture. Improved orthodox weapons are here. And so are men trained to use them.

The solid fact underlying the confidence emanating from Korea, the one great argument which says that the Chinese Communists do want a cease fire on the best terms they can get, is the enormous mobile fire power possessed by the U. N. forces—fire power delivered by small arms, automatic weapons, artillery, and interdicting airplanes. The fear of human sea tactics is gone. One front-line officer has told correspondents that 15,000 U. N. troops are pushing forward successfully against 100,000 of the foe.

It is reassuring to hear from Mr. Lovett that weapons development along new lines goes forward. But the forces arrayed against Red Imperialism are doing quite well with what they have. And that is comforting, too.

Taxes Go Up and Up and Up**EXTENSION OF REMARKS**

OF

HON. EDWARD H. JENISON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. JENISON. Mr. Speaker, the people are beginning to make themselves heard and felt in the Halls of Congress. This week's action on the tax bill in the House of Representatives proves that. Defeat of the measure last Tuesday, even though nullified by final passage Friday, serves notice on the public spenders that there is a limit to the continued application of the tax and tax, spend and spend, elect and elect theory.

Mr. Speaker, I was one of those who voted against the tax bill all three times it came before us. I did so because I felt the people I have the honor to represent are against the continuing increase in taxes so long as there is no corresponding effort to reduce Government spending. Spending for defense is a "must" in our present hour of international peril, but all Government spending is not defense spending. There is plenty of room for economy in the non-defense activities of Government. And even in the vast defense-spending program, there is no excuse for waste.

The people are aroused at long last, and the vote of protest against the tax bill proves it. That this view is widely held on the home front may be seen from a timely editorial on this subject, published by the well-informed Danville (Ill.) Commercial-News. Under permission granted to me, I include it in the CONGRESSIONAL RECORD, as follows:

TAXES GO UP AND UP AND UP

The administration is stunned, say Washington reports, by the action of the House in turning down the five billion seven hundred and fifty million tax increase. Be that as it may, some huge hike will be forthcoming. Assuming that it will be about five billion seven hundred and fifty million it will bring the total annual Federal tax burden to sixty-seven billions.

This figure—sixty-seven thousand millions—is twenty-one and a half billions more than the highest Federal tax levy of World War II.

It is more than the total national debt before the war.

It is reached by three tax increases since the outbreak of the Korean war totalling seventeen billions.

The increases alone are more than three times the total Federal taxes collected before 1940.

Regardless of what may be thought of the \$50,000,000,000 to which the seventeen billions has been added in less than a year, the seventeen billions, at least, is ponderable.

It is not the cost of rearming. It is the price to be paid by the American people for the refusal of their Government to tighten its own belt while repeatedly urging the people themselves to do so, and while writing tax bills that compel them to do so.

In the face of known extraordinary expenditures, the President last February declared that his \$71,600,000,000 budget contained "every economy that can be made." But in June Secretary Snyder offered revised spending estimates bringing the total down to sixty-eight billion four hundred million.

Evidently the administration found that it could not spend money as fast as Mr. Truman had estimated 5 months before. And the hope of a balanced budget now with sixty-seven billions in taxes, rests on the fact that the tooling-up for defense has fallen behind schedule in some areas and as a consequence the rate of military spending may not be as fast as expected.

More than a year has elapsed since the new emergency showed the need to make adjustments in nonessential spending so as to keep the tax burden tolerable. The net result has been zero.

The Hoover Commission's recommendations for economy and efficiency in government have been ignored by the present session of Congress and the President.

The Federal payroll has swollen.

Nothing has been done to eliminate non-essential bureaus or nonessential activities of other bureaus. Meanwhile the spending excesses of practically every Government agency have become notorious.

Last May Comptroller General Lindsay Warren told a Senate committee:

"You and I know that there can be no real economy unless there be weeded out and completely abolished those Government functions which, perhaps well advised at their inception, have long since outlived their usefulness, and unless there be eternal vigilance against the creation of new functions and programs that are not absolutely essential. I have always said that the Government is too large, and even in this day of war and emergency it is too large. It can be reduced if there is a will to do it."

But there was no will to do it either in administration or among the leaders in Congress. The added tax you pay is not the price of preparedness. It is the cost to you of the lack of will to hold spending to essential needs.

**Attorney General McGrath Defies
Congressional Committee****EXTENSION OF REMARKS**

OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. SAYLOR. Mr. Speaker, people who hold public office for a long time very often think that they own that office and have only contempt for people who have elected them to that position. This is true not only of elected officials but also of political parties, and especially those individual members of a political party who occupy appointive offices.

As Members of Congress, we know that the high military brass resent being called to account by congressional committees. We also know that the bureaucrats in all of the departments made end-runs around our committees in order to accomplish their goals which they have set up before even asking the appropriate congressional committee's permission to play the game. As Members of Congress, we have become almost accustomed to defiance from the executive branch of our Government.

No doubt many of my colleagues have already taken a resigned attitude, but I wonder whether or not we will sit idly by and overlook and ignore statements

of the United States Attorney General, a former national Democratic chairman and a one-time Senator, when he says, in effect, that Congress can investigate matters until hell freezes over and it will not bother the Justice Department.

Recently in California, Attorney General J. Howard McGrath, displayed supreme and unreserved contempt for Congress when he said that his Department intends to press a lawsuit until told by Congress to stop. I will not discuss the issues involved in the suit of the United States against the Fallbrook Irrigation district and others, although I feel that they are important not only to that particular district but to the entire United States because of the principles involved. I desire to have my fellow Members of Congress think about protecting the rights of their constituents.

Mr. McGrath said in a special interview with Ed Ainsworth—and none of the statements or quotes contained in Mr. Ainsworth's article have been challenged or denied—that any time the Justice Department starts to do something it is threatened by Congress. I wonder whether or not Mr. McGrath will tell the Members of Congress when they threatened to stop the Justice Department in the matter of deep-freezers, mink coats, 5-percenters, back-door pay for fixing income-tax troubles or the various shortages in the Internal Revenue offices. It seems to me that Attorney General McGrath and his staff can be overzealous in some matters and pitifully blind and negligent about others.

The Irrigation and Reclamation Subcommittee of the House Interior and Insular Affairs Committee, of which I have the honor to be a member, as well as the House Judiciary Subcommittee, headed by my distinguished colleague and fellow Pennsylvanian, Representative FRANCIS E. WALTER, have learned at firsthand that the bureaucrats in the Attorney General's office make laws to suit themselves, write their own rules of procedure, and do whatever they want until congressional action makes them respect the rights of the people. These two subcommittees have found out the manner in which the executive branch of the Government disregards Congress when we started the investigation of the shotgun lawsuit involving the rights of over 14,000 farmers, landowners, churches, pastors, and cemetery associations over water rights on the Santa Margarita River in California.

This suit in California may be tried in the courts a long way from Washington and may directly affect only the constituents of a few Members of Congress, but if the Attorney General is successful in his suit, the precedent established there will affect the rights of the constituents of every Member of Congress.

This lawsuit has stirred up a tremendous issue on the west coast but it raises a far bigger problem in the manner in which the executive department ignores the Constitution and the laws of our land. Under the Constitution the Members of Congress are the representatives of the people and as such are the group which makes the laws for the guidance

of our country and it is the duty of the executive department to carry out those laws. United States Attorney General McGrath does not share this view. In the interview which I have referred to I find many defiant and contemptuous statements by the Attorney General, none of which to my knowledge Mr. McGrath has repudiated.

Some congressional committee is looking into everything we do, every case we have. No congressional committee is going to push the Attorney General into dropping this suit.

Since Congress is the representative body of the people, I feel, Mr. Speaker, that they are not only entitled to look into anything any governmental department does, but it is their duty and responsibility to see to it that, in carrying out the laws of Congress, the executive branch does not unduly infringe upon the rights of any individual or group of individuals.

The Los Angeles Times, in its editorial of Wednesday, October 10, entitled "The Rights of 14,000 Farmers," has ably expressed this same conclusion. This editorial was introduced in the CONGRESSIONAL RECORD by the Honorable NORRIS POULSON of California on October 17, 1951, on page A6490.

I include as a part of my remarks the article of Mr. Ed Ainsworth in the Los Angeles Times, entitled "McGrath Defies Fallbrook Farmers in Water Dispute."

McGRATH DEFIES FALLBROOK FARMERS IN WATER DISPUTE—UNITED STATES ATTORNEY GENERAL TO PUSH SUITS DESPITE CONGRESS PROBE

(By Ed Ainsworth)

United States Attorney General McGrath, visiting here yesterday, issued an ultimatum to the farmers of Fallbrook.

It is that the suit against them by the United States Government over their water rights on the Santa Margarita River is going to continue despite the investigations of any congressional committees.

His edict was issued in response to specific questions by the Times in a special interview.

The Attorney General, here for the \$100-a-plate Democratic Jackson Day dinner held last night at the Palladium, said earlier yesterday that, in his considered opinion President Truman will be a candidate for reelection.

CITIZEN CAMPAIGN ISSUES

McGrath, Democratic national chairman in 1948, said he believes the dominant issues in the next Presidential campaign will be claims for success in managing foreign affairs, continuing domestic prosperity, and blocking of Communist forces in Europe. He expressed optimism over Democratic chances in this campaign.

"The party," he said, "is confident and united."

Getting back to the Fallbrook case, which is aimed at about 14,000 individual defendants, McGrath said the Federal suit will continue unless the entire Congress, by formal enactment, forbids him to proceed further.

Joining him in a portion of the interview was A. DeVitt Vanech, Assistant United States Attorney General, who did make one concession to the thousands of small farmers.

NEW TIME EXTENSION

Vanech, with McGrath's approval, announced that he will ask the United States district court at San Diego on November 1 to extend once more the time given defendants to answer the suit. Originally,

when the complaints were filed, each defendant was required to answer within 20 days or forfeit his water rights.

This procedure was fought so strenuously by the Times, on behalf of the small farmers, that the United States Attorney General's office was forced to go into court and request the original delay to November 1, which was granted by the court.

Now, the practical effect of the new announcement is to indicate that defendants will have still further time before facing forfeiture.

PENDING LEGISLATION

McGrath's disclosure yesterday that the serving of complaints will continue no matter what are the recommendations of congressional committees investigating the suit, was in response to a question concerning pending legislation before Congress. This legislation, introduced by Democratic Representative CLINTON MCKINNON, of San Diego, would have the net effect of nullifying the Attorney General's suit, if it is passed by Congress. It followed a hearing in Fallbrook by a congressional investigating committee headed by Democratic Representative CLAIR ENGLE, which denounced the suit in the strongest terms.

However, Congress is in the closing rush and it is doubtful whether the legislation can be enacted prior to adjournment, although it is considered probable that it will pass when Congress reconvenes in January.

"In view of Congress' concern with this Fallbrook matter and the probability that it will take some action, at least in the next session, would you consider a sort of truce in the serving of complaints pending its reconvening in January—to save money on process servers and all the attendant expense?" was the question asked McGrath.

He hesitated about answering at first.

Then, later, he said with emphasis that positively the serving of complaints will not be slowed and the suit will be pushed ahead as fast as possible.

He declared that "some congressional committee is looking into everything we do, every case we have," and that to slow up pending congressional action would disrupt his entire department.

SEES NOTHING UNUSUAL

"But, Mr. McGrath," he was asked, "this case has been described as the biggest in the West with these 14,000 or so defendants, and we all know it is very costly. Wouldn't it be possible to save a lot of money if further complaints were held up until Congress can decide on this legislation which may nullify the suit?"

"There's nothing unusual about the case," he countered.

"Why, we've had one just like it up in Oregon," Vanech asserted.

"What was that?"

"Well, it was a case involving 1,800 defendants."

"In a military establishment?"

"Well, no."

The so-called Fallbrook case involves Marine Camp Pendleton adjoining Fallbrook.

FOURTEEN THOUSAND DEFENDANTS

United States Attorney General McGrath is suing the 14,000 defendants ostensibly to determine the water rights of Camp Pendleton, although the camp and the Navy had worked out a perfectly amicable arrangement with local citizens over water of the Santa Margarita to be stored behind a new dam. This agreement was overturned by the Attorney General's office.

McGrath insisted yesterday that his department does not wish to take anything away from the rightful owners but that the suit was the only way to determine those rights.

That it is the only way has been vigorously challenged by California water lawyers, all the Congressmen who have investigated the

case, and many legal authorities in other parts of the Nation.

Even Democratic State Attorney General Brown—after much prodding by the Times and others—finally intervened in the case, too, on behalf of the people of California.

But McGrath contended yesterday that it would not have been sufficient to determine the water rights under California law and California procedure and that it had to be done with a Federal suit in Federal court.

He was particularly vehement in stating that no congressional committee is going to push the Attorney General into dropping the suit.

He declared the suit is being brought on behalf of the United States taxpayers to determine Camp Pendleton's rights in the only way it can be done.

The defendants—the thousands of small farmers—have contended that the whole matter could have been settled so the camp had an assured supply and the local people got the safe remainder, if the Attorney General had not upset the agreement with the Navy.

Power Revolution on the Farm

EXTENSION OF REMARKS

OF

HON. W. R. POAGE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. POAGE. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article by Hon. Claude R. Wickard:

POWER REVOLUTION ON THE FARM

(By Claude R. Wickard)

Sixteen years ago, 9 out of 10 farms in the United States looked like this: dim coal-oil lamps lighted a little of the home, wood-burning stoves were used for cooking and heat. There was no refrigeration, no running water or indoor plumbing. When the wind failed to blow, all water was pumped by hand and the farmer and his wife hauled it in buckets to meet household and livestock needs. Wood had to be sawed by hand. Milk and farm produce spoiled for lack of refrigeration. Lanterns flickered in the darkness of predawn and the darkness of evening as farmers hand-milked their cows. Men and women grew old before their time. Farm youth migrated to the cities by the thousands. As it had been for centuries farming was still a tedious hand-labor economy.

Today on nearly 9 out of 10 farms there has been a magic transformation. Electricity, on the farm and in the home, has brought new ways of producing and preserving food, as well as modern conveniences. It has changed farm management as radically as the industrial revolution changed the factory. Farmers have the best in home and farmyard lighting, refrigeration, motor-powered pumping systems and motor-powered tools. Electricity milks several cows in a few minutes and keeps down the bacteria count by sterilizing the equipment and by refrigerating the milk. There are more than 400 farm uses of electricity. All of them contribute much to the increased quality and quantity of food production. Rural power is responsible for a new and better way of life on the farm.

In 16 years of helping to bring this power to rural America, the Rural Electrification Administration, a loan agency of the Department of Agriculture, has had an object lesson in the capacity of people to administer their own affairs at the local level, to solve new and difficult problems and—working as

groups—to make democracy a living and vital force.

The experience of REA as a loan agency and the experience of our borrowers are a tribute to the flexibility and strength of the free, private-enterprise system. Out of this experience has been developed a set of working principles which have come to be known as the REA pattern.

The REA pattern is a democratic working arrangement between the people and their Government in which the people in need of a service provide the initiative and assume the management responsibilities locally, while the Government provides the credit facilities and the initial technical advisory services needed to enable local management to function effectively. An outstanding feature of the pattern is that it utilizes the powers of Government, not to extend Government ownership and operation, but to create and help develop new local private service enterprises. Its result is decentralization of ownership and control at the grass roots.

The pattern was based on, and developed out of, certain assumptions which are essential to the success of such a program. One is that the program must fill a real need. Another is that filling that need must at the same time promote the general welfare. A third is that the program must be self-liquidating, which means that its eventual costs must be borne by the beneficiaries themselves at a minimum of cost to the Government and to the Nation's taxpayers. In other words, financing of the program must be done not through grants but through loans to be repaid to the Government with interest. The Rural Electrification Act embodied these assumptions.

Since 1935, when REA was established, mechanization and rural electrification have permitted the farmer to start making the technological advances which industrial plants made many years ago. The REA pattern was not planned. It grew out of experience. When REA was established it was assumed that the existing utility companies would welcome long-term, low-interest loans to extend their lines into rural areas. The great majority of these companies, however, were reluctant to do so. They believed it would be unprofitable to serve the more sparsely settled rural areas and they were of the opinion that practically all farmers who could make good use of electricity were already being served.

Since the Congress had decreed that rural electrification was to be accomplished through loans rather than grants, the lack of interest on the part of the power companies would have been fatal to the program if the farmers had not decided to take things into their own hands. Farm groups experienced in operating and managing their own cooperative associations of various types formed themselves into new enterprises and submitted loan applications which would permit them to build and operate their own rural electric systems.

As these loan applications mounted in volume, REA made what was probably its most important administrative decision. As bankers, REA officials accepted the integrity of the American farmer as loan security. It was a calculated risk that one might depend on the inherent capacity of our people to administer their affairs with competence and pay their debts when due.

One must have a deep and abiding faith in America to make such a decision. What it meant was that REA would then make 100-percent loans to rural borrowers who had no experience in the construction operation or management of a rural electric system. Even though the Government held a mortgage on the system, revenues to pay off the loan would not develop unless the farmers really made use of the service offered and the enterprise were soundly managed.

If REA loans are unique in banking practice, the results are equally so. In 18 years REA has made loans amounting to more than \$2,850,000,000 to 1,076 borrowers, including 925 rural electric cooperatives. The latter have borrowed 95 percent of REA's loan funds. REA borrowers have built more than one and one-tenth million miles of line and serve nearly three and one-half million rural consumers, of whom three-fourths are farmers.

Do REA borrowers pay their debts? As of March 31, borrowers had returned \$282,196,238 in principal and interest to the Government, and less than three-tenths of 1 percent of the amounts due cumulatively was more than 30 days overdue. In 16 years REA has had to foreclose on only one borrower, a small commercial utility whose system was wrecked by a severe storm. Out of more than \$2,000,000,000 in loans our loss to date is about \$40,000.

Is it possible that farmers can direct the affairs of a business so complex as a rural electric utility and do so successfully? The record proves that it is. The accomplishments of REA borrowers are sound support for our working principles that a program can fill a need and at the same time pay its own way.

But what about the general welfare? Through REA loan funds more than a thousand new enterprises have been started. Directly, they have created new jobs for about 30,000 people in rural communities. But they have also generated considerable industrial production and employment. Three and a half million rural households are new consumers of electrical appliances and equipment. For example, without the electric motor to run the pump it is not practical to have modern plumbing in the farm home. At a conservative estimate, each user of electricity on the lines of REA borrowers has already invested an average of at least \$1,000 in electrical goods and services.

Labor, contractors, dealers, and manufacturers have benefited from the new demand to the extent of about \$3,500,000,000, over \$1,000,000,000 more than the amount of loan funds actually advanced. The new market is only beginning to show itself. It will expand each year as farmers learn to use electricity still more productively and as new uses for electricity on the farm are developed. Television is one example. Where it is available 10 percent of farm homes in the area have already installed sets.

Because power is now more readily available in rural areas thousands of new industries have been established in rural locations. It has meant the modernization of schools, churches, and business establishments in the villages and at the crossroads. REA borrowers are the sole source of power for hundreds of mines, oil wells, airway beacons, and radar stations. Then, there is the vast contribution which electricity makes to farm income. Dozens of tasks of food processing and other chores around the farmyard are done now by electricity to permit the farmer to spend more time at work in the fields. The influence of rural power is indicated in recent figures which reveal that although there are a million and a quarter fewer farm workers than in 1941, farm production is 40 percent above the level just before World War II.

If the proper function of money is to create new wealth through increased production, we feel that our program contributes to that objective and also makes a substantial contribution to the Nation's welfare through helping to restore the economic balance of one segment of our population which was lagging behind in its opportunity to produce. The increased capacity of farmers to produce and to buy goods and services tends to benefit everyone.

The principles of the REA pattern would be meaningless without a motivating force.

In the rural electrification program we believe that the motivating force is the practice of democracy by the home-owned and locally controlled rural electric cooperatives.

What has democracy got to do with rural electrification? Perhaps if we examine the form and structure of what might be termed an average REA borrower, the question will answer itself.

In terms of statistics, our average borrower will have \$2,000,000 in loan funds which have been used to build a rural electric distribution system covering 1,000 miles and serving around 3,300 rural consumers.

The borrower's enterprise will be a non-profit cooperative association chartered under the law of the State in which it operates. The loan is made to the enterprise, not to farmers individually. Membership of the cooperative is made up of those who use its services. At their annual and special meetings, the members select from their number a group to serve as directors or trustees. The board of directors serves without pay, and is responsible for policy making and over-all management. The board hires a manager to direct day-to-day operations and the manager in turn hires a staff. Just as any elected official is subject to the veto power of the voting citizen, so are co-op boards subject to the will of the membership.

Rural electric cooperatives follow the tradition that elections are held by secret ballot and that each member has only one vote. All have an incentive to keep informed about their co-op's affairs because each member is part owner of the rural electric system which serves him. Just as a home owner gradually pays off his mortgage, so the members of the rural electric cooperatives are gradually repaying the Government loans.

To do this, each member's bill for electric service is computed to cover the actual cost of operations (wholesale price of power, labor costs, taxes, etc.) and a small margin which can be used to pay off the mortgage. In most of the co-ops careful records are kept of each patron's margin of extra payments, for these establish his individual share of equity in the ownership of the electric system which serves him.

The rural electric co-op is usually the largest enterprise in the community and frequently one of the biggest taxpayers. Running a \$2,000,000 business takes vision, courage, and management skill. Each day, boards of farmers demonstrate their increasing competence in the application of sound management principles and practices.

Thousands of our rural citizens have come to their full stature of leadership through service on rural electric co-op boards. As they rotate in term of office, they are building a pool of experienced leaders and administrators in rural communities. These men have had experience in making big decisions. They formulate policies and get them down in writing. They demand standard procedures, effective budgets, job descriptions, and planned operations in the cooperative businesses they supervise. Through regular reports and audits, they have learned how to check on execution of policy by operating management.

More important, rural electric co-op directors are learning how to exercise leadership in conformity with the democratic processes as they work with and through groups. This addition to the human resources of the community is a byproduct of rural electrification, but it is an important one.

Now that these new enterprises have been established and now that nearly 9 out of 10 farms have power, what is the job ahead? On the face of it, some may say that the work is about done and that there is no longer a need for loan funds and technical assistance to these rural enterprises. The fact is that there are two big assignments yet to be accomplished. The first is to extend power to

the more than three-quarter million farms which are not yet served; and the second is to assure farmers of a future supply of adequate, reliable, and economical power.

Reaching the farms which are more isolated, farms over the hill and off the main roads, takes hard work and shrewd planning. REA borrowers make it a matter of paramount policy that if anyone in the area can have electricity, then everyone in the area is entitled to it—and at the same rates. Each loan is made with the understanding that the borrower balances revenues from the more thickly settled sections to permit lines to be constructed to serve those farms in sparsely populated areas. Actually the feasibility of the loan depends not so much on how many farms there are to a mile of line but how much electricity farmers will use.

It is the increasing amount of electricity which farmers are using and plan to use which creates the demand for loan funds to insure adequate, reliable, and economical service. But of what use has been our work thus far if farmers are unable to get enough electric power to meet their needs—reliable power which will not burn out their motors and power that is cheap enough to permit them to make full productive use of it?

In areas where the wholesalers of power are unable to deliver a supply which is adequate, reliable, and reasonable in price, REA borrowers meet their own needs through the development of their own generating plants or the construction of transmission lines to tap hydroelectric power generated at Federal dams. In their view, their efforts are not competitive. The consumers whom they serve are consumers whom existing companies formerly expressed no interest in reaching. Farmers see no difference between farm groups building a generating plant to serve their own needs and United States Steel installing a massive generating plant to increase its production. REA's policy in making loans for generation or transmission requires that borrowers show that more adequate or more economical power would result than is now available from existing sources.

We believe that increasing America's capacity to produce is just as important on the farm as it is in the factory. Electricity is the most important factor around the farmstead in producing more and better products with less labor, which the American farms must do to meet the demands of the Nation.

REA borrowers distributed 8,000,000,000 kilowatt-hours of electricity over their lines in 1950. This was 20 times the amount used in 1940. At the measured rate of use, the demand for rural power will double again this year. Our borrowers generated only 13 percent of their requirements in 1950. The remainder was purchased from power companies and other suppliers. The rural electric distribution systems developed with REA loans paid the power companies \$37,000,000 for electricity in 1950.

The success of the REA pattern in the rural-electrification program does not mean that we recommend it for all programs where the need is national in scope. But its success did result in the Congress giving REA the assignment for the new rural telephone loan program which is now under way. In any such programs, we feel that Government has three major responsibilities. First, to serve as a source of loan funds, second, to act as a central pool or clearing house where borrowers may obtain technical advice and assistance; and, third, to withdraw that advice and assistance progressively and as rapidly as borrowers develop operating and management maturity.

Such a program puts the emphasis on local ownership and control and insures local benefits. Its effect is just the opposite of the trend toward centrally controlled national chains for the distribution of goods or services. Where financing comes from

far-away cities, financial control and control of management and technical skills remain with the absentee owner. Not only do the revenues go back to other points, but local people have no voice in making the decisions which affect their own affairs.

In the rural-electrification program REA assembles and makes available the total experience of its borrowers for the use of any one of them. The role of the Government is to advise and assist but not to order or direct. Without the central pool of technical assistance, the mortality rate of the new and inexperienced enterprises might have approached that of business in general.

The REA does not own or operate a mile of line. The accomplishments of our cooperative borrowers as they operate and manage their locally owned private enterprises are adequate proof of the basic strength of democracy and the free private enterprise system.

Voice of America

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. McCORMACK. Mr. Speaker, the Eighty-second Congress will go into history as that which armed the free world—with spiritual force, economic vitality, and with military strength—to halt the global ambitions of communism.

I desire to tell the country that this Congress knows its responsibility and has accepted it.

It is dedicated to peace. It is determined to make America and the other free nations so strong that the Kremlin will not dare start war. Freedom through strength has guided the course of the first session of the Eighty-second Congress, now drawing to a close.

This is a Congress charting a course of global defense for free nations.

World developments abruptly brought a change in the whole concept of legislative programing. Many meritorious measures that a normal peacetime Congress would consider were forced aside. The work of this Congress cannot be compared with any previous Congress in which the survival of freedom was not then a pressing problem.

We have had to find a way to provide armaments without wrecking our economy at home.

We have had to proceed carefully.

The criticism we hear most is that this Congress has been slow and reluctant. This is high praise of the Congress. For the problems are so grave, and the risks so great, we would be foolish to rush into any action without time to gather all the facts and study and meditate upon them. And, of course, we have been reluctant to appropriate billions of the people's money and levy new taxes and put new controls on our economy, without first being sure that our own safety as a Nation requires it.

Take a look at the Eighty-second Congress' record thus far:

Proving our desire for peace, one of our first acts was to renew the Recipro-

cal Trade Act, as a treaty of commerce and friendship for all nations that respect freedom and want to be friends.

The Congress then voted \$56,937,808,030—far more than the total cost of World War I—to build up America's armed might—to sustain the fighting in Korea and to halt the march of Communist imperialism the world over. We have provided other billions to strengthen our allies militarily and economically, and to expand our own military installations.

Not only has this Congress extended the Selective Service System to July 1, 1955, but it also raised the ceiling on the Armed Forces to 5,000,000 men. Moreover, it laid the foundation for universal military training looking toward a permanent system of international safety.

Ahead of the general appropriations for defense, we authorized \$2,700,000,000 for conversion of naval vessels and the construction of new ships for the Navy, including a 57,000-ton carrier.

We set up a comprehensive program of public works construction at Army, Navy and Air Force bases, totaling around \$5,000,000,000.

We renewed the Defense Production Act, providing machinery for continuation of the program to mobilize the Nation's economic forces behind the defense program, and to deal with the factors that bring about inflation. A Small Defense Plants Administration is set up to help little manufacturers share in the productive effort.

In addition to price and wage stabilization powers, this act includes extension of rent controls and authority to control imports.

In this field of tuning the economy to the necessities of defense, and looking after the needs of the workers, we have passed a bill to meet urgent housing needs in the mobilization program.

While attending first to the primary purpose of preparedness, it has taken time to enact more laws benefiting veterans and service people, including a free \$10,000 life insurance policy for each member of the Armed Forces. The Congress responded to the appeal for emergency aid for India, providing a loan for the purpose of 2,000,000 tons of grain. The Congress moved quickly to ease suffering from floods in the Midwest, making a direct appropriation of \$25,000,000. Other relief is on the way.

We cleared all of the regular appropriations bills.

The only true gage of how well we have performed our task is to measure what has been done against what needed to be done.

When we convened on January 3 we faced the momentous task not only of supplying our Armed Forces with the immediate means and manpower to fight in Korea but also of providing for the long-range buildup of our military power and of our industrial production.

We had the obligation of aiding our allies of the free world both militarily and economically to assure their readiness to meet any thrust by an enemy anywhere in Europe or in Asia.

We faced the responsibility, moreover, of maintaining the stability of our

economy to support the program abroad while at the same time meeting normal requirements of our civilian population at home.

We had to perform, in addition, the regular essential housekeeping duties of the Congress, such as raising revenue, providing appropriations, and enacting much other needed legislation on the domestic and international fronts.

It was our job, in short, to make this Nation and its allies so strong as to deter an attack by any would-be aggressor. It was our job to wage peace by making ourselves strong enough to wage war.

The Eighty-second Congress can boast that it has provided—short of all-out war—for the greatest mobilization of America's economic, military, and manpower resources in our history.

We have likewise provided a program for cementing our relations with friendly nations all over the globe.

The Eighty-second Congress—now less than 10 months' old—will complete its program designed to protect America's liberties and to help free peoples stay free.

Like Bureaucratic Rule? Take Look at Indians

EXTENSION OF REMARKS OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. BOW. Mr. Speaker, under leave to extend my remarks, I wish to include in the CONGRESSIONAL RECORD the following article from the Alliance (Ohio) Review of Saturday, October 13, 1951:

LIKE BUREAUCRATIC RULE? TAKE LOOK AT INDIANS

(By G. S. Benson)

At a time when so many Americans are being charmed by visions of a Federal welfare state which promises to remove the vicissitudes of life and set up a guaranteed standard of good health, adequate education, economic welfare and security for all, it would be wise for us to take a good look at how well the American Indians, who have lived for a century in such a welfare state, have fared.

For 126 years the Federal Government's Bureau of Indian Affairs has been the benevolent guardian of most of our Indian citizens. No Indian under the paternal wing of this Great White Father in Washington has had to worry about food, shelter, or old-age security, regardless of whether he's been energetic or lazy, well-behaved or unruly. The Government has provided education too—or, rather, it guaranteed to do so.

TWO LESSONS

Many Indians have declined to enter reservations or otherwise submit to Government paternalism. I have seen numbers of them in Oklahoma who have made their own prosperity and security and are splendid, independent citizens. But the facts about the several hundred thousand Indians under Government guardianship provide two lessons which all free citizens should learn and learn well:

1. While wards of politically-managed bureaucracy our Indian citizens have become a stagnant, if not actually a disappearing

race. Their once magnificent pride, native resourcefulness and unmatched self-reliance has withered. Dependency has stunted their capability. They are the only minority group in America that has failed to make great strides of progress in the last half century. They are also the only racial group whose members have been wards of a welfare state.

2. On the basis of the 126-year record of the Indian Bureau, political bureaucracy has utterly failed as a caretaker of human hopes. The Bureau's oft-repeated claim of "taking care of the Indians" becomes a shameful mockery when all the facts are known.

SICKNESS AND SQUALOR

Here are some results of the Government's "taking care of the Indians"—as reported by the Marquette League for Catholic Indian Missions:

Health, education, and welfare standards of the Navajos (one of the tribes under Government guardianship) have been running steadily downhill for 83 years. The one-room hogans (homes) of the Navajos are windowless, unsanitary, uncomfortable overcrowded, and the entire family sleeps, eats, and lives on the dirt floor. Due to the neglect of the Government, tuberculosis and infant mortality have reached what is believed to be the highest rate in the continental United States. The Navajos are among the sickest people in the Nation, with the least amount of medical service, in spite of the fact they are wards of the Government.

Seventy-five percent of the Navajo Tribe is illiterate as compared to Negro illiteracy of 16.1 percent, foreign-born white illiteracy of 9.9 percent, and native white illiteracy of 1.5 percent.

The Rev. Bernard A. Cullen, of the Marquette League, one of the best informed authorities on the plight of these wards of our Government, says: "We have driven the Indian into an abysmal pit of darkness and misery, and the very least we can do is lower the ladder of opportunity to help him to climb into the sunlight and know again the pride that was once his."

Freedom of opportunity for the Indian and the unfettered chance to redevelop his self-reliance and pride—these are the best gifts within the province of our Nation, not mere bureaucratic paternalism. The Indian is not inherently a second-class citizen. If reborn into independence, he could do equally well for himself as the millions of immigrants have done who came to America penniless and illiterate. But with the continued political guardianship of a Federal bureau taking away all of their natural instincts and characteristics the American Indian would become, as would any other branch of the human race, mere creatures—with final extinction probable.

Had Enough War?

EXTENSION OF REMARKS OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. REECE of Tennessee. Mr. Speaker, Americans have had enough of the warfare state.

Three major wars in 27 years is the record.

In the years under Theodore Roosevelt, Taft, Harding, Coolidge, and Hoover, we lived in peace with all the world.

In the 27 years under Wilson, F. D. Roosevelt, and Truman, we have had 8 years of three wars with nearly 1,500,000 battle casualties.

These administrations made no effort to keep out of these wars. President Wilson, elected in 1916 because he kept us out of war, had already pledged our entrance to Lord Balfour. President Roosevelt said again and again and again that our boys would not be sent to fight in foreign wars, at a time when he had already decided to lead us into World War II. President Truman, after Senator TOM CONNALLY and Secretary Dean Acheson had said Korea was not part of our strategy, took us into the Korean war without constitutional authority to do so.

We are now in a total war, a savage bloody treadmill war of attrition pitting the lives of American boys against Red China's countless masses. Our total casualties are approaching the 200,000 mark—95,000 battle casualties and about 100,000 non-battle casualties. It is a war we dare not lose—yet we are afraid to win it.

The architects of the Korean war are now setting up a defense for Europe. On this record, what basis have we for the hope that the European project will be sounder than the one in Korea? If the leadership of this administration is unable to prevent Red China from destroying Korea, can this same leadership save Europe if Russia strikes?

After our decisive military victory in World War II, can we trust an administration which failed to win the peace with preparation for war, the conduct of war, and responsibility for peace should world war III come?

This year the Congress has appropriated \$75,000,000,000 for defense. This is \$15,000,000,000 more than the Government calculates can be collected in taxes. In addition, we have a \$20,000,000,000 item for the cost of the civil government. Then, the various State governments have a total budget of \$18,000,000,000. This session of Congress has appropriated \$95,000,000,000 in this 1 year. Our national income is estimated at \$260,000,000,000. This means that more than one-third of a citizen's income is seized by the Government. When this is so, a citizen is no longer free and independent. He works more than 1 day in 3 for Government. He, along with 150,000,000 other Americans has become what the socialist want, an incipient ward of the state.

As late as 1941, only 15 percent of our national income went for taxes. In 1945—27 percent went for taxes. In 1951—30 percent goes for taxes, and by 1952—32 percent. Unless we put the brakes on, just as 15 percent became 30 percent, and 30 percent will become 32 percent, under the tax bill we passed today, the 32 percent will become 35 percent, then 40 percent as it is in Britain today, and then 60 percent as it is in Soviet Russia. Then the Government, which should be the servant of the people, will have become the master. The socialists will have their socialism but Americans will have lost their freedom.

But, despite the back-breaking taxes, we will have a deficit this year of about

fifteen billion, thus adding to our present national debt of two hundred and fifty-six billion.

This deficit spending means further depreciation of the dollar.

There are 72,000,000 life insurance policies in America. They constitute the principal item of security which husbands leave their widows. As inflation from deficit spending mounts, insurance payments, widows' pensions, and Government bonds depreciate.

Inflation, unhalting, will lead us to the controlled state—just what the Fair Deal wants.

In spite of the fabulous spending, we are not getting national security. In Korea, we are outnumbered on the ground and in the air. Our allies send only token forces. There the destiny of our boys lies in Stalin's hands.

In Europe even our military leaders do not give a forthright statement that the proposed 60 divisions can save Europe should the Red Army strike. At home our fleet can prevent large-scale enemy invasion but according to General Vandenberg we have insufficient air defenses to prevent enemy bombing.

This all adds up to gross incompetence, mismanagement, and, in certain instances, disloyalty. The American people are sick of this administration coddling Russia which created a Frankenstein with which they are totally unable to cope.

Thank God, our Constitution places the power in the people. Fair Deal officials are responsible to the people.

We have had enough; 1952 is the deadline.

Tax Picture

EXTENSION OF REMARKS

OF

HON. ROBERT E. JONES, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. JONES of Alabama. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Mr. Reese Amis, outstanding editor of Alabama, from the Monday, October 15, 1951, issue of The Huntsville Times entitled "Let's Keep Tax Picture Straight":

LET'S KEEP TAX PICTURE STRAIGHT

There is a great tendency these days to exaggerate to make statements that are only partially true, or that do not give the complete context, and to distort the true picture about public matters.

A sample of this kind, which confuses many indifferent or unthinking readers, at a time when taxes are becoming so much heavier, is the propaganda emanating from many political sources, leaving the inference that tax increases are due to normal expenses of the Government.

This Congress has appropriated just over \$100,000,000,000, a near record exceeded only by the levy in 1944 for war expenditures.

Of this astronomical amount, \$80,000,000,000 is for defense preparation, the waging of the Korean war, and for assistance to our allies in the cold war against Russia.

The remainder, about \$20,000,000,000, is for conduct of the Government's normal operations.

There is plenty to criticize these days, without resorting to misrepresentation, or to befuddlement of people who are groaning under the burden of crushing taxation.

All of us are simply paying for our own shortsightedness, after World War II, in throwing down our weapons around the globe, calling all the boys home too soon, and allowing the Russians to take over, because of our own military weakness.

Atomic Energy Program

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. WICKERSHAM. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following:

RADIO INTERVIEW OF MR. GORDON DEAN, CHAIRMAN, UNITED STATES ATOMIC ENERGY COMMISSION, BY CONGRESSMAN WICKERSHAM, OCTOBER 18, 1951.

Question. I am glad to have you here today, Mr. Dean, to tell the folks in Oklahoma something about our country's atomic energy program. Just what is going on in the atomic field these days that you think would be interesting to the people in Oklahoma?

Answer. Well frankly, Mr. Wickersham, we are in the weapons business more than anything else. Our main goal today is to make atomic weapons as rapidly and as efficiently as we can. We are doing this because we want to maintain and if possible increase our lead over those who might be entertaining the idea of attacking us or our friends in the free world. I believe strongly that it is important to maintain our lead in atomic weapons so that we can negotiate from a position of strength in our efforts to bring about a peaceful and honorable solution to the world's problems. I might add that we're not in this weapons work through our own choice—we are in it through the choice of the men in the Kremlin. As far as we ourselves are concerned, we would much rather be devoting all of our attention and energy to realizing some of the potential peacetime benefits of the atom, but I don't believe that any right-thinking American would suggest that we follow a course different from the one we are following.

Question. Do you mean, Mr. Dean, that our atomic weapons program has brought to a halt all progress toward realization of the peacetime promise of atomic energy?

Answer. Oh no, not at all. It is true that in many ways our weapons work hinders us in our work on peacetime applications, but in some ways it actually helps us. As you may know, one of the main characteristics of atomic energy is that most of what we do has both a military and a peacetime application. That's why the atomic energy program—in both its military and peacetime phases—has to be controlled by the Government, at least in these times.

Question. Just what is the main peacetime promise of atomic energy, Mr. Dean?

Answer. Well, I would say that when most people think of peacetime promise of the atom they think of atomic power—cheap power to do man's work and to bring light into the dark corners of the world.

Question. Are we making any progress toward that?

Answer. Oh, yes; but again, because of the state of the world, we will have atomic power first for military use. I mean specifically an atomic engine to propel a submarine. That

will be the first practical use of atomic power. We have a research machine out at our testing station in Idaho which we hope will produce some power shortly as an experiment, but the first practical use will be the propulsion of a submarine.

Question. Are we very far along on that?

Answer. I can't tell you just when we think we'll have our first atomic submarine, Mr. Wickersham, because to tell the American people would also tell the Communists and that is one of the things we don't want them to know. But I can say that we now have under construction out in Idaho the first land-based prototype of an atomic engine suitable for submarine propulsion. And, as you may know, the Navy has announced that it has awarded a contract for construction of the kind of a submarine that can operate on one of our atomic engines.

Question. What about airplanes? Hasn't there been a lot of talk about atomic airplanes lately?

Answer. Yes, there's been a lot of talk about atomic aircraft, as there always seems to be about anything that has the word atomic in it. The fact is that both the Atomic Energy Commission and the Air Force have contracts out for work on this problem. It's in only its earliest phases now, however, and we'll see an atomic submarine before we'll see an atomic aircraft. But I think there is no question that someday we're going to have both, and if we can make atomic power plants for submarines and aircraft we will be a long way along the road toward producing power for civilian use.

Question. Strictly from the layman's point of view, Mr. Dean, I would think that it would be easier to build a stationary, land-based atomic power plant to say, light a city, than it would to build the small, intricate kind you apparently would have to have to power a submarine or an aircraft. Isn't that true?

Answer. Well, yes, in a general way, it is true. But there is one important difference between a submarine engine and a commercial atomic power plant, and that is demand. There is an immediate demand on the part of the military services for an atomic submarine at almost any cost within reason, whereas there is not today a commercial demand for atomic power at the prices at which it would have to be sold. A commercial atomic power plant built today with the knowledge we now have available would be an expensive proposition, and the power it produced would be expensive—much more expensive than power produced today from coal, gas, oil, or hydroelectric systems. People just wouldn't buy it because of the cost. Our main objective, then, is, through research and development, to get these costs down to where atomic power will be competitive. I think someday we will do it, and I think our work on these military engines will help, but commercial atomic power is not right around the corner.

Question. Aren't there some private industrial firms looking into the possibility of building privately financed atomic-power plants in the near future?

Answer. Yes, and we are cooperating with them. We are making available to them all of the information they need to make a thorough and comprehensive study. Their idea is to build atomic machines that can produce at one and the same time explosive material for the Government and power for commercial use, thus making it possible to sell the power more cheaply than would otherwise be the case. In this way they hope to make the power cost competitive. We're all for them, and we're doing all we can to help them succeed.

Question. It is interesting, Mr. Dean, to have this report on just what is going on in the development of atomic power, but there is one thing which has bothered me somewhat, and that is this. To produce power,

we need to use uranium, and to produce weapons, we need to use uranium. Isn't there a competition here? Do we have enough uranium to go around?

Answer. Yes; there is a competition. It is perfectly true that the atomic-energy materials that are in our national weapons stockpile cannot be put to work producing power as long as they are in weapons, and right now very nearly all of our materials are going into weapons. But there is one thing that I think everyone should know, and that is that all of these materials that are now stored in the form of weapons can some day, if they are never used as weapons, be used to produce power. They do not deteriorate, at least for many, many generations, and they are there for us to use for peacetime application anytime we feel it is safe to do so. They are actually one of our great national resources.

Question. That is very good to know. It is good to know that all of this investment we are making in atomic energy is not wasted from the peacetime standpoint. Speaking of investment, just how much have the American people paid out to date for atomic energy, Mr. Dean?

Answer. Just about \$5,000,000,000. Mr. WICKERSHAM, including the \$2,000,000,000 spent during the war by the Army and the \$3,000,000,000 that the Atomic Energy Commission has spent since. Next year our costs—because we are in the middle of a big expansion program—will come to about \$1,800,000,000, more than double last year's.

Question. Does the Atomic Energy Commission spend all that money itself?

Answer. Yes, but it goes to the private scientific and industrial contractors that do virtually all of the work. This is mainly an industrial enterprise, Mr. WICKERSHAM, and it is mainly done by industrial and scientific people. As of today, for example, of the more than 100,000 people who are engaged in atomic energy work in this country, less than 6,000 work for the Government. The remainder work for the more than 500 prime contractors and major subcontractors, both industrial and scientific, who perform nearly all of the functions carried on within the framework of what we call the atomic energy program.

Question. That sounds like you have a big program there, and one that penetrates rather deeply into our economy. Just what are the American people getting out of this investment in money and people and materials?

Answer. I'd say we're getting national security and the hope that through our atomic strength we can find a peaceful way out of the current tense international situation. I'd say we're getting, too, considerable progress toward our peacetime goals.

Question. I noticed you said peacetime goals—that is, in the plural. Do we have some peacetime goals besides the power one?

Answer. Oh yes, very definitely, and most of them stem from the production and use of the atomic energy materials called radiolotopes. Unlike atomic power, these materials are already on the market and have been for a number of years. I don't think the usefulness—both actual and potential—of these radioactive materials can be underestimated. It may well be in the long run, that they will constitute atomic energy's greatest contribution to man's welfare.

Question. You say these materials are already on the market. Are they in wide use?

Answer. Yes; they are. To date more than 21,000 shipments of radiolotopes have been made from our Oak Ridge, Tenn., isotopes production center to more nearly 700 research institutions and industrial concerns in the United States and to nearly 200 research institutions abroad. The institutions and industrial concerns using them include 11 in Oklahoma.

Question. I think the people in Oklahoma might be interested in knowing the names of some of these concerns.

Answer. Well they would include in Tulsa the Dowell Co., the Elda & McNulty Co., Engineering Laboratories, National Tank Co., Stanolind Oil & Gas Co., Arthur C. Sweeny, Jr., and Wells Surveys Inc. Others are the Phillips Petroleum Co. of Bartlesville, Oklahoma A & M. College, and the University of Oklahoma Research Institute and Medical School. In addition, both Oklahoma A & M. and the University of Oklahoma have a number of direct research contracts with the AEC for atomic energy work.

Question. These radiolotopes certainly appear to be in wide demand. I would like to know why. Just what are they good for?

Answer. Well, they are useful in a number of different fields. In medicine, for example, they are useful in the diagnosis and treatment of certain diseases, particularly of the thyroid and circulatory system, and in research leading to the development of new and better methods of preventing, diagnosing and treating many different types of disease. In agriculture, they are very useful in learning more about the utilization of fertilizer and for the development of better plants and livestock. In industry, they are useful directly in process control, testing and the making of precise measurements, and in industrial research leading to the development of better products and better ways of manufacturing products.

Question. They sound very useful indeed. But let's take one example and pursue it just a little further. How do radiolotopes, for example, help us to raise better livestock?

Answer. There are a number of different ways but I'll cite just one example. It has been found that cattle need extremely small quantities of some very rare elements in their diets, and these are not always provided in the soil the cattle graze upon. When these are lacking the cattle are sickly, even though they may otherwise have an excellent diet. Through radiolotopes, it is possible to find out which of these elements may be needed, and, if they do not occur naturally in the soil at a given location, to supplement the cattle's diet with them in some other way.

Question. How are radiolotopes used in Oklahoma?

Answer. For a number of different purposes, notably, I would say, for various kinds of industrial and medical research and for such things as radiography and oil well logging. Radiography, you know, means using the radiations they send out in roughly the same way that X-rays are used—that is, to figuratively look into solids to discover hidden flaws in industrial products, etc.

Question. What about oil well logging? How are they used there?

Answer. Well, different types of soil and rock react differently to various kinds of nuclear radiations. By lowering radiolotopes into the ground, therefore, it is possible to determine the different kinds of strata an oil well passes through, and to determine whether the geology is favorable to oil.

Question. That seems to me to be a very useful application of a product our atomic energy program has produced. I would like to ask you some more questions, but I see our time is up and I want to say I have been very glad to have you here today, Mr. Dean, and to learn how much more there is to this atomic energy business besides weapons.

Answer. Thank you, Mr. Wickersham. I am glad you asked me over. There certainly is more to this atomic energy business than just weapons and I think it is particularly fortunate that atomic energy can serve the dual purpose of helping to bring us a better life through its peacetime applications while helping us to live to enjoy this better life through its military potential.

The 90 Dismissed Cadets

EXTENSION OF REMARKS

OF

HON. WILLIAM E. MILLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. MILLER of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call to the attention of the House the following communication I received today from Louis T. Byrne, secretary-treasurer of the West Point Society of Western New York.

The letter follows:

WEST POINT SOCIETY OF
WESTERN NEW YORK,
Buffalo, N. Y., October 15, 1951.

The officers of the West Point Society of Western New York have been studying the case of the 90 dismissed cadets, have reached a decision, and have drawn up their findings.

We were flabbergasted to learn that for many years the academic board at West Point has been giving identical tests throughout the academic year to two distinct divisions of the student body on successive or intervening days.

The decision to do this was a function of the academic and tactical instructional staffs. The necessity for such procedure is not understood and is necessarily attributable to either stupidity or laziness or to both.

Whatever the reason for this procedure, no reasonable person would expect, honor code or no honor code, that any student would resist the temptation to give study tips to friends in a group taking a later exam. The so-called dishonesty for which dismissal was decreed by the Pentagon consisted of giving these study tips or receiving them, or knowing that they were being given or received and not reporting or squealing on the boys involved. The reason that intercollegiate athletes figure so prominently in this matter is because they are the only grouping of cadets from both regiments who associate together daily—in the dressing rooms, in the shower rooms and then three times a day at the special training tables.

Cribbing and cheating, a term usually applied to class-room dishonesty, did not at any time exist at West Point and was not charged against the dismissed cadets and the work actually performed in the exam room was the cadets own work.

A supposedly intelligent academy administration should have known that this system of identical exams on intervening days could not have been practiced over a period of years in any student body, honor code or no honor code, without advantage being taken of same. We believe that the practice of giving and receiving study tips such as it is evident was being practiced at the academy over a long period of years could not have existed without the knowledge and nodding approval of the academy staff.

We believe therefore, that the academy instructional staff was directly responsible for this condition and it could properly be charged to either stupidity or laziness or both.

The dismissed cadets were really made the goats for a system which appears to have been in operation long before their time and that had apparently received the nodding approval of at least a part of the Academy staff over a period of years. There are probably a great many officers who graduated in 1951 and for many years before that who committed the same identical offense.

We are not sure that the investigations were conducted in a manner which would

meet with public approval—it is evident that legal aid was denied all, veiled threats might have been employed and all cadets were cautioned not to discuss the matter with anyone, including their parents. Respecting the nature of the investigating board procedure, we note that Robert Daru, general counsel to the Committee on Justice of the New York Criminal and Civil Courts Bar Association is conducting hearings in New York. We believe that their findings will prove to be very interesting and perhaps educational.

The manner of announcing the offenses and the incorrect deductions made therefrom by press, radio, and commentators gave the citizens of the United States and the officials of colleges and universities an entirely erroneous conception of the affair and did unnecessary harm to a group of the very finest young men in America today.

We believe that Congress should take notice of this in a just, judicial manner and should direct the reinstatement of these cadets after a suspension of 1 year from the first radio broadcast on August 3, 1951.

We believe that Congress should moreover direct that the practice of giving identical exams on successive or intervening days should be discontinued at once.

LOUIS T. BYRNE,
Secretary-Treasurer.
(For the officers of the society.)

The Jessup Row

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. DINGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Drew Pearson from the Washington Post of October 19, 1951:

JESSUP ROW SEEN PLAYING HISTORIC ROLE (By Drew Pearson)

Historians who evaluate the closing days of the Eighty-second Congress will probably make special note of the debate over Ambassador Philip Jessup.

1. It marked the high-water mark in this country of legislation through fear. Such Senators as GILLETTE of Iowa and SMITH of New Jersey were fully aware of the unfairness of the charges against Jessup but bowed to their fear of a small, intolerant, vociferous public sometimes called McCarthyites.

2. It also marked a period when newspaper editors were criticizing the White House on freedom of the press, while one wing of the press seriously confused the public by distorting or suppressing important facts so necessary to a free press.

Unquestionably the timidity of certain Senators was due in part to this confused and poorly informed state of public opinion. Unquestionably also the great majority of newsmen in this country are anxious to protect the truth of the press as well as its freedom; for without the first the second cannot survive.

Therefore, let's look at some of the facts in the Jessup hearing and see how brazenly some of them were twisted by certain publishers with political axes to grind. Take, as an example, the New York World-Telegram, published by Roy Howard, high-ranking Republican and bitter critic of the State Department, who also publishes 18 other papers from Pittsburgh to San Francisco and who is one of the largest stockholders in the

United Press which once sold its service widely in China prior to Chiang Kai-shek's overthrow.

Here is how the World-Telegram lived up to its obligation of a free and truthful press in reporting the Ambassador Jessup debate.

On October 7: Harold Stassen accused Ambassador Jessup of lying. Jessup had sworn under oath that he did not attend a White House conference at which cutting off aid to Chiang Kai-shek was discussed.

"This matter goes to the heart of the veracity of Jessup," Stassen insisted with great vigor. He stated that his memory of a conversation with the late Senator Vandenberg was crystal clear; that Vandenberg reported Jessup was present. Stassen demanded that Vandenberg's diary be produced.

The World-Telegram played up this story, critical of Jessup, on page 1.

On October 9: The State Department showed Senators confidential documents regarding conversations with other governments on the recognition of China. Even Senator H. ALEXANDER SMITH, Republican, of New Jersey, admitted that they showed Stassen to be wrong. Jessup had not favored recognition of Communist China.

This story, favorable to Jessup, the World-Telegram buried inside on page 19, though failing to report that Senator SMITH supported Jessup on this point.

On October 10: Warren Austin, a rock-ribbed Republican former Senator from Vermont, now Ambassador to the United Nations, stated the U. N. records showed Jessup to have been in New York on the date Stassen claimed he was at the White House conference on China. This completely refuted Stassen's charge that Jessup was a liar.

However, the World-Telegram, after playing up the Stassen charge on page 1, buried Austin's refutation deep inside the paper, way back on page 28.

On October 15 General Eisenhower confirmed Jessup's statement that on February 5, 1949, the date of the White House conference on China, Jessup was in New York conferring with Eisenhower on extending his leave of absence from Columbia University. This again made Stassen the liar, not Jessup. The World-Telegram carried this on page 5.

VANDBENBERG'S DIARY

Meanwhile, Senator Vandenberg's diary had been made public, showing that Jessup was not at the White House conference—despite Stassen's statement that his memory was "crystal clear." Stassen had also claimed "This goes to the heart of the veracity of Jessup." But despite this, Stassen kept bringing new charges, while his friends on the World-Telegram kept on featuring them.

On October 11—Stassen charged that Ambassador Jessup had urged recognition of Communist China at a State Department round-table discussion. He demanded that the record of the meeting be published. "Every factor in my recollection of the round-table meeting can be substantiated by the transcript," said the former Governor of Minnesota.

Next day, October 12, the State Department promptly published the transcript. It showed Jessup had taken no part in the discussion, that the State Department actually had opposed recognition of Communist China, and that those favoring recognition were private citizens, led by business executives William Herod, president of the export branch of General Electric, and William A. Robertson, of American and Foreign Power, one of the biggest utilities on Wall Street.

Despite this, the World-Telegram next day featured an editorial blasting the State Department. The same issue also carried a United Press report that "Stassen offers new evidence against Jessup."

This is how one powerful publisher stacked the news for the American public,

thus contributing to the confusion of the reader, the intimidation of the Senate, and the annihilation of one man's character. The story of another powerful publisher will follow shortly.

Message of Hope to Poland

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Polish-American Journal of October 20, 1951:

GENERAL BOR-KOMOROWSKI ASKS UNITED STATES TO SEND MESSAGE OF HOPE TO POLAND

NEW YORK, N. Y.—Gen. Tadeusz Bor-Komorowski, former Prime Minister of the Polish Government in exile and leader of the Polish underground during World War II, delivered the following speech at the General Pulaski memorial dinner at the Waldorf-Astoria hotel here.

"Brig. Gen. Casimir Pulaski shines on the pages of American history as one of the heroes of the War of Independence and a soldier unflinchingly devoted to the cause of liberty.

"A man of great personal courage with an outstanding ability for leadership, Pulaski was, even as a youth, taking an active and prominent part in the struggle to liberate Poland from the uninvited protection of Russian bayonets.

"Forced to leave his country he found after years of exile a hospitable haven on the American soil. Unable to serve his own people Pulaski offered his heart and military experience to those who raised the banner of freedom in America.

"The best way to pay homage to the memory of this distinguished soldier is to turn our thoughts toward his native country Poland and to visualize in our mind the situation in that country today.

"Almost 200 years ago, when Pulaski was undertaking an armed struggle in the defense of his country, Russian imperialism was greedily stretching out its arms in an attempt to annex Poland's national territory. Today it is Soviet imperialism, much more dangerous than its predecessor, which tied the noose of Communist slavery around the neck of Poland, and endeavors by force to turn the Polish people into a vanguard of the Soviet march toward world conquest.

"POLISH RESISTANCE"

"The Polish nation, however, hardened in long years of struggle against aggression and consistently refusing to submit to foreign domination, offers today a stubborn resistance against the enforced encroachment of Communist ideology. The moral resources of the people which prevent them from becoming submissive tools of communism and Soviet Russia have been greatly enhanced by the blood shed during the last war in the defense of national independence and of those values which are supreme to every Pole. Liberty and justice.

"To all practical ends Poland lost her independence at the moment when, with the approval of the Western Powers, which continually acceded to Stalin's demands, she found herself within the Soviet sphere of influence, and when in 1945 a Government composed predominantly of Communist and

Soviet agents was imposed upon the people against their will.

"Russia entered the conquered countries of Central-Eastern Europe with a methodical and premeditated plan for their subjugation and sovietization. According to Soviet doctrine, the road which leads to the reconstruction of the conquered countries in Communist vassal states patterned after the U. S. S. R., often extends over a period of 10 or more years, depending on the internal conditions of each country.

"This plan is based on the Soviet's own experience and is divided into several phases through which the noose of slavery is tightened and the Communist ideology imposed by force. For each of these phases Moscow prescribes specific tasks and aims to be fulfilled. The length of every phase of sovietization may vary in accordance with the internal conditions of a given country. This may create an impression that Moscow applies a different system to each of her victims. But such an impression is erroneous; Soviet tactics may differ, but the end remains uniform and unchanged and that aim is the ultimate reconstruction of the conquered countries into Communist states modeled after the Soviet Union.

"The first phase of the Soviet domination of Poland, known as the period of people's democracy was characterized by a certain degree of pseudo tolerance. In that period the puppet regime attempted to convince its subjects that Poland is being reconstructed as an independent state, closely associated with her eastern neighbor. Some of the Poles entertained the illusory hope that their country could maintain a system of government intermediate between eastern totalitarianism and western democracy. Others believed that they might live and work in peace as long as they abstained from politics. There even were some, obviously unaware of the long-range Soviet goal, who became quite enthusiastic about the people's democracy.

"It is difficult to determine precisely when this first preparatory and transitory period was replaced by the next phase known as the building of a Socialist state. Anyway, the end of 1949 and the subsequent months were already marked by a speed-up in the structural changes of the state administration and the introduction of the Communist monopoly system. The entire legal and traditional structure of the Polish state has been adjusted to the Soviet example and the Communist Party emerged as the wielder of monopolistic power.

"All that remains now is the enactment of a new Constitution which would closely follow the Soviet one. A constitutional commission is presently at work on the adoption of a new Soviet-style Constitution which is expected within the next 2 months.

"In spite of the raging terror, the ever-increasing number of arrests, in spite of the show-trials at which the defendants confess to all charges just to put an end to the torture of the so-called investigation, in spite of the system of total violence applied to the entire nation, the Poles—in their overwhelming majority—have not accepted the foreign ideology. So deeply rooted are the Christian traditions, loyalty to ancestral faith and beliefs, ideological ties with the Western World and the desire to live as free men. This applies not only to the intelligentsia, but also to the workers and farmers.

"POLES HATE RUSSIA

"The attitude of the entire Polish society toward communism and the regime is decidedly negative. The age-long dislike of Russia changed into hatred as Russia is considered the source of all sufferings which have befallen Poland in recent years. But on the other hand people are weary of their constant struggle and resistance to sovietization, a struggle which they wage in complete

isolation. Aware of the hardships and sacrifices still to come the people have adopted an attitude of survival and preservation of strength for the future. The fight against the hated regime and the introduction of Soviet institutions assumes the form of a passive but stubborn resistance.

"It was not an accident that Konstantin Rokossowski, a marshal of the Soviet Union and trusted man of the Kremlin, was appointed commander in chief of the Polish armed forces and Minister of National Defense. Rokossowski commanded the Red Army which in 1944 reached the gates of Warsaw, but having learned of the outbreak of the uprising against the Germans ordered his troops to stop the offensive. Standing on the Vistula River, in full view of the burning capital, Rokossowski refused any assistance to the insurgents thus dominating the city to ruin and the valiant patriots to death. From the time when he assumed the command of the Polish Army, all pre-war officers, even those who cooperated with the Communist regime, were arrested and replaced by Russian officers imported from the Soviet Union. At present there are hardly any Polish nationals in higher positions in the Polish armed forces.

"The Polish soldier is now under Soviet command and supervision. In a similar way Russia expands the Soviet police network in Poland which controls all aspects of private and public life. Poland is being shaped as a part of the Soviet military machinery for use in the future conflict with the western powers.

"WANT TO SURVIVE

"It may look on the surface as though the people accept such a state of affairs. In reality, however, the Poles refuse to bleed themselves white in overt opposition to the regime. They are trying to adjust their lives to the conditions which have been enforced upon them. They want to survive spiritually and physically and to preserve their strength and manpower for future contingencies. The Polish people firmly believe that the present situation is transitory and cannot last long.

"The regime is detested by the people and stays in power solely through the ruthless application of police state methods and the aid of the Soviet Army, which surrounds Poland from all sides.

"One may ask why was Poland punished so severely by fate? Why Poland, which was first to oppose the German aggression by arms and fought through 5 war years faithfully on the side of the Allies, both in the underground and on all fronts from Africa to Norway, became after the war a prey of Soviet imperialism? Have all our sacrifices been in vain? Has the world forgotten the heroic Warsaw uprising, the tragic end of which was sadly remembered 5 days ago on its seventh anniversary?

"Poland is now in chains because the western world entertained false hopes that the friendship of dictators can be bought by concessions, while tyrants understand and respect only a policy of strength. In Tehran and Yalta the principles of international morality were abandoned on the illusionary premise that totalitarianism can . . .

"Today the western world is paying for these errors by the blood of its young people. Numerous Polish-American names on the Korean casualty lists constitute painful proof that dictators cannot be appeased.

"The western democracies have at last become aware of the mortal dangers which confront them.

"POLES LOOK WESTWARD

"The people of Poland are asking if the west still remembers them, if the wartime western Allies will support their just aspirations to live as a free country.

"The western world must answer this question if Poland is to maintain her spirit of resistance against Russia and communism,

and to remain the first defense line in the present global conflict.

"The answer must be clear and unequivocal if the hundred million enslaved people behind the iron curtain in Europe are to remain spiritually in the democratic camp. The friendship of these people may become particularly important should the present cold war be ignited by an armed conflict.

"MESSAGE FROM UNITED STATES OF AMERICA

"This great country of yours can provide such an answer. Your immense moral and material resources provide a firm foundation for a policy of strength and clear-cut decisions. All countries enslaved or endangered by the march of aggression look hopefully toward America. The Poles who listen intently to the American broadcasts are still awaiting the message of supreme hope that the United States stands for liberation of Poland and her neighbors, and that the injustices inflicted upon Poland in Yalta will be rectified. The liberation of the enslaved nations of Europe and Asia should be made one of the principal aims of the American foreign policy.

"If such an answer is given the resistance against communism behind the iron curtain will be considerably enhanced.

"It is most encouraging to see the policy of the United States gradually taking this highly desirable course. Amongst the hopeful signs is the recent formation by the House of Representatives of a special congressional commission to investigate the massacre of the Polish prisoners-of-war in Katyn. I hope that this investigation will be followed by the just punishment of those who perpetrated this monstrous crime.

"GERMAN DANGER

"As the former commander of the underground army I consider it my duty to draw the attention of the American people and Government to the dangers of resurging German nationalism which within recent decades embarked on the road of armed aggression, causing untold misery and destruction. The Polish Nation will welcome enthusiastically the western armies of liberation but for obvious reasons—the eventual German contingents of the western European army would be looked upon with suspicion, distrust, and fear. Any attempt to change in favor of Germany the present Polish-German border on the Oder and Neisse Rivers would be unanimously opposed by the entire Polish nation.

"As former commander of the Polish forces and former prime minister of the Polish Government I have always worked toward a close cooperation between the United States and Poland. We believe in the same principles based on a common heritage of Christian ideals. Having full confidence in the indestructible vitality of the unconquered Polish people and aware of the great moral and material power of America, I am looking hopefully toward the not too distant day when Poland will join again the family of free nations."

Letter of Her Majesty Queen Juliana of the Netherlands

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the Record, I include the following letter of Her

Majesty Queen Juliana of the Netherlands to the President of the United States, presented by the Netherlands Ambassador, Dr. J. H. van Roijen, on September 21, 1951:

MY DEAR MR. PRESIDENT: In these postwar years I have been thinking more and more about the evergrowing problem of the refugees and the homeless in all parts of the world.

Regardless of the causes for this distressing situation I am deeply concerned with the needs of the refugees and the expelled and most of all of the residual groups which for a long time to come will be in the need of care and maintenance.

I fully realize the magnificent and wonderful work which in the course of these years has been done and the results that have been achieved by UNRRA, IRO, the churches, and the voluntary agencies. In all these efforts the American people provided the greatest share as regards workers and means. We in the Netherlands try to do our share, too, notwithstanding our own grave overpopulation.

IRO is now finishing its task. A high commissioner has been appointed by the United Nations to provide international protection for large groups of refugees, but international protection is not enough. International machinery has been established for Korea and the Arab refugees, but elsewhere such machinery is lacking. There is no guaranty that material aid will be given to large groups of refugees who badly need it. Nor is it certain that the necessary measures will be taken designed to make possible the assimilation of nonresettleable refugees in the countries of their residence.

As the free nations are overburdened by the political, military, and economic issues of the day, the refugee problem might vanish into the background.

But you will surely agree that political questions can be most dangerously aggravated by the discontentment and restlessness of millions which are numerous enough to populate a major country.

In this uncertainty I put the problem before you in all its urgency for this moment and for the future. I would like to ask you to take the initiative for a new approach to cut this sore spot out of the body of humanity, where otherwise it will remain an imminent, political danger.

This can only be achieved, as I see it, by relieving these people from their feeling of discontentment and frustration and so helping them to regain their independent and self-respect. I believe that the best way to help them is by integrating them into economic life in order to make them able to bear the responsibility for those who are dependent upon them.

The assimilation of refugees must be the aim. In many cases this will require further material assistance, but—as you will agree—that can only be effective when given in a Christian spirit of mutual responsibility and laws. Then only the individual will feel that effective care is being taken of this problem in its different aspects, and that the sum total of his basic human rights, which the United Nations have proclaimed, is being implemented. I feel that in such a spirit only we can find a solution for this and other great human problems.

They should—so to speak—be looked at through the eyes of the social worker. Too often the refugees are dealt with only on the basis of their value as a labor potential. Insofar as they are unable to work they are then considered as a liability. We cannot, however, disregard the old, the sick, the disabled, and the children. Nor should we allow conditions under which families are being split up. As long as these things happen the world must seem to them a hostile place. This must embitter them deeply—and we all learn our lesson as to how embittered people are liable to adhere to totalitarian ideologies.

In measures of relief quality is still more important than quantity, and here like always any therapy can only achieve results when applied in a spirit of respect for the freedom of each person and each people since only such freedom will enable them to play their part in the building of a sound world.

Knowing how heavy the burden is on the shoulders of the President of the United States I have hesitated to approach you in this matter. However, I know that you not only see its political importance but that you also have the human understanding and the faith which are needed to tackle it.

Yours sincerely,

JULIANA R

SEPTEMBER 11, 1951.

Railroad Retirement Pension

EXTENSION OF REMARKS

OF

HON. JOHN V. BEAMER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. BEAMER. Mr. Speaker, as I have stated on previous occasions, my interest in the railroad retirement pension stems from a long relationship with railway employees. I personally know many of the railroad men, many are relatives of mine, and I count some of these people among my closest personal friends over a long period of years.

When I was a Member of the House of Representatives of the Indiana General Assembly in 1949, the record will indicate that I voted favorably for all of the legislation that was supported by the railroad brotherhoods. As a member of the Interstate and Foreign Commerce Committee, I have felt the same interest in these railroad employees that I have felt throughout my previous years.

In these spending times, with the Federal budget mounting to more than \$75,000,000,000 per year, it is a great source of satisfaction to me personally to vote for a bill which does so much good for so many deserving people without costing the Federal Government any money. We are more frequently called upon to appropriate large sums of money or to levy additional taxes to support the ever-increasing cost of Government. The railroad brotherhoods and railroad management are to be congratulated on their pension plan, which is self-supporting and actuarially sound.

The value of any insurance or pension program cannot be disputed. It is truly an insurance against the time when physical handicaps or old age overtakes the employee and either reduces or eliminates his capacity to earn a living. With a properly conducted insurance or pension plan, personal security is provided for his declining years.

The Interstate and Foreign Commerce Committee had many bills presented in behalf of the retired railroad people who would benefit from the pension. An unfortunate inflationary condition has overtaken this country with the result that the purchasing power of the dollar has been decreased to such an extent that the pension received at the present time is inadequate. Thus, it was vitally

important that these deserving people should be given greater benefits for the investment of their money which they had made for their retirement years. I feel that the committee is to be congratulated because every member was regular in attendance and participated in discussion when it was possible for him to do so.

It happened, however, that the railroad brotherhoods were not in full agreement on the type of benefits that were to be approved. Likewise there was a lack of agreement even among the members of the Railroad Retirement Pension Board. Thus, the committee had the responsibility of resolving two different points of view in an attempt to improve the benefits for all parties concerned.

For my part I was very hopeful that some measure could be reported by the committee that would resolve these differences of opinion into one working arrangement that would be satisfactory for all. I feel that the conference committee, in its Report No. 1215, which was accepted by the House on October 19, has accomplished this purpose.

During the hearings and consideration of the bill I received letters from many railroad employees and others who were interested in their welfare. I also wrote hundreds of letters to these people throughout the Fifth Indiana District in order to have their personal thinking. All of the answers that I received in reply to the questions I asked and the comments I received indicated certain factors which I felt should be respected. All of these points are embodied in the present bill.

This indicates that at the grass-roots level, the men are thinking for themselves rather than blindly accepting the dictates and recommendations of some of the heads of their respective organizations. In fact, some of the letters even indicated that this was the condition and they wanted to express their personal opinions which they felt should be reflected through their organizations and to the Members of the Congress.

The procedure of any legislation through the House of Representatives and the Senate means that if there is any difference of opinion in the legislation passed by those two bodies, a conference committee, composed of Members of both Houses, must be appointed. This committee then is charged with the responsibility of reaching some agreement on the points of disagreement. In this case, it is apparent that the committee did an excellent piece of work which seems to satisfy both Houses of the Congress, and, insofar as I can determine from my correspondence and contact with railroad employees, will be very acceptable and a greatly improved benefit for all.

Some of the amendments to the Railroad Retirement Act may be summarized as follows:

First. Fifteen percent increase in all annuities and pensions now being paid to retired railroad employees and in annuities to be awarded in the future.

Second. Spouse's annuity—A new annuity to wives over 65 years of age of retired employees who are receiving annu-

ities or pensions and who are also over 65. (This also applies to the dependent husbands of retired women employees.) The amount will be one-half of the annuity or pension retired employees are receiving, not to exceed \$40 a month.

Third, Thirty-three and one-third percent increase in all survivor annuities now being paid and to be awarded in the future.

Fourth, If any annuity under items Nos. 1, 2, or 3 above is less than the amount that would be provided by the social security formula, there is an integration arrangement whereby the employees, with 10 years or less of service and a current connection with the railroad industry, will receive an amount equal to that which those who are under the regular social-security plan would receive. For this purpose, an arrangement, which might be termed a reinsurance plan, is established whereby the social security is purchased by the Railroad Retirement Pension Trust Fund. The purpose of this is to guarantee those with less than 10 years of service with the railroads assurance of the same retirement benefits that is accorded those under social security.

Fifth, Twenty-five percent increase in lump-sum death benefits to be paid in the future.

Sixth, No increase in taxes (the increase from 6 percent to 6¼ percent at the beginning of 1952 has been in the present law for the last several years). The increase in taxable wages to \$350 or to \$400 provided in some of the bill was omitted in the bill passed by the Congress, which leaves the maximum wages taxable at \$300, the same as it has been.

Seventh, The bill passed by the Congress leaves the present law unchanged as to work restrictions. Some of the other bills before Congress provided that a retired employee could not engage in work covered by social security at a wage exceeding \$50 a month without losing his railroad retirement annuity for that month.

Eighth, Railroad service after age 65 will now be credited in figuring annuities. Under the present law this has not been credited to him.

A further reason for supporting this measure and working so zealously for its passage is the fact that actuaries apparently agree that the provisions of the amendments would in no manner jeopardize the fund. Some of the other proposed legislation would have been very detrimental to the fund and even might have depleted the fund within the next 50 years. For this reason, it seemed to me the better part of wisdom to be on the cautious or conservative side because I knew that both contributors—the railroad employees and railroad management—were very jealous of this fund which they rightfully want to protect.

Another factor that I felt very worth while was the creation of a study committee to give further consideration and study to any other benefits that could be added without impairing or jeopardizing this fund.

It was the feeling of the members of the Interstate and Foreign Commerce Committee and also, I know, of the con-

tributors to the railroad retirement pension fund that the financial soundness of this system must be preserved.

I believe that the Interstate and Foreign Commerce Committee, both Houses of the Congress, and the conference committee have met the situation honestly and squarely. This legislation has provided the most relief possible and the benefits will or should come to the employees with the next remittance check.

The bill is a very simple one and should be administered very easily and I am hoping that the increased benefits will help to relieve the situation of many of the deserving people who have worked and contributed so faithfully for years.

Housing at Camp Polk

EXTENSION OF REMARKS

OF

HON. FRAZIER REAMS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. REAMS. Mr. Speaker, the Thirty-seventh Division which is the Ohio National Guard has been ordered to Camp Polk, La., in January. A recent report of a Senate subcommittee states that veterans in this military installation are being gouged for housing for their families which does not even deserve the name of housing. Officers and men of the Thirty-seventh Division who hope to take their families with them to Louisiana in January are greatly heartened and encouraged by the recent certification of the community contiguous to Camp Polk as a critical defense housing area. It is certainly to be hoped that this will be followed by vigorous action on the part of all Government agencies to the end that these men who are giving up these years to prepare for the defense of this country may, at least, have proper housing for their families while they are stationed in this country. Mr. Speaker, I ask leave to extend my remarks to include an editorial from the Toledo Blade of October 17, 1951, which expresses this viewpoint well.

HOUSING AT CAMP POLK

Representative FRAZIER REAMS' request that the area around Camp Polk, La., be designated critical from the standpoint of defense housing has met with prompt action on the part of the Defense Department and the Office of Defense Mobilization. This is welcome information for the families and friends of the men in Ohio's Thirty-seventh Division of the National Guard, which will report for duty at Polk in January.

Since several thousand soldiers in the Thirty-seventh come from Toledo and vicinity, the accounts which have been published about housing around the Louisiana camp have caused much concern. Because although the military authorities may try to discourage men in the Armed Forces from bringing their families along with them to training areas in the United States, many of them will certainly do so if it is at all possible. And even if the men tried their level best to make their families stay at home, some wives would insist on being near to their husbands no matter what inconveniences and actual hardships were involved.

The break-up of a home, even temporarily, is about the highest cost that is chargeable to debit side of the military ledger. It's a perfectly human and understandable thing for a couple to resist being separated for as long possible. This being so, it would appear that the Defense Department may be forced to give more consideration to the housing facilities for military dependents in camp areas than was shown when it assigned the Thirty-seventh to Polk.

The few small towns in the countryside about the Louisiana post are ill-equipped for receiving large numbers of soldier families. The post itself has quarters for only three families. The upshot has been that some civilian landlords have been able to gouge exorbitant rentals for one-room dwellings and other inadequate shelter. Nor have civilians been the only profiteers, since at least one master sergeant established himself in the housing business to exploit his buddies' needs.

Now that the Camp Polk region has been officially listed as in critical need of defense housing, perhaps the conditions which a Senate committee described as deplorable can be eliminated. The Government will be able to ease credit restrictions on residential building. Blanket rent control may also be established. As a consequence, the Ohio men reporting for duty in Louisiana may find some improvement over the present situation.

But critical defense area or not, Camp Polk's housing problems may require more than a couple of months to solve. Ordinary prudence and concern for the comfort of their families would indicate that the men of the Thirty-seventh assure themselves that suitable quarters are available before a change of residence.

Address by Secretary of Commerce Sawyer Before Ohio State University Advertising Conference

EXTENSION OF REMARKS

OF

HON. WILLIAM F. KNOWLAND

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. KNOWLAND. Mr. President, pursuant to the unanimous consent obtained during the debate, I submit for printing in the Appendix of the RECORD the full text of an address delivered by Secretary of Commerce Sawyer before an Ohio State University Advertising Conference at Columbus, Ohio, on October 19, 1951.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

GOVERNMENT ECONOMY: ITS PROSPECTS AND POSSIBILITIES

We hear continually of the need for economy in Government. It is discussed, many times with heat, in and out of the Halls of Congress. Nobody disputes that the costs of Government should be cut. As a theoretical objective, everyone is for it. Problems become difficult as they become practical. The way to cut costs is to cut. There is a theory that by so-called streamlining of Government activities and reshuffling of functions, great savings can be accomplished. This theory is attractive, but is it sound? Some savings can be made by streamlining—great ones require a different treatment. Fundamentally I can conceive of no large savings of Government funds—the taxpayers'

money—except by eliminating things which the Government does. Large savings must be made in the places where we are making large expenditures.

I propose to discuss this matter from a completely realistic and objective standpoint. That being so, we must recognize that we are dealing with an extremely difficult problem. The difficulty lies in the fact that everyone favors economy as applied to the other fellow—few favor it when it strikes home.

Many reports on efficiency and reform of Government procedure have been produced. The most recent and outstanding and helpful of these are known as the Hoover Commission Reports, the result of long and serious study by competent and experienced men. The President has made a conscientious effort to carry out the recommendations of these reports by 35 so-called reorganization plans which he has periodically submitted to the Congress. Of these, the Congress has adopted 27, rejected 8. The Hoover proposals are constructive and honest efforts are being made to carry them out.

The great trouble with most reports on efficiency in Government (and this is true of reports on many subjects) is that the reports are filed away and thereafter never seen or used. We now have, in my judgment, sufficient studies and suggestions with reference to reorganization.

What is needed is to put the suggestion into effect, but beyond this is the need to recognize that reorganization in itself will not accomplish a major result. Studies which deal with a dream world and bear little relation to reality, full of graphs and charts and regrouping of functions, will not bring about great savings.

I might interpolate that the drafting of studies and programs is a Washington obsession, which in itself calls for the expenditure of more money, the use of more manpower, the occupying of more space. In many cases it results in a recommendation that a further study be made or that a new commission be appointed to take over the problem which has been discussed.

For great savings we need—not more studies—but action. What kind of action is required? As I said at the beginning, to accomplish great savings we will be forced to cut down or get rid of certain functions now being performed. With such action, and in fact with any specific suggestion along this line, there will arise a howl of protest and anger from every affected individual or group throughout the country.

There are, however, some practical steps which could be taken short of the drastic one I suggest, and the ideas I am about to set forth have been based not upon any commission study but on observation of what goes on in government as I have lived with it myself. My first suggestion is perhaps impossible of fulfillment, but here it is.

Each department of the Government is required to submit periodically its estimates of expenditures for the coming year. This "year" is a fiscal year which begins on July 1. Appropriation requests must be developed at least 1 year in advance of the next fiscal year. This confusing use of a fiscal year starting July 1, should be abandoned and all Government expenditures—after an appropriate interval for adjustment—be placed on a calendar year basis. Furthermore, requests for appropriations should be made as closely as possible to the period for which the funds are intended. If appropriations hearings for the calendar year 1952 were held by Congress near the first of that year, it would afford the Congress and the Government departments the advantage of utilizing up-to-date information. I appreciate that this is a drastic proposal and difficult to achieve—the legislative machinery tends to grind slowly. The processing of

a Federal budget currently requires weeks if not months because of the necessity for hearing each official identified with a particular appropriation. I am informed that one bureau in a Federal department had as many as 80 separate appropriations until a short time ago. The Government has moved to reduce the vast number of appropriations, which I am satisfied is a step in the right direction.

In connection with the budget submitted by each department, the operations and probable expenditures of the department are outlined in great detail. These figures are carefully scrutinized. The department head who is desirous of promoting economy, questions his agency subordinates as to the amounts of money requested to carry on each activity. Strength of character is needed to cut down these requests—first, because the men who make them are honestly enthusiastic about the activities in which they are engaged, and second, because the suggestion is continually made that in other agencies and in other departments the urge to economize is not equally present. The Congress has been fine in giving credit to my Department for its endeavor to economize, and for that reason I have suggested that a particular effort be made to operate within the amounts appropriated, and if possible to come up with a surplus. The answer from an operating official is that if he shows a surplus he gives Congress the impression that the original request was excessive and the agency head a poor administrator. Instead of being rewarded for his success in economy he fears that he will be penalized by reduced appropriations for the following year. This has gone so far that toward the close of the fiscal year if a surplus in any particular account is found to exist, extraordinary efforts are made to discover ways of spending it.

It is obvious that these frantic efforts—and I use the word "frantic" advisedly—at the close of the fiscal year represent expenditures which could be avoided. The remedy for this disturbing situation lies partly with the administrative heads and partly with the Congress. I have stated repeatedly to my bureau heads that I will not tolerate any such practice. As the result of my action, the amount of \$6,220,000 of the funds available to the Department of Commerce for the past fiscal year was saved. These funds will be returned to the Treasury as required in the case of all unexpended balances and other receipts such as those from the sale of documents and publications, which last item, incidentally, amounted to \$1,009,810 50 for the current year.

Savings can be made, of course, by improvements in management. In my department as well as others there are agency heads who make honest and effective efforts in saving. In the Civil Aeronautics Administration of the Department of Commerce, for instance, over \$3,000,000 was saved through improvements in operation—in streamlining of organization and management. In the Patent Office, one of the smaller bureaus in my Department, savings to the Government of over \$123,000 were brought about through reductions in printing costs alone.

These savings are laudable, but the agency head should get something besides praise. He should be able to feel that what he has accomplished brings some reward to his particular agency. We need a recognition of the value of incentive. We must devise and make effective incentives for saving the taxpayers' money, instead of incentives for spending it. If the agency head were permitted to retain for purposes of administration money received from the sale of publications and documents or similar services, we could cut down by these amounts the requests for appropriations. If he could

spend as he chose on agency activities even a part of the money he had saved, it would furnish a powerful incentive for economy.

I am convinced that an inherent weakness in the present Federal budget system is the tendency for the Congress to make many separate appropriations for separate functions in a single department. For example, the appropriations in my Department are made separately to the Civil Aeronautics Administration, the Weather Bureau, the Coast and Geodetic Survey, and so forth. It would be helpful if the Congress were to make the several appropriations to the head of a department, so that he, as a matter of operation within his over-all budget, could see that the money was spent in the best possible manner. This would permit the department head to do a better management job by holding costs to a minimum. If a department head is to be fully responsible for running his agency, he should have full authority for all expenditures in his department.

There has recently been exhibited in the Congress a feeling that the only way the executive branch can be forced to save money is by across-the-board cuts. This feeling is understandable. I would like, however, to make this suggestion: If the Congress feels that a percentage cut is necessary, let it permit the department head to distribute this cut throughout his department as he sees fit. Let him decide where the cut should be made.

I realize the difficulty of carrying out these suggestions. Members of Congress themselves have very definite ideas as to where money should be spent. Furthermore, they face continued and vigorous appeals from constituents for the financing of various projects. Any action by a department head which would adversely affect a particular project would meet with prompt and loud objection in some quarter. Nonetheless I know that these suggestions are sound. The appropriation committees of the Congress could still, of course, exercise final authority over the executive expenditures. If they felt the administrative head had been arbitrary, frivolous or unwise, they could make their own suggestions for the next budget. I am certain that the executive head would give preferred attention to these suggestions.

Another point should be made with reference to the impact of these across-the-board cuts. If one department has been run extravagantly, spending much more than was necessary, a cut in that department's budget would not affect its operation, except perhaps to improve it. The same would not be true of a department which had been rigidly economical. The department head whose sincere wish is to economize is halted continually by the feeling that others are not being equally economical, that his economy will penalize his own operations while others benefit, or at least are not similarly penalized.

If the President were authorized to make a flat cut of a certain percentage in the over-all expenditures, with discretion as to where the cuts should be made, it would tend to reduce, although it would probably not eliminate, the discrepancy between the department which is economically managed and the one which is not. I'm well aware of the difficulties which such a plan would present and the arguments which might be made against it; but the arguments in its favor outweigh those against it, and I'm certain that adoption would bring about many helpful economies.

One desirable change in the Federal book-keeping and budget-making would be a separation of the capital from the operating account. When Congress is appropriating money for capital expenditure it is doing something quite different from appropriating

ating for an operating expenditure. There is no reason why capital investment of the Federal Government should not be treated as such and good accounting practices applied to appraising its value, writing it off in a way similar to that done by private business. Furthermore, it is not only proper, but in my judgment highly desirable to set up and maintain continually the difference between a capital expense, which is theoretically permanent, or semipermanent, and operating expense which is not recoverable.

Since the department head and the bureau head do not at present receive credit for savings made, they have no great incentive to retain and encourage the more efficient employees and to get rid of the opposite kind.

In an effort to protect the civil servant and remedy the evils of the so-called spoils system we have created a body of practices, precedents, and laws which tend to treat employees as automatic units or robots and which do not adequately recognize the difference in quality of service which employees render. In spite of my years of contact with Government procedures, I am not yet accustomed to hearing an employee referred to, not by his name, but as "that GS-12 or 16"—referred to, in other words, by his salary grade.

If Government service is to be improved and the taxpayer is to get more for his money, certain things in the field of Government employment must be accomplished. First of all, the prospective employee and his employer must proceed on the basis that employment by the Federal Government is a privilege, not a right. Many seem to labor under the concept that a citizen has a vested interest in employment by the Federal Government or at least an inherent right to a job once obtained. In judging an employee, recognition must not only be given to his loyalty and honesty, but to his competence. It is not sufficient to get only qualified employees; it is essential to get the best qualified available within the present pay scales. This leads to vesting in the department head greater responsibility in the selection of employees than the present mere drawing of names from a so-called eligible list. It is necessary to recognize that while all men may be created equal they rapidly develop differences. Some are alert, some sluggish; some industrious, some lazy; some brilliant, some stupid. We should make a more determined effort than has so far been made to distinguish between a person's real qualifications and a paper record of achievements and to reward those who are efficient and get rid of, or at least not promote, those who are second rate.

In connection with the budgets which are presented to me periodically, one of the always recurring items is within-grade salary increases. This means in effect that automatically, since now almost all employees are rated "satisfactory," the employee gets an advance. Almost no supervisor will face the risk of time and effort necessary to prove an "unsatisfactory" rating or to make the decision which would prevent the automatic raise.

It should be easier than at present to eliminate incompetents. An American citizen has certain inalienable rights, but guaranteed employment by the Federal Government is not one of them. Every agency head has learned over the years that any effort to remove an employee is fraught with a most annoying and disappointing, if not disastrous result. It is, of course, obvious that the agency head should not from whim or caprice be able to discharge an employee. He should, however, have more leeway than he has at the present time. In all fairness it can be said that the regulations and procedures and the philosophy back of them are designed primarily to keep the employee in

his job. Frequently the trial of an employee for incompetence results instead in the trial of the agency head for prejudice or intolerance or worse. I recognize there is some risk involved in granting greater latitude to the agency head to discharge or demote an employee but in my opinion he should have such latitude.

Many an agency head has finally come to the conclusion that he will leave incompetents on the payroll rather than go through the unpleasant ordeal of trying to get rid of them. Having learned his lesson, he gives up his attempt to crash through all the maze of procedures and gradations which have been established and moves unenthusiastically with the current. It seems to me that greater administrative discretion, with protection of the individual from whim or prejudice, should be allowed without interminable appeals, some of them outside the agency—at least in the important policy-making positions.

On the other hand, there are in the public service, just as there are in business or elsewhere, those employees, devoted to their work, who will try in every possible way to do a superior job and give everything they have to the public service. To encourage and promote and adequately reward such employees is of the utmost importance. Here, as elsewhere, the question boils down to one of real incentive. The importance of this concept cannot be overlooked or minimized.

I have discussed some possible methods by which Government expenditures can be cut down.

The real solution to mounting Government expenditures and perhaps the only solution is, however, wholly different. It is drastic but simple. It is embodied in the statement that there is a limit to what we can do. No amount of streamlining of Government service will be a substitute for facing this unpleasant fact. There is a limit to the number of Government activities we can undertake. When we face this fact and move on from there we immediately confront almost insuperable but not really insuperable difficulties—for the question then is—what things can be eliminated? Which among the many laudable and worthwhile undertakings of Government are to be abandoned?

One way to keep out of this distressing dilemma is not to add new agencies where it can be avoided; new agencies which must later painfully be endured or liquidated. It is easier to prevent the creation of a new agency than to kill an old one.

We have a mania for new agencies, commissions, and study groups. When a new problem confronts us, it is common practice to suggest that some outstanding man of great ability (the theoretical man is always one of great ability) be brought to Washington to head up a new commission or agency to handle the problem. He is usually given a large amount of money to operate with. I will give you two illustrations.

One of the objects of solicitude of many both in and out of public office, and one of the matters deserving close and continued attention, is the situation and in some cases the plight of the small-business man. It is, of course, not true, as some claim, that the small-business man has been or is being completely crushed out in this country. Until recently the growth in the number of business enterprises has been steady and great. There are now slightly over 4,000,000 business enterprises, most of them small. About 300,000 are manufacturers. At this time, however, the small-business man does have his problems—plenty of them. There are in the Government, and have been, several agencies which are undertaking to be of help to the small-business man. This is true in the General Services Administra-

tion, the various branches of the armed services, the Reconstruction Finance Corporation, the Department of Commerce, and others. Within the Department of Commerce the National Production Authority, which handles critical materials and allocates them, has given particular attention to the small-business man's problems and is making great efforts to help him solve them.

The Congress has also been considering his problems, and has come up with a new agency. It is to be called the Small Defense Plants Administration, and the law specifically provides that it shall not be affiliated with or be within any other agency or department of the Federal Government. It has been proposed that this Agency be given a total of \$50,000,000 to spend. The administrator is to receive \$17,500 salary, and his two deputies are to be paid at the rate of \$15,000 each. While I shall, of course, do everything in my power to help carry out the wishes of the Congress, I feel, as I have stated before several congressional committees, that the work could have been done by existing agencies effectively and with a great saving of the taxpayers' money. Here, as elsewhere, the creation of a new agency to supplant a number of old ones results only in the new agency being added to the old ones.

I will give you a second illustration of my point. We have since World War II spent on foreign aid of one kind or another many billions of dollars. It is, aside from our military expenditures, the biggest item in our budget. These foreign-aid activities are carried on by many Government agencies. There has been a growing move lately, supported by many men of prominence and organizations of importance, to create a new superagency to handle foreign aid. The recent act of Congress dealing with foreign-aid discloses disturbing progress along this line. In my opinion, as I said recently in a letter to Senator CONNALLY, this would create serious if not insoluble administrative and foreign-relations problems, and in the long run would produce an unbearable drain upon the taxpayers.

Aside from other arguments which might properly be brought against this suggestion, one is, in my judgment, unanswerable. No department at Cabinet level should be created whose sole function is to give away money. We don't need a Santa Claus department. Santa Claus should operate as a private, not a public, enterprise.

In connection with the problem involved in curtailing the agencies which we already have, we must begin with the realization that we are not dividing the sheep from the goats. We are not retaining only those activities which are beneficial and eliminating those which are useless. In almost every case we will be forced to a decision to retain or abandon activities which are in varying degrees beneficial. Obviously, this presents a difficult problem and will prove to be a very unpopular job.

We are faced initially with the question of the relative importance of Government activities, in fact that is the fundamental question. Let us take, for instance, the matter of research. The oldest and certainly the most eminent governmental research authority in the country is the National Bureau of Standards, of the Department of Commerce. The Bureau was appropriated about \$8,500,000 for its operation this past year. In contrast, the annual appropriation for the Department of Defense currently for research and development is \$1,400,000,000. The Office of the Secretary of Defense alone is given \$90,000,000 for these purposes. This latter figure itself is about the equivalent of all the money which has been appropriated for research and development in the National Bureau of Standards since it was organized

50 years ago. The typical question, therefore, would be: If appropriations for research and development are to be cut, where is the cut to be made? The question is not simply between civilian and military expense since the Bureau of Standards, outside of its regular appropriation, does a vast amount of research for other agencies, chiefly the Department of Defense.

Two years ago there was passed out to the potato growers of this country the sum of \$190,000,000. This was more than the total amount spent that year in my Department for the Weather Bureau, the Coast and Geodetic Survey, the Patent Office, the Bureau of the Census, the Office of Business Economics, all the field offices of the Bureau of Foreign and Domestic Commerce, and the Office of International Trade.

Last year the United States, through the Economic Cooperation Administration, provided Western Europe with \$374,000,000 for machinery and equipment to be used in constructing or rebuilding its plants and \$817,000,000 for raw materials to be used in European industries—a total of \$1,200,000,000. In connection with national defense during the past year there was committed a billion dollars for defense plants and an additional \$1,100,000,000 for defense supporting facilities in the United States. Here is a possible alternative contrast.

I am not undertaking in any one of these cases to suggest which of the contrasted appropriations is more important. The answer may be clear to you. It is clear that when we talk about economy and mean it, we are facing a very tough problem. We really must answer the question: the \$64 question—or shall I say the \$64,000,000,000—what do we eliminate? It seems clear that the first thing required is a certain community of approach by the legislative and executive branches. There is, however, no reason to be discouraged, and if the American people mean business the savings can be accomplished.

The backbone of our capitalistic system is Government credit. Lenin once said that the surest way to destroy a capitalist regime is to debase its currency. That is still true. I do not suggest that we must at all times and under all circumstances balance the budget. The failure to recognize an emergency may be just as fatal as the failure to recognize the end of an emergency. We cannot avoid, however, the unpleasant task of self-discipline which is involved in meeting this problem of economy. There is a limit to what we can do. We should be making choices continually. Eventually we must make some drastic ones.

Hawaii Is Ready for Statehood

EXTENSION OF REMARKS

OF

HON. EDWARD H. JENISON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. JENISON. Mr. Speaker, one of the vital issues crying for prompt action by the Congress is approval of statehood for Hawaii. So well documented is the case for admission of Hawaii to the Union that this House has twice passed such a measure. New consideration of this step so essential to the welfare of the Nation should be given as soon as the Congress reconvenes in January.

As an indication of the readiness of Hawaii for statehood I call attention

to the analysis of the proposed constitution for Hawaii. The study was made by S. Gale Lowrie, on the faculty of the University of Cincinnati at Cincinnati, Ohio. It was published in the October issue of the American Political Science Review. Because it comes from a scholarly and unprejudiced source, the study further supports the contention that the citizens of Hawaii are well schooled in the underlying principles of representative government and ready to assume its responsibilities as well as its benefits. Under permission granted me by the House, I include the text of Dr. Lowrie's study, as follows.

A CONSTITUTION FOR HAWAII

(By S. Gale Lowrie, University of Cincinnati)

A convention assembled in Honolulu on April 4, 1950, to draft the constitution for the new state of Hawaii which the framers hope will soon be created by Congress. On July 22 the constitution was signed in the throne room of the old Iolani Palace in a colorful ceremony. Sixty-two of the sixty-three delegates signed the document, and the Territorial legislature, at a special session called for that purpose, approved its submission to the electorate by a unanimous vote in the lower house and with but two opposing votes in the senate. The voters ratified the constitution at the general election on November 7, 1950, by the substantial majority of 82,788 to 27,109. Sentiment for statehood has been increasing in the islands until it has reached the proportion registered in the referendum on the adoption of the constitution. The minority in opposition was small, and it is probable that a number of those voting in opposition registered disapproval not of statehood but of the document as written. The only organized opposition came from the International Longshoremen's and Warehousemen's Union, which is on record as recently as May 1950 as favoring the admission of Hawaii to the Union of States.

The act of the Territorial legislature of May 20, 1949, authorizing the convention may have seemed premature, since congressional approval for statehood is yet to be secured. But hope was high that the Eighty-first Congress would admit Hawaii as the forty-ninth State, and in calling a constitutional convention before admission was assured, the Territory followed the precedent set by 15 of our States. The House of Representatives of the Eighty-first Congress did in fact adopt H. R. 49 to grant statehood to Hawaii by the vote of 232 to 110, and the Senate Committee on Interior and Insular Affairs recommended the measure for passage. The Senate was strongly urged by the President and the Secretary of the Interior to take action before the congressional session drew to a close, and a majority of the Senators expressed themselves informally as favoring statehood. However, the issue was not brought to a vote and must now be considered anew by the Eighty-second, or a later, Congress. But there is confidence that the events of 1950, in the islands and in Washington, will hasten favorable congressional action.

Although several States have in recent years revised their constitutions and others have adopted amendments proposed by conventions, there have been no original documents for new States since New Mexico and Arizona were admitted in 1912. Much careful research has been given State constitutions in the intervening years, and Hawaii prepared her draft in the light of these studies. Most of the States have constitutions which have been outmoded by the technological and social changes of the last half century. Hawaii had an unusual opportunity to draft a modern document.

A striking feature of the Hawaiian Constitution is its provision for a strong Governor to be elected for a 4-year term. In addition to the usual duties ascribed to that office—responsibility "for the faithful execution of the laws," recommending measures to the legislature, granting reprieves and pardons, acting as commander in chief of the State's armed forces—he is given important appointive power, and each principal department is placed under his supervision. Through his control over the purse, he is to possess ample authority to dominate the State's activities. Unless the legislature should provide otherwise, no other executive officer is to be chosen by election except the lieutenant governor. Instead of organizing the administrative departments by constitutional provisions, the legislature is commissioned to establish not more than 20 principal departments in accordance with major purposes; and, unless otherwise provided, these are to be headed by simple executives. These department heads are to be appointed by the Governor for terms ending with his own, and they are subject to removal with the senate's consent. The constitution requires the Governor to appoint an administrative director to serve at this pleasure.

Under the organic act which now governs the Territory, the President of the United States appoints the Governor and secretary of state. The latter acts for the chief executive when the Governor is absent from the State, with authority to exercise all powers vested in the chief executive's office. This valuable provision is to continue when Hawaii becomes a State. The lieutenant governor, who will probably serve as secretary of state ex officio, although other duties may be provided by law, will, in the absence of the Governor from the State or his incapacity to exercise and discharge the duties of his office, have the powers and duties of the chief executive devolved on him. If the office of Governor becomes vacant, the lieutenant governor will become Governor.

It is made a duty of the Governor to submit to the legislature a budget comprising a complete plan of operating expenditure and capital improvements, together with a statement of anticipated receipts and recommendations for new revenue from taxes or borrowing. He is given specific authority to veto or reduce items in appropriation bills. A section of the article on "Taxation and Finance" requiring that provision be made "for the control of the rate of expenditure of appropriated State moneys, and for the reduction of such expenditure under prescribed conditions," probably contemplates a continuation of the present territorial system of allotments. This system clothes the Governor with the power of expropriation, even with respect to those departments organized for continuing policies under board administration, such as the department of education and the State university. In their desire to hold the chief executive accountable, the farmers have, at least potentially set up one of the most powerful executive offices in the United States.

The office of the Governor is further strengthened by the restrictions placed upon the legislature, particularly in limiting the sessions to 60 and 30 days. The legislature is to consist of two houses, a senate of 25 members elected for 4 years, and a house of representatives of 51 members elected for 2-year terms. The organization of this branch of government was affected by the unique geographical features of the proposed State, which consists of eight principal islands, unequal in size, population, and wealth, and so separated that passenger travel between them is principally by air. To represent the geographical areas, senatorial districts are established in the constitution, and these may not be changed except by constitutional amendment, which must be approved by a

majority vote in the State as a whole and also by majority votes in a majority of the counties. Representation in the lower house is apportioned on the basis of population. The desire to give the island of Oahu (which not only is the most populous of the islands, but also is the seat of government and the economic and financial capital) equal representation without reducing existing representation from the outer islands, resulted in increasing the size of this body to 51, from its present size of 30 in the Territorial lower house. Compared to the size of legislatures of other States, a legislature of 76 members is not a large one. The story is different when one considers that the islands have a population of less than half a million. Under present conditions, there will be one member of the legislature for each 1,780 registered voters.

Regular sessions of the legislature are to meet annually, but it is only in the "general sessions" to be held in the odd-numbered years that general laws are to be enacted. The sessions held in the even-numbered years are to be known as "budget sessions," limited to consideration of appropriations for the succeeding fiscal year, capital improvements, revenue necessitated thereby, constitutional amendments, and bills to call elections. Urgent legislation may be introduced upon the demand of two-thirds of the full membership of each house. General sessions must conclude in 60 days and budget sessions in 30 days. The Governor may extend any session 30 days. The Governor may call special sessions, but may not limit their agenda, as he may in some States.

A provision of the New Jersey constitution which calls for the return of the legislature after 45 days to act on bills vetoed by the Governor, has been borrowed and incorporated. No steps were taken to avoid the legislative jam which too often accompanies the closing days of legislative sessions, by arranging for continuing or periodic sessions. With respect to those bills which are passed during the last 10 days of the session, the Governor is allowed 45 days for consideration. Those he vetoes during this period are to be reconsidered by the legislature in a special veto session. The legislature is to return after this 45-day period to revise the bills to meet the Governor's requests, to pass them over his veto by a two-thirds vote in each house, or, by failing to do so, to acquiesce in the veto.

Although the legislature is empowered to create administrative or regulatory boards, the only ones provided in the constitution are the board of regents for the University of Hawaii and the board of education to control the public-school system of the State. Both boards are to be appointed by the Governor with the consent of the senate and are to be representative, at least in part, of the geographical subdivisions of the State. In the appointment of members of the board of education, names are to be taken from panels to be submitted by local school advisory councils. Central control of the educational system of the Territory now exists under the provisions of the organic act enacted by Congress for the Territory.

The convention is to be commended for its faith that the legislatures of the future will be competent and can be trusted to deal with the problems of their day. In consequence, it placed fewer restrictions on these bodies than are to be found in most constitutions. A controversial issue arose respecting home rule for political subdivisions. The article incorporated grants local agencies the right to frame and adopt charters for self-government, but the article is not self-executing and the powers will be exercised within such limits as may be prescribed by law. This provision, consequently, grants little to local bodies, but it is doubtful if much more local autonomy could have been established by

constitutional mandate. Centralizing administrative forces are at work. Public education is already centralized; the entire island of Oahu is for most municipal purposes an administrative unit. The geographical nature of the proposed state may demand special treatment for certain areas, and technical changes affect governmental operations.

The decision to establish the judiciary on an appointive basis will be approved by many who believe that the elective system in most of the States fails to secure the most competent judges. The supreme court will consist of a chief justice and four associate justices. There are to be circuit courts and such inferior courts as the legislature may establish. Judges of the supreme and circuit courts are to be appointed by the Governor, with the advice and consent of the senate, the former for 7- and the latter for 6-year terms. They may be removed, for causes provided by law, by a two-thirds vote of each house of the legislature sitting in joint session. If an agency (to be set up by law) shall certify to the Governor that a judge of the supreme or circuit court seems so incapacitated as to prevent performance of his duties, the Governor shall appoint a board of three to make inquiries, and on their recommendation the Governor may remove the judge.

No provision is made for the initiative to propose either statutes or constitutional amendments, nor for the referendum, except on constitutional amendments. Constitutional amendments may be proposed by the legislature or by conventions called for that purpose. The legislature may submit amendments which have received a two-thirds vote in each House, or majority votes at each of two successive sessions. Conventions to consider constitutional revision will be called if a majority of the voters so demand when the issue appears on the ballot. The convention issue may be submitted by the legislature at any general or special election, and must be submitted every 10 years. The Lieutenant Governor will place the matter before the voters if the legislature fails to act during this interval. Amendments, proposed by legislature or convention, must be approved by a majority of those who vote on the issues, and, in addition, by 35 percent of those who vote at the election, if submitted at a general election. Issues voted at special elections must have majorities on the issues and the approval of 35 percent of the registered voters. The voting age is 20 years.

No limitations have been placed on the State's power to tax, but a debt limitation of \$60,000,000 is established, which may not be exceeded except by a two-thirds vote in each house of the legislature. By these majorities, the legislature may contract debt up to 15 percent of the assessed value of real estate. Debts of local subdivisions are limited to 10 percent of the value of real estate in the subdivision. These limitations are not applicable to debts to raise funds to suppress insurrection, to repel invasion, or to meet disasters. They are not applicable to bonds secured by the revenues of enterprises and public corporations, nor to refunding bonds. The procedures to be followed in the passage of appropriation bills and in debt administration are set forth in some detail.

The convention which framed the Hawaiian constitution, while conservative, was mindful of the social obligations of a modern state. But rather than outline constitutional procedures for the State to follow, it was content to assert the basic duties of the State, leaving it to the legislatures of the future to devise appropriate means of meeting these obligations. The State must take measures to promote the public health, provide domiciliary care for mentally or physically handicapped and assist those unable to maintain living standards compatible with health and decency. The State may assist in slum clearance, in providing housing for those with low

incomes, and in rehabilitating substandard areas. Public lands are to be used as fully as possible to encourage farm and home ownership. For the development of places of beauty and of historical or cultural interest, private property may be subject to reasonable regulation.

The constitution contains the usual guarantees to protect civil liberties. Influenced by experiences in the Islands during the Second World War, the power of suspending the writ of habeas corpus, or laws, is to be exercised only by the legislature, or, in particular cases, as the legislature may expressly provide. There will be no discrimination or segregation on the basis of race or religion.

The civil service is to be governed by the merit principle, and the retirement system, which is to include the judges, is declared a contractual relationship. Public employees may organize and make known their grievances and proposals; private employees may organize for collective bargaining.

The style and arrangement of the proposed constitution are excellent. It is a brief document which contains fewer provisions of a statutory character than will be found in the constitutions of most of the States.

The Agricultural Conservation Program

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the Record, I include the following:

THE AGRICULTURAL CONSERVATION PROGRAM THE SOIL CONSERVATION AND DOMESTIC ALLOTMENT ACT

The agricultural conservation programs of the United States Department of Agriculture are carried out under the provisions of the Soil Conservation and Domestic Allotment Act, Public Law 481, Seventy-fourth Congress, approved February 29, 1936. This act amended and supplemented the Soil Erosion Act of 1935, Public Law 46, Seventy-fourth Congress. Its enactment provided for a new agricultural conservation program. The Soil Erosion Act of 1935 expressed the policy of the Congress "to provide for the protection of land resources against erosion and for other purposes." The amendments approved February 29, 1936 (The Soil Conservation and Domestic Allotment Act), added the expression of the policy of the Congress "to promote the conservation and profitable use of agricultural land resources." More specifically, the amendments state that the policy and purposes of the act are: (1) Preservation and improvement of soil fertility; (2) promotion of the economic use and conservation of land; (3) diminution of exploitation and wasteful and unscientific use of national soil resources; and (4) protection of rivers and harbors against the results of soil erosion in aid of maintaining the navigability of waters and water courses and in aid of flood control.¹

ADMINISTRATION OF THE AGRICULTURAL CONSERVATION PROGRAM

Previous to the reorganization of the soil conservation and agricultural research activities of the United States Department of Agriculture announced by Secretary of Agriculture Charles F. Brannan on February 16, 1951, the soil conservation programs consisted

¹ 49 Stat. 1148.

basically of two programs, one administered by the Soil Conservation Service and the other by the Production and Marketing Administration.

THE SOIL CONSERVATION SERVICE PROGRAM

The Soil Conservation Service has been considered the technical agency of the Department of Agriculture which aids in bringing about physical adjustments in land use to conserve soil and water resources, establishing a permanent and balanced agriculture, and in reducing the hazards of floods and sedimentation. In carrying out its program, the service conducts studies to determine the character, causes, effects, and extent of soil and water loss and to develop, adapt, and improve conservation farming practices and methods which will adequately protect our farm land and water resources. The development and improvement of practices is accomplished by laboratory and plot work to develop basic information and by experiment station field trials or practices. The work of the service is conducted in cooperation with the State agricultural experiment stations and other Department of Agriculture agencies, and is correlated with the programs of the Agricultural Research Administration.

Federal Government expenditures for soil conservation research and soil conservation operations carried on by the Soil Conservation Service during fiscal year 1950, totaled \$52,846,176.^{*}

The accomplishments of the Soil Conservation Service during fiscal year 1950, have probably been greater than in any previous year. Throughout the year, planned soil conservation measures and land use adjustments were applied in amounts equal to complete treatment on approximately 26,000,000 acres. Complete conservation plans were made according to the needs and capabilities of the land, for about 132,000 farms and ranches. These plans covered nearly 39,000,000 acres. In addition to the conservation plans carried out on the farms and ranches, detailed soil conservation surveys were completed on more than 31,000,000 acres. This work was all done in the soil conservation districts by technicians of the Soil Conservation Service working with the farmers.^{*}

In carrying out its program for fiscal year 1950, the Service cooperated with 2,200 soil conservation districts. These districts included approximately four-fifths of all the farms and ranches of the Nation. The Service did not give these districts all the help they desired and requested, however, because of its limited facilities and personnel.

AGRICULTURAL CONSERVATION PROGRAM ADMINISTERED BY THE PRODUCTION AND MARKETING ADMINISTRATION

The agricultural conservation program, administered by the Production and Marketing Administration is the means by which the Government offers to help farmers finance specific conservation practices that are needed and that will be needed in the future. This program is designed to restore and maintain the national soil and water resources by encouraging and assisting farmers to carry out on their farms approved soil-building and soil and water conserving practices in greater volume and variety than would be performed without such assistance.

Financial and other aid is available on request, under the program, to all farmers in the United States, Territories, Puerto Rico, and the Virgin Islands. Funds appropriated for this purpose are distributed among the various States, Territories, and insular

areas on the basis of their conservation needs. The amount of assistance required by any one State or area is estimated on the basis of the physical characteristics of the land, climatic conditions, crops grown, and the extent of particular practices needed to prevent wind and water erosion, to conserve water and improve its utilization for agricultural purposes, and to maintain and increase soil fertility.

Assistance offered on individual farms provides an incentive to farmers to carry out effective soil conservation practices. Financial assistance is given to farmers for practices which represent orderly progress toward the accomplishment of practical conservation farming. The payments to farmers for completing authorized conservation practices average less than 50 percent of the cost of carrying out the practice, and consist of materials, services, and reimbursement payments. The practices for which farmers can obtain Government assistance generally include four major classes: (1) Construction practices such as terracing and leveling land; (2) establishing and improving pastures of perennial grasses and other permanent cover, (3) growing annual or permanent cover crops, and (4) applying minerals such as lime, potash, and phosphate, to pasture and hay-land sods.

The agricultural conservation program is administered locally by State, county, and community Production and Marketing Administration committees. The county and community committees are elected by the farmers of their respective counties and communities. The State committee is also a farmer committee, its members being appointed by the Secretary of Agriculture. The farmer committees, with the advice of the technical committees composed of representatives of Federal, State, and local agricultural agencies, select and develop the conservation practices which make up the State and county programs. These farmer committees also determine in a large degree the manner and extent to which the agricultural conservation program applies to individual farms, and they have the responsibility of administering the program in the interest of the entire Nation, and in such a way as to obtain the greatest possible conservation with available funds.

Farmers in every agricultural county and community in the country are cooperating in the agricultural conservation program. During the crop year 1949, these farmers carried out approved soil- and water-conservation practices on 2,686,791 farms, comprising approximately 62 percent of the Nation's cropland.

These practices were carried out on a share-the-cost basis. The cooperating farmers, on the average, paid for about half the out-of-pocket cost and in addition did the work. The investment of the Nation in protecting its soil and water resources and in building a more productive agriculture is paying dividends in maintaining high production from our farms. Continued high farm production and protection of the Nation's soil and water resources are important parts of our national defense effort.

The 1949 program was a continuation of the program of the previous year. Changes for 1949 came as a result of experience with the previous programs. Acreage allotments on a number of the major crops provided an opportunity for farmers to use the land taken out of the allotment crops to carry out conservation on a more intensive scale. Particular encouragement was given to increase the acreages of grasses and legumes. A survey of grass and legume seed needs and special emphasis on seed production gave further encouragement to this aspect of conservation.

Cooperating farmers, during the 1949 program year, encouraged and aided by assist-

ance provided under the agricultural conservation program on a share-the-cost basis—Seeded 5,035,975 acres of pasture.

Constructed 58,261 dams for livestock water.

Established 17,379,703 acres of green manure and cover crops.

Built 443,328,000 linear feet of terraces.

Farmed 3,336,249 acres of intertilled and 2,539,575 acres of close-sown crops on the contour.

Carried out contour strip cropping on 229,075 acres.

Constructed 39,787 dams for erosion control (storage type) and 1,842 dams for irrigation.

Applied 24,933,957 tons of liming materials, and 3,109,972 tons of phosphate (20 percent P₂O₅ equivalent), to aid in establishing and maintaining stands of grasses and legumes.

Planted 95,573 acres of forest trees and shrubs.

The accomplishments of program year 1949 added to conservation measures carried out since the beginning of the agricultural conservation program in 1936 have helped to increase the country's assurance of continued abundant production from the land. From 1936 through 1949, farmers cooperating in the agricultural conservation program have carried out the following soil- and water-conservation practices:

Seeded 45,837,893 acres of pasture and range land.

Constructed 917,122 storage-type dams and reservoirs.

Improved the farm land of the Nation with 232,760,415 tons of lime.

Enrich the soil with 21,195,371 tons of superphosphate (20 percent P₂O₅ equivalent).

Established 231,972,655 acres of green manure and cover crops.

Terraced 16,944,432 acres of farm land.

Farmed 126,811,567 acres of farm land on the contour.

Field-stripped 71,643,300 acres to control wind and water erosion.

Planted 784,023 acres of trees.^{*}

The estimated gross assistance to farmers for conservation practices during the 1949 program year was \$223,855,000. Although the maximum assistance allowable was \$750 per farm operator, actually, individual payments averaged \$79.15 for the 1949 program. It is alleged, however, that this assistance represents only a small part of the value of the conservation practices carried out. Farmers, matching with their own funds and labor the assistance provided, and carrying out additional conservation measures because of the encouragement and aid given, more than doubled in value of conservation practices the funds made available through the agricultural conservation program.

Conservation work was further stimulated through the farmers' and rancher's conservation program initiated during the last half of the fiscal year 1949 in a few counties and expanded to 73 counties in 33 States. In 1950. Under this program, farmers were encouraged to develop their own conservation program and then available assistance from all sources. Federal agencies, State and local groups, and private enterprises, was fitted so far as possible to the needs of the individual farm.

Some of the leaders in the agricultural conservation movement feel that this work has accelerated thinking and action in meeting conservation problems on individual farms, and that although many of these problems are local in nature, they vitally affect the welfare of the Nation. It is believed by administrators of the program that this approach will provide more complete and exact information, farm by farm, as to

^{*} U. S. Department of Agriculture, Production and Marketing Administration.

^{*} U. S. Department of Agriculture.

^{*} U. S. Department of Agriculture, Report of the Chief of the Soil Conservation Service, 1950, p. 8.

the conservation problems which exist, making it possible to develop and operate a more effective agricultural conservation program for the country as a whole.⁵

THE CONTEMPLATED AGRICULTURAL CONSERVATION PROGRAM FOR 1951

Efforts to promote conservation and development of agricultural land and water resources will be continued during 1951. It is estimated that \$257,500,000 will be available for conservation payments to farmers to assist them in carrying out approved conservation practices on their farms. Many of the practices approved for the past year will be continued throughout the 1951 program year. In working out the conservation program for 1951 the program will be planned to fit in with the national preparedness program. Farmers are being encouraged to produce more cotton, corn, wheat, and other grains. This means that some conservation practices emphasized during the past year will not be carried on as extensively in 1951. Practices will be planned and approved that will lead to adequate production of commodities needed for national defense both now and in the future.

Assistance will be given to farmers carrying out conservation practices under the 1951 agricultural-conservation program in accordance with the provisions of the 1951 National Bulletin issued September 1950, as amended. The following is a general description of the conservation practices applicable to the continental United States, which are contemplated for the 1951 program year:

- 1 Practices to develop cropping systems that protect the soil and restore, improve, and maintain soil productivity.
- 2 Practices to restore and maintain range and permanent pasture.
- 3 Practices to conserve and obtain efficient use of agricultural water.
- 4 Drainage practices to permit land-use adjustment needed in establishing soil-conserving cropping systems, or to permit other measures required to conserve soil and water resources.
- 5 Practices to establish, restore, and maintain farm woodland.
- 6 Practices to protect soil from wind and water erosion.

The above list includes the major classes of conservation practices that will be carried out during the 1951 program year. Numerous specific program will be used to achieve the desired results under each of these general classes.

COORDINATION OF AGRICULTURAL RESOURCES CONSERVATION SERVICES

On February 16, 1951, the Secretary of Agriculture, Charles F. Brannan, announced the reorganization of the soil conservation and agricultural research activities of the United States Department of Agriculture. He stated that the administrative changes being put into effect seek to carry out the objectives of the President's Commission on Organization of the Executive Branch of the Government—the group generally known as the Hoover Commission—as they pertain to soil conservation and agricultural research. Mr. Brannan explained further that he felt that the changes will enable the Department of Agriculture to do its work more efficiently and economically and that the Nation would be assured of more soil conservation per appropriated dollar.

As now organized, a single policy will govern the soil conservation activities of the Department of Agriculture, and the activities will be carried out through a unified and interlocking administrative organization.

"The basic physical objective of soil conservation activities by the Department agencies shall be the use of each acre of agricultural land within its capabilities and the treatment of each acre of agricultural land in accordance with its needs for protection and improvement."

The conservation programs of the Forest Service, Soil Conservation Service, and Production and Marketing Administration, will be supervised by an Assistant Secretary of Agriculture. Under the supervision of this official these agencies will jointly determine the soil conservation practices and rates of payment for the agricultural conservation program. These are decisions for which the Production and Marketing Administration has had sole responsibility, although in practice PMA has consulted the other agencies.

The Assistant Secretary of Agriculture will also maintain a continuous survey of the agricultural resources activities of the Department and determine with the Secretary such action, including transfer of functions, as may be necessary and appropriate to insure integration, effectiveness, and economy of these activities.

The land and water resources staff of the Office of the Secretary will be assigned to the Assistant Secretary in charge of agricultural resources conservation services, to assist him in carrying out the Department's responsibilities relating to flood control, river basin investigations, and various other matters concerning land and water utilization.

The reorganization plan also provides for unification of the agricultural conservation field work. In each State and county, personnel of the Soil Conservation Service and the Production and Marketing Administration will be housed in the same building as soon as possible. At present, farmers and others having soil conservation business with both the Production and Marketing Administration and the Soil Conservation Service may have to go from one office to another in the same town or even in different towns.⁶

Why We Are Fighting

EXTENSION OF REMARKS OF HON. CLARENCE CANNON OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES
Saturday, October 20, 1951

Mr. CANNON. Mr. Speaker, this is a day of columnists and broadcasters, but the most pertinent column on Missouri and American affairs is the column by H. J. Blanton, which has appeared regularly for many years in the Monroe County Appeal, of Paris, Mo.

Mr. Blanton has received every honor—local, State, and national—that could be conferred on a newspaperman, and both he and the Appeal have been the subject of numerous articles and features, notably in the Saturday Evening Post and other national magazines.

Under leave to extend remarks I am including a couple of paragraphs from last week's issue of his famous column:

NO ENTHUSIASM FOR GREATEST WAR

Young men who come back from Korea are shocked to find how little interest the

⁵ U. S. Department of Agriculture, Office of the Secretary, Memorandum No. 1278, February 15, 1951.

⁶ U. S. Department of Agriculture, Memorandum No. 1278, February 15, 1951.

general public is showing in what is going on over there—how little it knows about why we are fighting, and how little it cares about the outcome. There are no send-offs for departing soldiers, no welcoming parties for returning veterans. There is no singing of war songs. There are no orations about the invincibility of American arms. There are no sermons about the justice of our cause, few editorials whose purpose is to mold sentiment for what we are undertaking to do.

This, too, when the world destiny hangs on the outcome of that war, and when democracy and Christianity never had more at stake. While we are bearing most of the burden, that war really is being fought by the United Nations, not by the United States alone. Its purpose is to put an end to aggression, to make this world safe from any present or future attempt at world domination. If it is lost, communism will win.

If communism wins, Christianity will receive the greatest set-back in 500 years. What is happening in Russia, where religion is not tolerated, and China, from which all missionaries are being expelled, and in Bulgaria, Rumania, Poland, and Czechoslovakia, in which preachers and priests are being imprisoned, is what will happen in other countries on every continent. If our side wins, it will mean an end to aggression. It will mean freedom of religion, freedom of the press, a continuance of our way of life, and freedom to carry the Gospel wherever we please. With so much at stake how can pulpit, press, and people be so indifferent?

Let's Avoid a Greater Korea in Iran— Milwaukee Sentinel Makes Common-Sense Proposal To Avoid Explosion in Middle East

EXTENSION OF REMARKS OF

HON. CHARLES J. KERSTEN

OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, October 18, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, three editorials recently set forth in the Milwaukee Sentinel, in common with other Hearst newspapers throughout the United States, proposes a plan formulated by J. Kingsbury Smith, European general manager, INS, which seems to be the common-sense approach to avoid a greater Korea and a possible explosion that might inaugurate world war III starting in Iran.

It would be a grave mistake for us to support exclusively British policies in Iran or any place else, particularly if those policies are inimical to the Iranian people or other people elsewhere.

The Milwaukee Sentinel editorials provide a just basis for a settlement when they propose that the rights of the Iranian people are primary in any settlement of the Iranian oil question.

Particularly pertinent is the editorial written by Mr. Joseph Packman, No Blood Bath Over Iran's Oil. I wish to set forth hereinafter the three editorials: [From the Milwaukee Sentinel of October 9, 1951]

ACT NOW TO PREVENT WAR IN IRAN

Unless swift and decisive steps are set in motion by an administration which has

⁵ U. S. Department of Agriculture, Production and Marketing Administration, Report of the Administrator of the Production and Marketing Administration, 1950.

badly bumped the problem up till now, America faces a super-Korea in Iran should a shooting war detonate in that oil-rich area.

The spark that could touch off a third world war is clearly flickering and it is the urgent duty of our Government to snuff it out while there is still time.

Each passing day edges us closer to war, as America's involvement is a foregone conclusion should violence flare.

British power would be pitted against Iranian fervor in the early stages, with Stalin waiting in the wings for the cue that would propel the Red Army over the border in response to the Soviet-Iran pact of 1921.

The United States has no chance of keeping out once England and Russia commit armed forces to the scramble.

Thus far our efforts to mediate in the trouble zone have not been distinguished by their sagacity.

The same rigid adherence to Anglo-American unity that shackled General MacArthur in Korea has paralyzed our chance to effect a settlement satisfactory to both sides.

The time has come for a new approach, and the Hearst newspapers believe the formula is to be found in the plan advanced by J. Kingsbury Smith, European general manager for International News Service.

Mr. Smith advocates the formation of an international committee, composed of representatives from Iran, England, and countries which have received Iranian oil in the past.

This group would recognize the just rights of both Britain and Iran; it would insure the continued production of oil, so urgently needed to fuel the western world's rearmament effort.

Most of all, it would prevent prostrate Iran from falling into the yawning embrace of communism.

Prospects of a quick settlement through the United Nations are not bright, but the Smith plan at least should receive as much consideration as any other proposal.

It favors the Iranians who would still control their oil industry. It would provide needed revenue to finance their country's economic development and thus lift the living standards of a majority of the poverty-stricken population. And the funds for such a program would be made available in Iran and not be handled by politicians.

A stumbling block in any U. N. decision is that Soviet Russia still holds the power of veto. The Russians could be expected to exercise this power if only to keep the pot boiling in Iran.

Couldn't the dispute be settled outside the U. N.?

The time to act is now. Our leaders have already delayed too long. The State Department should act quickly to inject reason into a passionate dispute that could become the tinder box of world war III.

The American Government should throw its influence behind the Smith plan, a formula for peace that would forestall once and for all a super-Korea in Iran.

[From the Milwaukee Sentinel of
October 6, 1951]

NO BLOOD BATH OVER IRAN'S OIL

Great Britain has shown good sense in deciding to take home her oil experts from Abadan, as demanded by Iran.

By so doing she has avoided a strong possibility of getting a black eye in the United Nations, at the least. And by bowing to Iran's national pride she has made a significant, although tardy, move for peace.

For this Americans should be grateful, because it would be foolish to think we could avoid involvement in a British war to enforce her oil contract in Iran. Just as fool-

ish as to try to unscramble an egg. Having entered into the global wrestling for world power in the First World War and its natural sequel in the Second World War, no war involving any major nation could break out without affecting our interests.

While Russia could possibly stay out of open involvement in the war in Korea if it went against her interests, she could find it convenient to jump into Iran if Britain tried to defy the Persians. Not only is Russia in a good military position there, but she would be doubly armed with the moral excuse of going to the aid of a little neighbor resisting invasion.

Such a clash in Iran would bring America in up to its neck. But such a war would lack the moral reasons for all of our previous resort to arms. Such a tragedy would find us in the position of fighting to enforce a commercial contract gained by a great nation from a small, inexperienced country.

Contracts as we like to look at them are agreements of mutual interest between parties who are equal before an impartial court. Agreements involving nations, at this stage of world organization, are finally enforceable only with war.

We are sure Englishmen don't want to fight such a war.

And the Iran Government surely knows it could not win such a war. And we don't want to go to war over this issue.

It really wouldn't make any difference who quit fighting first, nobody would win that war.

This is certain, that short of war Iran has the sovereign right to change its mind about who is going to exploit her very valuable oil property.

This much is also certain, that we of the industrial west, England and America, etc., need that oil—and we can pay the best price for it. We can pay in more than gold. We can pay in food and machinery desperately needed to put Iran on its feet.

So then, without any further loss of time, let's work this whole problem out on a business and humane basis. The Hearst newspapers have started the ball rolling in proposing a new international company to do business with Iran in place of the British firm the Persians now refuse to tolerate.

Let's not turn Iran's pool into a blood bath.

[From the Milwaukee Sentinel of September
30, 1951]

A PLAN FOR IRAN

READERS CAN HELP PROGRAM TO SAVE PEACE

Only one thing is clear concerning the muddled oil dispute between Britain and Iran: Every day in every way we're being drawn deeper and deeper into the mess.

Britain's Socialist Prime Minister, Mr. Attlee, is calling on President Truman to do all he can to help keep the British oil men in Iran.

The new American Ambassador to Iran, Loy Henderson, couldn't wait to present his credentials to the Shah before he went into conference with Premier Mossadeq over the troubles of the Anglo-Iranian Oil Co., which is owned by the British Government.

Secretary Acheson and British Ambassador Franks went into a huddle in Washington and said that they were giving every consideration to further possible action in the crisis.

Within the last 24 hours the problem has been placed before the Security Council of the United Nations, but experience would indicate that a Russian veto or unlimited debate could prevent a solution for months.

Stalin has said nothing. But he has a treaty giving him the right to enter Iran if that country is invaded. And Stalin has many convenient ideas of what invaded means.

What with the British paratroops mobilized in the Near East, the 50 British warships in Iranian waters, the ugly temper of Iranian ultranationalists and the incitation of its Tudeh Communists, we are confronted with the hot and ready makings of a super-Korea.

To make the picture worse, Churchill has demanded that Parliament oppose any British withdrawal in Iran. Should Winnie get his old job back, he may try again to get the generous American support supplied by Mr. Roosevelt in 1940.

Ordinarily our advice would be for the United States to keep as far away as possible from this dirty squabble. But should one spark ignite a shooting war between the British and the natives and should the Russians declare themselves in—well, figure it out for yourself. While you're about it try and recall any "police actions" we've kept out of recently.

Can the explosion which seems inevitable be forestalled? Can the United States save itself blood and treasure by coming forward with an emergency solution that would resolve the deadlock?

J. Kingsbury Smith, European general manager for International News Service, spent several weeks in Tehran as the dispute neared the showdown stage. He talked with and listened to all the principals involved and wrote a penetrating analysis of the situation which was published in the Hearst newspapers at the time.

A few weeks ago Mr. Smith amplified the coverage with a report. In the report he suggested a simple plan which respected the rights of both sides in the argument and provided the basis for a peaceful settlement.

The Hearst newspapers believe that the Smith plan has solid merit and advance it at this time for the consideration of our readers.

"Main objection of the Iranian Government to an agreement with Britain is that it no longer wishes to have a British-owned company control its oil industry. The Iranians feel the British gave them a raw deal, treated them as inferior people.

"Why not create an international company to act as the operating agent for the National Oil Co. of Iran?

"The international company could be composed of representatives of Iran, Britain, and other countries which are the chief consumers of Iranian oil.

"Under such an arrangement, Iran's right to control its own oil industry would be recognized. At the same time, efficient operation of the industry and continued flow of Iranian oil to the free world would be assured.

"As part of this plan, the Iran Government might be persuaded to use its increased oil revenue to finance a program for the economic rehabilitation of the country—whose people are among the most poverty-stricken in the world.

"Such a program already exists. It was formulated by a group of American economic experts. It was adopted by a former Iranian Government. It came to nothing, however, because of lack of funds.

"With an international company handling the production and distribution of Iran's oil resources on a profit-sharing basis, the necessary funds would become available for implementation of that program.

"The Iranian Government could probably be persuaded to have the funds for the program administered by an international group of experts under the auspices of the Economic and Social Council of the United Nations.

"This would be a safeguard against corruption in the use of the funds. It would mean that the common people of Iran would be the chief beneficiaries."

If Mr. Smith's idea makes as much sense to you as it does to us, there still may be

time to force a statesmanlike American approach to the Iranian problem. Here is what you can do. Clip this editorial and mail it to your Senator at the Senate Office Building in Washington, D. C. The Senators from Wisconsin are ALEXANDER WILEY and JOSEPH McCARTHY.

It may still not be too late to head off another Korea.

University of Illinois Students Urge Voting Age Be Lowered to 18

EXTENSION OF REMARKS OF

HON. EDWARD H. JENISON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. JENISON. Mr. Speaker, one of the perplexities of our times is the large number of our people who fail to exercise their most precious right—the right to vote. It is refreshing, therefore, to find a demand among a growing number of our young people that the voting age be lowered to 18 in order that they may begin to exercise this right earlier than at present. Statutory control of voting qualifications is a State matter, of course, but it appears noteworthy to me to report a movement presently taking place at the University of Illinois in Champaign-Urbana to obtain legislative consideration for a proposal to lower the present age limit from 21 to 18 in the State of Illinois. Reliable figures indicate there are approximately 465,000 persons in the State between the ages of 18 to 21 who would thus become eligible to cast a ballot.

There are several persuasive reasons in favor of the change. The present limit of 21 was determined in a period when the public was without the means for obtaining with ease a general knowledge of public affairs, public issues, and candidates for public office. Greater educational opportunities and present-day newspaper, radio, and television facilities bring the problems of the day to all the people, young persons included.

Perhaps most important is the fact that the Nation has had to turn to its youth for the defense of the land twice in the first half of the present century, and at this moment is doing so for a third time. The national leadership has recognized the fact that at 18 a young man is mature enough to fight for his country. Surely he is mature enough to think for his country as well.

Another reason with some measure of weight is the fact that good government, by our standards, demands the fullest possible reflection of public sentiment at the polls. Voting, or not voting, is a habit. We recognize the fact that good habits should be developed early in life. A young person interested in meeting this primary responsibility of representative government is likely to continue that interest and continue to meet that responsibility.

The case for lowering the voting age has been well supported by an informa-

tive editorial appearing in the student newspaper, the Daily Illini, of which Garland Fritts is editor in chief. Under permission granted me in the House, I am including the editorial in the CONGRESSIONAL RECORD, as follows:

LOWER THE VOTING AGE

Because of its great import on the subject of lowering the Illinois voting age to 18, we quote in full President George D. Stoddard's statement on the subject from a recent book.

"Now is a good time to abandon the idea that at age 21, and not before, the American citizen is entitled to full voting privileges. In the light of researches in child development and experience with in-school and out-of-school youth, voting for all persons at age 18 is clearly indicated.

"By that age, most persons have finished school and are meeting real economic and social responsibilities. Their intelligence, energy, and sense of participation adequately counterbalance the wisdom and life-experience of voting citizens in the later decades. Moreover, by voting, they might learn what voting means. Their interests, if specialized at all, would be attached to the needs and problems of youth, and that would be all to the good.

"However, no means of test, short of a legal verdict of incompetence, should be attached to the 18-year-old voter; as for the 21-year old, any such test, except by purely chronological, would lead to an unreasonable loss of suffrage. It simply could not be well administered.

"For American life in the middle of the twentieth century, to deny the franchise until age 21 is to hold back persons who are capable of assuming social and political responsibilities. There is no magic power in 20 or 19 or 18, but the last figure represents a young person further along (thanks to science, education, and democratic procedures) than the 21-year old of the preceding century."

It would be well at the outset to explain to the doubters and cynics that this campaign for a lower voting age in Illinois is no fly-by-night affair.

The idea was a long time in the making and has received top grade help from administrators and faculty members throughout the university. Students formulated the idea and went to those men for advice.

Origin for the idea cannot be claimed by any person now at the university.

Many persons have thought about this problem, particularly since the beginning of World War II. Most of them laid down their beliefs on the subject because of the great amount of legal red tape necessary for its completion.

Youth have had little contact with real red tape, and for that reason possibly, the students at this university are willing to undertake getting passage of the necessary State of Illinois constitutional amendment.

Before going any further it should be pointed out also that this campaign is not a publicity stunt of any individual.

There is a group of persons here who sincerely believe the 18-year-olds of this State ought to have the right to vote.

Persons within this group have pledged to keep individuals and organizations, as much as possible, out of the campaign for what they consider a great moral issue.

They believe this campaign is a good one and are hoping to receive the backing of the entire student and faculty body. Petitions now being circulated by the Daily Illini will give a rough indication of student sentiment.

Student senate members have suggested referring this subject to a general student referendum. We approve such a move as long as it is well handled and every student and faculty member be able to vote easily.

We include the faculty in this referendum and petitioning because its members are an integral part of this campus. No issue of such vital concern should be undertaken leaving them out of it.

Four State leaders Thursday approved the student senate resolution for lowering the age qualification on all legal questions in the State.

So far in the campaign no organized opposition has shown itself. The Daily Illini, in spite of its editorial position in favor of this idea, will continue its policy of printing both sides of every issue.

When, and if, any opposition does arise to this campaign we pledge our wholehearted cooperation and full use of the news columns for unbiased coverage.

It has never been our idea that this will be an easy task.

It was mandatory the subject be brought up now for consideration by the 1953 general assembly. It is impossible to get consideration of a topic brought up the last minute before the legislature meets.

Now the subject can be debated throughout the State and by persons involved in the coming gubernatorial election in 1952.

Another point backs the idea of bringing this topic into the light at this time. Most persons now on the campus will be able to make definite opinions on the subject.

These same students will be of age to vote when the topic comes up in the legislature. They can then influence the assembly members in the manner they believe correct.

Another advantage is that critics of the campaign cannot point to persons now at the university and say it is selfishly inspired.

We believe the 21-year-old ruling is grossly unfair. We hope to alleviate that injustice for those men and women following us.

This is a moral issue of the highest caliber.

Women have every legal right offered them in the State of Illinois when they reach the age of 18—except one—the right to vote.

Eighteen-year-old men and women are as qualified to vote for the leaders of our country and State as anyone over 21.

Although we cannot deny the existence of some younger persons not capable of voting intelligently, we do not believe the old generation can claim completely intelligent voting by all persons in its ranks.

Citizens of Illinois are given the right to make wills at the age of 18 in 1943. That was only a small beginning.

All citizens, 18 and over, should have the right to vote, sell property, buy property, and carry on in other legal practices.

We urge a university-wide referendum. We also sincerely believe in the importance and high quality of this move to lower the legal age in this State.

Mr. Speaker, I find myself in complete accord with the proposal. I feel the State of Illinois, and other States as well, would advance the cause of representative government by considering favorably a lowering of the voting age to 18.

Appropriation Bills, Eighty-second Congress, First Session

EXTENSION OF REMARKS OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. CANNON. Mr. Speaker, I submit a report of the appropriations made

APPENDIX TO THE CONGRESSIONAL RECORD

during the first session of the Eighty-second Congress. The following table

sets forth the amounts of estimates considered, the amounts approved by the

House and the Senate, and the amounts finally appropriated:

Appropriation bills, Eighty-second Congress, first session

Title	Estimates considered by the House	Reported to House	Passed House	Estimates considered by the Senate	Reported to Senate	Passed Senate	Law

RECAPITULATION							
Total, defense activities, 1952:	77,892,805,648	74,615,918,873	74,523,242,123	78,030,362,648	79,021,162,075	77,435,601,554	76,032,673,743
Total, nondefense activities, 1952:	10,861,349,603	9,792,216,372	9,637,524,487	10,928,437,914	9,538,204,064	9,605,888,206	9,785,086,341
Total annual appropriations, 1952:	88,754,155,251	84,318,134,945	84,160,766,610	88,958,790,562	88,559,366,139	87,341,489,760	84,817,960,084
Permanent appropriations, available automatically not subject to annual review, and indefinite appropriations (estimated):							6,116,000,000
Grand total appropriations, 1952:							90,933,960,084

¹ Totals by agencies not available because of general reduction by Senate not applied to individual agencies.

There has been some criticism of the Committee on Appropriations this session and its failure to effect reductions in appropriations. The newspapers have frequently referred during the past few months to the economy drive on the floor of the House revising the appropriation bills and making large reductions which

the committee should have made. The following table shows the amounts reduced by the committee before the bills were reported to the House and the further reductions made by the House. The committee effected reductions during the session of \$4,805,497,517, while this much touted economy drive on the floor suc-

ceeded in taking out only \$162,789,335 additional, only 3½ percent of the amount already taken out by the committee. In other words the committee reduced estimates 5 percent and the House effected further reductions of less than two-tenths of 1 percent.

APPENDIX TO THE CONGRESSIONAL RECORD

A6745

Comparison of action by Committee on Appropriations and by House

Title	Estimates considered by the House	Reductions by House Committee on Appropriations	Further reductions by the House	Estimates considered by the Senate	Total passed by Senate	Law

¹ Totals by agencies not available because of general reduction by Senate not applied to individual agencies.

In closing the appropriation records for the session, it is hardly necessary to call attention to the untoward effect of the discontinuance of the consolidated bill. It is too obvious to be overlooked.

The single package appropriation bill was attacked on two major grounds:

First. It delayed appropriation bills beyond the beginning of the fiscal year and they could be handled much more rapidly as individual bills.

Second. Greater economies could be effected through the individual bill approach because of the greater attention which could be given to details.

The record of the first session of the Eighty-second Congress proves the fallacy of both of these arguments. In fact

it is conclusively demonstrated by the record of action on appropriation measures this year that just the reverse is true on both counts.

As to the delay here is the record: For the fiscal year 1951: Conference report on the general appropriation bill, making provision for all agencies, agreed to on August 28.

For fiscal year 1952: First conference report agreed to on August 9. In all, five bills agreed to by August 20. Remainder of bills not agreed to until month of October, the last being on October 20.

It is obvious that the charge of delay does not hold water. The earliest bills enacted were only a few days ahead of

the date of the single package bill and the others were so much delayed as to greatly embarrass the agencies involved, including the State, Commerce, Justice, and Defense Departments.

As to the question of greater economies here is the record:

For fiscal year 1951: Single package bill, total reduction below estimates. 6 percent. Total reduction on other than Department of Defense items. 9.2 percent.

For fiscal year 1952: Individual bills, total reduction below estimates on regular annual bills: 2.7 percent. Total reduction on other than Department of Defense items. 6.3 percent.

The figures speak for themselves.

While the consolidated procedure would have made it possible for the House to pass all regular supply bills before the Easter holidays—with the exception of the military bills which had to be delayed pending receipt of estimates—we were not able to take final action on the last of the annual appropriations until after the expiration of more than a quarter of the fiscal year 1952. Never has there been such delay and confusion and attendant waste as there has been this year. No business can be operated successfully or economically when its programs and policies are held in suspense over a quarter of the new year, and the Federal Government is no exception to the rule.

It could not have come at a more unfortunate time. Seldom has there been such need for prompt and expeditious action on the money bills as at the present session. The President in his budget message of January 15 handed the Congress a pay-as-you-go budget. The excess of projected expenditure from past appropriations and the new appropriation requests were to be met by added revenue. Congress was expected to preserve the pay-as-you-go principle, whether by following the budget recommendations or by reciprocal adjustments between expenditures and additional revenues. To determine the minimum of additional revenue which would have to be raised in order to balance the budget, it was necessary to know with reasonable accuracy how much the Congress might be expected to pare projected expenditures. The only method by which this could be effected was through the procedure of the omnibus bill. As it was, no one knew what the relation of the various departmental expenditures would be to each other and no one could tell definitely the total amount of expenditures until the last week of the session. And the tax bill, which should have been predicated on the amount of revenue needed to cover current expenditures, and which should have been passed early in the session to provide the needed revenues, was not disposed of until the middle of October.

Every major nation in the world, every State in the Union, and every metropolitan city in America uses the consolidated procedure. Why should the United States Congress be the only exception in continuing the use of the quill pen and the horse-and-buggy methods of the last century?

Flood Relief and Flood Control

EXTENSION OF REMARKS OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. CANNON. Mr. Speaker, under leave to extend my remarks, I include a letter which I have addressed to certain

newspapers carrying erroneous reports of proceedings in the Committee on Appropriations and in the House:

EDITOR, KANSAS CITY TIMES:

The suggestion in news columns and editorials that I have opposed aid and insurance programs and other measures for flood control is absurd. My district, at the confluence of the Missouri and Mississippi Rivers, receives every drop of water that passes Kansas City and added water from tributaries in between.

The next morning after the news of the flood came I got through a resolution providing \$25,000,000 for immediate relief. Just as soon as Colonel Howse provided the data I appointed a special committee to draft a report and the House passed the bill in record time. It did not include indemnities or insurance for the simple reason that 85 percent of the Members of the House and Senate would not vote for either.

I gave a luncheon in order to get the Congressmen from Missouri, Kansas, and Oklahoma together and organize support for the program while the hearings were in progress. No other attempt was made to organize support for the program. At this meeting, with all newspapermen present, I stated unequivocally that I was for the whole program, including aid and insurance and urged cooperation of the three delegations as no other State was directly interested. The AP telegraphed this to all its correspondents and yet newspapers reported that I was against the program and was delaying the bill. I was for the program and there was not 1 minute's delay in the committee or the Congress. Colonel Howse was responsible for the delay as the printed hearings clearly show. All members of the three State delegations were favorable and cooperated but the bill that was passed was the best we could get. And the Senate passed it without changing a line or a word.

The charge that I am against the engineers is even more ridiculous. Any work in the nature of flood control must be done by the engineers. There is no other agency. But they have not completed the plans and told us they would not have the definite project report ready until next year. In the meantime they say they can spend any amount of money we give them. Of course they can. But how will they spend it? They testified before our committee only a month or two ago that the regular routine is to complete the definite project report before asking for construction money. Even after the definite project report was completed they had to move the Gavins Point Dam 8 miles from its original location. And after they had the definite project report and had completed the Wappapello Dam on the St. Francis River and had assured everybody that it would control all floods for all time to come, the area supposed to be protected by the dam suffered the worst flood in its history. The people in my district have been holding mass meetings at the county courthouse and all over the inundated area calling attention to the work done on the river for the last 70 years and insisting that the floods grow more destructive every year, that the more money the Government spends the less protection they get.

Even with the most careful planning the engineers have made ghastly mistakes. We cannot afford to make mistakes this time. Too many people and too much property and vast Government appropriations are involved and we must not take any more chances on incomplete or inefficient planning.

I enclose printed copies of the hearings and report.

CLARENCE CANNON.

Stamps for Peace

EXTENSION OF REMARKS OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. JAVITS. Mr. Speaker, appended is an editorial from the August 4 New York Times:

STAMPS FOR PEACE

The handsome new stamps soon to be issued by the United Nations are something more than just a philatelist's delight. They are symbols of what could be, what may well come to be, the greatest mechanism for peace this broken world has ever known. One of the stamps bears the words "United Nations" in Chinese, English, French, Russian, and Spanish, the five official languages of the United Nations. The Russians at least are with us in name. Perhaps they will be with us in spirit some day. Another stamp says "Peace, Justice, Security." The first of these is what the United Nations forces are trying to achieve in Korea and will go on trying to achieve wherever it is necessary. And from peace will flow justice and security, without which there is no true peace. The stamps are symbols, as are all stamps of all countries. Let us hope that these stamps will never become obsolete curiosities, like the stamps of once-free Czechoslovakia, once-free Poland. Let us hope they will be symbols of a living force for peace in the world.

Address of Hon. Charles H. Silver at Exercises Marking Donation of Clothing by Nurses of Beth Israel Hospital

EXTENSION OF REMARKS OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 17, 1951

Mr. KLEIN. Mr. Speaker, it gives me special pleasure to include as a part of my remarks under leave of the House the address made by my friend, Charles H. Silver, president, Beth Israel Hospital, New York City, when the Korean Ambassador was welcomed and was presented with a sizable donation of clothing by the nurses of this hospital.

I should like to make clear my own strong feeling that democracy, as a way of life and not as a dogma, is at the international crossroads of its existence in the government of man.

If we are to meet totalitarian competition in the market place of ideas, we must show by deeds and not by words alone that the color of a man's skin, the gods he worships, the economy he endures, the politics he suffers, make no difference to our ideas of justice through law.

When the underpaid nurses of a great charitable hospital can find the means of donating to the far-away Koreans, it is time for the rest of us to bring our own actions in line, whether it involves grain to India, integration of the fire-fighting

forces of the District of Columbia, or taking care of our own disinherited

REMARKS OF CHARLES H. SILVER, PRESIDENT, BETH ISRAEL HOSPITAL, IN NEW YORK CITY GREETING KOREAN AMBASSADOR Y C YANG, AT SPECIAL CEREMONIES IN THE HOSPITAL, ON SEPTEMBER 21, 1951

It is with a feeling of great pride that I welcome you, Dr. Yang, to these special exercises where the nurses of Beth Israel Hospital have contributed large quantities of clothing for the brave people of the Republic of Korea. It is my hope that other institutions of this kind will do their share in this great humanitarian campaign in the United States to bring some measure of material aid and comfort to those who have suffered such terrible blows from the invaders who would enslave ultimately the men, women, and children of all liberty-loving nations.

The Republic of Korea is one of the vitally important bastions of democracy. Upon its soil men have fought and are now fighting so that human dignity will not be destroyed. They have been men of all races and creeds but in fighting for a common cause they have stood shoulder to shoulder as comrades in a spirit of brotherhood, engaged in a great task for the benefit of free men everywhere.

It is of more than passing interest that the clothing should be given at a ceremony where the nurses at Beth Israel Hospital are capped. These young women are not only doing wonderful work from a technical and medical standpoint but they constantly maintain a spirit of understanding and compassion toward their patients.

And so today in sending clothing to the people of Korea they are projecting a similar spirit of understanding and compassion to those who have not yielded and will not yield to the invaders who would take away from them their priceless freedom.

This clothing is a symbol of our deep devotion to all people in all countries who are fighting against communism. It is our duty—and I include every one of us—to contribute generously to the campaign which is now in progress and which has for its goal 20,000,000 pounds of clothing before the advance of another bitter Korean winter. We have read of the heroism of the Koreans and we also know how the armies of the Allied forces have fought, and are now fighting tenaciously, under the most trying conditions to stop the aggressors.

I want to assure you, Dr. Yang, that all of us at Beth Israel Hospital, administrators, members of the board of trustees, doctors, and nurses will not stop in our efforts as individuals and collectively to give clothing for the hard-pressed people of your country. For us, this will be a continuing drive until the aggressor has been hurled back and the Republic of Korea is put on a solid foundation as a sovereign nation.

And now, my friends, before presenting His Excellency Dr. Yang, I would like to read to you part of a proclamation issued by President Truman August 31. The President said in his proclamation:

"Now, therefore, I, Harry S. Truman, President of the United States of America, do hereby set aside and proclaim the month of September 1951, as a special period of intensive effort during the course of which, as an additional sincere and tangible gesture of American friendship and sympathy, the clothing collection appeal of American Relief for Korea, Inc., may receive the utmost support of all Americans. I call upon our citizens, our schools, our churches, and all our civic and patriotic organizations to respond promptly and bountifully to the appeals of American Relief for Korea, Inc., and its associated agencies, for clothing and kindred supplies for the people of Korea."

Ladies and gentlemen, it is now my privilege and pleasure to present His Excellency Dr. Yang, Korean Ambassador to the United States.

Oil and Gas Possibilities in the Seventh Congressional District of Alabama

EXTENSION OF REMARKS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. ELLIOTT. Mr. Speaker, the pinch of war and related defense activities on the Nation's supplies of oil and natural gas will undoubtedly stimulate new prospecting and exploratory development in areas not now producing oil and gas.

In my judgment the Seventh Congressional District of Alabama has very great possibilities in this field, and under leave to extend my remarks, I include an article recently prepared at my request by Miss Erin Woodall, of the Economics Section of the Legislative Reference Service of the Library of Congress. The article follows:

GAS AND OIL POTENTIALITIES OF THE SEVENTH CONGRESSIONAL DISTRICT OF ALABAMA

With the exception of Blount County and possibly the eastern half of Cullman County, the Seventh Congressional District is considered to be an important potential oil- and gas-producing area. Its importance is surpassed only by the southwestern section of Alabama which includes the Gilbertown Field now producing oil commercially. The discovery of oil in the Gilbertown Field, Choctaw County, on February 17, 1944, stimulated a geophysical and drilling program which indicates that Alabama is destined to become a major oil-producing State in the near future. The gas and oil possibilities of Alabama have been studied by various noted geologists since 1911, but much subsurface geology remained unknown until lately. These resources can now be interpreted and appraised with some measure of confidence. According to the State geologist, Dr. Walter B. Jones, more than half the area of the State is considered to be possible gas and oil territory.¹

The major portion of the Seventh Congressional District lies in the Warrior Coal Basin and in the west includes areas where the coal measures lie underneath the upper cretaceous rocks. Structures seem to be fairly common throughout this territory although most of them have not been tested. In addition, areas of similar structure elsewhere in the Appalachians have had good oil and gas production, and there does not appear to be any reason why this region should not also be productive.

Geologic studies as early as 1911 predicted good possibilities of gas and oil pools in the Warrior Coal Basin.² The northern part of Fayette County, western part of Walker County, the eastern part of Lamar County, all or at least the southern part of Marion County, and the western part of Winston County were thought to contain areas where all the structural conditions necessary to the occurrence of oil and gas were present.³ This view has been upheld by later geologic studies. A report on oil and gas in Alabama by Dr. D. R. Semmes excluded only Pickens

and Blount Counties from the probable area for gas and oil.⁴

One of the most striking indications of oil in the northwest section of Alabama is the "showing" of asphalt in the Hartselle sandstone and in the Gasper and Bethel formations, where these outcrop along the northern margins. The asphalt is the residue left from evaporation of crude oil at the outcrop. Therefore, there is good reason to believe that some oil was trapped in structures to the south.

In addition, to these surface indications, almost every well drilled in this region has showed good gas and oil potentialities. There was commercial production of gas in the Fayette gas field in 1912-14. The gas production of this field was not too great, but the reservoirs were depleted early because of the inadequate technique of drilling, finishing off, and producing wells at that time. It is thought that with modern equipment and operating skill several other wells in this region could have been producers. Other evidences of gas and oil were found from drilling within the limits of the Warrior Coal Basin during this period. Oil-saturated sands were discovered at Atwood in Franklin County and Hamilton in Marion County.⁵

More recent exploratory wells within the boundaries of the Seventh Congressional District seem to sustain the promising predictions of the geologists. In December 1944, Glenn D. Rose began drilling operations on a structure located between Manchester, Walker County, and Poplar Springs, Winston County. The first well struck gas, was acidized to increase its productivity, and tested at about 750,000 cubic feet of gas per day. Two other wells were begun on this same structure, both of which had good evidence of gas and oil in limestone, but neither were finished before Mr. Rose abandoned the project in 1947. It is believed that both of these wells could have finished off as commercial producers.⁶ Neither of the wells appears to be on top of the structure which has a northwest-southeast trend.

A well was brought in on February 20, 1950, about 4 miles southwest of Hamilton, Marion County, by Harry L. Cullet. This well was treated with 600 quarts of nitroglycerine before its capacity was tested. The potential capacity of this gasser is calculated at about 2,000,000 cubic feet per day. Several good oil shows were encountered both above and below the gas horizon so that it seems probable that the field may produce both gas and oil. The oil found in the higher formation was black, heavy (19.5 API) crude oil. Mr. Cullet plans to drill further in this area.

The latest drilling operations have been undertaken in the Cedar Creek Valley, Franklin County. The drilling has been done on the largest known structure in the county. The first well struck a good gas horizon before water was encountered which destroyed that site. Further drilling is being done and plans for commercial production and distribution of the gas is contemplated.

The Seventh Congressional District of Alabama comprises a very promising oil and gas region in the State. The predictions of potential gas and oil production in this area are based on geophysical evidence as well as actual testing by exploratory drilling of wells. Geological studies show that the land formations in many parts of this region have all the necessary characteristics. This area greatly resembles productive areas elsewhere in the Appalachians and there are phenomena present that normally accompany gas and oil, which include asphalt beds, tar

springs, bituminous sandstones, and bituminous limestones. A continuing drilling program gives further proof of the presence of gas and oil in this area. Only further drilling can show how extensive these hidden reservoirs of gas and oil are.

Does Congress Really Want Private Medical Schools?

EXTENSION OF REMARKS

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, I wish to include herewith an article in the magazine *America* in the issue of October 20, 1951:

Does Congress Really Want Private Medical Schools?

In a mysterious maneuver, the Senate on October 4 defeated, 42-23, the so-called Pastore amendment to S 337 and then sent it back to committee.

S 337 is a bill to bolster health education through Federal aid (*America* October 6, p. 1, where "\$1,000" should have read "\$2,000"). There is rather general agreement on the need for Federal assistance. The Nation's medical schools alone require something like \$40,000,000 (beyond tuition) merely to survive. Their costs have gone sky high because of inflation and constant improvements in expensive techniques.

A good index of the impossibility of getting any such sum from private sources is the experience of the National Fund for Medical Education, of which Herbert Hoover is chairman. The national fund, aiming at a total of \$5,000,000 with which to assist medical schools, has collected only about \$1,000,000 in nearly 2 years. Mr. Hoover and his colleagues agree that a very large part of the money needed must come from public funds. They support Federal aid.

Thirty-five of our seventy-nine medical schools already rely on State aid and local taxes. The 44 private, nonprofit institutions constitute the chief problem. Some of them enjoy relatively large endowments. The fact remains that three-quarters of them have been running into serious deficits. Their plight is worsening. Private gifts, because of high taxes, are dwindling. Costs, meanwhile, are skyrocketing.

It is generally agreed, moreover, that the rate at which we have been producing physicians, dentists, and nurses is below par. The Nation faces serious shortages in health personnel. In some places the shortages are already acute. The needs of the armed services and of civil defense will probably create very severe vacuums in health facilities. How soon they will appear no one can predict.

This dual problem—the financial undernourishment of present institutions and the need of increased personnel—should have been tackled right after the war. It got bogged down in the controversy over compulsory health insurance. In the spring of 1949 the Senate drew up a special bill to grant \$500 per student (less than one-fourth of the cost) to medical schools to help cover operational expenses, a bonus of \$500 per student for enlarged enrollments, and \$5,000,000 a year for capital expansion. (The bill made provision, at lower figures per student, for dental and nursing schools.) With bipartisan support and the approval of the health-education professions—including the American Medical Association—the bill passed the Senate without a dissenting vote.

Although amended to meet objections, it raised a storm in the House. On June 19, 1950, after the AMA had turned against it, the bill was defeated in committee by one vote.

In February of this year, S 337—amended to satisfy the criticisms of 18 professional associations, including those of American medical and dental schools, and the Catholic Hospital Association—received preliminary bipartisan approval in the Senate. Then, late last month, the Committee on Labor and Public Welfare made a radical change. It lowered the grant per medical student to \$200 and increased the bonus for increased enrollments to \$2,000 per student.

This Russell-Kerr amendment was adopted to please southern Senators, who felt the great need in the South was for larger enrollments. When Senator Pastore introduced it 2 weeks ago, enough southern Democrats and northern Republicans (still professing allegiance to the "principle" of Federal aid) raised serious objections to this and that provision to overwhelm the little band of proponents.

Are those who can always find some reason for defeating this bill serious about trying to save private medical, dental, and nursing schools? Aren't they the same Senators who profess to be alarmed at government control? Their inaction on S. 337 helps undermine the one chance private health institutions have of surviving. State-supported schools will survive and grow and multiply because they already are government controlled. If that is what the Senators want, why don't they say so instead of pretending to be so concerned about private enterprise in the field of health?

The American Farmer Should Have the Benefits of Old-Age and Survivors Insurance Under the Social Security Act

EXTENSION OF REMARKS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. ELLIOTT. Mr. Speaker, we have recently heard many statements on every side of the proposition of whether we should amend Federal law so as to allow the publication of names and addresses of persons receiving monthly old-age assistance allowances, which are largely paid for by the Federal Government, under the old-age assistance provisions of the Social Security Act.

It seems to me that by far a more pressing question is whether or not we will extend the old-age and survivors-insurance provisions of the Social Security Act, so as to cover the one large group of our population not now covered by any retirement system. I refer, of course, to the farmers of this country. There is no good reason why we cannot amend the Social Security Act to cover farm owners and farm tenants.

Through the years we have provided various old-age security programs for segments of our population. The Federal Social Security Act, with the amendments to the law by the second session of the Eighty-first Congress, now covers practically all our industrial and commercial workers. It is estimated that

nearly 50,000,000 workers are now covered by this system. The civil-service retirement system covers practically all Federal employees. Many of those not covered by mandate of this law have the privilege of electing to become covered by it. The various States, counties, and towns have retirement systems covering their employees. Those that did not have their own systems were permitted by the Social Security Act Amendments of 1950 to come into the Federal Social Security System. Some professions, such as the teaching profession, have separate retirement systems. Railroad employees have their retirement system under the Federal Railroad Retirement Act. Many private corporations have a retirement system for their employees. Some of the larger of these systems are found in the coal, steel, and auto industries. Members of the Armed Forces are covered by their own retirement system. Veterans of our wars, who are 65 years of age, and whose income is not above \$1,000 if single, or \$2,500, if married, are entitled to a Federal pension of \$60 per month. Some church organizations provide for pension systems for their aged clergymen.

It is true, of course, that farm wage laborers, some 2,000,000 of them in this country, are now covered by the 1950 amendments to the Social Security Act, but this leaves several million farmers, owners, and tenants who are covered by no old-age retirement or security system other than the meager benefits provided by the old-age-assistance plans of the various States.

I believe that farmers want to be covered by the Federal Social Security Act. I believe that they should be covered by this system. To do so would greatly lower the amounts necessary to be spent for their care in a near-destitute old age under the old-age-assistance system.

The cost of the old-age-assistance system is largely borne by the Federal Government. Present laws provide that the Federal Government will put up \$15 when matched by \$5 by one of the States. Thereafter the Federal Government matches with the States, dollar for dollar, up to a total assistance benefit of \$50 per month. Unfortunately, however, many of the States of the Union cannot, or have not, matched available Federal funds, and so we find persons drawing old-age assistance in Alabama, for instance, being paid approximately \$20 per month, \$15 of this by the Federal Government and \$5 by the State. Under this kind of system, the needy old people of the poor States are discriminated against because their States cannot match available Federal funds.

The only long-range solution to this problem that I see is to bring those persons not now covered by the old-age and survivors' insurance provisions of the Social Security Act under that coverage.

There is no valid reason why they should not be covered by the system. There is no reason why practically every gainfully employed person in America should not be covered by a retirement system which he contributes to as he works from year to year.

According to the 1950 census, the Seventh Congressional District of Ala-

bama, which I have the honor to represent in the Congress, has more than 34,000 farm families, which families account for approximately 63 percent of all the people of the district. Only a few of these people, those who happen to work on farms for wages or salaries, are presently covered by the old-age and survivors insurance system.

Even though the farmer is not covered by old-age and survivors insurance benefits under the Social Security Act, he must help pay for the benefits for those who are covered. When he buys a tractor, a truck, a car, a washing machine, a refrigerator, a shirt, pair of overalls, he pays an additional amount, because the workers who manufacture these products are all covered by the social-security system, and, naturally, the taxes which those workers and their employers pay for coverage under the system, is passed on to the farmer as an additional cost of the article which he buys.

We must no longer delay to bring the farmers of America under coverage of the old-age and survivors insurance system of the Social Security Act.

On August 23, I introduced a bill, H. R. 5279, to extend the old-age and survivors insurance system to the farmers of America. This bill is now pending before the Committee on Ways and Means of the House of Representatives. I hope the bill will have early consideration.

Mr. Speaker, under leave to extend my remarks, I include excerpts from a statement written by E. J. Niederfrank, extension rural sociologist, United States Department of Agriculture, and originally published in June 1949:

FARM PEOPLE AND SOCIAL SECURITY CONTENTS

Security is a universal hope.
Security programs are not new.
Farm people are among the least protected.
The fundamental question.
Some farm people participate in social insurance.
Farm people already pay now.
Other questions.
What the proposed social insurance means to farm people in costs and benefits.

MEANING AND BACKGROUND

Security is a universal hope, not merely a pension or program. Let us look at the term broadly. Farm people, like all other people, hope for security. It is an objective of their strivings and desires just as it is of industrial workers and other nonfarm people. Most rural people want to have a good home and a happy community life. They want to bring up their children well and educate them; they want to have good health; they want to earn enough to provide a comfortable living and some savings for retirement and for giving their children a start in life. Furthermore, these things have always been among the main hopes and ambitions of rural people, and they still are. For farmers the fulfillment of these hopes depends basically on successful farming and satisfactory prices.

But illness and poor health, accidents and resulting disability, death, and other emergencies frequently prevent the accomplishment of these goals; then there is the period of old age itself usually accompanied by reduced earning capacity. Farm people of today want freedom from these insecurities; this also was the hope of farmers of yesterday.

In grandfather's time rural people handled these insecurities and met the problem of retirement in various ways. For example:

Some held their level of living low throughout life in order to save enough for old age and emergencies.

Some let disease and other health needs go uncared for.

Some continued hard work in old age, thereby shortening life.

Some lived on meager savings with a consequent lowering of their level of living.

Some lived with their children or other relatives or friends.

Some turned to their church or a fraternal organization.

Some had to turn to the county poor farm as a last resort, and often had to accept pauper status to do so.

But times have changed. The changes that have taken place have made former sources of security inadequate or harder to provide, and also have created more insecurity. Today families are smaller, there are fewer children to share the responsibility of caring for parents. Young families find it more difficult to accept this responsibility because the cash costs of their living have increased, they have smaller homes, and because now there is little work that older people can do around the home to increase family resources. These factors have increased the desire of young families to live by themselves; more also desire to be free from being tied down by care of old people. Institutional care has also become more and more insufficient and costly, owing to the increase in the number of old people and to the higher standard of care demanded. Old-fashioned neighborliness has lost ground, because families move more often, make contacts over wider areas or larger communities, and have less dependence upon one another.

The rapid developments toward commercialized and mechanized production in agriculture since 1920 have affected the hopes and securities of farm people. They must have more capital to get started in farming and need more ready cash to meet farming and living costs. Farm returns are more dependent upon prices and demand at harvest time because perishable produce constitutes a larger proportion of the total than formerly. Economic depressions may sharply decrease or completely wipe out a lifetime's savings—the farmer's traditional security for old age. Employment on farms for farm laborers is less steady, and it is harder for them to save, too. Because of all these changes, the issues and problems of security and insecurity of those engaged in agricultural production are more and more like those of industrial workers and others who are an integral part of the national economy.

Improved health services and practices in urban areas have led rural people, quite rightfully, to desire higher standards of medical care than they can have individually. They need such care both for numerous disabling accidents and for illnesses. Accidents that disable farm people are numerous—more numerous today than ever before because of the increased mechanization of farming and because farmers travel more. The most recent data of the National Safety Council indicate that 1,800,000 injuries by accident occurred to farm residents in 1947, or about 67 per 1,000 farm population. From sample surveys made by the Bureau of Agricultural Economics, it was estimated that \$36,000,000 was spent for medical attention because of accidents alone, not including fatalities and total permanent disabilities. And illness is even more important. The BAE estimated from surveys made in 1948, that farm people lost in 1947, 80,000,000 man-days because of illness, compared to about 17,500,000 man-days because of accidents.

Security programs are not new: Over a period of years, private and public groups and agencies have tried many methods of pro-

viding protection from the insecurities of life. The purchase of individual and group life insurance has spread enormously, and accident and sickness insurance companies have had phenomenal growth. Many people have joined hospitalization insurance plans and other cooperative health plans. A very limited amount of insurance providing cash benefits for permanent and total disability is written by several companies. Only persons who can meet several strict qualifying conditions can ordinarily obtain such insurance. The development of State workmen's compensation protecting workers against some of the costs of injury while on the job began many years ago. Many industrial concerns have profit-sharing plans and pension or annuity plans for their employees. Special groups of workers, through their unions and other efforts, have brought pressure for the establishment of disability funds, welfare funds, and retirement pensions. Other organizations have set up retirement funds for some or all of their members, for example, the pension funds of some church bodies provide for aged clergymen and their widows. Some local and State governments, and the Federal Government have set up retirement systems for their career employees. Many educational institutions have done likewise. The idea of insurance, pensions, and bonuses, for war veterans has been increasingly stressed through the years. Noncontributory or public-supported State old-age pensions were initiated some time ago. In 1935, the broad social-security program of the Federal Government, in cooperation with the States, was inaugurated. It concludes unemployment compensation, public-supported old-age assistance or relief, self-contributing retirement and survivors insurance, and other benefits for special dependent groups.

All these developments have been undertaken to provide a basic minimum of security that will stabilize the conditions of life in old age, unemployment, illness and disability, premature death, and other insecurities. Some of these programs have met the security needs of many people, others have not worked so well. Certain large elements of the population, such as farm people, have been left out or do not participate in these programs to the same extent as do other groups. Nevertheless, the existence of these programs shows that people have been concerned about security for a long time and have tried in various ways to obtain it. The ways they have tried are in line with the good, old American way of providing it for themselves.

Sources: Spectator Year Book and Institute of Life Insurance

Farm people are among the least protected by various private and public security programs. Take life insurance, for example: Only 55 percent of the farm families in the United States have one or more owners of life insurance, as compared with 90 percent of the families in business and the professions, 87 percent of the families of clerical, skilled, and semiskilled workers, and 71 percent of the families of unskilled workers. Table 1 shows that people in agricultural States have the lowest amount of life insurance per person. Even among farmers with life insurance few have retirement annuities.

Group hospitalization insurance plans also reach relatively fewer families in rural areas than in the cities. Very few farmers and farm workers have sickness or disability insurance or workmen's compensation protection against work-connected accidents and illnesses. The programs for special groups, furthermore, such as the welfare funds of labor unions, and the retirement plans of industries and organizations, include few farm families. The only farm families that benefit from these programs are those of part-time farmers who work under such plans long enough to obtain benefits. Most important of all, farm operators and farm laborers are not included in the self-contributory old-age and survivors' insurance program established under the Social Security Act of 1935.

But all needy people, including farmers and farm workers, are eligible for old-age assistance or relief payments under the Social Security Act. The main difference between these two programs is that the benefits of the old-age and survivors' insurance program, for which farm people are not eligible, are paid from an insurance fund accumulated from social security premiums paid by the employees and employers in the industries and firms covered by this act. Benefits are paid to all insured workers when they stop work after age 65, regardless of how much rent or other income they receive from investments. On the other hand, the old-age assistance or relief program, which is the program available to needy farm people, is not paid for from specific funds contributed by the recipients themselves, but from State and Federal funds raised by general taxes. In other words, the first program pays its own way. The people who benefit have paid into an insurance fund in advance. Under the latter program the people who benefit must qualify for grants by meeting a needs test under their State law, and the money comes from public funds. The amount of the monthly relief or assistance payments under this latter program varies from State to State. In some States the

public assistance or relief payments are very meager, frequently not even providing for minimum needs; in other States the assistance program is being expanded to provide a regular, substantial payment to all needy aged persons. A minimum income of \$75 a month is the standard of the State that has the most liberal provision.

THE FUNDAMENTAL QUESTIONS

New attention is being given social security. The term "social security" is now customarily used to denote the Federal and Federal-State programs inaugurated by the Social Security Act of 1935, although as mentioned before, the idea of security itself is much older. This act is now up for legislative discussion and revision. The basic current question of concern to farm people is: Should farm people—farmers and farm laborers—be covered under the retirement and survivors' insurance program?

But the fundamental question regarding social security for farm people is not simply the question of protection or no protection for farm people, for they are already eligible for public-supported assistance or relief as mentioned before. The main question is something far deeper. Looking at the whole idea of security, the fundamental question is: How can we maintain the maximum freedom in our economic life and also provide the desired security for the individual and his family? Does the Federal Government have a responsibility toward farm people in this regard? And if so, how is the best way? The alternative questions are: (a) Is a comprehensive social-insurance program, to provide stability or a floor of security for all people, the correct philosophy and approach? Or (b) would it be better to provide flat pensions and bonuses to special pressure groups as they demand them? Or (c) would it be better to rely on a system of giving public-supported assistance or relief payments to the needy persons.

Some say that in the long run a broad over-all, comprehensive social-insurance program, paid for by the people who benefit through general compulsory insurance premiums, would be less costly and more satisfactory. They say that this would be less hazardous to State and Federal general funds, which otherwise would be under constant pressure for special pensions, larger pensions, and other security plans. People are less likely to ask for large social-insurance benefits if they must pay for them directly than they are for pensions which are paid from general funds.

Also under a public-supported assistance and flat-pension plan the continued demands for special pensions, bonuses, and other benefits for special groups, and for larger payments, make it that much harder to supply funds for roads, schools, extension work, research, and other services which the people might like State and Federal Governments to provide. In short, the more that people, through social insurance, pay their own way for retirement and disability the less that is needed for relief, pensions, and similar payments from general Government funds. If the insurance program is widely extended, taxes for relief payments and special pensions could be considerably reduced. A minimum amount of assistance, however, would be needed to care for persons who failed to qualify for insurance benefits and for those whose benefits might not be large enough to meet their needs.

The significance of these questions is that the number of beneficiaries under the old-age and survivors' insurance program is proportionately much greater in the so-called urban States, where large numbers of people work in industries and commercial firms covered by the program, than in the States in which large percentages of people are engaged in agriculture and consequently are not under the insurance program. This means that in these agricultural States the

burden of assistance payments is proportionately greater; it will become even more so as the number of people reaching old age increases in the years ahead. In 1940 there were slightly more than 9,000,000 people aged 65 and over in the United States; by 1975 there will be 17,600,000 at these ages according to present estimates. The proportion of the total population that will be aged 65 and over, which was 68 percent in 1940, is expected to rise to nearly 11 percent by 1975. The increase in the proportion of old people will be even greater in some States. Thus, it is said that to place the future aged population under a self-contributory pay-as-you-go retirement and survivors' insurance program now would considerably lessen the cost of care for the aged to be borne by future generations.

Farm people already pay for the care of their aged and survivors: Paying for social security would not be new to farmers. They now pay the costs of old age, disability, and the care of families whose breadwinner dies. They pay through individual sacrifice for doctor bills and the support of family members in need; they pay through taxation and charity to finance public supported pension assistance, and other relief programs. They also pay part of the costs of the social insurance programs, which benefits other people, they pay in the higher cost of manufactured goods and services to the extent that social security premiums are passed on to consumers. For example, farmers who buy tractors pay part of the social security premiums of the workers who produce and distribute tractors. Farmers pay the part of these premiums that is considered an operating cost and consequently raises the price of tractors.

Other questions: Although extending coverage of old-age and survivors' insurance to farm people might be desirable, can farm people stand the cost of it? Would it be any higher than general taxes for public-supported flat pension or assistance programs? (Costs and benefits are mentioned in the next section.) Farmers under the insurance program, obviously, would need to keep a record of their income and of the wages paid hired farm workers. Most farmers already keep such records to compute their income taxes.

Also, what effect would the social insurance program have upon the ideas of thrift, individual independence, and other values which are traditionally characteristic of rural life? What would it do to one's relationship to government and his attitude about this relationship? Would these be any different for farm people than for those already covered by social insurance? Would these values and ideas be less affected, or more affected, by a self-financed insurance program than by public-supported old-age pensions, assistance, or other special relief?

Another factor to consider in analyzing the subject is that farm people are not all alike as to security resources. Among the people engaged in agriculture are well-to-do farmers, a large proportion of relatively small-scale operators, and approximately 2,000,000 hired farm laborers. Then there is the question of security equality between farm people and urban people, both as to inclusion in a program for its benefits, and as to whether farm people should not also pay for the security benefits they would receive from government, like those who are now covered or are proposed to be covered must pay for their old-age insurance benefits.

The social security insurance program does not guarantee an average level of living. Presumably, it will merely establish a minimum floor of security as a means of helping to give some stability of income and feeling of certainty for old age and times of emergency about which farm people have always been concerned. Above this floor, there would still be room for continued

family savings, for more life insurance, for farm price programs, or for other governmental, individual, or group efforts which people may wish to undertake to achieve higher levels of living or greater protection against certain insecurities.

It all comes back to a basic question: What should be the basic objectives and responsibilities of governmental cooperation in affording farm people a measure of security, and what principles should be observed in doing so? Do farmers and farm laborers want governmental social security protection of any kind at all or not? Do they need it? How many will require old-age relief or suffer from emergencies in the years ahead, if social insurance is not available to draw on then? Which social security method is best over the long pull for the farmer, for the farm laborer, for the other people already under compulsory social insurance, for the general economy, and for State and Federal Governments? To sum up, below are a few factors to consider in analyzing the subject

- 1 Upward trend in numbers of old people
- 2 Economic and social changes affecting living patterns, standards of security, and ability to attain it.
- 3 Difference among farm people as to security resources.
- 4 Less coverage of farm people by insurance and other private or public security programs
- 5 Comparative costs and benefits of different governmental social security methods to farm people, to other parts of the population, and to State and Federal funds
- 6 The self-contributory insurance principle versus public-supported assistance or relief according to degree of need or pauperism.
- 7 Effect on accepted cultural values, such as self-reliance.

All the Perfumes of Arabia Cannot Cover Our Disastrous Far Eastern Policy— The Case of Naval Lt. William H. Evans, Jr.

EXTENSION OF REMARKS
OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, I include herewith some newspaper articles and editorials pertaining to the case of Naval Lt. William H. Evans, Jr., of Edgewater, Md.:

[From the Santa Ana (Calif.) Register of June 5, 1951]

NEW DEAL POWER CULT FIRMS ANOTHER OFFICER
(By Robert H. Williams)

Vindictive Truman and the pro-Communist clique behind him seem determined to stamp out the growing rebellion among military personnel against his destructive policies.

The latest of a growing list of victims is a naval lieutenant (William H. Evans, Jr., of Edgewater, Md.) who, while risking his life in Korean waters, fighting "with both hands tied" by Truman's policies, dared to protest these policies.

While it is against regulations for a military officer on active duty publicly to protest policies of the administration, this honest and loyal officer chose to violate the regula-

tion and risk the consequence because he saw that the Truman policies were merely chopping up our troops in Korea without leading us to victory (while giving Stalin and Mao Tse-tung time to train a Red Chinese air force and army).

Wrote Evans, "We are out here waiting for 'Acheson's agrarian reformers' to attempt an invasion of Formosa. Now, instead of allowing the Nationalist Chinese and the Seventh Fleet to attack the mainland to break up any such plans before they start, we have to fight with both hands tied behind our back, one hand bound by Acheson and his—gang and the other hand by the pro-Soviet United Nations."

"That pro-Soviet one-world administration of ours and our senile, ignorant Congress would rather have Americans slaughtered than attack Red China everywhere." * * * The Roosevelt-Truman-Acheson-United Nations followers in the United States should be loaded onto ships and used as shock troops in Korea, instead of America's best citizens. Americans are dying by the thousands, thanks to the pro-Red administration."

We have increasing evidence that the Frankfurter-Acheson power cult behind Truman is trying to censor all opinions and criticism even by retired and Reserve military men. The list of their victims grows: Captain Crommelin, Admiral Denfeld, General of the Armies MacArthur, his intelligence officer, Major General Willoughby, the Far East expert, Lieutenant General Wedemeyer (the last two having felt forced to resign)—and now Lieutenant Evans.

Some readers will recall that I myself was given an honorable discharge from Military Intelligence Reserve last December 21—the very day on which Anna Rosenberg was confirmed by the Senate as Assistant Secretary of Defense after I had published part of Mrs. Rosenberg's long Communist-aiding record.

At that time I pointed out in the Santa Ana Register that my discharge served notice on all military personnel—active, retired, and Reserve—that they might be disciplined if they dared to expose subversion in the administration.

I quoted a new regulation in the uniform code applying to the military, which provided punishment for any active or retired person who used "contemptuous words against the President, Vice President, Congress, Secretary of Defense, or a Secretary of a Department, a Governor or a legislature of any State, Territory, or other possession of the United States in which he is on duty or present."

It seemed to me then (last February) that this new provision was aimed specifically at General MacArthur, to keep him from telling what he knew, should he retire. His removal was not then foreseen. The manner in which he was removed and his importance and the issues at stake gave him an official hearing before Congress, where he was exempt from the above regulation.

I do not think the new regulation will silence men with MacArthur's courage and integrity, men who have bowed their necks against the New Deal and its Communist backers. But I have received letters from some high-ranking retired officers revealing that the administration is threatening them for public statements they have made against Truman's Communist-inspired policies.

It looks highly doubtful that the power cult can stop the growing resentment at its subversive policies. A storm of protest is gathering and it may break with a great deal of force over the White House, the State Department, and the Department of Defense, if the administration does not soon adopt policies which may give us the initiative in the cold war and a clear chance for victory in Korea.

[From the Holland (Mich.) Evening Sentinel of June 2, 1951]

ARE PUBLIC EMPLOYEES PUPPETS FOR
WASHINGTON?

(By Junius B. Wood)

WASHINGTON, D. C.—"I took an oath to defend my country against all enemies. I put duty to my country above that to any individual."

That is what the young Navy lieutenant (junior grade) told Francis P. Matthews, Secretary of the Navy. Three days later, May 28, his commission was revoked and he was discharged from the service. The order specified that the discharge was honorable, possibly in deference to the constitutional questions involved.

The career of one American in only one step above the lowest commission grade may be a small incident in the fortunes of several million men and women in our armed services. It also may be overshadowed, certainly in the public furor, by the similar forced retirement of a five-star general, Douglas MacArthur. However, the parallel cases put a question squarely before the American people: "Are the services of public employees, civil or military, for the people or are they exclusively for transitory elected and appointed officials?"

This young man, William H. Evans, Jr., who now has retired to civilian life at Edgewater, Md., is a graduate of the Naval Academy at Annapolis, class of 1948. After less than a year's active service he resigned to go into the Naval Reserve and to take post-graduate studies at the University of Maryland. He specialized in political economy, a particularly live subject since our involvement in global affairs, but banned in military circles unless the high ranking military conversationist has reached Ambassador or Cabinet level. In December 1950, he had returned to the service and was assigned to the U. S. S. *Rogers*, a 2,200-ton picket destroyer, off the coast of Korea.

Relaxing from his duties as assistant navigation officer on March 16, Lieutenant Evans wrote to Alfred Kohlberg, of New York City. Kohlberg, an old China hand, is the extremely active head of the American-China Policy Association. Evans said his letter could be made public and, 2 weeks later, copies were going out to the association's extensive mailing list, also to newspapers who received it with gusto.

Evans did not say much which others have not said without being kicked into outer darkness. He had some pertinent suggestions on the long delayed and now being considered Japanese peace treaty—give the Kurile and Sakhalin Islands to Japan instead of to the Soviets, not assess an indemnity as the United States would pay it in the end and other features debated by the United Nations.

He also made pungent comment on the dubious success of the late President Roosevelt and the present President Truman at the Yalta and Potsdam conferences, the policies of Secretary of State Acheson and his predecessors. It was an excellent demonstration of too much knowledge being a dangerous thing, especially for anybody in uniform.

Evans, now a civilian, held a well-attended press conference, Thursday, a novelty for one of his modest rank in Washington teeming with admirals, top-flight generals, and fancy titles. He is a stocky blue-eyed lad with a crew haircut. His only Navy regalia were white shirt and tan shoes. To please the clamoring photographers, he placed the Navy uniform cap and service-ribboned jacket into a suitcase—"Good-by to Uncle Sam." He told his story simply and without heroics.

The official lightning was slow in striking as the radio message to report in Tokyo was not received until April 25. He was ordered to Susono, Japan, the following week, where

a hearing was held. He was the defendant but on the last day, his status was changed to witness. From there he was sent to Washington for a board of inquiry which started on May 11.

Both inquiries, also Secretary Matthews in the later audience, emphasized that he was not being tried for the content of the letter but for violating regulations in making it public. Navy general order No. 16, specifies that anything for publication must go through the chain of command while Operation Navy No 37-50, a confidential order to officers, specifies that anything relating to diplomacy must be cleared through the State Department and to military through the Defense Department. Evans insists he was not shown the latter order until after the inquiry started, a month after he wrote the letter. Obviously the letter never would have seen the light of day if it had gone through channels.

Despite the insistence that he was bounced only for violating regulations, the order of Secretary Matthews says: "Revocation of commission and discharge from the United States Naval Reserve under honorable conditions. . . . This action is taken by reason of your action in addressing and mailing a letter which contained highly intemperate criticism of the foreign policy of the United States and impugned the motives and good faith of officials in the highest levels responsible for the formulation and implementation of that policy. Your action in this respect is considered to have constituted unsatisfactory performance of duty in that it had a foreseeable tendency to promote disunity and disaffection among other persons in and outside the Armed Forces, rather than singleness of aims and purpose in an hour of national peril. Your action was in violation of a directive of the Chief of Naval Operations, requiring advance clearance of statements concerning foreign policy by members of the naval service. Moreover, the contemptuous words used in your letter with reference to the present and a previous incumbent in the office of President of the United States, and to the present Secretary of State, constitute grave misconduct on the part of an officer of the naval service."

The order's theatrical fears of possible mutiny as a result of a humble officer's letter and his reference to our hour of national peril contradict the official explanation that Korea casualties are only a police action and that runaway inflation is not a peril.

But it is a summary warning to other letter writers in uniform. The American public is to learn of its sacrifice and fate only through sugar-coated press releases of high-level officials.

[From the Pittston (Pa.) Sunday Dispatch of June 3, 1951]

IT TOOK GUTS TO SPEAK UP

That young naval officer, William H. Evans, Jr., who has just been fired for criticizing the Russiavelt Acheson betrayal of the American people deserves a medal. Of course he won't get one—medals aren't handed out to officers who have been sacked. Nevertheless, young Evans has rendered a brave service to his country just as much as if he had performed some feat of valor in battle. It really takes guts for a junior officer to protest the betrayal of his country under the circumstances in which Lieutenant Evans spoke up. Had young Evans observed a fellow serviceman turn traitor in battle he would be justified in protesting the betrayal. The betrayals he has called attention to are just as real. Regardless of Navy Department rules I, and I am sure millions of other Americans, can understand how he couldn't stand to remain quiet about the betrayal he knew took place at

the Yalta conference on the part of Franklin Russiavelt, Alger Hiss, etc., as well as about the betrayal in Korea by Secretary of State Dean Acheson, and the other rascals, who have been satisfied to let American boys die rather than cut off war supplies going to Red China from our so-called United Nations allies; the refusal to use Chiang Kai-shek troops to save American lives, etc.

Lieutenant Evans said some things that all Americans should think about. For instance, "Americans in Korea are not afraid of the enemy in front of them. They are afraid of the enemy behind." Also, "Damn the United Nations, long live the United States."

The Evans blast at the United Nations recalls what a Congressman named Wood, from Idaho, said in Congress not long ago: "We should never have joined the United Nations. It was conceived in iniquity and born in sin, with Alger Hiss the midwife."

We need more young men like ex-Lieutenant Evans to keep America safe. We need also to hear from more young servicemen such as he. Along with calling in the top brass to testify regarding the MacArthur ouster, the congressional investigators should call in young men from the ranks—the young men who have been doing the actual fighting and the dying. The investigators wouldn't have to call on boys still serving in the Army or Navy or Marines. Those lads might not talk up as bravely as did Lieutenant Evans, for fear of being punished. They could call on the disabled veterans of the Korean war—lads who have been blinded or who have lost their limbs, lads who have had their hands and feet burned off or frozen off. Those boys could give their opinions freely because their injuries have put them out of the service, and out of the reach of Dean Acheson, George Marshall, and their assistants.

[From the Manchester (N. H.) Union Leader of June 4, 1951]

THE EVANS LETTER SPEAKS VOLUMES

The letter written by Lt. William H. Evans, of the United States Navy, to Alfred Kohlberg, chairman of the board of the China Policy Association, brought to light in the Senate hearings, is a damning indictment of the Truman administration's policy in the Far East.

The great point in this Evans letter is that patriotic, conscientious men in the military service feel as he does.

Evans claims that a large percentage of the men fighting in the Far East share his feelings, and the assertion of the Navy Department that a poll of his shipmates did not substantiate that fact does not disprove his claim. In a Government poll of servicemen, opponents of Government policy are likely to be wary, and they have ample reason to be, as the crack down on Lieutenant Evans proves.

The fact is that Evans' letter is not an isolated incident. Many similar letters have been sent home to parents and friends by GI's in Korea. This newspaper has received several of these letters. Illicit firing by the Government will not cure this situation. Such measures only will intensify dissatisfaction among servicemen by deepening the sense of injustice. And do not forget that these are the men who must do our fighting, and that their morale, which is based on the justice of their cause and the way it is being handled, is supremely important.

The firing of Evans is just one more example of the attempt by the Truman administration to cover up its bungling and incompetence by the tactic of suppression employed so ruthlessly by Stalin, and which was used so flagrantly by Truman in the firing of MacArthur. This tactic will not heal the bleeding ulcer that is eating at the heart of our national morale. Healing can come

only by restoring the confidence of our people in Government policy by putting that policy in the hands of men of demonstrated competence.

Make no mistake about it. This Evans affair reaches further than disciplinary action in the military forces. It strikes at the very heart of our national security. It shows clearly that there is something seriously wrong in Washington that must be corrected before it completes our destruction. The boys in the field are sensing this fact.

And the situation has an even more sinister meaning. This suppression of the traditional American right of free speech in the military services that is going on today to silence criticism of Government incompetence accentuates an immediate danger. Today the members of the military services are silenced. Tomorrow it will be the press for publishing criticism. The next day the ban will be clamped on every American. Then the Hitlerian gag will reign in America.

Don't say that this is farfetched. It isn't. It can happen here, and it is happening. The American people must rise in righteous indignation and demand that the present bungling, dictatorial incompetence end.

How Late Do You Think It Is?

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. WILLIAMS of Mississippi. Mr. Speaker, under leave to extend my remarks, I include an address by Dr. Walter R. Courtenay, pastor of the First Presbyterian Church in Nashville, Tenn.:

How Late Do You Think It Is?

(Baccalaureate address at Ripon College, Ripon, Wis., June 8, 1951, by Walter R. Courtenay, D. D., pastor, First Presbyterian Church, Nashville, Tenn.)

My message to you today cannot be classified as a sermon. Dealing as it does with the contemporary American scene, it must be more than a sermon. Let us then call it a sermon—address, a sermon because it seeks to honor God and serve the welfare of this Nation, an address because it deals with matters of Government and business. As a matter of fact, my message must begin as if I were a Republican seeking support in 1952, but I hope it ends where it ought to end, namely, on the major note of spirituality.

Let it further be said that I speak to you as a Jeffersonian Democrat. Not a New Dealer, if you please, and certainly not an admirer of Mr. Truman or the Fair Deal state. As a Jeffersonian Democrat I have no national party to represent me. The Democratic Party as it exists today would be roundly condemned and excoriated by such men as Jefferson and Jackson. The ethical stooping down which characterizes so much of the politics of our era, the lowering of standards, the Roman-circus atmosphere which surrounds Washington, bode little good for the perpetuation of the greatness of this Nation. Like millions of other Americans I am a man without a party, a man worried by the antics of leaders who are often profane in both speech and intent; worried, too, by the moral decline of America which strangely coincides with the history of the present administration. Its example in the realm of divorce and broken homes, its close association with big-time bossism and crime, its waste of public funds, its dis-

tortion of truth, its distribution of favors to racketeers and unworthy enterprises, its duplicity in foreign policy, its use of official Government agencies for propaganda purposes, its sale of special privileges in return for customer support, can only nauseate those citizens north and south who would honor God and would live constructively for the well-being of the State.

I am a Christian minister, but I am also an American citizen. My citizenship must be directed and empowered by my faith, and my faith must elevate my concept of what citizenship means. Always and everywhere I must live, not now as clergyman and now as citizen, but always as Christian citizen, whether I walk the streets of America or speak from platform or pulpit.

There are those who feel that I ought to confine my interests to the activities of the Hitites and Jebusites who lived some 3,000 years ago, or at least to the events which occurred in the state of Palestine in the first century. But I would remind them that my moral responsibilities do not fall in those eras of history. I live in the year 1951, and my responsibilities are here.

With these things in mind I would say three things to you this day:

1. It is late.
2. It is later than many Americans realize.
3. I pray God that it is not too late.

IT IS LATE

I do not know how you read the calendar or clock, but to me the hour of our history is late. When I compare the opening century of our history with the history we have recorded in the last two decades I believe it is late. When I compare the leadership we have been getting with men like Washington, Jefferson, Adams, Madison, Webster, and Hamilton, I know that it is late. When I remember that the founding fathers and their supporting citizens fought a war to be rid of big Government—that they created a Constitution to prevent big Government's return to this country—and then mark the course of events which make big Government inevitable, the hour seems very late. Through the processes of indifference on the part of some, neglect of duty on the part of others, and the direct intent of many, Washington grows in its power over us. It now threatens to be the brains and the blood of all activities, so much so that no hand can move or foot stride or voice speak except it be directed and empowered by those elected to serve, but who legislate to enslave.

When I further ponder the fact that we are more and more controlled by minority groups, directed and controlled by persons who were appointed but not elected; when I realize that bureaucracy has become so inflated that national inflation is inevitable, I look at the clock of destiny, and I am afraid.

When a congressional committee can threaten the right of free speech without stirring up a wave of national protest, we ought all to be afraid. In a country where stealing becomes legal simply because it is the government that steals; where the five percenters roam the halls of influence like ambassadors from royal courts, where crime is investigated outside of government, but not too deeply in government, where RFC disclosures give America the flavor of an overripe barnyard, where men like Hiss and Vaughan, Mungon and Dawson, and hundreds whose names are known but not yet challenged, flaunt their freedom to abuse all rules of decency and decorum, who is safe from fear? When a nation sells its friends down the river as we sold both China and Korea, and where we have done so much by way of connivance to increase the power of Russia in the world; when ex-captains of artillery whose record is average can dismiss five-star generals whose record is excellent;

when we are compelled to face peace-shattering events with our national ranks split because we lack adequate leadership; when we spend billions on preparedness without ever getting preparedness, and other billions on our so-called foreign friends who are about as honest and fair as a Yalta agreement, and who may or may not stand with us in the hour of crisis, the hour of this Nation is late.

IT IS LATER THAN MANY AMERICANS REALIZE

If I were to characterize my position on matters of church and state I would call myself a progressive-conservative. I am all for holding fast to the principles and values that have proven their worth across the history of America and of mankind. I would strengthen and perpetuate the kind of thinking and living which add moral and ethical fiber to both individual and nation. But I would do more. I would seek new ways of doing old things better, creating new paths of progress, and opening new doors of opportunity. With one hand I would hold fast to that which is good, and with the other I would reach for better tomorrows.

We have little to fear from the so-called conservatives of America. At least we know they are Americans who love America. There is no question about their loyalty and intentions. Nor need we fear the honest liberal. The liberal spirit has always been, and always ought to be, part of this Nation's life. We must have those who strive to cut away the walks of the unknown and the untried, creating thereby avenues of new advance. Progress is the result of the interplay of the conservative and liberal thoughts and manners of men, and it is good.

But there are three groups we ought to fear.

1. The radicals, the persons who are not true liberals. The liberal tinkers with things with a view to correcting mistakes and improving the procedure or product. But the radical does not tinker—he destroys. He feels that he must crush everything that is, no matter what the cost in terms of blood and tears, and begin anew.

It is right here that I would pause to say that while socialism comes by ballots and communism comes by bullets, we can vote ourselves—yes, and spend ourselves—out of business as a free enterprise, a democratic Nation. The radical Socialist is as dangerous to us, nay, more dangerous than the radical Communist. We must watch both, and must match in cleverness their schemes.

2. The do-gooders. These are the people who intentionally or unintentionally close their eyes to the lessons of history and of human nature. They dream of Utopia, concentrating on how heavenly life would be if we were free from sickness and poverty, fear and folly, selfishness, and avarice, and all the traits and strains that weaken us as individuals and as corporate groups. Seeing only the ideal, and ignoring the real, the practical, the down-to-earth ingredients with which we work, they seek legislation and propound social schemes which can never work because they are contrary to our natures and contrary to the earth as it now constituted. If we could drain from the minds and hearts of men the poison that sickens our race, leaving only the lovely and the lovable, such schemes would work; but as matters now stand their schemes become wasteful of resources, both natural and human, and the fiber of our people declines in quality.

Much of the legislation of recent years stems from the do-gooders who dream or from the politicians who do not believe in dreams, but who see in utopianism an opportunity to capitalize on man's inherent envy, avarice, selfishness, and lethargy. Hence, the efficient are made the pawns of the inefficient, and the superior are penalized be-

cause they are superior. Thus, legislation becomes narcotic, acting like a drug in the people who are needled with government dope until they become government-addicts, people who cannot live without the dope, and who have no will power to resist it. They lose personal security, the courage and confidence of standing on their own feet, using body, brain, and heart to face and conquer life. They become victims of government, made socially secure by law, but at the same time made creatures of fear, fearing to live as free men and to do the work of free creatures.

I personally fear the do-gooders of our day more than I fear either the liberal or the radical. The gimme-boys of America have increased amazingly in recent years. Whereas the Statue of Liberty stands with hands of dignity, hands that hold high the light and gesture benevolently toward all God-fearing men, the hands of many of our people and leaders are the hands of the beggar who holds no light, and whose intent is the robbing of fellow citizens. By their hands ye shall know them.

3. The promoters of the welfare state: Nothing declares the lateness of the hour more than the rapid, frightening strides we have taken toward state socialism, the advocating and implementing of laws that would further rob us of personal security and make us the duped victims of big government. I stand belligerently opposed to socialized education, socialized medicine, socialized agriculture, socialized business, socialized labor, and the creation, through Federal aid, of a set of mind that negates the laws of thrift and teaches a man to let George and Harry do for him what he ought to have manhood enough to want to do for himself.

The time has come in America when we must either return to a truer form of Americanism or lose ourselves in the quicksands of the Socialist state. While resenting and resisting those areas of free enterprise wherein good morality is not practiced, I stand wholeheartedly behind the principles inherent in our historic system, the system which produced modern America, the only system that works for the welfare of all the people. The germs of socialism are already here. We cannot go on living half Socialist and half free enterprise any more than we could exist half slave and half free. We must now either sicken into the state of health endured by the British or revive and return to the strength, courage, faith, and fearlessness of the America we used to know.

Here I pause to lay special emphasis on several points that further indicate the lateness of the hour.

1. Our search for happiness. In spite of history and literature, men still believe that there must be some place in the world where they can be free from the worries and hurts of life. But there is no such place. It has always been, and still is, a phantom island.

Happiness is not something we get by seeking. It is a byproduct of a way of thinking and living. It is a state of mind which produces a state of life. Men confuse it with what they call pleasure. Pleasure may or may not lead to happiness. It may destroy happiness. It may so drug us that happiness becomes impossible for us. One can have pleasures without getting happiness. One can have happiness apart from so-called pleasures. Until we know the difference between the two we have small chance of finding the contentment and peace that passes understanding.

2. Our search for security: The world is filled with people today who believe that life can be made secure, protected against the forces that jeopardize well-being and happiness from the cradle to the grave. We talk in terms of social security, health security, happiness security, security from want and fear, but history will repeat her lesson:

There is no way of making life secure. The only security worth having is spiritual security, the security of self, the security that comes from one's loyalty to the best he knows, and to the God who seeks to love us into greatness. There will never be money enough, health enough, brains enough, happiness enough to make it possible for all men to have an equal amount. The wealthy are still heirs to sickness and worry, the price of sin and the cost of living. No man and no government can guarantee security to any of us. Only God can make us secure, and even He is limited to a world beyond this world. Aids to animal security governments can—and sometimes ought to—give, but true security comes from a proper rapport between man and God.

One thing I am grateful for: I am glad our forefathers on the Atlantic seaboard did not live under the legislation and philosophy which characterize our day and generation. If they had, they would have remained right there until the Federal Government had built roads across the mountains and prairies, bridged all rivers, created ferries for all lakes, all the way to the Pacific. They would not have moved a foot until all Indians had been shut up in reservations, all buffalo properly corralled, all lands divided into farms, the fields cleared of trees and stumps, the farms fenced in, and buildings erected. And even then I doubt that they would have taken a chance unless the Government had handed to each family cash for outfitting, maintenance, expenses from home to destination, a deed to the property with all taxes paid for 20 years, and a tidy subsidy to protect them against all losses or to permit them to make a good living while they fished, hunted, snoozed, and boozed.

That is not how America was born and reared, and unless there is an end to the legislation that bottle feeds this Nation of adult people, encouraging us to remain infants through all our days, the future of our Nation is shadowed and shortened. Under modern ideas, America will become like a dairy farm wherein we are all well pastured, well housed, well fed, and well milked.

3. Our search for equality. Here is an island that modern man loves dearly, but let me assure you that it is a phantom island. It has no real existence.

I have no patience with the idea. I do not believe in equality, for the simple reason that I do not believe God does. In creating the universe He made some stars large and others small, some bright and others dull. In creating the earth He did not make lakes and rivers to measure the same in surface or in depth. The mountains know nothing of equality, in fact, the contours of the earth demand another pattern. I find no equality in cattle, horses, or sheep, or equality among grains or sunset glories. Horses and men run races on the basis of inequality rather than of equality.

Look at your own graduating class. Are you equal in grades? Is something wrong because 5 percent of you received 100 percent of the top grades given? Is it unfair and unjust to give some of you B, others C, and the rest a mongrel mingling of lower grades? How shall we make those who lack leadership the equal of those who have developed it? How can we give to you whose knowledge is limited the education of those whose knowledge is large? How can we make you equal to one another?

As I read the record of the natural and the human worlds, inequality seems the rule.

Let me add this other thought: The superiority of the few must not be used as a weapon against those less well endowed, but neither must the inferiority of the many become handcuffs on the creative few. Let us make our peace with inequality, each using his endowment for the security of self and society, remembering that we are

one in flesh and nature, even though unequal in many things.

I have often thought of the story of the man from Illinois who visited Louisiana during the heyday of the Kingfish. A colored man enthusiastically described the program: the Kingfish was going to confiscate all money and all property and then divide the wealth of the State into portions so that every citizen would get an equal amount. The visitor responded by saying, "Uncle, but look here; if you divided all the wealth equally on Monday morning don't you know that by Saturday night 15 percent of the people would again own 85 percent of the wealth?" To which the colored man replied, "Sure, I know that, but I thought the Kingfish was going to divide it up every Saturday night."

I never play golf with the boys who believe in equality, and when any that I do play with begin picking balls out of the rough and putting them near my ball on the fairway, or lifting the wee pellets from the sand traps and putting them on the green near mine (when I am fortunate enough to be there), saying, "We have just as much right to be out here as you have," well, right then and there we stop playing golf.

Ladies and gentlemen, it is late, very late, and later than many Americans realize.

IS IT TOO LATE?

The major question we must consider is not either of those with which I have dealt, but this one: Is it too late? Is there yet time for us to do something about the trends of decline? Can we stem them and start a movement that will prove constructive in America and the world?

Many believe that this is the twenty-fifth hour, the hour beyond our saving. Others tell us that we are now in the twilight zone of the senescent age and that nothing can save us from the destiny of darkness that lies ahead. They point beyond the hour and the age to a new dawn when a remnant of faithful men and women will take up the task of rebuilding a broken world. They say the hour is very late. But how late is it?

Two things are essential if we are to win the battle of the century, our war against socialism and communism. These two essentials are the faith that builds righteousness into life and the courage that bids men do right regardless of personal consequences.

MacArthur was right when he declared that the basic problem of modern life is theological, meaning by the phrase that if modern life lacks spiritual dimensions nothing can save it from decay and death. It is the hand reaching for God and goodness that has always kept the world standing upright. Whenever we stop reaching for God and goodness our moral bodies slump, and the power of gravity pulls us earthward.

A bridge that is built in contradiction of the laws of the Universe will not stand. The Universe will shake it down. A life, either of a person or of a nation, which is not shaped and anchored according to the laws of the Universe will also fail. There is in this world a force that is determined to pull everything down that is not built in obedience to the higher laws of the spirit and of God's purposes. Call morality and ethics old-fashioned if you will; ridicule the pure and the straight if you care to; but face up to the fact that moral decline always robs the person and the nation of the power to stand upright, and without uprightness there is no tomorrow worth our craving.

The prophets and the Christ still haunt us. The Ten Commandments and the Sermon on the Mount echo even in this generation of strident sounds. The higher paths of achievement and righteousness remain untrodden save by those few who are lured to the heights by the vistas of grandeur or the need for a place of improved perspective. Until more of us are willing to pay the

price of climbing higher, as long as most of us are satisfied with the paths in, or just above, the valley floor, how can we build into modern life the stuff of God which fills out our flabby frames and makes us people of divine worth and strength?

We need religion that is religious, that purifies our motives and our loves, that makes us gloriously dissatisfied with ordinary attainments and procedures, a dissatisfaction that makes us restless until we rest in God and express our faith in ways of goodness.

But we also need the courage that commands us to do right regardless of personal consequences.

I do not know how you define courage, but to me it does not mean the absence of fear. We all need our fears. Proper fear teaches us caution, makes us safety-minded, forcing us to be considerate of the welfare of others. It is only neurotic fear, unfounded fear, that we need fear.

I would define a courageous person as one who does what he has to do in spite of personal danger. Every brave man has his moments of cowardice, even as every coward has his moments of courage, but the brave man is courageous in most instances, while the coward is cowardly in most instances.

One definition of a Christian might well be this: A Christian is a coward who is made courageous by faith in Christ. His companionship, His approval of the right, His demand that Christians prove themselves worthy of His love, makes men and women strong when they otherwise would be weak, winners when otherwise they would miserably fail.

There is no substitute for courage. With it love, faith, loyalty, citizenship, and religious excellence become possible. Without it there can be no humanity worthy of the name, and no divinity worthy of our desire. Men who lack courage are never real men.

I have always liked the reply given by a coast-guard officer to an enlisted man when the young fellow complained that the waves were too high and the wind too strong to permit them to run out to a stricken ship and return. Here are the words of the officer: "What you say may be true. We may or may not make the ship, and if we go we may not get back. But you see, we don't have to come back, but we do have to go."

I am only one person in the midst of millions, and at times I feel impotent and alone. But this I can do, I can strengthen my life until it becomes a strong link in the chain of God that would anchor America and the world to the things that really matter; I can keep abreast of the trends of my day, speaking and voting against those who would cut us loose from common sense and the Christian standard, setting us adrift in socialistic or communistic seas which can only mean our wrecking. I can hold aloft a higher way of life for all, challenging men to be men, God's men, to seek personal security in terms of character, and to fight and die as brave men ought.

Given a steady increase of citizens who have the faith that builds righteousness into life and the courage to do the right regardless of personal consequences, the future of America is assured. It is not too late, not if we are doing what each one ought to do for God and country.

In 1864, when the War Between the States was at its height, letters poured into the White House calling President Lincoln's attention to the fact that the moral life of America was in danger. Citizens all over the North called on the President to do something about it. One suggestion was this: Choose a verse of Scripture and stamp it into the coins of the realm. Both Mr. Lincoln and the Secretary of the Treasury, Mr. Chase, thought well of the idea—but which verse? It was decided to use the middle verse of the Bible. An Army chaplain disclosed that the

middle verse was the eighth verse of the one hundred and eighteenth psalm, which reads: "It is better to trust in the Lord than to put confidence in man." When Mr. Chase complained that the verse was too long, Mr. Lincoln shortened it to read: "In God we trust."

But this verse was born out of a great experience in the life of the psalmist. Let me give you a Courtenay imaginative translation of the fifth verse, the one which gave birth to the words, "It is better to trust in the Lord than to put confidence in man":

"I was in a deep gorge. The precipitous walls were all about me. The path beneath my feet was steep and slippery, and there was only a tiny wisp of heaven blue above my head. As I walked that steep and slippery path I prayed to the Lord for guidance and strength, and as I walked and prayed I suddenly found myself in the open countryside."

There you have a picture of our present situation. The precipitous walls we all know. The path so steep and slippery is beneath our feet. The tiny wisp of heaven blue is high above our heads. Our situation is not enviable. But what shall we do about it?

Is it too late? Not if we are willing to walk and pray, not if we fasten our gaze on the wisp of heaven blue above our heads, not if we keep going in the right direction, not if we are willing to discipline life and make it creatively obedient to God.

Hear the words again. "I was in a deep gorge with precipitous walls all about me. The path beneath my feet was steep and slippery, and there was only a tiny wisp of heaven blue above my head. As I walked that steep and slippery path I prayed, and as I prayed and walked, I suddenly found myself out of the gorge and at liberty in the open countryside."

Ladies and gentlemen, that is both our situation and our solution. There is no other, and you can and should do something about it. You, and only you, can answer the brutal question. Is it too late?

The Strategy of Defeat

EXTENSION OF REMARKS

OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 18, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, I wish to include in my remarks an article in the September 1951 issue of the *Freeman* entitled "The Strategy of Defeat," by Suzanne La Follette:

THE STRATEGY OF DEFEAT

(By Suzanne La Follette)

Senator JOE MCCARTHY has been frequently and not always fairly attacked for his commando tactics in the rough and tumble of debate on the issue of Communist influence in our Federal Government. But when he makes a full-dress speech in the Senate it is likely to be well documented and worth reading. That was true of his speech of March 30, 1950, which, if the CONGRESSIONAL RECORD were as widely read as it should be, might have spared him a great deal of unmerited abuse. It is even more so of the recent 70,000-word speech on Gen. George C. Marshall (RECORD, June 14, 1951), in which he dared to lay iconoclastic hands on one of the most revered idols of the administration and the press, a man who, as William Hard once remarked of President Wilson, is "suffering from premature canon-

ization." To be sure, the gilt was cracking, thanks to Marshall's dubious role in the MacArthur affair; yet the aura of sainthood was still blinding enough that the speech was contemptuously dismissed by most of the ambassadors of the press in Washington. It is perhaps the most widely condemned and least read speech of recent years. But it will find readers. Not long after these words appear in print it will be published in book form by Devin-Adair. Line forms on the right.

The task MCCARTHY set himself was to find out if possible who had been responsible for Marshall's influence on the conduct of World War II, his role at Yalta, and his disastrous policy in China. That he did not succeed in doing, but he came up with an analysis of Marshall's record, documented from sources in the main not unfriendly to Churchill, Stimson, Leahy, Deane, Chennault, Hu'll, Mark Clark, Sherwood, and Hanson Baldwin, to name a few—which makes the question one of vital interest in view of Marshall's present powerful position. For this array of evidence reveals a frightening thing: that the political and military policy stubbornly pursued by the man who was Chief of Staff throughout the war, who was able to impose his iron will on the aged Stimson, who had the willing support of the mercurial, irresponsible Roosevelt (eager propitiator of Stalin) and later of the ignorant and incompetent Truman, the man chiefly responsible for the betrayal of China—this man's policy has consistently ignored the interests of the United States and paralleled those of Stalin.

One must bear in mind that Marshall acted against the background of a powerful pro-Soviet propaganda in which almost the whole American press (and the administration itself) participated. When he echoed the Soviet demand for a second front in Europe as early as 1942, he was expressing a sentiment shared not only by our Communists and fellow travelers but by many eager and ill-informed Americans. Yet this hardly explains or excuses his insistence on a cross-channel invasion—"the only way," said Churchill, "in which we could possibly lose this war"—even after the British and Mark Clark (at that time commanding American forces in Britain) had persuaded Roosevelt and Admiral King that it could end only in disaster. Neither does it excuse his wanting Roosevelt to threaten the British that if they refused his demand, this country would withdraw from Europe and busy itself with the far-eastern war, or his cabling Churchill shortly before the north African invasion that the American Joint Chiefs considered that operation too hazardous—this after he had insisted upon throwing unseasoned troops against Hitler's formidable channel fortifications and a German Army of more than a million men. It must be remarked here that Stalin, for obvious reasons, was opposed to any allied action in the Mediterranean.

Churchill and Stalin, says General Deane, were thinking at Tehran of their relative positions in the postwar world, whereas Roosevelt was thinking only of winning the war. But MCCARTHY cites an American estimate of the postwar world. It had appeared at the first Quebec Conference in the custody of Harry Hopkins; and Sherwood in "Roosevelt and Hopkins," describes it as "a very high-level United States military strategic estimate" which had an important influence on American policy. In brief it declared that, with Germany crushed, Russia would dominate Europe after the war, with "tremendous military forces." To be sure, Britain was building up a position in the Mediterranean, but might not be able to oppose Russia there "unless she is otherwise supported." (MCCARTHY shows that Marshall was so stubbornly opposed to any action in the Mediterranean that at Malta he threatened to resign if the British continued

to press for any further undertaking in that theater. Unfortunately his bluff was not called.)

What conclusions would you think were drawn from this estimate? That the United States and Great Britain should employ their decisive military might to prevent Stalin from getting a foothold in the Mediterranean, the Balkans, Central Europe? That the United States should confine Soviet lend-lease—without which, as Stalin once admitted, Russia could not have won its war—to the minimum requirements for victory? That instead of creating a power vacuum in Germany through the fatal policy of unconditional surrender, the Western Allies should attempt to drive a wedge between the Nazis and the German people and encourage Hitler's overthrow by elements with which they could treat? You would be wrong. The obvious conclusion was that policy of appeasement which to this day vitiates our resistance to Soviet imperialism.

"Since Russia is the decisive factor in the war [sic], she must be given every assistance and every effort must be made to obtain her friendship. Likewise, since without question she will dominate Europe on the defeat of the Axis, it is even more essential to develop and maintain the most friendly relations with Russia."

The final recommendation urges the importance of persuading Russia to enter the far-eastern war.

Do you recognize the documentation of Roosevelt's calamitous "great design"? Do you see why Mark Clark's Italian campaign, designed to lead into the Balkans, was rendered meaningless because Stalin for obvious reasons insisted at Tehran (with the support of Marshall and Roosevelt) that Clark's best troops be used for an invasion of southern France, as if the pursuit of Kesselring's retreating army to the Balkans and the heart of Europe would not have provided an offensive from two converging directions? Do you see why Eisenhower halted the victorious armies of Montgomery and Patton, thus permitting Russia to take Berlin and Prague? Do you see the betrayal of Mihailovich and the Polish patriots and the grim forecast of Chiang's betrayal at Yalta? Do you see why the proposal of the Joint Chiefs of Staff in January of this year, that we really fight the Chinese Communists, died on Marshall's desk? It is all there in that incredible document which only 5 months ago guided Marshall and Acheson in the unprecedented action of removing General MacArthur because he wanted to win the Korean war.

Chiang Kai-shek was not invited to Yalta, and we need hardly wonder in view of what was in preparation, Stalin, MCCARTHY shows, had three times expressed his intention to enter the far-eastern war—to Harriman, Huxley, and Hull. It would probably have taken force to keep him out, for the war involved his designs on China. Yet Harriman and Deane had been sent to sound him out on terms, and naturally he made them steep—the recognition of all the old czarist imperialist claims. It was not hard to persuade Roosevelt, the liberals around him had convinced him that old-fashioned imperialism such as that of Britain in Hong Kong and India was bad, but the new Communist imperialism good—MCCARTHY brings out that he had offered Dairen to Stalin even as early as Tehran.

But it is Marshall's behavior at Yalta which was most remarkable. So bent was he on having Russia in the Japanese war that he presented Roosevelt with false intelligence estimates of Japanese strength and concealed the peace feelers which Japan was already sending out. The "master of global strategy" was planning another invasion, this time of the Japanese islands, in spite of the opinions of Leahy, MacArthur, and Nimitz that Japan had already been defeated by sea and air power and no invasion would be

necessary. He even insisted at Potsdam on bribing Russia into the war, after the atom bomb had been successfully tested at Alamogordo.

McCARTHY suggests that Marshall went to China in the winter of 1945 to see that the Yalta agreement was carried out. If so an excess of zeal must have overtaken him, for his services to the Communists went far beyond the terms of Yalta. Both before he went and after his return he told Admiral Leahy, who "thought he was wrong both times," that he was going to force Chiang to come to terms with the Communists, who had resumed their operations against the Chinese Republic, or get along without American aid. Marshall's tough attitude was in all probability conditioned by the pro-Communist stand of Gen. Joseph Stilwell, whom he had recalled on Chiang's demand but only after "direct and positive orders" from Roosevelt. And here the whole pro-Communist State Department crowd enters the picture—the men who surrounded and influenced Stilwell in China, as they influenced Acheson in America—beginning with Stilwell's adviser John Paton Davies, devoted friend of the Soviet agent Agnes Smedley.

Marshall's "deadly blows" at free China during this mission were four, according to McCARTHY. He pressured Chiang, as the price of a truce with the Communists, into ceding them the vitally important cities of Chihliang and Dolun, gateways from north China to Soviet-held Manchuria. The Communists broke the truce and captured the important city of Changchun. When the free Chinese forces drove them out, Marshall forced a second truce upon Chiang. Then he imposed an embargo on American military aid to free China and persuaded the British to do likewise—an action which, as McCARTHY rightly says, more than anything else "made the victory of Russian imperialism in China inevitable," for Stalin of course continued to supply the Chinese Communists, largely with material provided by the United States for his 6-day "conquest" of Manchuria. The final blow was Marshall's insistence, on threat of his own recall, that Chiang accept yet another cease-fire just as his victorious troops had taken Kalgan, described in the white paper as "one of the political and military centers of the Communist Party," and commanding the Kalgan Pass into Manchuria.

There is much more to Marshall's China story as McCARTHY relates it. Part of it has already been publicized; for example, Marshall's suppression (when Secretary of State) of General Wedemeyer's 1947 report proposing measures to check Chinese Communist aggression—Marshall deceived Senator Vandenberg about the reasons for this action. Space does not permit me to cite further instances from McCARTHY's wealth of material. Suffice it to say that Marshall's actions and attitude toward the Chinese Republic were consistently tough and inimical, while he has consistently befriended the Chinese Communists and served their interests, in total disregard of America's vital interest in a free and friendly China. The conclusion is inexorably dictated by the evidence which McCARTHY adduces.

Is there an American interest? More Americans than Marshall and Acheson would like to believe are asking today whether their Government knows or cares just what it is. They are asking why, in the face of the tremendous Soviet military power predicted in that strategic estimate, the greatest military machine in history was destroyed—not demobilized but destroyed—after the war. They are asking why their sons are fighting in Korea a costly and needless war which the administration confesses it is afraid to win because winning might annoy Stalin. They are asking why it is that for all the administration's tub-thumping against Soviet aggression, its actions invari-

ably have the effect of serving Soviet interest. If the American people had been allowed to learn the substance of this important speech, they could never doubt that the great conspiracy, as McCARTHY maintains has its dupes and agents inside the administration—and very near the top. And they would understand why the administration's heaviest guns have lately been trained against its author. The general unawareness of this heartbreaking record of betrayal is startling proof of the abyss which the press has created between the people and their representatives in Congress.

Labor Relations

EXTENSION OF REMARKS

OF

HON. J. PERCY PRIEST

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. PRIEST. Mr. Speaker, under leave granted to extend my remarks, I desire to include excerpts from an article written by Jeter S. Ray, Associate Solicitor in the Department of Labor, and appearing in the September issue of the Labor Law Journal.

I believe this article is exceptionally well written and is a good analysis of a very important subject.

The article follows:

INTERNATIONAL REGULATION OF LABOR RELATIONS

(By Jeter S. Ray, Associate Solicitor, Department of Labor)

(The views expressed represent the personal opinion of the author and are not necessarily the official views of the United States Government.)

INTERNATIONAL FREE TRADE-UNIONISM CAN BE A PRIME BULWARK AGAINST THE EXPANSION OF TOTALITARIANISM

Generally overlooked, despite the extensive attention given to labor relations legislation during the past decade and a half, is that international organizations have been dealing with the subject of labor legislation for over half a century—at least since the International Congress on Labor Legislation held in Zurich, Switzerland, in 1897. Without question, the International Labor Organization established under the peace treaties of World War I has been the agency primarily responsible for directing international attention toward, and achieving international action with respect to, the many and complex problems in the fields of labor standards and labor relations.

The ILO, an autonomous association affiliated with the League of Nations, was founded to aid in the maintenance of peace by the improvement of living and working conditions. The preamble of its constitution contains the declaration that "recognition of the principle of freedom of association" is one of the means of improving the conditions of the workers and securing peace. Article 41 of its constitution recognizes "the right of association for all lawful purposes by the employed as well as by the employers." Voting delegates, representative of employer associations, worker associations and member governments, participate in its deliberations. The notable purpose of the ILO, together with its tripartite representation, has endowed it with the necessary strength and vitality to survive not only the dissolution of the League itself, but the disruptions of World War II as well.

Prior to World War II, the International Labor Organization conventions and recommendations were concerned primarily with such aspects of the worker-employer relationship as the regulation of night work for women, minimum wage legislation, requirements regarding the maintenance of statistics of wages and hours of work and the establishment of standards with respect to maritime employment.

Under the aegis of the Economic and Social Council of the United Nations, the governing body of the International Labor Organization placed the question of freedom of association on the agenda of the thirtieth session of the conference held in 1947. Despite past failure of the ILO to attain international regulations regarding this matter, there now appeared a maximum chance of success. As is well known, freedom of association progressively had been suppressed in the interval between the two World Wars in countries which had adopted totalitarian regimes and the countries dominated or occupied by the Axis Powers. Continuous efforts, during this interval, by the International Labor Organization to achieve international action on the subject were paralyzed effectively by such external political obstacles. The end of the Second World War involved the collapse of many totalitarian states, however, and such political difficulties had considerably diminished.

Freedom of association—ILO conference reiterates rights

It was not until a year later, however, at the thirty-first session of the International Labor Conference, held in San Francisco, that constructive and positive action with respect to this subject took place. On July 9, 1948, without a dissenting vote, the Conference adopted what was probably the most significant convention adopted up to that time. That convention (No. 87), entitled "Freedom of Association and Protection of the Right To Organize," covered all essential aspects of the life of organizations from establishment to dissolution.

The adoption of convention No. 87 was viewed as only the initial step in dealing with the problems, limited as it is to a definition of the fundamental guarantees which workers, employers, and their organizations should enjoy—guarantees to which the state members undertake to give effect under article 1. Recognizing that the exercise of the right of freedom of association, especially with respect to the right to organize might be endangered unless protected, the thirty-first session of the conference recommended that there be placed on the agenda of the thirty-second session the question of the effectuation of the principles of the right to organize and bargain collectively. The governing body of the ILO accepted this recommendation and placed the subject on the agenda of the thirty-second session held in Geneva in 1949.

According to its usual procedure, the conference referred the question to its Committee on Industrial Relations which immediately proceeded to consider it on the basis of a proposed text that had previously been prepared by the Secretariat of the ILO after receipt of the views of the member governments.

Not-to-join amendments cause disagreement

One of the substantive issues upon which unanimity could not be obtained was evoked by the proposed amendments to article 1, offered by the employer group. These amendments were designed to include express provisions in the instrument affirming the right of workers not to join.

The significance of this series of amendments is that they would protect nonmem-

bership in a union, thereby rendering it impossible for workers and employees to negotiate union-security clauses in collective-bargaining contracts. Obviously such amendments extend beyond an affirmation of the right of workers to refrain from organizing if they so desire. The international regulations under consideration were intended simply to make the principle of freedom of association effective by guaranteeing workers the right to establish their own organizations which could function without interference. * * *

U. N. declaration of human rights not applicable here

In this connection, proponents of the proposed amendments emphasized the principles expressed in article 20, paragraph 2, of the Universal Declaration of Human Rights, which provides that no one may be compelled to belong to an association. It was pointed out, however, that the application of article 20 (2) of the declaration appeared to be open to doubt in the light of article 23 (4) which deals specifically only with the right to form and join trade-unions and not with the right "not to join." Some committee members felt that it would be undesirable to attempt to interpret an existing international document by the terms of the proposed convention or to interpret the convention by reference to the Declaration of Human Rights. * * *

* * * Needless to say, these proposals provoked lively discussion in which the committee members from the United States actively participated. As is usually the case, full and open debate on the subject produced a practical solution. As stated in the committee's report:

"The committee finally agreed to express in the report their view that the convention could in no way be interpreted as authorizing, or prohibiting union security arrangements, such questions being matters for regulation in accordance with national practice."

Article 2 of the text proposed by the office, dealing with the protection of workers' organizations from interference by employers or their associations, was amended by the committee to incorporate a principle of reciprocal protection against interference with employers' organizations. In other words, the amended article protects the rights of employers' organizations as well as organizations formed by workers. The inclusion of protection of the rights of employers' organizations does not suggest that properly constituted trade unions would perform acts of interference with the affairs of such organizations. The absence of any such implication was clearly asserted by spokesmen for the employer group. They insisted such a safeguard was necessary, however, under totalitarian regimes and even in democratic countries where the attempt was being made to undermine the democratic character of institutions, and to disorganize employers' organizations. The majority of the worker members of the committee adopted the principle in a spirit of compromise. * * *

Article 6 of the office text provoked considerable debate and presented a challenge to the committee to find an appropriate text reflecting the extent to which the members considered it desirable or practicable to apply the regulations to government employees. The worker members and some of the members representing governments would have preferred that the convention apply to all government employees. In their view, the large number of workers in the service of their governments should not be deprived of the protections enjoyed by private workers. The employer members, however, expressed the view that each government should be

permitted to determine for itself the extent to which the guarantees laid down could be applied to its public officials and other employees. Other members representing governments pointed out a need for some restrictions on the rights of public servants, not so much with respect to the right to organize as with respect to the right to bargain collectively. In the end, recognizing the validity of some restriction on strikes by government workers, the committee phrased article 6 in the language ultimately adopted by the convention. In this connection, it should be noted that the legislative history of the article seems to indicate that article 6 is intended to provide an exception with respect to public servants of the constituent states or other divisions of a federal government, as well as public servants in the employ of the Federal Government itself. * * *

Convention No. 98

A comprehensive report on its activities was prepared by the Committee on Industrial Relations and made available to the thirty-second session of the general conference. Some of the afore-mentioned proposals which had been voted down in the committee were nevertheless again proposed before the conference. There was no lack of opportunity for debate, and extensive discussion took place. Ultimately, however, the proposals of the committee were adopted.

Articles 1-6 of the convention contain the substantive provisions, while articles 7-16 deal primarily with such matters as reporting, ratification, territorial application, and revision of the convention. * * *

Effect of Convention No. 98 in the United States

Next we consider the question of the effect of Convention No. 98 on the laws and practices of this country. How are we affected?

First, it should be noted that the ILO constitution (article 19) contains special provisions for federalized members, such as the Argentine Republic, Australia, Brazil, Canada, India, Mexico, Switzerland, and the United States, because of the division of authority between the central and constituent governments of each. Under those provisions, the United States is permitted to decide whether a convention or recommendation adopted by the ILO is, in whole or in part, appropriate under our constitutional system for action by our constituent States. If considered by this Nation to be appropriate for action by our Federal Government, the obligation of the United States is to refer the matter to the President and Congress for the enactment of legislation or other action, which includes in the case of a convention the possibility of ratification as a treaty. If not considered appropriate for Federal action, the convention or recommendation is referred to the Congress and to the several States, for enactment of legislation or other action, as they may consider appropriate, and steps are taken to promote, within our country, such coordinated action as will give effect to the provisions of the ILO regulation. The ILO constitution does not contemplate that this Nation should ratify a convention which is partially or exclusively appropriate for action by our States.

Consideration has been given to the convention by the interested departments and agencies of the United States Government. It is the coordinated view of these branches of the Government that the provisions of the convention are appropriate in part for action by the Federal Government and in part for action by the States. Hence, under the provisions of the ILO constitution applicable to federal states, there is no obligation on the part of this Government to consider the instrument for ratification as a treaty. The convention has been referred to the States for "enactment of legislation or other ac-

tion" as each State may deem appropriate. And, upon the recommendation of the interested executive departments, the President transmitted, on June 21, 1951, the convention to the United States Senate and House of Representatives for such action as those bodies may consider appropriate. No specific legislation has been recommended, but the suggestion has been made that Congress should give consideration to the provisions of the convention in connection with its continuing study of legislation in the field of labor relations.

It seems clear that ratification of this convention by the Federal Government would be inappropriate under our constitutional system, since our constituent States, as a proper exercise of their police power, may exercise jurisdiction under certain conditions in the labor-relations field. Thus, if this country were to enter into an international treaty relating generally to the rights of workers to organize, it is not difficult to visualize the possibility of extinguishing State jurisdiction and superseding conflicting State laws in the field under the provisions in article VI of our Constitution making international treaties the supreme law of the land.

It is in recognition of such situations in federalized states that the ILO constitution so appropriately contains special provisions whereby federalized members are permitted a certain latitude in order to achieve internal compliance with the terms of a convention without the necessity of ratification of a treaty. Thus, by allowing federalized states to determine for themselves whether the terms of a convention are appropriate for Federal or State action, there arises no question of the possibility, through ILO participation, of the loss of State jurisdiction over fields constitutionally reserved to them. We are in a position to preserve the constitutional division of powers between our State and Federal Governments and yet remain a full participant in an effective program for the promotion of better conditions of labor and higher standards of living throughout the world.

Conclusion

While the principles and objectives of Convention No. 98 are substantially recognized in the laws of this country, nevertheless its passage represents significant progress in promoting the institution of basic rights in many areas of the world. In this convention, government, worker, and employer representatives of 62 nations have fashioned a framework of minimum rights and guarantees deemed necessary to foster peaceful industrial relations. This cooperative venture, it is submitted, provides reason to believe that, through the offices of this convention, the need for protection of workers' freedom to associate will be more widely recognized, and that action will more likely be taken by countries whose laws may be deficient in that respect. To the extent that it fosters and encourages the growth of free trade unionism throughout the world, to that extent has the convention aided in strengthening a prime bulwark against the expansion of totalitarianism.

We Get What We Pay For

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULIER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. MULIER. Mr. Speaker, the following article, written by Maurice R.

Franks, appeared in the July-August 1951 issue of the magazine *Partners*, official publication of the National Labor-Management Foundation. It speaks volumes.

PENNY-WISE—IF WE WOULD WIN BETTER MEN AS GOVERNMENT OFFICIALS, EDUCATORS, AND LABOR LEADERS, WE'LL HAVE TO DROP REAL CASH IN THE KITTY

We Americans have managed pretty well throughout our history to avoid the pitfalls of false economy. We discovered fairly early in the game the futility of pinching mere pennies when such meant pinching off future dollars. We have learned well the basic rule of investment. The Scriptural statement, "As ye sow, so shall ye reap," has made a lot of sense to the business minds of our Nation. Dollars, not pennies, were sown by American enterprise, hence the harvest has been in gold, rather than in copper.

Americans, in a word, have been dollar-wise—not penny-wise. The result of our economic wisdom has been our exalted standard of living—a standard which is the envy of the entire world.

To appreciate the scope of our bright and continuing harvest we need only pause long enough to realize that our dollars, even while financing the reconstruction of most of the civilized world, are still numerous enough to provide the vast majority of our own people with every essential, along with an incredible inventory of pure luxuries.

No, surely we Americans have no reason to hang our heads when less successful people point fingers of scorn at our coffers and taunt us for our "dollar wisdom." If anything there be for which we should be ashamed, it is that our dollar wisdom is not as yet complete—that in a shocking number of vital instances we are still penny-wise and dollar-foolish.

The situation is all the more shameful because of who and what we are—and because it is we, more than any other nation, who have come up with the right economic answers.

THE CASE OF THE UNDERPAID

Two streams of poison afflict our American way of life. The one is mediocrity. The other is crookedness.

Both, unfortunately, descend from the high places and dribble their paralyzing poisons down across the entire face of our national life and into the deepest reservoirs of our future security.

We suffer from mediocrity and corruption in Government. We suffer from both poisons in the field of education. The dual affliction is obvious in many social services—particularly in the profession of labor leadership.

In each instance, the reason for this deadly condition is the same—insufficient investment—penny wisdom and dollar foolishness. And in each instance the remedy, tested and true, is already written in gold in the book of American accomplishment.

PENNY ANTE FOR GOVERNMENT SERVICE

Have mediocrity and corruption made of government in the United States a top-heavy and inefficient machine—one which is completely out of step with the powerful and efficient machine represented by our industry? All right, we are getting precisely what we pay for. In hiring governments to represent us, we offer each officeholder comparatively speaking, a pittance. And that goes for all Government officials, from the small ward politician to the highest officeholders in Washington.

By offering small change for running the largest and most complex government machinery in the world, we attract mostly small change in terms of human capacity and integrity. By setting up a scale of remuneration we otherwise pay to average men, we get exactly what we pay for: mostly average men,

with their modest store of experience and their limited ability in the handling of outside problems. By playing penny ante for Government service, we staff our public offices for the most part with men whose horizons are circumscribed and whose spirit of enterprise does not go beyond an unenlightened willingness to indulge in a bit of a killing whenever and however they can.

It our halls of government swarm with two-for-a-cent characters—when billion-dollar decisions are confided to their inadequate care—we have only ourselves to blame for the obvious results of penny wisdom.

Until we rise to the occasion and make a proper investment in good government, we are doomed to witness a continuance in office of just such a squander trust as is losing billions of our good dollars today. Worse, we shall be progressively afflicted by armies of petty Government job holders morally and temperamentally prepared to sell our magnificent economic heritage for a mess of collectivist pottage.

THE UNDERPAID SCHOOL TEACHER

If bad government can sell us out as a nation, bad education can certainly pave the way for the irresponsible auction. And that is just what the minds of our young are today receiving.

From the grade school, through high and prep school, into the dimly-lit classrooms of college and university, it is becoming more and more the rule of thumb to question our economic institutions and denounce the pattern of our American way of life. The cynic becomes the mouthpiece of our history and of our economic and political theory. The Red threads of communism are discernible in the educational fabrics being woven for our youth to wear, and everywhere the palsied hand of mediocrity writes nonsense on the blackboard as the only answer to the charges of Red cynicism.

The situation in the educational field is becoming really serious, but, again, we have only ourselves to blame. Again we are reaping only the harvest of our penny wisdom. The teaching profession is notoriously underpaid—considering the responsibilities with which it is charged. And I don't mean by a few coppers—I mean by thousand-dollar brackets. By what queer betrayal of our better judgment do we presume to pay a vital profession less than we pay our unskilled labor?

Naturally, the underpaid school teacher is a discontented character, and therefore is ready meat for subversionist doctrine. If, being underpaid, he is on the other hand contented, he is something as bad if not worse, he is a mediocre of the mediocre.

Needed, as in the case of our attitude toward the Government official, is a complete revision of our estimate of the school teacher's annual worth to our society. Excellence is an absolute requirement on teaching staff and faculty, if we would preserve our economic sanity and carry it over into the oncoming generations, but to attract such excellence, the money must be there. Penny pinching will never turn the trick.

THE UNDERPAID LABOR LEADER

No great imagination is required to realize the vital part which the leader of organized labor can and will play in the saving or scuttling of the America most of us still love and revere. We have entered a phase of our national development wherein labor is fast becoming the dominant voice. For better or for worse, the "laboristic economy" announced by Prof. Frank Tannenbaum, of Columbia, may indeed be upon us already. Very well, it is therefore all the more important to our future as a nation that our labor leadership shall be up to the tasks confronting it. Give us mediocrity and corruption as the badges of such leadership and we'll not last out the century, possibly not even

the present decade. Already the boys in the Kremlin are licking their chops over the prospect, based on current symptoms.

Here again, penny wisdom on our part can turn out to be the open sesame to Moscow's dearest hopes for this country. Here again, dollar wisdom—sound and lavish investment—is immediately called for.

Labor leadership is a fast-moving and responsible profession. No other profession, it is safe to say, comes closer to holding the keys to our future as a nation. All right, with what kind of material are we going to people this profession? With rats and racketeers? With stumblebums and ignorant? With short-sighted contractors for socialism? Or with men of superior intelligence, moral fiber and social vision? We'll get what we pay for—make no mistake about that. The choice is up to us.

NOT A HOPELESS PICTURE

The picture is not a pleasant one, most of us will admit. Government, education, labor leadership—three powerful machines manned by individuals who, in character and capacity, but slightly resemble the men in better-paid walks of life who through the years have created American industry and commerce and enabled all of us to realize a fabulous return on their investment. The picture is not a pleasant one because of the damage our long neglect has piled up in our midst. But the picture is not a hopeless one.

With the book of the past open on our knee, the answer to our dilemma is clearly defined. In exploration, industry, commerce, finance, etc.—in all that is wrapped up in our American business world—we have invested heavily in the excellence which resides in our people, and have reaped a mighty harvest. In Government, education, and labor as a profession, the field is still fertile. As we sow, so shall we reap. This we know from experience. Here, as elsewhere, the dollar must be our trusted servant. We cannot afford to be pennywise.

Frankly yours,

MAURICE R. FRANKS,
Editor.

Proposed Aluminum Industry for Montana, No. VII

EXTENSION OF REMARKS OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. MANSFIELD. Mr. Speaker, I am inserting at this point in the RECORD a letter which I received from the Honorable PORTER HARDY, JR., chairman of the Subcommittee on Government Operations of the Committee on Expenditures in the Executive Departments, in response to my letter of October 18, and also I am inserting a letter I have received from the Honorable EMANUEL CELLER, chairman of the House Judiciary Committee, relative to hearings on my bill, H. R. 5410, a bill to provide for the establishment of a clearing house of information in the Department of Justice, to furnish agencies of the Federal Government with information concerning the qualifications of Government contractors. I am also inserting a copy of this bill, H. R. 5410.

I am deeply disappointed that the Hardy subcommittee was not able to furnish a final report of its investiga-

tion of certain allegations made concerning the Harvey Machine Co. over the radio and in the newspapers by Mr. Drew Pearson and in the Appendix of the CONGRESSIONAL RECORD by the Honorable JOHN SAYLOR, of Pennsylvania. It is my hope that this matter will come to a head at the earliest possible opportunity so that the status of the aluminum industry for the Flathead Valley in Montana can be settled. The people of Montana are, at the very least, entitled to this consideration at the earliest possible time.

GOVERNMENT OPERATIONS
SUBCOMMITTEE OF THE
COMMITTEE ON EXPENDITURES,
IN THE EXECUTIVE DEPARTMENTS,
CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., October 20, 1951.

Hon. MIKE MANSFIELD,
House Office Building,
Washington, D. C.

DEAR MIKE: This is to acknowledge your letter of October 18, 1951, in which you expressed the hope that this subcommittee will issue a report in the near future with respect to its investigation of certain allegations which have been made concerning the Harvey Machine Co.

Immediately upon the decision of the subcommittee to comply with your request for an investigation of this matter the staff began an examination of all pertinent departmental files and records having to do with all phases of the Harvey matter. This study has been in continuous progress since that time, and the results of the study have been presented to me in a staff memorandum. Unfortunately, there has been insufficient time for members of the subcommittee to analyze the work of the staff with a view to determining the proper course of action. Copies of the staff memorandum are, however, being sent to members of the subcommittee so that at the first opportunity we can decide what our next step should be.

I know you will appreciate that the adjournment of the Congress at this time is unfortunate from the standpoint of being able to wind up our action on this matter promptly.

Sincerely yours,

PORTER HARDY, Jr.

HOUSE OF REPRESENTATIVES,
COMMITTEE ON THE JUDICIARY,
Washington, D. C., October 19, 1951
Hon. MIKE MANSFIELD,
House of Representatives,
Washington, D. C.

DEAR COLLEAGUE: I have your letter of October 4 concerning your bill, H. R. 5410.

Please be advised that I am today referring H. R. 5410 to subcommittee No. 3, presided over by our colleague, Mr. BRYSON.

With kindest greetings, I am

Sincerely yours,

EMANUEL CELLER,
Chairman

H. R. 5410

A bill to provide for the establishment of a clearinghouse of information in the Department of Justice, to furnish agencies of the Federal Government with information concerning the qualifications of Government contractors

Be it enacted, etc., That in order to provide all agencies of the Federal Government with full, complete, and accessible information concerning certain persons who have heretofore contracted or may hereafter contract with the Federal Government, the Attorney General is authorized and directed to establish and maintain within the Department

of Justice a clearinghouse of information as hereinafter provided.

Sec. 2. (a) The clearinghouse established pursuant to the first section of this act shall contain such information (including information with respect to credit, integrity, loyalty, efficiency, and performance) concerning each person who contracts with an agency of the Federal Government as the Attorney General shall deem appropriate.

(b) Each agency of the Federal Government shall, from time to time, submit to the Attorney General such information concerning persons who contract with such agency on or after the date of the enactment of this act as the Attorney General may require in accordance with subsection (a).

(c) Within 30 days after the date of the enactment of this act, the Attorney General shall submit to each agency of the Federal Government a request for such information as he deems appropriate in accordance with subsection (a) concerning persons who have contracted with such agency within the 10-year period immediately prior to the date of the enactment of this act, and each such agency shall within 60 days after the date of the enactment of this act furnish to the Attorney General the information so requested.

Sec. 3. (a) Upon the request of the head of any agency of the Federal Government for information concerning any person who has contracted or may contract with such agency, the Attorney General shall furnish to such agency any information concerning such person which is available in the clearinghouse established pursuant to section 2 (a).

(b) If any information requested by the head of an agency of the Federal Government pursuant to subsection (a) is not available in the clearinghouse established pursuant to section 2 (a), the Attorney General, upon the further request of the head of the agency, shall conduct such investigation as may be necessary to secure the information requested and shall furnish such information to the agency.

Sec. 4. For the purposes of this act—

(1) the term "person" includes an individual, partnership, corporation, and any other business entity; and

(2) the term "agency of the Federal Government" means any department, agency, or independent establishment in the executive branch of the Government, and any corporation wholly owned by the United States.

Sec. 5. The Attorney General shall prescribe such regulations as may be necessary to carry out the purposes of this act.

Address of Hon. Zales N. Ecton, of Montana, Before the Montana Bar Association

EXTENSION OF REMARKS

OF

HON. ZALES N. ECTON

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Saturday, October 20, 1951

Mr. ECTON. Mr. President, I ask unanimous consent to place in the Appendix of the RECORD an address delivered by me before the Montana Bar Association in Butte, Mont., June 29, 1951.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is indeed a pleasure, and I deem it a great honor, to have been invited to address

the Montana Bar Association this afternoon here in Butte.

Having worked with numerous lawyers for the past several years, I have reason to say that members of the bar are always most tolerant and understanding. Some of the very finest and best friends I have, both in Washington and in Montana, are lawyers.

We have 63 lawyers in the United States Senate, representing 43 States. Apart from the warm, personal friendship I have with many of them, I can assure you that the Senate is a more capable, more deliberate, more tolerant, and a more dignified body because they are part of it.

Their legal training, their experiences in private practice especially equip them as public servants. Their respect for the opinion of others, their tolerance under trying circumstances, and their dignity as individuals inure to the credit of the legal profession.

We are living in a restless, unpredictable, and dangerous age. Mankind is beset with apprehension and fear as to the future and to the future of the country. Almost every plan of action by individuals and government is impregnated with calculated risks.

America today stands hesitant and trembling at the crossroads. The old cocksure confidence in the manifest destiny of American principle to save mankind has given away to fear and frustration. And why?

I know that in your minds is poised the same question that everyone else is asking. Why? With all the able men and good minds we have in this country, why has this America of ours drifted into the state of confusion and fear so evident on every hand?

From the observations and analyses which I have made, it seems to me the answer lies primarily under two headings:

1. This country has been governed too long by men instead of by law, as was intended and defined under the Constitution.

2. This country has been drifting too long on a hit-and-miss foreign policy, a foreign policy which has been weak, vacillating, compromising, and appeasing.

During the past 18 years, in the ever-expanding governmental bureaucracy, rubber-stamp Congresses have delegated more and more powers to the President and the executive branch of the Government. Thus, the legislative branch has been shorn of many of its constitutional powers and rights as direct representatives of the people.

The poet, Tennyson, once wrote: "Ring in the nobler modes of life with sweeter manners, purer laws." Unfortunately, too many political lawmakers have taken that poetic admonition entirely too literally. The Ten Commandments have been supplemented with laws pertaining to almost every subject under the sun, but there are few who would say that much improvement has been made either upon the manners or morals of the country or the world.

Our Capitol at Washington has been infested with many brain trusters and demagogues who call themselves liberals who have been entrusted with the administration of these delegated powers and who believe we can create peace, prosperity, and morality by legislative action. Actually they have been much less interested in the nobler modes of life than they are in controlling the lives of our citizens.

These so-called liberals have organized what I can best describe as a secret force within our Federal Government. They have a new lure in their bag of bait they call security and it is peddled by every leftist in the land. The result is that today there are millions who are willing to endanger not only their own future, but the future of America itself, in their mad scramble to lay their hands on this modern golden calf, called "security." Opportunity, as the American way, has been dropped from their vocabulary.

The route they are pursuing to reach this unknown goal is strewn with the bleached bones of people and nations led to destruction by demagogues and dictators who used that same old bait—the welfare state and security. Such promises have won influence and power for both frauds and tyrants ever since man first lived under organized government.

Not until after people have traded their freedom for the promise of security do they learn that man's real security is to be found only in his own industry, integrity and self respect. Modern history gives us undeniable proof of that.

Despite these proven facts, we Americans have lowered our guard and we are now paying for that folly.

When a one-sided Congress side-stepped its duty 17 years ago and began delegating authority, upsetting our constitutional system of checks and balances between the legislative, executive and judicial branches of the Government, this country took its first steps in Government by edict and delegated authority.

Most of you recall when an army of Federal employees was first sent out over the land to boost prices. That delegated authority, the NIRA, was foisted upon us during a drought and depression. The Supreme Court of the United States saved us then.

Along about that time the executive branch of our Government had become saturated with groups of intellectual soap boxers and pinkos. These nefarious fakers, charlatans and quacks covered their tracks and intentions by labeling themselves saviors of the common man.

The propaganda machine began to roll. Groups were organized by appealing to the selfish thirst for power in certain individuals and they were given power, by taking away from some and giving to others. Then the groups were carefully balanced against each other by a master political craftsman so they could not consume the political architect. The unified support of all groups was ensured politically by dangling the bait of more and dominant authority before each group, without ever delivering it in sufficient quantity to upset the balance. Our domestic give-away program was inaugurated and the political strategists geared it to the indirect buying of votes.

Is it any wonder people are asking, "Why?" Such corrosive methods and intellectual dishonesty can only breed moral decay in the body politic and engender fear and apprehension.

Then, on the newsstands came that book, the Nine Old Men. This was followed by a bold attempt to pack the Court with their satellites. That battle raged for months.

Temporarily halted in their blitz to gain complete control over the Court and business life of the Nation, another plan was developed. The heralded crises and emergency declarations circumvented those in the Congress who patriotically defended the Constitution. The result was that we have been struggling along under emergency declarations ever since. We had them before the war. We had them during the war. We have them now.

Emergencies provide an excuse for rule by men, regulations by the ream and red tape by the mile. Commissions and bureaucrats ignore the Constitution, representative government is denied and the executive power is increased accordingly. The tempo has been doubled and trebled and the system remains supreme, masquerading in the name of democracy. It is akin to that same kind of democracy that masquerades in Russia, Red China, and some other places.

Russia repeatedly refers to her Communist state as a democracy. Whatever significance may have been attached to the word in the past, the term "democracy" is certainly no longer a dependable key to the

secret of a free society. The word is totally inadequate and fatally misleading in describing the political system of our country which is definitely in a class by itself.

One of our troubles is that too many people have been sold on the idea that America is and should be a democracy. But it was never intended to be a democracy. The United States of America is a republic. Democracy is domination by the majority. A republic means representative government under a constitution which protects the individual and the minorities from the majority. The single official purpose of all American Government is to secure and protect the unalienable God-given attributes of the individual human being.

The word "democracy" is not mentioned anywhere in the Constitution of the United States, nor is it mentioned in the Constitution of any State in the Union. But the Socialists and the Communists and the welfare-staters and the security promoters are bent upon destroying this Republic and its representative Government and changing it into a Socialist democracy which they can dominate.

The secret government within the Government, with an army of 3,500 publicity agents and 40,000 public-relations workers, has been bombarding the people and the Congress day in and day out for years on this proposition.

Just a few years ago this Government functioned very capably with approximately half a million civil employees. Today we have five times that many—2,500,000.

Just 11 years ago President Roosevelt sent over his budget request and practically apologized for asking for \$7,000,000,000 to pay the cost of Government in 1940. Today President Truman is asking more than 10 times that much. Next year it will require more than \$8,000,000,000 just to pay salaries to civil employees.

Today we have an annual budget running well over \$70,000,000,000 and a demand that the already stifling taxes be increased another \$10,200,000,000.

When we started to prepare for World War I, the Federal debt was a little more than \$1,000,000,000. When we started to prepare for World War II, it was a little more than \$40,000,000,000. As we start to mobilize again, that debt stands more than a quarter of a trillion. This country has been on a deficit financing basis in 19 out of the past 21 years. The national indebtedness now amounts to \$6,786 per family in the United States.

The salaries and expenses of the publicity workers alone now cost approximately \$500,000,000 a year. I have not been able to get the exact figures for 1950, but the travel expense for just the executive department in 1949 cost \$335,000,000.

Government by edict and rule by the executive branch has reduced the role of Congress to the point at which it is little more than a tax-levying, money-appropriating body.

We are not at war because of any act by Congress. The President ordered our Armed Forces into war without even consulting Congress. We are sending divisions of troops to Europe, not by act of Congress, but by decree of the President. The fundamental law of the land, the Constitution of this Republic, has been ignored by the Executive.

Eleven years ago the 15th of this month, a fantastic piece of legislation was introduced in Congress. It was Senate bill 4141, and was introduced on June 15, 1940.

Its preamble read, and I quote: "To provide revenue and facilitate and control the economic and industrial structure of the Nation, for the successful prosecution of the war, and for other purposes."

I want you to note that date, June 15, 1940. That was a full year and a half before Pearl Harbor was bombed. But our super

Government was going to "control the economic and industrial structure of the Nation, for the successful prosecution of the war and for other purposes." What war? What other purposes?

What did that bill propose? I will read you the opening paragraphs. "The President is hereby authorized" (you will note the unmistakable delegation of authority) "to require, under such rules and regulations as he may establish, the registration of all or any class of persons engaged in the management or control of any . . . establishment of any kind whatsoever, whatever the form of ownership thereof, corporate or otherwise."

This bill would have given the President authority, and again I quote from the bill itself:

"To prohibit the publication of prices quoted on commodities, . . . to regulate, limit, or prohibit the purchase, sale, use, transportation, manufacture, or illustration of any product, foodstuff, material, commodity, real estate, or right."

You would not only have been required to register and obtain a license, but you could have been prohibited from conducting your own business, or even selling your property. Every business from the biggest manufacturer down to the one-man business would have had to have a license, whether he was a manufacturer, merchant, farmer, mechanic, lawyer, newspaper publisher, or a doctor. That is what that bill would have authorized, and it definitely states, "any person . . . or establishment of any kind whatsoever."

Fortunately, that was a little too much for even a rubber-stamp Congress to swallow—especially just 5 months before election.

Now the OPS is trying to revive it, and the President has requested the licensing power, as he says, to control black markets. We were not at war in June 1940, but we are now, and if this secret government within our Federal administration could possibly elect enough of its stooges, the bill would probably be enacted.

The OPS with its eventual 35,000 to 50,000 employees could control a lot of votes, and if it gets the licensing bill, it would have another quarter million employees spread over the Nation and telling you how to conduct your business. They say now they must have such a bill to curb black markets. We already have laws against black markets.

The Brookings Institution, a nonpartisan organization, deals with the gradual steps taken by another once great nation when its leaders conspired to gain complete control over the people. I will quote directly, but briefly, what some of those first steps were.

"In the first place, reliance was placed primarily on a rather flexible system of rationing."

"A system of priorities was the distinguishing feature of the second phase."

"Unified allotment of all materials required for a given contract or operation marked the third phase."

"Special methods, including ration banking, were used to control the distribution of consumer goods."

"The freezing of existing prices characterized the first stage of general price control."

"Raising and lowering prices for a variety of objectives mark the second stage of general price control."

"The corporate income tax and other taxes applicable to business earnings were increased sharply."

"Special levies on one business were used to pay subsidies to another business."

The Brookings Institution recorded these steps as they were taken in Germany after a paper hanger by the name of Adolf Hitler became chancellor.

Hitler promised the people security, employment, prosperity and freedom.

The ways of fascism, nazism, and communism were all founded on the writings of Karl Marx. J. Edgar Hoover of the FBI told a congressional committee that we have almost 50,000 dues-paying Communists in America, all agents of Stalin, and a half million fellow travelers taking their cues from those 50,000 Communists. And we have several million gullibles and dupes in and out of the administration willing to take their cues from such fellow travelers. Let us wake up. It can happen here.

The result of this transition in our one-time government of checks and balances is that we have ruinous inflation, vicious taxes, a terrific national debt, printing press money backed by little more than promises, national insecurity and an administration that preaches fear of Red China, fear of Russia, fear of losing defensive allies and fear of an atomic bomb attack on this country.

There is fear and confusion in our land because we have been ruled by men instead of by law.

The American taxpayer has paid billions to develop and perfect the atomic bomb.

Communist Russia may be able to blow our cities off the face of the map. I don't know and no one else does. But of one thing we can be certain—the Soviet did not get into any such position by their own efforts. They were aided by men on our own Government payroll.

Remember the names of the five spies, Klaus Fuchs, Bruno Pontecorvo, Allan Nunn May, David Greenglass, and Harry Gold? Between them, they gave Russia what the Atomic Energy Committee admits to be "a particular well-rounded picture." The first three were scientists of great ability but turned out to be loathsome spies.

It was common knowledge that May was a member of a Communist-dominated scientific society and that Greenglass had joined the Communists before he was inducted into the Army. Yet, when patriotic citizens tried to call attention to such matters, they were denounced by the cry of "red herring."

The present is molded by the past. We must therefore outline the recent past to reach conclusions about the present and to influence the future.

Our fighting forces won the greatest war in history, both on the Atlantic and Pacific fronts, but our Government lost it at the international council tables. A million fine Americans gave their health or their lives to preserve freedom. But when the "big shots" arose from the international poker table, 600,000,000 more human beings were committed to Communist slavery.

Today South Korea is a shambles, and only recently when General MacArthur was being questioned by a joint committee of the Senate, he stated that under the present policies which were being pursued, our forces in Asia could not win and that the best we could hope for was a stalemate.

Even General Wedemeyer, who recently testified before that committee, also referred to that same sort of stalemate which General MacArthur referred to.

General Wedemeyer even went further and intimated that it was impossible to win against the dense Communist hordes in Korea by just shooting them when they advanced toward us; that if we did not intend to use our full naval and air strength for fear of an oil-out war, it would be much better to withdraw from Korea and thus save further useless bloodshed.

I concur in that conclusion.

Testimony has been brought to light through the Senate hearings which backs up the belief that our diplomatic service in the State Department has been a dominant factor over our military and our military strategy. It was the failure of our diplomatic service and our State Department to take a strong and realistic attitude toward communism in

time to avoid the dangers and pitfalls which this country has fallen into. It is the foreign policy of this country which is the crux of the whole evil.

The Russian Communists long ago denounced the church, Christianity, and the truth. Their aim is and has been world domination by revolution, infiltration, bankruptcy, corruption, and war, based on the principle of force, fear, and reward.

Many many people in this country have recognized the Communist aim for a long time. Why was it that the leaders in our own Government and those in positions responsible for giving away the peace could not recognize the truth in regard to such revolutionary and imperialistic forces? President Truman recently stated that he recognized the danger from Communist intentions back in 1945. Why was it then that he repudiated the Eightieth Congress and called it the worst in history after it had authorized and appropriated the money for a 70-group Air Force? He deliberately refused to carry out the law as passed by the Eightieth Congress and now we shiver and shake because we're unprepared to defend ourselves adequately.

Why was it that our leaders always seemed to be dominated by fear which compelled them to compromise and accede to every demand and every whim of the Communists?

Why were they induced to halt our troops in World War II at the Elbe and thus permit the Russians time to get into Germany and take Berlin?

Why were they induced to sign an agreement setting up the military zones in Germany without an avenue of ingress or egress over Russian territory?

Why was Manchuria given to Russia when it naturally belonged to China and when China had been promised it after the war?

Why was this tragic deal consummated when Nationalist China had been our friend and ally all during World War II? Why were munitions and supplies withheld from Chiang Kai-shek's army fighting so desperately in China? Why was it that the guns delivered to Chiang's army, supposedly for support, direct from this country were minus a trigger or a firing bolt?

Why was it when responsible people called the administration's attention to how the Nationalists were being sabotaged that investigators returning from China reported that there was nothing to fear from China, that they were just peace-loving agrarians trying to effect good government?

Why was it that after General Wedemeyer was asked to make a report on conditions in China that his report was suppressed and withheld by our State Department until just recently? When he made his report, after studying conditions in China for 8 months back in 1946 and 1947, that report was hidden away in Secretary Acheson's secret files. Wedemeyer at one time was slated to become Ambassador to China, but he did not get the appointment because, as Acheson told him, the Communists objected strenuously. He was not being appointed ambassador to a Communist government; he was supposed to be appointed to the Nationalist or Chiang Kai-shek's government, but the Communists objected, said Acheson, and Wedemeyer's appointment was withdrawn.

The answers to all these questions can only be found in the fact that our foreign policy has been one of weakness, appeasement and fear. Stalin knows how to use his pawns in the great game of international chess. The whole technique of communism is based on a fear complex. We in America cannot succumb to that type of technique and we cannot be dominated by fear of Russia or any other nation on the face of the earth.

In February 1947, Stalin admonished a great gathering in Red Square, Moscow, that,

"War, until the death of capitalism, is our aim." Another of his hatchetmen stated in the Russian press, "The United States and capitalism are the real enemies of communism and of Russia. They can be exterminated only by war."

Secretary Acheson has stated that our future foreign policies must be conducted through the United Nations. If the President continues to take the power and right upon himself to send troops in various parts of the world to engage in police actions without congressional sanction, it would be very easy for this country to become so thinly spread over the world as to endanger our very safety here in this country.

Many people are laboring under the misapprehension that the United Nations is a potent factor in preserving the peace of the world. So far it has proven to be a political bazaar and worthless from a military point of view. Even the United Nations has been willing to appease Russian communism on numerous occasions. They have been willing to accept Red China as a member, even while our boys are being killed by the Red Communists in Korea.

If the United States of America is to take her place in the vanguard of civilization, it will be essential that we be prepared to go it alone if necessary. A nation that is thus prepared and knows she is prepared and proud of her heritage and determined to preserve it, instead of finding herself alone will find that the Christian nations of the world will all be flocking to her.

This idea of not taking firm stands on this Communist issue for fear of alienating friends or former allies is fallacious. Furthermore, we have been too easy and too compromising with some of our other allies. It is impossible to buy the friendship of nations as well as it is of individuals. They look upon us as easy marks and eventually with contempt. We have given of our substance and money to no end. We have not caused our allies to be better and more determined allies, to suppress aggression and militarism throughout the world, but instead we have made them the more dependent upon us for supplies and for money, even to the point of expecting our own military forces to protect them.

This is not the type of leadership which is necessary to preserve the peace and freedom of the world.

Well, what should we do about all this?

No. 1: We should stop all appeasement.

No. 2: We should make every reasonable and honest effort to reach an agreement on the Korean situation but if it develops that Russia is not acting in good faith in the present peace negotiating then we should break off diplomatic relations with her immediately, and should track down the international organization operating in this country which is directed from Moscow.

We should proceed to do the latter in any event.

No. 3: We should build our strength in the Western Hemisphere and concentrate on air and sea power.

We should be able to control the airways from our western coast to Japan and from the Atlantic coast to France. The ground troops for the defense of western continental Europe would be the prime obligation of the nations of Europe.

We have found that we cannot buy them with money and likewise America cannot create their spiritual forces. We must put our own house in order and build and preserve our own strength.

Above all, we need a national unity and it can be achieved with the proper national leadership. We know that during the Revolutionary days America was made up of various and sundry nationalities, religious groups, local and isolated communities with a great divergence of thought and ideals and yet all of these elements were unified into

one common band for their self-preservation because they had a common enemy and a common purpose. That purpose was freedom of the individual man.

Today, all the people and elements in the United States have a common enemy and we all have a common purpose—to preserve that freedom and that heritage which our forefathers made possible and passed on to us.

The American people are put together with a hard core of integrity. We must be realistic. We should realize that we cannot fight half the world and feed the other half and have business as usual, comforts as usual, and politics as usual.

We need a resurgence of morality, of self-respect, of effort, and of courage in this country to undo the wrongs which have been committed.

We must follow the admonition of Thomas Jefferson, who said "Equal rights for all, special privileges for none."

We must have men in this country who are worthy of the offices they fill, men who are worthy of our country they serve, men who are worthy of the boys who fight and die on the bloody fields of battle, men who are worthy of our forefathers—those men who became great by their dreams and hopes for a great people, a great country, and a great world.

Christianity's Debt to Judaism—Why Not Acknowledge It?

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. MULTER. Mr. Speaker, I think it is appropriate that I call to the attention of my colleagues the following very famous sermon by the Reverend Dr. John Haynes Holmes, renowned minister of the Community Church, New York City. He is one of the most prominent civic and religious leaders in America. His reputation as a dynamic, fearless preacher has spread far and wide. His many-faceted career as a lecturer, author, traveler, and leader for civil rights has made him a unique figure in the ministry and political life. He has served the Community Church since 1907 and his pulpit and forums have won a great host of adherents. He is a founder of the American Civil Liberties Union, a founder of the National Association for the Advancement of Colored People, was chairman of the City Affairs Committee of New York for 9 years. Dr. Holmes is a graduate of Harvard University and its divinity school.

CHRISTIANITY'S DEBT TO JUDAISM—WHY NOT ACKNOWLEDGE IT?

(By Dr. John Haynes Holmes)

In speaking to you this morning, I have two very definite propositions in mind. One is the proposition that Christianity owes a heavy debt to Judaism. The other is the proposition that Christianity ought to be willing to recognize and pay this debt, as any honorable debtor recognizes and pays his obligation.

When I speak of Christianity, let me say, I am not speaking of theological doctrines or ecclesiastical instructions—very little of what is contained in the actual history of

the church. Rather am I speaking in terms of that pure religion and undefiled which sprang from the heart of Jesus, was propagated far and wide by his disciples and apostles, was recorded in the pages of the New Testament, and remains to this day the greatest single spiritual influence in human history. This religion, it should be known, is in reality Jewish in origin and content. It is only an accident that it did not remain in the end what it was in the beginning—a part and parcel of the Jewish world. Now that it is one of the separate religions of mankind its parentage should be confessed, and its heritage duly honored.

Let me begin what I have to say this morning with Jesus, who is the center and soul of Christian faith. There are three things to be made plain about this man.

In the first place, I would remind you that Jesus' parents were Jews. Whether His father, Joseph, was of the stem of Jesse, and thus of the royal house of David, as the Bible states, is altogether unknown and quite improbable. The genealogies to this effect in the New Testament are valueless. As a matter of fact, we know very little about Joseph—only that he lived in Nazareth in Galilee, that he was a carpenter by trade, and that he died, in all probability, before Jesus came to manhood. In much the same way, we know little about Mary, the mother of Jesus. She is a shadowy figure who emerges into the light only in the last few hours in the career of her eldest born. But amid all this obscurity, there remains the indubitable truth that these two persons, who are so venerated by the Christian church, were both of them Jews.

The second fact is, of course, that Jesus, as the oldest child of these parents, was thus Himself a Jew. Two attempts have been made to break down and destroy this simple fact. The first is theological, and is to be found in the dogma of the Virgin Birth, which represents Jesus as born not of Joseph and Mary, but of a divine conception of God upon Mary. But this leads to the fascinating and impressive conclusion, seldom mentioned in doctrinal discussion, that out of all the tribes of earth, God chose a Jewish maiden for the incarnation of His dearly beloved and only begotten son. The second attempt to dispel the fact of Jesus' Jewish origin is purely pagan. It is to be found in the assertion of the early opponents of Christianity in the Graeco-Roman world that Jesus was born out of wedlock from a Jewish girl who had contact with a Roman soldier. This has been revived today, in one form or another, by anti-Semitic Nazi propagandists. But this suggestion leaves Jesus at least half-Jewish, and thus quite as much outside the pale of the Nazis as though He were a full-blooded Semite. Suffice it to say that there is as little in this story as in the dogma of the Virgin Birth. There exists not a scrap of evidence to substantiate it outside of sheer anti-Semitic prejudice. If we know anything about Jesus at all, it is that He was a child of Jewish parents, born in a Jewish home as the first-born of a large family, and thus Himself a Jew.

The third thing to be said about the Jewishness of Jesus is that he was reared and trained in the Jewish faith. His parents were pious Jews, they went up each year to Jerusalem to keep the feast of the Passover. They taught Jesus, by precept and example, to attend the synagogue where he became acquainted with the Bible of his race. In his early manhood it was his custom to go to the synagogue on the Sabbath Day, which is more than a good many Jews do today, and he began his public ministry, so the record tells us, by standing up in the synagogue in Nazareth and reading from the Prophet Isaiah. In spirit as well as in blood, this Nazarene was a son of Israel.

It is from these three points of view—his parents, his birth, and his religious train-

ing—that we must agree that Jesus was a Jew. It is to the Jews that the Christians owe this peerless leader and founder of their faith. I would go so far as to say that we cannot understand Jesus unless we acknowledge that his rightful place in history is that of the last and greatest of the Jewish prophets. It is to me as incredible that the Jews do not recognize this fact as it is discreditable that the Christians do not recognize it.

So much for Jesus. Next only to this august figure of the Nazarene stand three elements which are central in Christianity. For all these three elements the Christians are indebted to the Jews.

In the first place, there is the Bible, the sacred Scriptures of the Christian church. This Bible consists of two parts—the Old Testament, so-called, and the New. The Old Testament, which comprises some three-fourths of the Bible, belongs not to Christianity at all but to Judaism. The Old Testament, let it be said is the Jewish Bible. I know of no more high-handed piece of impudence in all history than the action of the early Christians in taking over the Old Testament into their churches, and saying, "This is ours." It is as though we Americans should possess ourselves of Shakespeare and Milton, and Dryden, and Poe, and Keats, and Shelley, and Tennyson, and Browning, and solemnly declare that the writings of these men belonged to us and were the basic part of our native literature. Saying so, of course, does not make it so. These poets are not Americans, and, by the same token, the Old Testament is not Christian. It is Jewish through and through; and whenever we use it we should remember that we are turning to Jewish sources for instruction and inspiration. That is the reason why I am careful in our services here to refer to the Old Testament, whenever I read lessons from its text, as "the Scriptures of the Jews." As for the New Testament, this is our own. This portion of the Bible is "the Scriptures of the Christians." But even so, it is only fair to recognize, it seems to me, that the New Testament is throughout a Jewish book. Every word of it, from the first chapter of Matthew to the last chapter of Revelations, was written by Jews, and thus is saturated with the Jewish spirit and ideals.

Next to the Bible comes the church, by which I mean not the hierarchy, which belongs to a later period of history, but the simple fact of the congregation of men and women meeting together on a Sunday morning for the worship of Almighty God. Where did this reality come from? Why, from the Jews—more specifically from that generation of Jews which suffered the tragic experience of the exile.

In the ancient times, among all peoples, there was no church, or congregation, as we know it today. The centers of religious worship were temples, dedicated to the god or gods of the nation, where national festivals were held, where holy offices were performed by priestly agents of the state, and where the people came at periodical intervals to lay their offerings upon the sacred altars. This was as true in Palestine as it was in Egypt, Babylonia, Greece, and Rome. The great temple of the Jews was in Jerusalem, and there was worship offered to Jehovah. There were times, to be sure, when local worship was set up in what was called the "high places", but this was uniformly discouraged, and all religious rites thus centered in the city of the king.

Then came the exile, in 586 B. C. The Kingdom of Judah was overrun, Jerusalem captured and destroyed, and the people carried away as slaves into the far realms of their conquerors. Here they remained for two generations, lost to their homeland and to all the high practices of their religion. How could they sing the Lord's songs in a strange land? How could they worship God without temple or altar? They must keep

in touch with their deity, and plead for his pity and help—otherwise they were surely lost, and their children with them. But with the temple so far away, how could they reach God, or perform the rites which he expected? The answer came out of the very necessities of the situation. Robbed of their temple as of their holy city, the exiles, settled in scattered towns and villages, came together on the Sabbath Day, wherever they were, and remembered Zion and read from the sacred pages of the law. These meetings came to be regular gatherings, which in due course were organized, and later developed customs and practices and a sanctity of their own. They were called synagogues—or whatever is the Hebrew word for a "gathering together," or congregating, of men and women for the holy purpose of religion.

It was thus, in a time of dire extremity, that the law of Israel was preserved, and the memory of Jehovah, the God of Israel, not forgotten. In due course the Jews returned to Palestine, and there set up the Temple once again upon Mount Zion. The central worship was thus restored, and the priests once again commissioned to guard the people's destiny. But the habit of the exile was too strong and people would not give up their local or congregational meetings in their villages, or even houses. The synagogue became as well recognized an institution of Judaism as the Temple itself, and held in time the first devotion of the people. Jesus knew the synagogue of Nazareth from His youth up, and in this synagogue began His ministry. When, following His death, His followers carried on His work, it was first in synagogues, and only later in churches of their own, that they proclaimed the gospel.

But these churches, when they came, were modeled precisely on Jewish example, and thus were the daughters of the synagogue. When Christians meet today on Sunday mornings to worship God and to consecrate their lives to His service, and to preserve the sacred traditions of the faith, they are doing not only what the early Christians did, but what the Jews have done since the sad days of the exile. We have a church because the Jews first had a synagogue. The former is the direct descendant of the latter.

This brings us directly to the third of these essential elements of Christianity. In addition to the Bible and the church is Sunday as the sacred day of rest and worship—the one day in seven set scrupulously aside for purposes of physical recreation and spiritual regeneration. Where did this Christian Sunday come from? Why, obviously, from the Jewish Sabbath.

It is true that the Jewish Sabbath is the last day of the week—traditionally the day when God rested from His labors after the 6 days of the creation. "And on the seventh day God ended His work which He had made" (Genesis 2:2). The Christian Sunday, in contrast, is the first day of the week, so celebrated because it was on this first day that Jesus is supposed to have risen from the dead. "And when the Sabbath was past . . . very early in the morning, the first day of the week, they came unto the sepulcher . . . and saw that the stone was rolled away" (Mark 1:3). So the first day among Christians came to take the place of the seventh day among Jews. But this detail is unimportant. The central fact is that the Christian Sunday is the rebirth of the Jewish Sabbath—the Christian once again taking his religious practices from the Jew.

We are beginning now, perhaps, to understand how stupendous is the debt which Christians owe to Jews. Not only Jesus Himself, but the Bible, the church, and Sunday all come from Jewish sources. But not yet have we gotten to the heart of the matter. What about the teachings of Christianity—those great truths of the moral and spiritual life which constitute the essence of the Gospel? The things which Jesus taught—were those original with Him, or did they spring

from the Judaism in which Jesus was born and reared?

This question reminds me of an experience in the early days of my ministry in this city. I was attending a meeting of the liberal ministers club of which certain Jewish rabbis were members along with the Christian clergymen. I chanced to be sitting beside a very eminent rabbi of that day—the head of the great Temple Emanuel. In the course of our conversation together, I made some reference to what I called the originality of Jesus. What was my surprise to hear this rabbi retort that there was no originality in Jesus—that the Nazarene was one of the most unoriginal men who ever lived. As a young and ardent preacher, I was greatly shocked by this remark. In late years, however, I came to feel that my friend, the rabbi, was on the whole correct. It is true that Jesus was original in what He said—or rather in the way He said it. Of all the religious teachers of the world He ranks as incomparably the most poetic. The Sermon on the Mount and the various parables are unmatched for sheer power and beauty in either ancient or modern literature. Jesus was original also in His spiritual insights—in His discernments of truth in unusual circumstances, and in His application of this truth to the common way of life. He had a genius for spirituality which is unparalleled. But His supreme and unique contribution to Christianity, of course, was His personality. Within this Man was a radiance of the inner life which made it easy for His contemporaries to join with the Roman centurion in the declaration, "Verily, this Man was the Son of God." But in the actual content of His teaching, Jesus was not original. The substance of His faith and vision was all derived from Israel. Let me see if I can make this plain.

On New Year's day, recently, a civic ceremony was conducted at the city hall by Mayor LaGuardia, in which a Catholic priest, a Protestant clergyman, and a Jewish rabbi were the participants. In the course of his remarks, the mayor referred to the Golden Rule and the Lord's Prayer, and said that if men would only live up to the precepts of these two teachings, there would be no trouble in the world. It would seem as though, in this reference, the mayor was flattering the Christians and leaving out the Jews. As a matter of fact, he could not have made a better selection, for the Golden Rule and the Lord's Prayer belong quite as much to the Jews as to the Christians themselves.

The Golden Rule, it must be said belongs to neither Christians nor Jews in any exclusive sense of the word. It is a part of all religions. Thus, I have found it in the scriptures of no less than nine of the world's religions—Hinduism, Zoroastrianism, Buddhism, Confucianism, Mohammedanism, Grecian, Roman, Judaism, and Christianity. The Golden Rule, as it appears in the New Testament, is familiar: "All things whatsoever ye would that men should do to you, do ye even so to them, for this is the law and the prophets." The Jewish Golden Rule is negative rather than positive in its formulation, but is identical in meaning. It reads: "Whatever ye do not wish your neighbor to do to you, do not do unto him. This is the whole law, the rest is exposition."

But the Lord's Prayer—this surely is original with Jesus. So it is in its formulation into one of the simplest and most beautiful compositions that can be found in the world's religious literature. But in its content it is derived from beginning to end from Jewish sources. There is not a line in the prayer which cannot be duplicated in these sources. In substantiation of this sweeping assertion, let me cite the testimony of two scholars who have a right to speak, as I do not. The first is a famous German authority, Theodor Keim, whose biography of Jesus, written many years ago, still ranks as one of

the greatest studies ever made of the life and teaching of the Nazarene. Referring to the Lord's Prayer, Keim writes, "Not only the address of God, together with the first two petitions, but pretty well all of it in detail, appears here and there in Jewish Talmudic prayers." The second witness is a great Jewish scholar, Joseph Klausner, of the Hebrew University in Jerusalem, whose Jesus of Nazareth is regarded as the ablest biography of Jesus ever written by a Jew. In this authoritative work the author says of the Lord's Prayer that it is "a remarkable prayer, universal in its appeal, earnest, brief, and full of devotion. Every single clause in it, however, is to be found in Jewish prayers and sayings in the Talmud." So the Golden Rule and the Lord's Prayer alike belong to Jews as well as Christians.

Next only to these two documents, I would name the Beatitudes as the most precious sayings to be found in the Christian Scriptures. Here again we have a formulation of truth which is a supreme illustration of Jesus' poetic and spiritual genius. But the content of what is said is again almost wholly derivative. "Blessed are they that mourn for they shall be comforted"—if you would know where this comes from, turn to Isaiah 61:2. "Blessed are the meek, for they shall inherit the earth"—turn to Psalm 37:11. "Blessed are they that hunger and thirst after righteousness, for they shall be filled"—turn to Isaiah 55:1. "Blessed are the pure in heart, for they shall see God"—turn to Psalm 24:4. Thus are the phrases and thoughts of this great passage all anticipated by the Jews.

If any statement of Jesus is commonly cited as the complete and perfect summary of his religion, it is the dual commandment, "Thou shalt love the Lord thy God, with all thy heart, and with all thy soul, and with all thy strength, and with all thy mind, and thy neighbor as thyself." Where does this come from? First of all from the New Testament story of the lawyer who tempted Jesus, saying, "What shall I do to inherit eternal life?" But originally from the Old Testament, in two famous passages. The first is from Deuteronomy 6:4. "Hear, O Israel, the Lord thy God is one Lord, and thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy might." The second is from Leviticus 19:18. "Thou shalt not take vengeance, nor bear any grudge . . . but thou shalt love thy neighbor as thyself."

If anything is original with Jesus, it would seem to be his nonresistance—his injunction in the Sermon on the Mount to "resist not evil." This received its supreme expression in Jesus' commandment that we should love our enemies. This is very obviously a protest against and correction of the Jewish law of retaliation—"an eye for an eye, and a tooth for a tooth." This law, without any question, appears in the Old Testament. Jesus was mindful of it, and would get rid of it. But he was not the first to take this stand. Long since the Jewish prophets had laid hold upon the doctrine of love and forgiveness, even of enemies. But in one brief passage of the Old Testament we have an anticipation of this positive aspect of nonresistance which is breath taking.

If I were asked to name the most beautiful expression of Jesus' teaching on this point, I would turn to St. Paul's great epistle to the Romans, and read the closing verses of the twelfth chapter: "If thine enemy hunger, feed him; if he thirst, give him drink; for in so doing thou shalt heap coals of fire upon his head. Be not overcome of evil, but overcome evil with good." If there is anything original in Christianity, this would certainly seem to be it. Yet turn to the twenty-fifth chapter of the book of Proverbs, the twenty-first verse, and what do you find? "If thine enemy be hungry, give him bread to eat; and if he be thirsty, give him water to drink, for thou wilt heap coals

of fire upon his head." Even in his teaching of love, for enemies as well as friends, Jesus was only faithful to the noblest precepts of the Jews.

All of this shows what Jesus was really doing in His ministry. Not practicing a new religion, but reviving the pure and undefiled religion of Israel. Not starting a movement of revolt against Judaism, but only a movement of reform inside of Judaism. Not forsaking the Jewish synagogue and starting the Christian church, but cleansing the Jewish synagogue, even as He cleansed the temple of the money-changers. Nothing would have surprised Jesus more than to have learned after His death that His work had led to a new religion largely hostile to His own. To this day He would not have understood the meaning of Christianity and Christian doctrine. Jesus was a Jew, in the great traditions of the prophets. He saw a religion in His time, as Isaiah and Amos and Jeremiah had seen a religion in their time, which had become overlaid and encrusted with a vast growth of theological and ecclesiastical literalism which was fatal to the pure essence of the faith. He found the people beset and betrayed by all kinds of rules and regulations, the minutiae of law and rite, which were killing out the simple practices of righteousness and truth. Worst of all, He beheld a priesthood which was feeding upon the corruption which they themselves were fostering in the worship of Israel.

All this He sought to sweep away. "The letter killeth, but the spirit giveth life." The Nazarene wanted to end that spirit again. Therefore did He seek, like the shepherd his lost sheep, that great body of Jewish prophecy which was the real religion of Israel as contrasted with the sheer superstition of the priests and Pharisees. So everything that was precious in Judaism came to life again in Jesus. He was teaching what was truest and noblest in the tradition of His own people. He sought for nothing but the restoration of Israel to its true faith. What wonder therefore that He was not original, since He did not seek to be original? "Think not that I am come," He said, "to destroy the law or the prophets. I am come not to destroy but to fulfill. For verily I say unto you, till heaven and earth pass, one jot or one tittle shall in no wise pass from the law, till all be fulfilled." Here was not a Christian speaking, but a Jew. All that was distinctively Christian came later and was unknown to the Nazarene.

Such is the debt which Christianity owes to Judaism. Not Jesus merely, nor the Bible, the church and the Sunday, but the whole substance of Christian teaching. To take account of this debt is to come face to face with two facts, which I would emphasize in closing.

First, we find here one explanation at least, and every important one, of why the Christians dislike and persecute the Jews. They hate them and would get rid of them because they are so heavily indebted to them. This is a simple law of psychology, illustrated by the experience of every day. Thus, did you ever hear of a tenant who loved his landlord? Have you ever encountered a borrower who is devoted to the money lender who has given him money? How often do you see a taxpayer who folds in his affectionate embrace the tax collector? The publicans in ancient Israel were hated for nothing except that it was their business to receive the taxes for the government. And now the burden has fallen upon the Jews—that they have given so much to the Christians that the latter feel embarrassed and at least outraged that they owe all this to Israel. There are many reasons for anti-Semitism—for tortures and massacres, the pogroms and exiles, which the Jews have suffered all these centuries from Christendom. The problem is

complicated and difficult—the pattern hopelessly entangled. But one strand in the snarl may be unraveled, and that is the one which has to do with the Christian's debt to Judaism. Until that debt is paid, or at least acknowledged, there will be little peace.

The second thing which I would emphasize is this payment of the debt. Is it not time that payment began? And how shall it be done?

First, the debt must be acknowledged, somewhat as I have tried to acknowledge it this morning. Why should not Christians everywhere recognize Jesus as a Jew? Why should they not have the grace to refer to the Old Testament, when they use it, as the Jewish scriptures? Why should they not acclaim the kinship of the church with the synagogue, and of the Christian Sunday with the Jewish Sabbath? As for the Gospel, what would be lost and what not gained, if the Jewish sources of this teaching were at last made plain? All this is not very much, perhaps, in the serious business of paying a heavy debt, but it is at least something. A first step is taken in discharging an obligation when it is acknowledged that it exists.

Secondly, why may we not pay this debt to the Jews by fighting anti-Semitism? All around us rages this noisome and fatal plague. It works its havoc not merely in Germany and Europe, but right here in America. Half-hidden, half-confessed, whispered rather than shouted, taking shape not in hideous persecutions but in countless little irritations and injustices, but nonetheless fatal as a prejudice which poisons the soul, this curse is our curse, as it is Christianity's curse, and it should be ended for very shame. Here the church, in the very name of Jesus, should take the lead in stamping out this pestilence that devours ourselves as well as our victims. To fight and destroy anti-Semitism—this would be a large payment on the debt.

Lastly, as a means of paying Christianity's debt to Judaism, there is the opportunity now abundantly given us to succor the Jewish refugees who wander the world in misery. Christianity has already done much for these refugees. The Catholics and Protestants of Germany and the occupied countries have lifted up their voices in protest against the Nazi horrors, and on more than one occasion have identified themselves with those who suffered. In England and in this country have Christians given generously in relief, and offered shelter and sustenance to the homeless hordes of Israel. But all that we have done is little enough. More—more is needed, till every Jew the world around has found home and country once again, his place in the great body of humanity. To succor the Jews in this their hour of greater distress than they have endured since Jerusalem fell to Titus, this is our plain duty. And it should be our welcome opportunity to discharge the debt which all too long has gone unpaid.

To bring Jews and Christians together, not by converting or merging one with the other, but by recognition of that spiritual kinship which makes them one—this is our holy task. To end the injustice and horror of the ages in finding and binding that "unity of the spirit which is the bond of peace." Already Jews and Christians are one in all that is central to the inner essence of our faith. Why should we not similarly be one in all that is central to the outer relations of our lives? In both branches of the severed family there rests the obligation to shake off separatism and end isolation—but most heavily and immediately does this obligation rest upon Christians, who have the numbers, the power—and this debt which must be paid.

I keep thinking, as I talk to you, of that great scene in Lessing's drama, *Nathan der Weise* (Nathan the Wise), which touches upon this truth. Some of you may have

seen this drama when it was produced in New York this past winter. If so, you will remember the scene to which I refer—that scene where the Christian friar has just discovered some great deed of generosity and sacrifice which has been performed by the Jew, Nathan. In his enthusiasm and gratitude, and desiring to honor Nathan with the greatest praise that he knows how to speak, the friar exclaims:

"Nathan, you are a Christian. Yes, I swear You are a Christian—better never lived."

To which the big-hearted and wise Nathan replies.

"Indeed! the very thing that makes me seem Christian to you, makes you a Jew to me."

United States International Information and Educational Program

EXTENSION OF REMARKS OF

HON. ALLAN OAKLEY HUNTER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. HUNTER. Mr. Speaker, under leave to extend my remarks in the Record, I wish to include a series of five articles by Mr. Frank Stout, a staff writer for the *Scranton* (Pa.) Tribune, published in that paper October 8-12, 1951. Mr. Stout worked 8 months for the State Department's propaganda program as a general writer, White House and State Department reporter. He quit his job, disillusioned and disgusted. He sets forth in the articles his observations while so employed concerning the State Department's information and educational activities.

I am one who believes in the purposes of the international information and educational activities of our Government, including the Voice of America. Today we are fighting a war against communism—a battle for men's minds. We must fight it with ideas; we cannot win with guns alone.

When the State Department appropriation bill was before the House, I voted against an amendment to cut the funds provided for the United States information and education program below the \$85,000,000 approved by the Committee on Appropriations. However, I am now deeply alarmed by the charges of inefficiency, waste, and incompetence made by Mr. Stout with respect to the operations of the State Department's propaganda program. The matter should be thoroughly investigated. The articles follow:

GOVERNMENT WASTE IS HOPELESS, SAYS WRITER WHO QUIT CAPITAL

(By Frank Stout)

I could have stayed in Washington, but I quit my Government job because—though I was a little wheel in an \$185,000,000 propaganda machine—I could see the taxpayers' money going hopelessly down the drain.

I say hopelessly, because during 8 months in the bureaucratic morass of Washington I met only one or two men who would know a taxpayer if they fell over him. To most Government workers—even though they are taxpayers themselves—a taxpayer is a vague myth conjured up by editorial writers to

frighten politicians just before elections. For instance:

A few weeks ago I stood on the steps of a State Department building two blocks from the White House. A colleague greeted me and said, "I hear you're leaving us." I agreed that I was. "Why?" he demanded in a tone of shocked disbelief. I told him I was returning to the newspaper business. "And beat your brains out?" he asked incredulously.

I then suggested to my coworker that some people liked to earn their living and that, besides, Congress might some day carry out its economy threat and eliminate his job.

"That's all right," he assured me. "I've got civil-service status, and I can float to another agency. I like it here; it's a nice, easy job."

I walked away thinking that here, in one man, was the embodiment of thousands upon thousands of Government workers who long ago forgot that someone—in Scranton, Syracuse, Bowling Green, Ohio, and every city and hamlet in the United States—is paying their way.

If you accuse a Government worker of lack of conscience, whether he's a filing clerk or a full-blown, mahogany-desk bureaucrat, he replies with an injured bellow that you've challenged his patriotism and the honor of his public service. That's the standard answer Government workers use that answer to salve the conscience just as others shout, "Stupid," at anyone with whom they disagree.

But it's not a sufficient answer and it's a convenient dodge of the facts.

During 8 months as an information specialist for the State Department's International Press Division, I worked at various times in the White House, the State Department news room and various other Government agencies. Eight months seems a short time. In Washington it's a lifetime of waste, frustration, and ridiculous make-believe.

My job was to write news and feature stories that we hoped would be printed overseas in foreign newspapers or magazines to throw some light on the truth about the United States—the truth that the Communists have been working overtime to deny. Many of these stories were broadcast by the highly publicized Voice of America. That's where part of the rub comes in. How much of this truth is being heard? How much is being printed—and in fact, is it being presented in such a fashion that the rest of the world even will bother to hear it or read it? I don't believe the answer has ever been given to those questions. Not the whole answer.

The obvious question should come up here. If the Voice of America, for which the taxpayers spent nearly \$100,000,000, were doing its job, why were the same taxpayers called upon to donate more millions to the privately sponsored Radio Free Europe? Is it that the private citizen has more courage for telling the truth than our own Government has?

In the State Department's International Press Division, where reams of news and feature stories are written every week for various kinds of publications, there is a staggering amount of duplication of personnel, time, and effort. A similar amount of duplication on a private newspaper or magazine would make it bankrupt in jig time. But then, the private newspaper or magazine is not supported by tax revenue.

I know of one case where a worker in a supervisory capacity was so lacking in experience and tact that the unit in this person's charge was losing its best personnel. The superiors decided finally that something had to be done. But because experience and tact were the touchy problem, they could find no direct way to better the situation. Government workers long ago lost the ability

to do things directly. The last suggestion I heard was that they dream up a new project for their difficult supervisor and transfer him to that. A convenient method of changing a tough situation and spending more of the taxpayer's money at the same time.

The duplication of jobs, the bureaucratic tendency to sit things out, the careless regard for money, are in themselves a widely known fact about "big government," and the butt of many jokes. Even the bureaucrats have jokes about themselves.

The discouraging element lies in the fact that the big and little Government worker has lost all individual conscience about the waste, red tape, and obstructive confusion that surround him. He's resigned to it and doesn't give a hoot in hell. The Government—that vague, paternalistic cornucopia—owes him a living, and he's going to get it.

Meanwhile, the cornucopia stands on end and down the drain goes the taxpayers' money.

CONFUSION IS THE KEYNOTE IN CITY OF GOBBLYDGOOK

If your grandmother falls downstairs and breaks her neck, and if the sight of it doubles you over in laughter, you should board the next train to Washington. You'll die laughing in Washington, the Capital of Confusion. For instance.

Last February, my boss in a propaganda division of the State Department asked me to write an office memorandum addressed to the staff of about 25 writers. He handed me a clipping from the Washington Star.

The newspaper story listed eight objectives of the United States propaganda project. My boss, with all the aplomb of a Minsky burlesque straight man, told me the chief of the chief of the division had outlined the eight objectives, but they were classified as confidential, so we'd have to pick them up from the newspaper. There's nothing like keeping your employees in the dark about what they're supposed to do—in Washington, at least.

In Scranton, if someone asks you where you work, you tell him—right out, like this: "I work for the Murray Corp." or, "I work for Scranton Lace." But not in Washington. In the Capital of Confusion you give your questioner a fast shuffle in the language of gobbledygook. The longer you're in Washington, the more gobbledygook you know. As a case in point, I worked for the International Press Division of the Department of State. But you don't say that. You say INP, using initials. Multiply this by all the Government agencies in Washington, all their thousands of subsidiaries, and the combinations of letters in the alphabet, and down you go—buried in a blizzard of gobbledygook.

I called the State Department Bureau for information one day, identified myself, and said I worked for INP. The man on the other end asked, "Are you in government?" He seemed afraid I might be one of those private citizens you hear about now and then. I assured him I worked for the Government—in fact, I added, he and I both worked for the State Department. He was stunned. He'd worked for the State Department 10 years, he chuckled, and never heard of INP. It was just too funny for words. It didn't make much difference because he referred me to another set of initials, who referred me to another set of initials. The men who worked for the various initials were unwilling to take the responsibility for telling me what I wanted to know, so the sole benefit of the entire exchange was lung exercise for me. I got that lung exercise several times a week.

When the State Department's propaganda officials went before congressional committees some time ago to present their case for a new appropriation they ordered one of their artists to prepare charts to be used in explaining the program and its expenses.

"Make the charts good," the artist was told, "but not too good. If you make them too good the Congressmen will think that's all you do around here." The artist backed off in a daze and at last reports was still trying to divine the fine line between "good" and "not too good."

And the memorandum. Bless the memorandum. In the event you're a taxpayer private citizen with your nose to the grindstone, you may never have seen a memorandum. You haven't missed a thing. All memorandums are printed in the Government Printing Office. Some are small blue ones, some are long blue ones, others are white and long. Across the top, it says: "Office memorandum." Then in a line down the left side, is this:

"From:

"To:

"Subject:"

You'll find reams and reams of these memorandums stuffed into drawers, filing cabinets, and piled in the corners of any Government agency. I remember one irreverent wagster walking down a State Department hallway one day carrying an armful of blank memorandum pads. Like a program hawker at a ball game, he was shouting:

"Get your memorandum here, folks. Can't tell one bureaucrat from another without your memorandums."

Walk into any Government agency and ask the first man you see at a desk for some simple information. Chances are three in five, he'll answer you like this: He'll burrow into a drawer or a filing cabinet and mumble.

"Just a minute, please, I've got a memorandum around here someplace that covers that."

No successful bureaucrat says anything unless he can find a memorandum covering it. If he's wrong, he can always blame the memorandum.

When news stories are written about world or national events by State Department propaganda writers, their output is guided by a policy staff which determines what line the stories should take to beat point up the United States position on the subject. And you can probably see right now that this is a perfect spot for the memorandum. It is, indeed. In 8 months, all the policy memoranda I ever saw arrived 1 or 2 days after the story had been written and sent overseas. It was fun, however, to read those confidential memoranda to find out what you should have said in your story—which, 99 times out of a hundred, you said anyway.

Sure, you'll find a lot of laughs in Washington. You'll just die laughing. Washington is a regular riot of whacky doings. Of course, the price is high, and you might find the laughs sticking in your throat if you started to tally up the bill.

VOICE OF AMERICA RESULTS MAKE IT COSTLY PROGRAM

The State Department's propaganda project is costing you, the taxpayer, about \$185,000,000. It spent about \$100,000,000 last year and has an appropriation of \$85,000,000 this year. That staggering amount of money would run many of the Nation's big cities for a year.

Propaganda—good, hard-hitting United States propaganda—is a must to counteract the vicious innuendo Russia is spreading throughout the world about you and me. But are you, the taxpayer, getting your money's worth? Or is the timid, inefficient State Department pouring your money down the drain? Let's have a look.

From a good Democrat, whom you would expect to praise the State Department's propaganda, came this criticism only a few weeks ago, "The United States is hiding its light under a bushel."

That criticism came from Melvin D. Hildreth, Democratic national committeeman

for Washington, D. C. He had toured 2 months in France and Italy and came home shocked at the efficiency of Russian propaganda and the lack of ours.

Hildreth's criticisms were published in the Washington Post, a newspaper with strong administration leanings, but which rarely hesitates in calling a spade a spade. Hildreth said, "We've been too afraid of bragging and strutting in the past." The Voice of America, he added, is not enough. "Not everyone has radios."

The Communists, Hildreth said in the Post article, are plastering hundreds of posters all over Europe, angled to rouse anti-United States feeling over "problems that affect the people closest." But the United States isn't answering adequately, Hildreth concludes.

This is a good time to ask why—if we're spending \$185,000,000—we are not answering the Communists. You'll never get your answer from the State Department people who run the propaganda program. Not even the congressional subcommittee that investigated our propaganda last June could get an answer, and as a result, Congress cut the State Department's propaganda request from \$115,000,000 to \$85,000,000.

Let's go to the record, which in this case are the hearings before the subcommittee of the Committee on Appropriations of the United States Senate, which was studying the State Department's request last June for \$115,000,000 to carry on the propaganda program.

The record discloses that as of last June, 8,287 people were working in the State Department's information division. At the end of 1952, the record shows, the State Department hoped to have 10,369 at work on propaganda.

The record also shows this: The State Department hired the British news service, Reuters, to analyze Voice of America results in Europe. Here are excerpts from a few Reuters reports, which even the Congressmen didn't question.

For London: "The over-all percentage of listeners [to Voice of America] is small. Britains listen to the BBC, or European stations."

For Stockholm: "About 1 Swede in 25 listens more or less regularly to the Voice of America."

For Madrid: "Spanish radio listeners to the Voice of America had considerably decreased in the last few years, but since the Korean hostilities many more people are listening to it again. One radio-listening expert said that he considered that at the moment 60 percent of those who have a short-wave radio set listen to the Voice of America." (But the survey doesn't say how many short-wave sets are owned in Spain. So 60 percent could be 2 listeners or 2,000,000. Who knows?)

For Vienna: "The Voice of America is listened to widely but casually in Austria."

For Istanbul: "Too much United States domestic news and too much 'high' diplomatic matter presented in an 'Olympian' manner lessen the value of Voice of America programs for listeners in the iron-curtain countries, is the unanimous opinion of leading political refugees of the Istanbul Refugees Mutual Aid Committee. . . . Each refugee represented a different country."

For Albania: "There is too much news of no importance for simple Albanians. They should choose themes of special interest to Albania."

These aren't intended to show that the Voice of America is a failure by any means. To the contrary, the Voice of America wins as much praise as criticism in Europe. But the fact remains there is much qualified criticism and so far the State Department has done little to evade such unfavorable comment.

In addition to the much publicized Voice of America, which is only a part of the

propaganda program, the State Department sends out material for use in foreign newspapers and magazines, also makes moving pictures for showing in foreign countries, carries on an exchange of students, and finally sets up libraries abroad where United States books, magazines, and newspapers are available.

In addition, the State Department publishes a magazine called Amerika, printed in the Russian language and distributed in Russia under contract with the Soviet Government. The Senate subcommittee hearings disclosed in June that the magazine costs more than \$500,000 a year to produce. Originally, the Russians said they would put 50,000 copies on sale, but, breaking their word as they usually do, the Russians cut that number to 24,000.

Senator Pat McCarran, of Nevada, expressed amazement that a magazine costing half a million dollars was getting to 24,000 known readers in Russia. He charged that such a tremendous expense was poor management. No, it wasn't poor management, said the State Department man defending the expenditure. It was a political problem. There you have it again. Who cares about management when you're spending the taxpayers' money? It comes easy.

Some 400 men and women in Washington are pouring out hundreds of thousands of words every month for foreign newspapers and other publications, but no one in the State Department has as yet proved whether the stuff is being used abroad, and if it is, is anyone reading it or believing it?

Commenting on the State Department's blasé attitude toward the millions it is spending, Senator McCarran said bitterly:

"The State Department information people come in here for more money, but they never can show any use for it. They always say, 'We are going to do better next year—just give us more money, and we will do better next year.' We cannot tell you what we have done this year or for the year before."

And that's about the size of it. The State Department is spending the money, but has never really said for what.

STATE DEPARTMENT MISSES BEST PROPAGANDA SHOTS

A dictatorship, by its very nature, is ruthlessly efficient. The Russian propaganda apparatus follows that pattern and, with a straight face, tells colossal lies about the United States wherever anyone in the world will listen. Meanwhile, our State Department, steeped in the striped-pants tradition of caution and timidity, fails to tell the truth about race relations in the United States, and once tried to muzzle its own mouthpiece when Robert Vogeler told the story of his tortures in Communist Hungary.

Several weeks ago when 22 Negro children left New York City for Vermont, where they were to spend 2 weeks on farms with white families, it was suggested to the State Department's International Press Division that stories and pictures of the event should be published to counteract Russian exaggerations of our treatment of Negroes.

A couple of people in the International Press Division thought it was a good idea, but the chief of the division vetoed it. Why? His reason was that a southern Congressman might hear of the story and accuse the State Department of promoting anti-segregation. And besides, he added, the State Department was before Congress right that minute asking for propaganda money and it couldn't risk Congressional anger.

Someone had the courage, rare in Washington, to carry the idea further. Still fearing Congressional reaction, it was decided to check the political affiliations of the people involved in the plan. The 22 Negro children were sponsored by the Abyssinian Baptist

Church, of New York City. The church and its pastor were found to have no subversive connections, but a minister who read a prayer at the railroad station when the children departed, and who had only a vague connection with the project, once was affiliated with a committee to free Communist Earl Browder.

So the State Department's policy advisers decided they would not "cover" or write the story of 22 Negro children living with white families in Vermont. Their reason? The State Department was seeking appropriations from Congress and had to lie low, taking no chances on the ire of Congress.

A few weeks later Gov. Thomas E. Dewey, of New York, toured the Far East, the Middle East, and Alaska. In Singapore he was shocked to find the newspapers there carrying eight-column headlines and four-column pictures from Cicero, Ill., U. S. A., about a young Negro and his wife who were stoned out of their apartment in a white district. It didn't take three guesses to know who provided the Singapore newspaper with all the details, and the exaggerations to boot. Dewey was so concerned he delivered a lengthy speech to Singapore officials, trying to explain that race relations in the United States are not nearly as bad as the Communists picture them.

So while the State Department, with an \$185,000,000 propaganda program, was too timid to tell the story of 22 Negro children visiting white people, Governor Dewey was belatedly and futilely shouting into a tide of Communist propaganda in Singapore.

A few months ago Robert Vogeler was freed from a Hungarian prison where he had spent 17 months on a phony charge of espionage. He returned to the United States, a nearly whipped man. After coming out of Bethesda, Md., Naval Hospital, he gave a long speech at the National Press Club in Washington, D. C. It was a hair-curler. He described the stimulants, the tortures, and the ruthlessness of the Hungarian secret police.

Three major wire services of the world—the Associated Press, United Press, the International News Service—carried the story in great length, one of them carrying practically all of Vogeler's words. When a State Department reporter returned from his coverage of the Vogeler address, he was dumbfounded to find that someone—I don't know who—in the Hungarian section of the State Department was unwilling to let the Vogeler story be carried in the State Department's propaganda outlets. Why? It never was explained. But a good guess would be that the same old caution, the same old inability to make a decision had hamstringed some job-fearing minor bureaucrat.

Finally, after 2 or 3 hours, when it was proven that the Vogeler story had been flashed to all the world by private wire services, the State Department policy Solomons allowed their propaganda division to go ahead with it.

Perhaps these instances of fear, indecision, and lack of conviction explain, at least, in part, why such private organizations as Crusade for Freedom have set up Radio Free Europe to spread the gospel of democracy, or why it took a private organization to have the imagination to send balloons floating over the iron curtain with their messages of hope for enslaved peoples.

So far, the State Department, even with its \$185,000,000 for propaganda, has done nothing so imaginative and bold as Winds of Freedom which loosed the balloons over Eastern Europe. Such a maneuver excites the minds of men, especially the minds of enslaved people.

The minds of our State Department propagandists are so preoccupied, however, with dodges and alibis to preserve themselves in their jobs that bold ideas may never occur to them.

STATE DEPARTMENT SPIES GUARD FENCES FOR BUREAUCRATS

If Members of Congress knew that State Department reporters and writers, hired to gather propaganda, were spying on them, they would be furious—and justifiably.

And if you, the average taxpayer, would take into account that these men whom you are paying to write propaganda, are using much of their time spying on the deliberations of Congress, you should be furious, also. It's your money they're using to preserve themselves in their jobs so they can go on spending your money year in and year out.

The State Department's International Press Division, as a routine matter, has reporters covering both the House of Representatives and the United States Senate to pick up news that is of interest in foreign countries. That's fine.

But on many occasions—I could not even estimate the number accurately—these men, and others, are assigned to watch committees studying State Department propaganda appropriations hearings. They have been under orders to report immediately to their superiors.

What they report has no possible use as propaganda overseas, but is simply information for the bureaucrats who run the program. They, in turn, use this information to build their defenses and lay their tactics for the time when they are to ask for even more money.

You, the taxpayer, remember, are footing the bill for this, while these men who are hired to write propaganda are spying on Congress simply to ferret out information to save their own skins, their salaries and expenses are coming out of your pocket.

For myself, I have been told time and time again by my superiors in the State Department's International Press Division to watch the teletype machines, the newspapers, and all else for any stories or speeches that criticize the propaganda program or the Voice of America. On at least five occasions I have called aides to Edward Barrett, Assistant Secretary of State for Public Affairs, to report such critical items. Immediately, of course, Barrett's office sets its defense mechanism in motion.

I ask, how in the world can we get a vital propaganda job done in these dangerous days, days when our leaders in it spend half their waking hours fashioning alibis? It seems obvious that if they had any confidence in themselves or their product they wouldn't be in the least concerned about criticism, except as a routine part of their work.

Our fear-ridden, faint-hearted State Department propagandists have grown into the habit of working on the principle that the best way to avoid embarrassing mistakes is to do nothing.

One thing I am sure they will do, however, and quickly, if these articles reach their attention. They will start with blanket denials and then turn on the smears. They'll call me a sorehead, a malcontent, and unqualified to criticize.

Smears or not, it's about time someone asked some pertinent questions about where the \$185,000,000 is going for propaganda—and got an answer.

One of the principal reasons why the American people are not getting nearly their money's worth in the propaganda program is the fact that the State Department International Press Division is dominated by former Office of War Information workers. The Office of War Information was merged into the State Department in 1946. Many of its memorandum-writing experts held onto their Government jobs, and today hold the top positions in the International Press Division.

In one section alone, former OWI men hold virtually every top post from general manager on down the line. Why is this bad, you ask? It is bad because these men are,

like all men, creatures of habit, and they are now the victims of too much time in Government. They move slowly, with painful caution and are frozen toward new ideas. Holding the jobs they do, they are in position to deny, or shut out, good paying posts for men from private industry—men who might have fresh ideas and imagination and the ingenuity to get them through the red tape of bureaucracy.

Congress, or the State Department itself, must take stock of United States propaganda and tear down the defenses that now surround it. We need propaganda. We need friends in the world. We must compete just as hard for the minds of men as we do for high ground on the Korean battlefield. But we can't spend \$185,000,000 every couple of years and get the pitiful product we're now getting. We haven't got that much money, if some Congressmen are right. And we certainly don't have the time.

Congress, or some other agency, should ask a commission of the top newspaper, magazine, and radio executives in the United States to give their time to move into the State Department's propaganda program and clean house. This commission of top executives should be given unlimited powers to hire and fire, rip out the red tape, dismiss the faint-hearted, and put men with ideas and authority into the leading jobs.

The State Department will say that there is a United States Advisory Commission on Information already set up to do such a job. But the Commission hears and sees only what the State Department's propaganda people want it to see and hear. Besides, the members of the Commission are too busy with their private businesses to give full time to the job.

The task of cleaning house in the State Department's Information Division will take time and solid effort. There must be many private citizens in the United States who could—and would—do the job. But, first, they must be given a free hand.

And the job must be done soon. Anything less would mean a victory for communism in the battle for the minds of men or, at the very least, the loss of more millions of dollars with nothing to show for them.

Karl Stefan, of Nebraska

EXTENSION OF REMARKS OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. HINSHAW. Mr. Speaker, Karl Stefan was my great and good friend. I am sure that every Member of this House who knew him can say those same words, because Karl Stefan was the kind of person who made friends of all with whom he came in contact. But to me he was a very particular friend, a special friend, because we have had many interests in common, and hence many associations in our work here in the House of Representatives.

Among other things, he and I have been deeply interested in the subject of aeronautics. I have long admired Karl Stefan for his keen understanding of aeronautics and communications. He not only was a careful student of these subjects but he was one who enjoyed flying and, in fact, had flown over most of the world. As a member of the Congressional Aviation Policy Board of the

Eightieth Congress he served on its Subcommittee on Transportation and made many important contributions to the report of the subcommittee as well as to the report of the Congressional Aviation Policy Board. That report is known as Senate Report No. 949 of the Eightieth Congress, second session.

Karl Stefan was the ranking minority member of the subcommittee of the Committee on Appropriations dealing, among other agencies, with the Department of Commerce and the Civil Aeronautics Board. In that capacity he was in a position to know every detail of the Government's activities in relation to civil aeronautics, and to advance those important interests. His untimely and sudden passing comes as a piercing shock to us all. To those concerned with aeronautics his death removes a real pillar of strength that will not soon be replaced.

Mr. Speaker, these poor words of mine, inadequate as they are in expressing my own grief upon losing my friend, are only a supplement to the many beautiful things that have been said of Karl Stefan, and which I would like to be able to find the words for myself. My heart goes out to his lovely wife, his real companion over the years, with the hope that she may find some consolation in the knowledge that we here, in our ways of men, likewise loved her husband as a true and steadfast friend.

Routing the Reds

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. MULTER. Mr. Speaker, here is a priceless reply to the Communist Party, United States of America, when it tried to infiltrate into the United Committee for Civil Rights in Portland, Ore. The writer, David Robinson, regional director of the Anti-Defamation League of B'nai B'rith in that area, was named by the committee to answer the Communist bid for affiliation. The United Committee consists of 55 Catholic, Protestant, and Jewish groups, civic, labor, students, and political agencies.

The civil-rights ordinance lost in the referendum, but Robinson's answer is one of the clearest indictments of communism and a splendid essay on the privileges and rights of every freedom-loving American.

COMMUNIST PARTY, U S A.

OREGON STATE COMMITTEE,

Portland, Ore.

(Attention: Mr. Mark Haller, chairman; Mr. Mort Newman, organizational secretary.)

GENTLEMEN: Your application for affiliation with the United Committee for Civil Rights was given consideration by the executive board and the writer was appointed to prepare the committee's answer to your letter and to inform you of the action taken on your application.

It is our firm conviction that if there was any sincerity of purpose in your statement favoring adoption of the civil-rights ordinance you would be anxious to withhold the kiss of death impliedly involved in endorsement by you.

We have every reason to question the good faith of the Russian-inspired and controlled Communist Party of the United States in expressing desire to affiliate with our committee. Our aims and purposes are totally at variance. We are first of all loyal Americans, trying within the framework of law under constitutional guaranties to effect enactment of legislation through democratic processes.

The humblest citizen of Portland will have an opportunity to cast his ballot in secret without molestation or fear, and his ballot will be counted, and as much weight given to it as to the ballot of the wealthiest or most influential person in the city. We are unwilling to trade this privilege of the free ballot for the dictatorship of a politburo.

The right of *habeas corpus* wherein the judicial branch of our Government can be set into motion for an open public inquiry into the cause of a prisoner's detention is a constitutional guaranty in this country.

Even members of the American branch of the Russian Communist Party have sought and been given the protection of this safeguard to our liberties. We are not willing to exchange this civil and liberty right for the police state of Russia, where in the dead of night, citizens are taken into custody without warrant and without trial and are transported into life servitude. It seems ironic that those who seek to destroy the American Constitution are always quick to invoke its provisions when their liberty is threatened. It is tragic that the freedoms thus protected are directed to make America subservient to a foreign totalitarian state wherein the dignity of the human personality is not recognized.

Our country is made up of people of various religious faiths. Many of the immigrants to these shores came to escape the bigotry and persecution which prevented their unrestricted worship according to dictates of their consciences. While the United States has not always been free from acts of prejudiced men, there has always been the great fundamental law, the Constitution, which is both a bar against imposition of a state-approved religion and a sanctuary of protection against those who would interfere with the right of free worship. Here Catholic, Protestant, and Jew are protected in the right to observe and preserve the tenets of their faiths. These precious rights we are not willing to surrender or trade for what has been set up in Russia where God and the moral law have been dethroned and instead deification of the state and its rulers has been substituted.

Notwithstanding the charity and love in their hearts for all men of good will, the Protestants, Catholics, and Jews who make up the bulk of the membership of the United Committee for Civil Rights do not desire affiliation with an organization which seeks to accomplish in the United States the destruction of religious freedom.

The insignificant membership of the American branch of the Russian Communist Party is convincing evidence that our conception of free political institutions and the democratic structure of our society with all the room for improvement which admittedly exists make the field a sterile one for growth of Russian-controlled communism. That undoubtedly is the reason the Communist Party desires the failure, not the success, of the significant social changes which are steadily being achieved.

These social changes could be magnified and accelerated were it not for the delib-

erate and malicious design of the Russian Government to create unrest, war and collapse of the United States and other democracies.

If proof were needed that the American branch of the Russian Communist Party was guilty of furthering this design, the references in your own letter to "United States aggression against the Koreans" and "the unjust character of the (Korean) war" and "American troops that are intervening against the people of Korea" convict you. It is such expressions and conduct which are a corollary of these attitudes which create apprehension and induce legislation caused by fear. If your comrades in Russia would say or write such a traitorous thing, their lives would be quickly forfeited.

I am not happy that Congress was confronted with a situation which the members believed called for enactment of the McCarran Act. The Communist Party can claim the dubious credit for provoking the passage of the act. One thing is certain and that is the repeal of the law as soon as the emergency which called it into existence is over. How long that emergency lasts depends on how long some traitors within our midst give allegiance, aid and comfort to the enemies of the United States.

Peace and stability could come to a peace-hungry world if there was the slightest desire for it on the part of the Communists who control Russia. The gigantic sums now being spent for military preparedness would be available to study the cause and cure of disease, for building educational institutions and for improvement of mankind generally. That, however, is not the program of the Kremlin.

You have no place in the United Committee for Civil Rights. Your program and tactics are to create turmoil, unrest, and confusion. We want none of this. We are taking our case to the citizens of Portland in the American democratic way. We are asking the voters to approve the civil rights ordinance so that human beings will be able to purchase food and shelter without religious or racial discrimination. This is in keeping with the principles of the Declaration of Independence and the Universal Declaration of Human Rights of the United Nations of which the United States is a signatory. I am hopeful and confident that the voters of Portland will approve the ordinance which was unanimously passed by the city council. I am equally confident that the rulers of the Kremlin and their American followers would hail the defeat of the measure with great glee. I hope that this pleasure will be denied to them.

By unanimous vote of the executive committee of the United Committee for Civil Rights, your application for affiliation has been rejected.

Sincerely,

DAVID ROBINSON,
Member, Executive Committee.

Alabama Forest Fires in 1950

EXTENSION OF REMARKS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. ELLIOTT. Mr. Speaker, in the year 1950, 2.3 percent of Alabama's protected forest acres were burned by fire. Four hundred and fifteen thousand eight hundred and twenty-six acres, out of a

total protected acreage of 18,044,938, were destroyed by fire.

At this rate of destruction—assuming its uniform rate, and that forests are totally destroyed on the acres burned—Alabama's forests could be completely destroyed in 43 years, or one generation.

Our forests are one of our very greatest and most valuable natural resources.

It is a resource that can be preserved by properly guarding against fires—a duty of every citizen.

It is a resource that can be replenished by reforestation—the planting of tree seedlings which are available, at least in some degree, to every Alabama farmer.

The Seventh Congressional District of Alabama, which I have the honor to represent in the Congress, has the third largest number of fire protected forest acres—2,389,027—among all the nine congressional districts of the State.

In acres burned by forest fires in 1950, with 51,183 acres it ranks fourth among the congressional districts of the State.

But, in percentage of total forest acres burned it has the very good rating of seventh among the congressional districts of the State.

Under leave to extend my remarks, I include a table which I have prepared under the heading "Alabama's forests, 1950, by congressional districts," and a table of "Selected statistics on forest fires for the State of Alabama by congressional districts" prepared at my request by the Legislative Reference Service of the Library of Congress. I also include an article from the September 4, 1951, issue of the Haleyville Advertiser styled "Alabama Third in Nation for Lumber Industry."

Alabama forests, 1950, by congressional districts

	Protected acres	Acres burned	Percent burned
District 1	3,770,242	83,441	2.48
District 2	3,190,291	78,616	2.46
District 3	1,715,133	38,557	2.24
District 4	1,750,542	52,282	2.98
District 5	1,193,494	35,753	2.42
District 6	2,341,120	48,146	2.06
District 7	2,389,027	51,183	2.14
District 8	1,280,169	11,551	.90
District 9	522,400	16,006	3.06
Total	18,044,938	417,826	2.30

Selected statistics on forest fires for the State of Alabama by congressional districts, 1950

[From the Haleyville (Ala.) Advertiser of September 4, 1951]

ALABAMA THIRD IN NATION FOR LUMBER INDUSTRY

Actually growing a never-ending stream of money which flows into Alabama from all sections of the Nation, this State today ranks third among the 48 States in the production of lumber. Department of Commerce figures just released show the prominent position of Alabama in this industry. Annually, Alabama tree farmers are paid close to \$30,000,000 for their raw timber. Alabama sawmills, numbering more than 3,000 cut and dressed and sold this lumber for a total price exceeding \$100,000,000. Since small farmers and land owners account for nearly 70 percent of the tree growing land in the State, this means that the great flow of wealth from the lumber industry was widely diffused throughout the State, and that thousands of farmers gained a profit in this field.

What Jews Should Know About Christianity

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. MULTER. Mr. Speaker, I believe the following article which appeared in the June 1951 issue of Liberal Judaism, written by Willard Johnson, national program director of the National Conference of Christians and Jews, is entitled to the greatest possible publicity. It will do much to create good will among Christians and Jews.

WHAT JEWS SHOULD KNOW ABOUT CHRISTIANITY

It is good that Christians and Jews should look at some aspects of one another's religion so that we avoid the commonplace but

dangerous statement that "After all, there's not much difference between Christianity and Judaism." As a matter of fact, and despite many common elements in both religions, there are many very great differences between Judaism and Christianity, insofar as the majority of Christians are concerned.

These differences, of course, need not lead to hostility and prejudice. Neither should we try to build up a false and superficial sense of good will by glossing over the differences. The clear, frank facts are that we must live together as neighbors in spite of our differences and that if we do not respect one another and cooperate for our commonly held objectives, Christianity and Judaism both may be driven underground, perhaps even to the point of virtual extinction in the coming years. This has become a truism in these last 20 years but its urgency must constantly be kept in mind and on all occasions lest we falter in our struggle against the materialism, atheism, and totalitarianism which enslave a third of the people of our world.

Let us not fear differences. They are a part of nature. According to the scientists there are no two objects in the universe exactly alike. No two atoms, no two grains of sand, no two thumbprints, no two faces (thank God!), no two personalities. Infinite variety and diversity are the creation of God. So, why should we fear differences? Why should we not teach our children to look for and adjust themselves to differences? Only dictators try to make people the same—and they do not succeed because they are violating a basic fact of nature.

Let me be clear—I am talking about differences among people—I do not refer to truth itself. There is only one truth but people's acceptance and interpretation of that truth differ.

To be sure we must also see the mutual and common elements which bind together people of every race, creed, and nation. These common characteristics of human beings are also God's handiwork. They, too, must form part of the education we provide for our children since education, to be adequate, must deal with all of life.

Keeping in mind, therefore, the naturalness of both diversity and our common humanity, let us explore some of the characteristics of Christianity which may not be well known to Jews.

First in importance, I believe, is the Christian doctrine that Christianity is revealed or given to man by a direct act of God. Jews believe this about Judaism, too. Both are revealed religions. That is, their adherents do not consider them as natural religions growing out of the evolutionary process of thought and social development. They are supernatural; God gave them to man, according to the doctrines of both.

But Christians believe that Christianity is a later, higher, and superior revelation of God. It is necessary to keep this in mind. Christians believe that Christianity is the new dispensation while Judaism is the old.

Along with this are numerous related considerations. For example, most Christians have been taught that Judaism is basically a religion of law, rigid and stern, while Christianity is a religion of love, mercy, and forgiveness. I believe this is a false thesis. Nevertheless, many Christians believe it. I was taught it as a boy in Protestant Sunday school.

This is not to say that Christians believe that Jews, as people, are inferior or that they are doomed to eternal damnation and destruction. I must admit that these ideas have prevailed among some Christians at various times and still do today, but many Christian theologians are trying to point out that these inferences are false.

A complete statement of this seeming dilemma would involve tedious argument, but

to put it simply, Christianity also holds that man must abide by the dictates of his conscience. That is the ultimate and final determinant in all branches of Christianity. If a man has sought knowledge diligently and believes he has the truth he must follow that truth or be lost.

It is therefore consistent to the vast majority of Christians to believe that Christianity, and their branch of Christianity, is the one true faith revealed by God and at the same time to believe that non-Christians who are true to their knowledge and their conscience are entitled to full salvation and are their equals in society as persons and before God as His children.

There is specific teaching on this subject by qualified spokesmen of all branches of Christendom, including the Eastern Orthodox, Roman Catholic and Protestant. Conscience's final and ultimate and yet Christianity is the one and only true faith. If a Christian truly and honestly should believe that Christianity is false and another faith is true, he must accept the other faith or be lost. Christians, of course, believe that since God gave Christianity as the final revelation to man all people everywhere must and will some day accept it. The truth must prevail. This explains why Christians believe they are obligated to try to convert Jews to Christianity.

Parallel with this belief is the doctrine that Christ is God, the incarnation of God on earth and therefore the revealer of this new and final dispensation. The belief is too well known to be given more attention here but it must be recognized.

Jesus of Nazareth as a man was a Jew who lived as a simple carpenter and teacher. But he was God bringing the new and final revelation to man, first to the Jews, who had received the earlier and incomplete revelation through Moses, the prophets and others, and then to all people everywhere.

The vast majority of Christians believe this, substantially. Some, such as Unitarians (or those who are Unitarian in belief and yet members of other denominations) believe either that Jesus was not God but a great religious teacher, or that all human beings reveal God's nature through the spark of the divine that is in each person and that Jesus was such a revealer of God par excellence. But these Unitarians are only a tiny fraction of the Christian world.¹

Perhaps one of the most important facts in this connection is a rapidly growing awareness of the Jewishness of Jesus, that he taught good ethical Judaism and that his whole life was lived among Jews. George Foote Moore, J. M. P. Smith, Travers Herford, James Parkes, and Conrad Henry Mochlman are chiefly responsible for this awareness.

¹ Some American Protestant Liberals who read this interpretation may say, "I do not accept this version of Christianity. Only the orthodox believe such old-fashioned ideas." To which it is necessary to point out that there are about 750,000,000 Christians in the world. All Protestants in the United States number about 55,000,000; of this number perhaps 10 percent may not accept such beliefs as the superiority of the Christian revelation, the compulsion to convert non-Christians, and the divinity of Christ. In fact, this figure of 5,000,000 is probably high. In other words, 99 percent of the Christians of the world probably accept the orthodox beliefs about the divinity of Christ, the superiority of Christian revelation and the necessity of trying to convert non-Christians.

Many Christian clergymen who speak at synagogues are liberals whose beliefs are not as orthodox as the vast majority of Christians or are men who in deference to their audiences do not present their own beliefs with candor.

Another Christian belief of interest to Jews is that Christianity has continuity and much in common with Judaism. Every Christian accepts the Bible of the Jews, its lawgivers, teachers, poets, and prophets and its history as part of Christianity.

Moses, Joshua, Joseph, Jacob, Solomon, David, Isaiah, Nehemiah, and Micah, as well as the cities and lakes of the Holy Land, are personal possessions of all Christians. They are, for example, some of my most prized and precious childhood memories from Sunday school lessons.

This is likewise true of the great ethical teachings of Judaism, such as the Ten Commandments, and the teachings, "Thou shalt love the Lord thy God," "Thou shalt love thy neighbor as thyself," "What doth the Lord require, but to do justly, to love mercy, and to walk humbly with thy God."

Most Christians believe that Christ, Paul, and other early Christian leaders taught a new way of life. They often say, as I have already stated, that Judaism is dominated by law, while Christianity is motivated by love. Many Christians would try to prove this by quoting such passages as the teaching of Christ, "By this shall all men know that you are my disciples, that you love one another," or the famous thirteenth chapter of Paul's first letter to the Corinthians, which ends, "Now abide faith, hope, love, these three, and the greatest of these is love." Equivalents of these, they would say, are not in the Jewish Bible.

A considerable number of philosophers and theologians, however, have studied carefully the ethical teachings of both religions and can discover very little, if any, difference. One of the errors is that some Christians have tried to contrast Christian teachings of their own era with the principles of Judaism of 2,000 years prior to the Christian era. That, of course, is ridiculous. When Judaism and Christianity of similar periods of time are looked at together there is little difference in ethical and moral teaching.

To be sure, some parts of Judaism are legalistic, but so are some parts of Christianity. The differences are not in the realm of ethics and morals, either taught or practiced, but in the realm of dogma, history, ritual, and institutional structure, and government with major contrast arising from Christian beliefs about revelation, the person of Christ, and the concept of the church as the institution of God.

Now I call your attention to a problem that will disturb Christian-Jewish relations for many generations as it already has. I refer to hostility toward Jews which is found in some parts of the New Testament. These texts are in the New Testament because the early Christian church broke away from Judaism and some Christians who had been Jews were trying to defend their new faith, to make it appear as superior and their old as inferior. Likewise there are actual conflict incidents reported in the New Testament. Often you will read such a passage as "and the Jews set upon Paul and drove him from the city." In the gospel of John there is constant reference to the Jews as hostile to Christ, so much so that some Protestant clergymen always substitute the word "people" for "Jews" in public reading of the gospel of John. They base this on two assumptions: (1) There is no historical proof that all Jews of Jesus' day rejected him (note the triumphal entry of Palm Sunday when the people hailed him) and (2) the universalism of the sinfulness of man should be kept in mind by Christians who will not become smug by thinking only of Jews as the rejectors of Christ.

If these passages are read without understanding the background and if they are not interpreted correctly in the light of basic Christian ethics, it is not difficult to see why some Christian children have had their

minds set against Jews at a very early age and with the sanction of the Holy Bible, which, to most fundamentalist Christians, is the final word of God.

Furthermore, this Bible in its essentials cannot be changed. It is the word of God which was fixed in its present form by the church, the representative of Christ on earth. If any Jew expects drastic change of the New Testament in the conceivable future to extract the anti-Jewish passages he is seeing a mirage and cherishing a false hope. It will not be done. But these passages can be, and are being interpreted so that they do not contribute to anti-Semitic attitudes.

Incidentally, it should be noted here that every responsible Christian group about which I know has condemned anti-Semitism without qualification or reservation. Most of them have indeed gone beyond this condemnation and have implemented their statements by specific curricular materials, and study projects.

Great change has taken place, for example, in the teaching of the story of the crucifixion. Take my own experience as an illustration. I was raised in several small towns of Iowa and attended Protestant churches. I recall that my good Sunday school teachers taught me that Jews were responsible for the death of Jesus on the cross. But when I went to seminary I was given what I now accept as the correct interpretation, namely, that some Jews conspired with the Roman rulers to get Jesus out of the way. Neither the Roman rulers nor some of the Jewish religious leaders wanted Jesus to interfere with their domination of the people of Palestine. I was also taught that it was contrary to Christian teaching and immoral to hold responsible either all the Jews of Jesus' day or any Jews who have lived since for the death of Jesus in which they had no conceivable part.

Further I learned that many Christian churches such as the Roman Catholic teach that Christ died for the sins of all mankind and that all who sin take part in a continuous crucifixion.

These teachings and interpretations are becoming increasingly dominant. They are to be found in the catechisms and basic instructional courses of Christian churches. You will hear sermons about them. Some untrained, thoughtless teachers deviate from these principles but the overwhelming trend is to the points I have just stated.

Jews also should know that many Christians cannot in good conscience worship with non-Christians or those who are not members of their own denomination. For example, such large groups as Roman Catholics, Episcopalians, many Lutherans, and Southern Baptists do not permit clergymen of other groups in their sanctuaries. Several large Christian groups will not permit their members to participate in any kind of religious service other than their own.

They believe that theirs is the true faith and therefore that worship conducted by any other clergyman must be false. Whether we accept this position or not, we must respect it for it is a matter of conscience. We should not ask people of any group to violate their conscience by worshipping with others, any more than we would expect them to ask us to violate our conscience by accepting their position. On such matters we should not argue. They are affairs of conscience and faith and we simply must accept the situation as it is.

In conclusion it should be noted again that the differences among religious groups are sharp, pervasive of most of life, and long in years. We must hope and pray that our common humanity, our common purposes and goals, our common enemies and, above all, our common God will bring us together and hold us together in brotherhood, in mutual respect, and in love.

**Hon. Mike Mansfield, of Montana, Reports
on Project Developments in Western
Montana**

**EXTENSION OF REMARKS
OF**

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. MANSFIELD. Mr. Speaker, in accord with my annual custom, I am happy to include with my remarks a summary of appropriations approved by the Congress for specific reclamation, Bonneville Power Administration, Rural Electrification Administration, Indian Office, and Army engineer's projects in the district I have the honor and the privilege to represent. The time covered by these appropriations is for the period during my service as a Representative from the First District of Montana and follows up similar reports sent out by me in previous years.

These projects, with the coming into western Montana of new industries in the Butte-Anaconda and Hungry Horse areas, mark the beginning of the development of our State, a diversification of our economy, and greater security for our people.

Reclamation projects

1 HUNGRY HORSE PROJECT

1946.....	\$1,700,000
1947.....	867,210
1948.....	2,500,000
1949.....	14,611,650
1950.....	22,093,125
1951.....	29,500,000
1952.....	22,000,000

1951.....	51,000	
1952.....	56,000	

1 Completed

Army engineers projects

1949: Orchard Homes flood-control
project (expended \$40,000)..... \$140,000
1950: Libby Dam—authorized—May 17, 1950.
(Estimated cost, \$220,000,000; estimated
capacity, 550,000 kilowatts).

Indian Office projects

1. Indian Tuberculosis Hospital,
Warm Springs:
1949..... \$750,000
1950..... 750,000

Total..... 1,500,000

2. Polson drainage project. 1950..... 100,000

RURAL ELECTRIFICATION PROJECTS

1. Ravalli County Electric Cooperative,
Inc., Corvallis, Mont. (it includes Ravalli and
Missoula Counties):

	Customers	Farms	Amount of loan
1943-50.....	859	809	\$495,900
1951.....	866	799	200,000
Total.....			695,900

2. Vigilante Electric Cooperative, Inc.,
Twin Bridges and Dillon, Mont. (it includes

Jefferson, Madison, Silver Bow, Beaverhead,
and Broadwater Counties):

	Customers	Farms	Amount of loan
1943-50.....	1,630	879	\$1,743,000
1951.....	1,708	951	500,000
Total.....			2,243,000

3. Missoula Electric Cooperative, Inc., Mis-
soula, Mont. (it includes Ravalli, Granite,
Powell, Missoula, Mineral, and Lake Coun-
ties):

	Customers	Farms	Amount of loan
1943-50.....	748	478	\$11,145,000
1951.....	739	401	
Total.....			1,145,000

4. Flathead Electric Cooperative, Inc.,
Kalispell, Mont. (it includes Flathead and
Lake Counties):

	Customers	Farms	Amount of loan
1943-50.....	1,614	843	\$1,218,700
1951.....	1,817	923	755,000
Total.....			1,973,000

5. Elmo Electric Cooperative, Inc., Polson,
Mont (it includes Lake County):

	Customers	Farms	Amount of loan
1940-50.....	190	135	\$330,000
1951.....	190	135	
Total.....			330,000

6. Lincoln Electric Cooperative, Inc., For-
tune, Mont (it includes Lincoln and Flat-
head Counties). Construction not com-
pleted.

	Customers	Farms	Amount of loan
1940-50.....	24	20	\$107,000
1951.....	309	143	125,000
Total.....			732,000

In addition, funds allocated to the North
Idaho Electric Cooperative were used to
energize lines and serve farms in Sanders
County, and funds allocated to the Park
County Electric Cooperative were used for
similar purposes in Gallatin County.

History With a Twist?

**EXTENSION OF REMARKS
OF**

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 13, 1951

Mr. LARCADE. Mr. Speaker, under
leave granted to extend my remarks in
the Record, I include the following
article:

HISTORY WITH A TWIST

History of Louisiana. You might enjoy
reading this Louisiana history again, if
you've read it before. We have, some place,
but Secretary Bruce McCoy, of the Louisiana

Press Association, reports that it is making the rounds of newspapers in the Northwest. It's entitled "History of Louisiana".

"The Post Office Department in Washington, D. C., was making a careful investigation of title of proposed post-office sites in Louisiana. In due course, the Department received an abstract of title to a tract under consideration.

"Replying, the Post Office Department commented on the fact that the title record began with the year 1803, and stated that while the title seemed to be complete and satisfactory so far as it went still, as a justification for the investment of the sum contemplated, the Department would require to know more of the origin of the title involved, in records back of 1803.

"In due course, a reply was received from one who signed himself as attorney for the owners of the land. He wrote:

"I note your comment upon the fact that the record of title sent you, as applying to the lands under consideration, dates only from the year 1803, and your request for an extension of the record prior to that date.

"Please be advised that the Government of the United States acquired the Territory of Louisiana, including the tract to which your inquiry applies, by purchase from the Government of France, in the year 1803.

"The Government of France acquired title by conquest from the Government of Spain.

"The Government of Spain acquired the title by discovery by one Christopher Colum-

bus, traveler and explorer, a resident of Genoa, Italy, who by agreement concerning the acquisition of title to any land discovered, traveled, and explored, under the sponsorship and patronage of Her Majesty the Queen of Spain.

"The Queen of Spain had verified her arrangement and received sanction of her title by consent of the Pope, a resident of Rome, Italy, and ex-officio representative of viceroy regent of Jesus Christ.

"Jesus Christ was the Son of God.

"God made Louisiana.

"I trust that complies with your request."

Report to the People of the Second Congressional District of Wisconsin

EXTENSION OF REMARKS

OF

HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. DAVIS of Wisconsin. Mr. Speaker, I include herewith my third annual

Roll-call record, 1st sess., 82d Cong.

report to the people of the Second Congressional District of Wisconsin. In 1949 and 1950 I prepared reports on my voting and attendance records during the first and second sessions of the Eighty-first Congress. This is a similar compilation for the first session of the Eighty-second Congress complete to the date of adjournment on October 20.

By means of news letters and conferences throughout the district during congressional recesses, I have attempted to inform my constituents and report to them on my stewardship as their Representative in Washington. This voting report is in keeping with my purpose of keeping the people of my district as fully informed as possible on congressional issues.

It is a complete record. It is not a hand-picked list of a few so-called key votes compiled by some lobbyist, pressure group, or political campaign committee. The whole record is there in concise form for the people to examine and evaluate for themselves.

If more complete information on any measure considered, or an explanation of any particular vote, is desired, I shall be glad to respond to such requests.

Roll call No.	Date	Identification and result of vote	My vote	Roll call No.	Date	Identification and result of vote	My vote
1951				1951			
1	Jan 3	Quorum call	Present	26	Apr 10	Amendment to H. R. 3587, third supplemental appropriations bill, reducing administrative funds for commodity credit corporations by \$750,000 (Rejected, 159 to 250)	Aye
2	do	Election of Speaker of House (Rayburn, 241, Martin, 192)	Martin	27	Apr 11	Quorum call	Present
3	do	Previous question on H. Res. 7, adopting rules of 81st Cong as rules of 82d Cong. (Vote for previous question cut off all amendments.) (Not ordered, 179 to 211)	No.	28	do	do	Do
4	do	Substitute amendment to rules of House, striking out provision permitting committee chairman to call bill up for debate even though rejected by Rules Committee (Agreed to, 215 to 178)	Aye	29	Apr 13	do	Do
5	Jan 17	H. R. 1001 authorize construction of "super" aircraft carrier, 500,000 ton, of naval vessels, and conversion of 1,000,000 ton of existing vessels. (Passed, 365 to 0)	Do	30	do	Motion to recommit S. 1, 1951 amendments to Selective Service Act, and establishing Commission for Universal Military Training (Rejected, 121 to 296)	Aye
6	Jan 19	Quorum call	Present	31	do	S. 1, 1951 amendments to Selective Service Act, and establishing Commission for Universal Military Training (Passed, 52 to 44)	Do
7	Jan 23	H. R. 1725, providing for renegotiation of Government contracts for national defense, where such contracts exceed \$100,000 per year. (Passed, 377 to 0)	Aye	32	Apr 18	Quorum call	Present
8	Jan 24	H. R. 1, establishing a program of gratuity in demerit for survivors of members of the Armed Forces who die in active service, each serviceman to be covered in the amount of \$10,000. (Passed, 380 to 0)	Do	33	do	Jensen amendment to H. R. 3709, appropriations bill for Federal Security Agency and Labor Department, limiting replacement of personnel (with certain exceptions) to 25 percent of vacancies. (Adopted, 208 to 115)	Aye
9	Jan 31	Quorum call	Present	34	Apr 21	Quorum call	Present
10	do	do	Do	35	Apr 25	do	Do
11	Feb 6	do	Do	36	Apr 26	do	Do
12	Feb 7	Pearl-point amendment, providing for congressional notification by the President prior to reduction of tariff below level determined by Tariff Commission to be a pearl point, to H. R. 1612, extending authority for reciprocal trade agreements. (Adopted, 225 to 168)	Aye	37	May 1	do	Do
13	Mar 7	Motion to recommit H. R. 2615, increasing peanut acreage allotments and marketing quotas. (Rejected, 174 to 212)	Do	38	May 2	do	Do
14	Mar 8	Quorum call	Present	39	do	Gary amendment to H. R. 3790, Department of Interior appropriation bill, deleting \$3,400,000 for Southeastern Power Administration constructions. (Adopted, 218 to 119)	Aye
15	Mar 13	do	Do	40	do	Harris amendment to H. R. 3790, Department of Interior appropriation bill, reducing by \$550,000 the funds for construction by Southwestern Power Administration. (Adopted, 222 to 173)	Do
16	do	H. R. 1545, to authorize emergency reorganizations of executive agencies, substantially increasing existing Presidential authority in such reorganizations. (Rejected, 167 to 227)	No	41	May 2	Short amendment to H. R. 3790, Department of Interior appropriation bill, to prevent use of funds for developing western Missouri project. (Adopted, 247 to 152)	Aye
17	Mar 14	Quorum call	Present	42	do	Ford amendment to H. R. 3790, Department of Interior appropriation bill, cutting \$53 million from funds allotted for Bonneville Power Administration construction. (Adopted, 225 to 167)	Do
18	do	H. Res. 112, disapproving President's Reorganization Plan No. 1 of 1951, relative to the REC. (Failed of adoption, 200 to 197, a constitutional majority of 218 being required to disapprove reorganization plan.)	Aye	43	do	Pickett amendment to H. R. 3790, Department of Interior appropriation bill, cutting \$800,000 from the funds allocated for management of lands and resource, and to earmark \$1,200,000 for use in soil and moisture conservation. (Adopted, 249 to 148)	Do
19	Mar 14	H. Res. 166, providing for consideration of H. R. 2988, for Federal "defense" public housing and community facilities and services. (Rejected, 170 to 219)	No.	44	do	Taber amendment to H. R. 3790, Department of Interior appropriation bill, reducing by \$10,000,000 the funds provided the Bureau of Reclamation for construction and rehabilitation of authorized reclamation projects. The Macedonian Question**EXTENSION OF REMARKS**

OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. BOW. Mr. Speaker, under leave previously granted to me I would like to submit the following:

The thirtieth annual convention of the Macedonian Political Organization (MPO) of the United States and Canada held at Columbus, Ohio, on September 2, 3, and 4, 1951, guided by the cause of attaining a lasting Balkan peace, and having under consideration the existing state of conditions there, deems it as its imperative duty to make it known to the world public opinion the following declaration:

1 From the beginning of the present century to the present time, the Balkan States have always presented a danger point in Europe. The chief cause for the existence of this situation is Macedonia, a country of 25,000 square miles and with a population of nearly 3,600,000 people.

While the Ottoman empire still partially dominated the Balkans, the population of Macedonia was subjected to a brutal oriental regime. Taking advantage of the existing hard state of conditions in Macedonia, some of the Balkan States promptly directed their political and territorial aspirations toward Macedonia. They did not even bother to conform with the fact that the population of Macedonia, in the name of its own cause, had already been organized for a struggle whose aim and purpose was the creation of a free and independent state within the geographic limits of Macedonia. The Balkan States, encouraged by some of the great European powers, obstinately followed their egotistic designs. This situation quickly brought them to conflicts, contradictions, and rivalry which readily ensued into wars. Because of Macedonia, in the course of three decades (1912-41) four wars occurred in the Balkans.

2 The Turkish regime over Macedonia was overthrown in 1912. But the Balkan Christian nations, who miraculously allied themselves, declared war on Turkey in order to free Macedonia. Such was, at least, their avowed. Instead of carrying out the objective of their open declaration they soon began to quarrel among themselves, and as a result Macedonia was divided into three parts. United under the Turkish rule, Macedonia emerged, in 1913, partitioned by her "emancipators." Macedonia now assumed the position of eighteenth-century Poland.

Today Macedonia remains divided among Yugoslavia, Greece, and Bulgaria. The Paris peace treaties of 1919 did not alter the existing Balkan situation. The injustices inflicted upon Macedonia after the second Balkan War (1913) continued to exist. The period between the First and Second World Wars was full of threats to world peace. Again, because of Macedonia, the Balkan States were unable to achieve friendly understanding, this unfortunate situation hastened to encourage Hitler's aggression toward the Balkans.

3 Although the Second World War terminated with a crushing defeat of nazism and fascism, no substantial change has taken place in the Balkans. The conditions as created at Bucharest in 1913 remain. The Atlantic Charter had the same fate as President Wilson's 14 points. Today a new aggression endangers the Balkans. They again constitute a danger point in southeastern Europe. And the center of this danger point is Macedonia, toward which the several

Balkan States have directed their territorial appetites.

From the north Communist Tito entertains ambitions that some day he might be able to acquire an outlet to the Aegean Sea. Until June 1948 Tito's Yugoslav press has more than once written about this pretension. To attain this objective numerous guerrilla bands were dispatched from Yugoslavia to Greek Macedonia so that they may capture this province and reach Salonika. Currently the Bulgarian Communist government continues to plead for the annexation of Yugoslav and Greek Macedonia. In Athens, on the other hand, many declarations are being made to the effect that, for the security of Greece, the annexation of Bulgarian and part of Yugoslav Macedonia is necessary.

4 It is quite obvious that, by the creation of and the continued existence of such conditions in the Balkans, there may yet generate the necessary spark to ignite the third world war. In this case, it is noteworthy that not a single one of the interested Balkan states ever cares to know the wishes of the Macedonian population. In the three parts of divided Macedonia the inhabitants have no way of expressing their own wishes as to their destiny. Since 1893, when the Internal Macedonian Revolutionary Organization (IMRO), was created and again during 1903 (when the Macedonia population rose with arms in hand against the Turkish rule) the population of Macedonia declared that it wishes to govern itself. It cheerfully accepted the motto of the renowned British statesman, William Gladstone, "Macedonia for the Macedonians." And today, if the Macedonian people are free to express themselves, the great majority of the population would demand the creation of a free, united and independent Macedonian state unit, which may eventually serve as a nucleus for the formation of a Balkan federation.

5 While the Macedonian question remains unsettled there will never be peace in the Balkans. The best solution of this question is, of course, to let the Macedonian people govern themselves under the protectorate of the United Nations. With such an arrangement, no one of the Balkan states could have the courage to provoke war because of Macedonia. And as a consequence, the population of the whole Balkan peninsula would pacify itself and devote its energies to creative economic endeavors, which are so necessary for the prosperity of the Balkan peoples and the peace of mankind.

"Where There's a Will"**EXTENSION OF REMARKS**

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. SHAFER. Mr. Speaker, the old adage that "where there's a will there's a way" applies most aptly to the matter of economy in the Federal Government.

Some of the recent newly professed interest on the part of a few Democrats in Congress in ways of achieving economy would be considerably more impressive if that interest were matched by a corresponding past record of a will for economy.

The unexpected House rejection of the conference report on the tax increase last week is a case in point. Unquestionably some of the House Members who switched to a "no" vote have become

aware of the rumblings of revolt among alarmed and angry taxpayers back home, and felt that an economy gesture was in order. But those who switched their vote for this reason have repented too late. The damage was done when these same Members consistently and recklessly voted for excessive appropriations and for more and more blank checks for the administration.

Consider the fact, for example, that after spending 9 months trying to devise methods of increasing taxes by \$5,750,000,000, the House took only 4 hours of debate to vote a give-away of \$8,800,000,000 for so-called foreign aid.

When Members of Congress who voted for the reckless and excessive expenditures suddenly shy away from voting a tax increase which will go only part of the way toward paying the fiddler, the genuineness of their will for economy is certainly in doubt. It looks more like a belated and futile attack of political jitters.

Recently the appointed junior Senator from Michigan BLAIR MOODY, has been making more headlines for himself by urging enactment of the McClellan bill which would create a joint House-Senate Committee on the Budget and a staff of fiscal experts, perhaps 75 in number, who would check on the way in which departments of the executive branch spend the money appropriated by Congress, thereby providing the proposed Committee on the Budget with information and guidance.

It sounds very fine. But this splendid display of interest in the way to achieve economy would be more convincing if there were evidence of a corresponding will for economy.

MOODY's record, so far as the will for economy is concerned, is entirely clear. On 27 roll calls involving actual economy proposals totaling \$7,966,384,713, he voted for economy on measures aggregating only \$222,334,430. He voted against economy on proposals aggregating \$7,640,362,783. And he was absent and unpaired on roll calls involving an additional \$103,687,500. By way of contrast, Republican Senator FERGUSON, of Michigan, cast an economy vote or was paired in favor of economy on all of the items totaling \$7,966,384,713.

There is another matter of record so far as the will and the way to economy is concerned.

In 1947, in the Republican Eightieth Congress, the Republican-controlled House Appropriations Committee for the first time created a full-time staff of 10 investigators who made detailed, systematic and continuing economy studies, including nearly a dozen special studies of executive department agencies with a view to ferreting out waste and inefficiency and establishing sound economies. Largely through these efforts, the Republican Eightieth Congress balanced the budget 2 years in a row. It made savings of \$9,800,000,000. It reduced the national debt \$7,000,000,000. It cut \$4,800,000,000 off the tax burden, with 71 percent of the tax relief going to persons with incomes under \$5,000. It took 7,000,000 persons off the tax rolls entirely—all lower bracket taxpayers. Yet this Republican Eightieth Congress voted more funds for

national defense than Mr. Truman permitted to be used.

The very first thing that the Democrats did after Mr. Truman's surprise victory in 1948 was to fire this Appropriations Committee investigating staff and return to the old system of having executive department personnel make investigations of executive department expenditures—which is like having a bank examined by members of its own staff.

Yes, where there is a will for economy, ways of achieving it will be found. And vice versa.

Ohio Power Co. Maintains Service During 41-Day Strike

EXTENSION OF REMARKS OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. BOW. Mr. Speaker, under leave previously granted to me I would like to submit the following:

The Ohio Power Co., one of seven operating companies of the American Gas & Electric Co., experienced during the months of July and August a 41-day strike. The strike started in the company's three major generating plants on July 21 and spread to include one of five operating divisions on August 1. Approximately one-fourth of its 4,000 employees were involved.

The Ohio Power Co. serves 367,000 customers in 50 of Ohio's 88 counties. These customers include all the essential services which are vital to our everyday living, commercial establishments, municipalities, residential areas, both rural and urban, and hundreds of major industries, many of which are engaged in defense work.

During this 41-day strike service was maintained to all of Ohio Power Co.'s 367,000 customers. Not a single industrial plant was shut down because of lack of power, or were any asked to curtail operations.

The company operated its three power plants and the division with supervisory personnel throughout the strike.

While many things contributed to the company's ability to give full electric service during the strike, there were four primary factors which characterize the Ohio Power Co.

First. The company, as a public utility, fully recognizes its obligation and responsibility to its customers. Therefore, over the years it has built an electric power system and an organization of people capable of fulfilling its obligation and responsibility even under most adverse conditions.

Second. The company is efficiently organized under sound management policies. Its supervisory personnel, through years of service and advancement, are well trained, experienced, and have a thorough knowledge of the many phases of the business, thus were personally able to operate the facilities during the strike.

Third. The company's facilities and equipment are in excellent condition, which has been the result of careful planning and high standards of maintenance.

Fourth. The Ohio Power Co. is interconnected by a network of high voltage lines with sister companies in the American Gas & Electric system, and also with other nearby electric utility companies. With such an interconnected system, had there been a major equipment failure in the Ohio Power Co. customers still would have received service.

Let GOP Stick to Facts on Our Asia Policy: They're Damning Enough

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the New York Herald Tribune:

LET THE GOP STICK TO FACTS ON OUR ASIA POLICY: THEY'RE DAMNING ENOUGH

The case against the administration's China policy has been presented recently before committees where questions of subversion or disloyalty were paramount; the effort has been to shadow the motives of various individuals concerned. It is an effort which has not been very astutely or very fairly carried out, and its results to date have been singularly unconvincing.

This approach has disturbing implications for the Republican Party: for it may mean that one of the great issues, which should form the substance of debate and choice in the campaigns ahead, will be lost. On finding that nothing subversive was involved in our China policy the public may very well jump to the conclusion that nothing has been wrong with it.

The collapse of a case argued on narrow grounds, and pursued with methods often reckless and irresponsible, may be taken for the collapse of an infinitely sounder and broader case against the statesmanship, the competence and the foresight of the Democratic administration.

REPROOF NEEDED FOR MISCALCULATING

Subversion, disclosed and proven, is a monstrous evil; but a free people cannot afford to forget that miscalculation also needs to be reproved. A series of mistakes, even where motives are beyond question, needs to be defined and the responsible party rebuked.

In Britain today it seems not to have occurred to the Conservative opposition that the retrenchment in Iran is the result of disloyalty, and yet the Conservatives are quite properly making this a prime issue in the elections. They know that faulty statesmanship is the best of all reasons for calling upon the voters to throw out a government, that fateful and costly diminutions of national power are by themselves powerful arguments for a change.

In this spirit the Republicans must get the China issue—now bemired in committees—out into the broad light of the public meeting. It is a matter that needs to be expounded and judged, not merely investigated.

Rarely does an opposition party have an issue on which it can go more confidently before the voters than that which has fallen to the Republicans through the defection of the great nation that had so long been America's friend, that had been a principal ally in the last war, and that had promised to be a bulwark against tyranny in the post-war world.

The Republicans were not responsible for this defection. As for the Democrats, they may claim that they meant well, that none would have done better than they, that they only suffered the inevitable; yet they held power during this whole period and they cannot escape the onus of a gigantic failure.

This is the fact which must be made clear. It will be a tragedy for the Republicans, and a severe blow to the two-party system, if this fact is lost sight of in abortive efforts to defame individuals.

Let the Republicans hold the mirror up to the melancholy truth; let them show by what steps and stages, by what misjudgments and temporizings, the prize of Asia was cast away. The voters can be counted on to do the rest.

Hiss, Chambers, and the Age of Innocence

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. JUDD. Mr. Speaker, one of the questions loyal American people are always asking is "Why do people like Hiss become leftists?" Under leave to extend my remarks, I include from Commentary one of the best analyses I have seen of this troublesome question.

Was there really "a generation on trial" in the case of Alger Hiss? And if there was, what was its crime? Leslie A. Fiedler here examines the Hiss case in the light of the political—and moral—history of our time. Mr. Fiedler, associate professor of humanities at the University of Montana, has published fiction, poetry, and literary criticism in various periodicals.

[From Commentary of August 1951]

HISS, CHAMBERS, AND THE AGE OF INNOCENCE—WHO WAS GUILTY—AND OF WHAT?

(By Leslie A. Fiedler)

(You will either aid in molding history, or history will mold you, and in the case of the latter, you can rest assured that you will be indescribably crushed and maimed in the process. . . . History is not a blind goddess, and does not pardon the blindness of others—Whittaker Chambers in 1931.)

Alger Hiss is in jail. The last legal judgments have been passed. The decision of the courts stands: Guilty as charged—guilty in fact of treason, though technically accused only of perjury. It is time, many of us feel, to forget the whole business: The prison doors have closed; let us consider the question also closed. But history is not so easily satisfied. Like some monumental bore, it grabs us by the lapels, keeps screaming into our faces the same story over and over again. The case of Judith Coplon, the case of William Remington, the case of Julius and Ethel Rosenberg, the inevitable case of tomorrow's Mr. X—the names change but the meanings are the same, and we protest that we have long since got the point. But have we? Of what was Alger Hiss guilty anyhow?

The statute of limitations protected Hiss against the charge of having passed secret material from State Department files to his accuser Whittaker Chambers, of having placed in the hands of agents of the Soviet Union documents which, whatever their intrinsic value, enabled our present enemies to break some of our most important codes. The transaction had taken place in 1936 and 1937—a war away, in years we ourselves find it difficult to remember, in years some of us do not want to remember. It is a painful thing to be asked to live again through events 10 years gone, to admit one's identity with the person who bore one's name in a by now incredible past. It is hardest of all to confess that one is responsible for the acts of that past, especially when such acts are now placed in a new and unforeseen context that changes their meaning entirely. "Not

Guiltily!" one wants to cry, "that is not what I meant at all."

And yet the qualifying act of moral adulthood is precisely this admission of responsibility for the past and its consequences, however undesired or unforeseen. Such a recognition Hiss was called upon to make. Had he been willing to say, "Yes, I did these things—things it is now possible to call treason—not for money or prestige, but out of a higher allegiance than patriotism"; had he only confessed in the name of any of the loftier platitudes for which men are prepared publicly to admit the breaking of lesser laws, he need not even have gone to prison. Why did he lie?

Had Hiss told the truth, the whole meaning of the case might have been different, might have attained that dignity of tragedy for which Alistair Cooke looks through its drossers in vain. The defenders of Hiss, and of the generation they take him to represent, would have been delivered from the intolerable plight that prompted them, during the trials, to declare at one and the same time that (a) Hiss was innocent of the charges, the victim of a malevolent psychopath and (b) even if he was technically guilty, he had the moral right, in those years of betrayal leading to Munich, to give his primary loyalty to the Soviet Union. Why did he lie, and lying, lose the whole point of the case in a maze of irrelevant data: the signature on the transfer of ownership of a car, the date a typewriter was repaired?

The lie, it is necessary to see, was no mere accident, but was of the essence of the case, a clue to the deepest significance of what was done and to the moral atmosphere that made the deed possible. We can see Hiss' lie now in a larger context, beside William Remington's even more vain denials of Elizabeth Bentley's charges, and the fantastic affirmations of innocence by Julius and Ethel Rosenberg. These were not, after all, common criminals, who plead innocent mechanically on the advice of counsel, these were believers in a new society, for whose sake they had already deceived their closest friends and endangered the security of their country. In the past (and even yet in the present—the F. o r t o R i c a n nationalists, for instance) such political idealists welcomed their trials as forums, opportunities to declare to the world the high principles behind their actions, the loyalty to the march of history and the eventual triumph of socialism that had brought them to the bar. They might have been, in some eyes at least, spectacular martyrs; they chose to behave instead, before the eyes of all, like blustering petty thieves.

¹Alistair Cooke, *A Generation on Trial*. In addition to Mr. Cooke's book, a thorough and scrupulous work, though one with many of whose interpretations I disagree, I have used for this article de Toledano and Lasky's *Seeds of Treason*, which is marred by a journalistic and melodramatic style, but contains much valuable background material and sets the Hiss case in an illuminating context of Communist espionage on two continents. I have also consulted the newspaper accounts of the case, particularly those of the New York Times, and the printed hearings of the House Un-American Activities Committee; while for further background, I have turned to the New Masses for 1931, and various other official Communist publications. I do not know personally either of the principals in the case, nor have I made any attempt to communicate with them. I have no private or special sources of information. What I have attempted in this piece is an analysis based on publicly available documents, considered in the light of my own experience and knowledge of that world of values and beliefs out of which the incidents of the case arose. It is the lack of such experience and knowledge which makes even Mr. Cooke's careful and subtle book miss what seems to me the essential point.

Not that the avowals of innocence, especially in the case of Hiss, were not affecting. Despite the absurdity of his maunderings about "forgery by typewriter," there was something moving—for a generation brought up on stories of Dreyfus and Tom Mooney, and growing to social awareness through the Sacco-Vanzetti trial and the campaigns to free the Scottsboro boys—in Hiss's final courtroom pose as the victim. Even now, it is hard to realize how little claim he has to the title. For here was no confessed revolutionary, marked by his avowed principles, his foreign accent, his skin color, as fair game for the frame-up, here was a supereminently respectable civil servant from the better schools, accused by the obvious outsider, the self-declared rebel and renegade, Whittaker Chambers. Hiss seemed to desire both the pathos of the persecuted and the aura of unblemished respectability. His is, as we shall see, the popular front mind at bay, incapable of honesty even when there is no hope in anything else.

After the hung jury, the second trial, the reams of evidence that rittered away the drama in boredom, one thing is quite clear. Twenty of twenty-four jurors, presumably twenty of twenty-four of us, believed that Alger Hiss was guilty of the perjury with which he was charged, of the treason with which he could not be charged.

For many, that verdict may be sufficient; for some, it is not enough. These cannot help feeling that the total issue of the guilt or innocence of Alger Hiss remains still to be solved. The verdict of the courts applies only to the facts as defined by precedent and law, a few fragments torn from their rich human contexts and presented to a group of men deliberately chosen for their relative ignorance of those contexts, and for the likelihood of their not being sympathetically involved with the passions and motives which underlay them.

Is there any sense in which Hiss is symbolically innocent—in which he may, indeed, have made the mistake of having passed certain papers via Chambers to the Russian agent, Colonel Bykov, but out of such naive devotion to the good that it is a travesty of justice to find him on merely technical grounds guilty? It sometimes seems possible that when a Remington or a Rosenberg or a Hiss speaks publicly of his innocence, he is merely using a convenient shorthand for an account of motives and actions too complex to set before an ordinary jurymen without completely reeducating him. One of the distinctive features of the recent series of spy trials has been that the accused and the chief accusers have been intellectuals, whereas the jury, the lawyers on both sides, even the judges, were not. And since in this country the intellectuals have been notoriously set apart from the general public, living, especially since the Russian Revolution, by different values and speaking a different language, communication is difficult. How can people who do not read the same books, and whose only relationship is one of distrust, arrive at a common definition of innocence and guilt?

One might argue on these grounds that what a jury could have meant by voting "guilty" is ridiculously far from the truth; that Hiss is not what the average mind, brought up on E. Phillips Oppenheim and pulp fiction, means by a "traitor", that he can surely feel himself neither venal nor skulking, for he has always been faithful in intent to his true fatherland, Humanity, that if in fact he has ended up by helping the interests of just another imperialist power, the Soviet Union, it is not his crime but that of the Soviet Union, which he took in good faith to be the deputy of mankind's best interests.

This was Henry Julian Wadleigh's defense: A minor source of information for Chambers in the prewar years and a witness at the Hiss trials, he attempted to declare his innocence

and guilt at the same time. With no sign of contrition, he admitted passing secret documents to Chambers, but insisted that his course had been justified by history, it had not even struck him, he explained, condescendingly, as a matter of conscience; though merely joining the Communist Party had, and he had finally not signed up.

The comic aspects of Wadleigh strike one first—the cartoonist's pink-tea radical, with his thick glasses, disordered hair, and acquired Oxford accent. The articles which he wrote for the New York Post are classics of unconscious humor, monuments to smugness and self-pity, and trailers for the novel which (of course) he was busy writing about his experience. When Hiss' lawyers found they could not pin on Wadleigh the stealing of the papers Chambers had disconcertingly produced, they were content to make him the butt of their jokes. At several points during his questioning, the judge had to cover his mouth with his hand to preserve the dignity of the court. Wadleigh is the comic version of Alger Hiss.

The clowning of Wadleigh reveals what is not so easily read in Hiss—a moral obtuseness which underlies the whole case. Mr. Cooke tries to make of Wadleigh his tragic figure, but the true protagonist of tragedy suffers and learns. Wadleigh has learned nothing. He cannot conceive of having done anything really wrong. He finds in his own earlier activities only a certain excessive zeal, overbalanced by good will, and all excused by Munich. Was he not a better man for having tried to counter, however ineptly, the shameful appeasement of Hitler? That the irony of events had made him, just insofar as he was more idealistic and committed, more helplessly the tool of evil, he cannot conceive. In the end, his "confession" is almost as crass a lie as the denial of Hiss—a disguise for self-congratulation, a device for clinging to the dream of innocence. He cannot, even in the dock, believe that a man of liberal persuasion is capable of wrong.

It was this belief that was the implicit dogma of American liberalism during the past decades, piling up a terrible burden of self-righteousness and self-deceit to be paid for on the day when it would become impossible any longer to believe that the man of good will is identical with the righteous man, and that the liberal is, per se, the hero. That day came at different times to different people—for some it was the Moscow trials, for others the Soviet-Nazi pact, and for a good many (including a large number who had, during the war, regained lost illusions) it came on August 17, 1948, when Hiss and Chambers were brought face to face before the House Committee on Un-American Activities.

The facts were clear from the moment of confrontation, but for many the facts did not matter. Chambers stated flatly that Hiss had been a Communist, his associate in the underground; Hiss as flatly denied it. Simply to ask cui bono would have been enough, which one of the men stood to gain by lying? But somehow such a common-sense approach seemed excluded. The most fantastic psychological explanations were dredged up. One heard via the intellectual underground the unlikely, proto-Dostoevskian stories to suggest reasons for Chambers' self-vilifying testimony. Psychopathia sexualis was hailed out, and Freud quoted glibly by the same skeptics who had laughed at the psychologizing explanations of the Moscow trials.

But there remained still the detailed circumstantiality of Chambers' memories, the documents stolen from the office in which Hiss had worked, the microfilms taken from the dusty dumbwaiter in Brooklyn and hidden in the famous pumpkin on Chambers' Maryland farm. For all the theatrical instincts of Chambers, who seemed to possess a flair for adding one artistic touch too many to any situation, out of God knows

what compulsion, the documents were there—the undeniable goods.

An unbiased look at the proceedings of the House committee reveals that from the start Hiss quite apparently lied, or more precisely, half lied and equivocated with the canniness of the trained lawyer. During the trials his version of the events was delivered with great aplomb, but before the committee one can see him uncertainly feeling his way into the situation, cautiously finding out at each point how much he will have to admit to escape entrapment.

At first, he said simply that to the best of his knowledge (the qualifying phrase hardly seemed significant, a lawyer's habit), he had never met the man Chambers who had named him as one of a Washington cell of infiltrators. There was no mention of espionage, it must be remembered, until Hiss had forced Chambers' hand. Then, advised perhaps of the convincing nature of Chambers' testimony, he began slowly to shift ground, first, however, taking the initiative and charging with increasing surliness that the committee had been leaking back to Chambers everything he said. At this point the committee, which had handled him until then with more than normal sympathy, began to press him hard. He could not say for sure, Hiss now testified, but he thought that certainly he had known no one who called himself Chambers, or anyone who looked very much like the photographs he had been shown. They were, however, not very good pictures, so he could not be positive. Indeed, the face on the photograph before him might be that of the chairman of the committee. It was his last joke.

Finally, he admitted that he had, after all, known the man in question, under a name he had written down on a pad in front of him. It was George Crosley (Chambers was later to say that, although he had used many names, he was quite sure he had never used that one), a dead-beat writer whom he had known casually, and with whom he had occasionally talked over possible story material, though he had really found the man despicable. As a matter of fact, he had even once, for certain obscure reasons, let the dead-beat move into his apartment for a couple of days, or was it weeks; and when Crosley had wailed on the rent, Hiss, for reasons even more obscure, had given him a car—just a little old car, it must be understood, with a "sassy" rumble seat, though one, Hiss admitted, to which he had been sentimentally attached. It is a fantastic story, enough to send anyone less well placed to jail without further ado. Later, there was to be a good deal of trouble over the dates of this strange transaction, and records were to turn up proving that the car had never been presented to Crosley-Chambers at all, but apparently to the Communist Party.

All the while this amazing farrago was being served up by Hiss, Chambers was patiently building up the story of their actual relationship, born in intrigue and common devotion to an ideal, and destined to end in bitterness and mutual accusation. They had been comrades and close friends, Chambers said, he and the promising young lawyer, whom he was still able to describe as of a great gentleness and sweetness of character. At first, their dealings were concerned only with dues and reports, but they had quickly grown closer together, in the sort of relationship hard to parallel outside the party, the two of them utterly dependent on each other's loyalty, and both betting their self-esteem on the truth of the Marxist-Leninist dream.

They are men who could never have met outside the Communist movement, and even as Communists they were utterly different; Chambers, the romantic recruit of the twenties, hating a world that had rebuffed him at every encounter, and choosing the movement as an alternative to suicide; Hiss, universally respected, and by nature an oppor-

tunist, but with a streak of social conscience (personified in his earnest wife, who could not even let a casual visitor call the day "fine" without reminding her of the plight of the sharecroppers), choosing the party to protect himself from a merely selfish kind of success. Different as they were, Chambers had found Hiss a real Bolshevik, perhaps sensing in him a kind of hardness to which he himself could only aspire, and had defended him against the sneers of their Russian boss, Bykov, who always referred to Hiss condescendingly, as "our dear lawyer."

The quality of the feeling that must have existed between the two men is revealed by Chambers' last-minute attempt to draw Hiss with him out of the party, after he himself had become convinced that the Soviet Union was serving not justice but her own selfish national interests. Feeling that he might well be killed by party agents after his desertion (such political murders have occurred even in America), Chambers, nevertheless, risked exposing himself by a final visit to Hiss' home. But Hiss had stood firm, scarcely listening to the arguments of Chambers, though he had finally wept a little (the scene stays in his imagination, the completely unexpected, uncharacteristic tears), and had given to Chambers a trivial Christmas present for his daughter—a little rolling pin.

Perhaps, even before the break, Hiss was already tired of Chambers as a person, a little ashamed of his admiration for the shabby writer who wrote nothing, and who had a tendency to remake his experience as he told about it, retouching and bringing up the high lights here and there. Mrs. Hiss had distrusted him from the first, finding him, with a strange inconsistency for a genteel internationalist, "too foreign." They had pretended finally, Alger and "Crosley," that "Crosley" was a Russian, which made him all right, of course, and Chambers had played up to it with all his love of subterfuge.

Whatever the status of their personal relations, when Chambers had come to Hiss with his talk about the Moscow trials and the betrayal of the revolution, Hiss already could not afford to listen to him. He had by then too much to lose, for, without ceasing to be a Bolshevik, he had become a success, a respectable citizen. To acknowledge that Russia could be fundamentally wrong would have changed the whole meaning of his own life, turned what had perhaps seemed to him his most unselfish and devoted acts, the stealing of State Department documents, into shameful crimes—into treason. Only the conviction that there was no final contradiction between his activities, public and private, could have made Hiss' life tolerable. He must have felt that what he had done as a New Deal lawyer, helping to expose the munitions makers in the Nye committee, or working for the AAA in the Department of Agriculture, did not contradict what he tried to do as a member of a left-wing faction in the State Department, urging certain attitudes toward Chiang Kai-shek; and that what he had sought in both these capacities was merely completed by his secret work as a purveyor of information to warn the Soviet Union—his Soviet Union, mankind's Soviet Union—of the forces that worked for and against her in the inner world of diplomacy.

He was not a "traitor." What the Un-American Activities Committee could not understand, what the two juries were certainly not able to comprehend, is that to Hiss, his service to the party and the Soviet Union is an expression of loyalty, not treason. Before consenting to marry him, Remington's former wife had made him solemnly pledge not to succeed; to so many of the generation of Remington and Hiss, the bourgeois success of the American dream was the final treachery, and each step forward in their personal careers had to be justified in terms of opportunities provided for infiltration.

Hiss offered his espionage as an earnest to the inner few whose opinion mattered to him (in those days chiefly Chambers, and always himself) that he had not sold out to the bourgeois world in which he was making a splendid career.

No wonder Hiss was inaccessible to Chambers' arguments against the party. No wonder he seemed scarcely willing to admit his existence, refusing him his very name. It was as if Hiss had wanted to shrug off his accuser, not like a real being in the outside world but like a nightmare. Indeed, the persistent voice of the man he had once admired must have seemed to him to possess the quality of a nightmare, speaking in its characteristic half-whisper the doubts, thrust down in himself, that could destroy his self-esteem.

And so Hiss had spoken out over the condemning voice, protesting his innocence with a vigor that contrasted oddly with Chambers' quiet tone. All the accounts speak of the voice of the accuser as one that, symbolically enough, could scarcely be heard. There is, even in the printed testimony, a sense of a counterdesire not to be heard along with the resolve to speak out. Far from seeming the vindictive persecutor of some accounts, Chambers strikes us as oddly reluctant, willing for a long time to risk perjury rather than reveal the full guilt of his former comrade. What Chambers really seems to be after is a confession of the truth from Hiss; he does not feel he can hide forever what Hiss has done, but he would prefer him to speak out himself.

Hiss, on the other hand, baits Chambers furiously, daring him to become the complete "rat," as if knowing Chambers will suffer in speaking out, as if wanting to shame and punish him. He seems to have felt sure that Chambers could not really harm him. A man does not unflinchingly succeed from high-school days to early middle age without losing something of humility, and forgetting that a single failure of the most superb luck is enough for destruction. When the end comes, when the threat of a suit for defamation against Chambers leads to the disclosure of the damning papers, to the trials of Hiss for perjury, and to the final conviction, one has the sense that both of the men are surprised.

Some of the commentators on the case have spoken of the anti-Red hysteria that prevailed at the time of the case, as if in such an atmosphere the cards were hopelessly stacked against Alger Hiss. But precisely the opposite is the case. He is just the type that does not normally get caught in the indiscriminate witch hunt, which tends to pick out those who look like witches, the visible outsiders. A woman like Assistant Secretary of Defense Anna M. Rosenberg, for instance, foreign-born and a Jew, is much more likely to be haled up without any evidence against her, while a man like Hiss can slip past the ordinary Congressman, to whom Red really means loud-mouth or foreigner or Jew (RANKIN, who was on the committee that examined Hiss, apparently spent his spare time thumbing through Who's Who in American Jewry, and turned all his fire on—Chambers).

The committee did not want to believe Chambers. They were convinced by his and his wife's, astonishingly specific memories: though some members of the committee had been eager to get the goods on the New Deal, to catch out the State Department at last, they had apparently found it difficult to put much faith in Chambers. It was impossible to like him, as one instinctively liked Hiss for the boyish charm we think of as peculiarly American. Chambers seems to have worn his unprepossessing air (he is the sort of person of whom one believes immediately quite unfounded stories of insanity and depravity) deliberately, as if he had acquired in his revolutionary days

the habit of rebuffing all admiration based on anything but his role in the party.

Every word he spoke declared him an ex-tractor, a present turncoat and squealer, and Hiss, sensing his inestimable advantage in a society whose values are largely set in boyhood when snitching is the ultimate sin, had traded on his role as the honest man confronted by the "rat." Really, Hiss kept insisting, they'd have to call the Harvard Club, say he'd be a few minutes late to dinner—after taking care of this unpleasantness. For a while it came off quite successfully, coming from one who visibly belonged, whose clothes beautifully fitted, whose manners were adequate to all occasions.

We learned later, of course, how much the genteel aspect of Hiss was itself a mask, imposed on a background of disorder and uncertainty not unlike Chambers' the suicide of his father and sister, the undefined psychological difficulties of his stepson, into whose allowance from his actual father, we remember, the Hisses sometimes dipped for contributions to the party. It was as if Alger Hiss had dedicated himself to fulfilling, along with his dream of a new humanity, the other dream his father had passed on to him with his first name—from rags to riches. How strangely the Marxist ideal and the dream of Horatio Alger blended into the motives of his treason.

Any good bourgeois bristles when confronted with Whittaker Chambers. His years as an editor on Time (he is brilliant, of course, but the adjective is itself ambivalent), his present role as a small farmer, cannot conceal his real identity as the outsider: the butterball who could not even learn to play marbles, the writer of poetry for little magazines, the obnoxious young radical expelled from college, the uncomfortable spirit that either blasphemes or is too religious for respectability. At one point, Chambers is asked by a committee member how he spent his time during a week-long period when he had borrowed Hiss' apartment, and when he says, "reading" one feels the troubled silence. How could anyone read so long? It is the suspicious vagary of the kind of man who once believed in Stalin and now believes in the Devil.

After his years in the underground, he still seems ill at ease in our daylight world, and beneath the guise of the magazine executive, assumed only, we remember, to establish an identity for himself as a protection against being murdered by the GPU, the old Chambers persists. Everyone who had known him in his revolutionary days—except Hiss, of course—had no difficulty in recognizing Chambers at the time of the trial.

The jowls and the new teeth do not fundamentally change the face we can still see on the inside back cover of the Communist literary magazine, the New Masses, for July 1931. After 20 years, the young Chambers looks up at us still with the sullen certainty of one who has discovered in the revolution an answer to the insecurity and doubt which had brought his brother to suicide, him to months of despair and near paralysis. In the movement he had found a way out of immobility, a way to join with the other insulted and injured of the earth to change the world which excluded them. To appear in the New Masses in those days was not merely to be a writer, but to subscribe to a new myth of the writer, summed up in the blurb under the photograph: "Youth as a periodically vagrant laborer in deep South, Plains, Northwest. Brief Columbia College experience ending with atheist publication." * * * Joined revolutionary movement 1925."

Hiss, who really knew Chambers, of course, better than anyone else except Chambers' wife, put his finger on the sources of this myth when he told the committee that Chambers thought of himself as a kind of Jim Tully or Jack London. To understand Chambers, one must understand the concept of the literary bum as hero that came

out of Tully and London, a special Marxist class-angling of the old Bohemian ideal. Chambers' once living in the same quarters with an old whore, and his stealing of library books of which Hiss' lawyers and psychiatrists were to make so much during the trials, his name-changing and wandering, were all standard procedure for the rebel intellectual in those days.

The life style he adopted was perfected in the Communist third period, in the years before 1935, and it is the third period we must first of all understand. The term is Lenin's, invented to describe that last stage of imperialism, the age of cataclysmic wars and revolutions, but it comes also to describe the way of life of those who believed themselves the sole carriers of the future in those final days. To the young comrades in their blue work shirts or flat-heeled shoes, there was no need to come to terms with the dying bourgeois world. Marx had told them that the point was to change it. They lived in a fine apocalyptic fury, issuing leaflets to ROTC units in midwestern agricultural colleges, urging the peasants and soldiers to turn their guns the other way, they cried for an autonomous Negro republic to be carved out of the deep South, and in the few cities where they had sufficient numbers, they were forever rushing into the streets to shout their resolve to defend the Soviet Union against their own bourgeoisie in case of war. The only reality in their paranoid world was the workers' fatherland, still encircled and unrecognized by our own Government. Here is a typical passage from an editorial that appeared in the New Masses in 1931, and which may actually have been written by Chambers.

"It is only a question of time until all the imperialist powers mobilize their manpower and hurl its bleeding masses in a rain of steel across the frontiers, to destroy the first Socialist republic. In this situation what are the intellectuals to do? * * * They realize, however imperfectly, that the Union of Soviet Socialist Republics represents the advance guard, the hope of human progress and civilization. * * * And they desire, the most advanced of them, to employ their minds as weapons in the fight to save the Soviet Union from its reactionary enemies."

Reread in the pages of the old magazine, in the heavy black format that seems to shiek at us across the years, and surrounded by the pen and ink drawings with their incredibly depraved bosses and their unbelievably noble workers, the banal paragraph seems merely unconscionably funny, like a bad silent film. But when we remember the universal loss of faith in those years of mass unemployment and of seemingly endless depression, we can appreciate the attractiveness of the Marxist answer, guaranteed by the miraculous existence of the Soviet Union, the last best hope of human culture. We sense, too, the appeal of violence in a world of words, an instant of bloodshed and the whole golden future unfolds.

No Third Perioder could have become, like a later type of Communist, really a "traitor" as distinguished from a mere "spy." How could they betray a world they publicly disavowed? Romantic and ridiculous, they were still revolutionaries, their allegiance single and unconcealed. When such Communists went underground they hid, but they never pretended to be good bourgeois. When the call came in 1932 from Max Bedacht, asking Chambers to disappear as the individual he had been in order to take on "special" work, Chambers seems to have welcomed the chance. He had already sacrificed his will to party discipline, his fate to history. He had little more to offer up beyond his name and the small frame that had become attached to it in the movement: the praise he had received in the Russian press for his stories of Communist life, the popularity of the play Can You Hear Their Voices,

based on one of his works, already presented at Vassar and about to be produced in Russia.

Something in his temperament seems to have greeted the prospect of self-immolation; even before he entered what the Communists mean by the underground, he had been, in the Dostoevskian sense, an underground man, his own enemy. It had apparently pleased him to take the final step, to become one whose death it would be forbidden to notice. What did Mundt or Rankin or Dixon know of Dostoevsky, or those 24 jurors of the kind of alienated life that conditioned Chambers? What trick of history brought them and him into the same room, pushed them toward an uneasy alliance?

It was Hiss—the embodiment of the subsequent popular-front era, as Chambers was the embodiment of the third period—who provided the common link. Hiss who had as desperately to look respectable as Chambers had not to. The New Deal had moved American politics left, and had opened the doors of the trade unions and the Washington bureaus to the university intelligentsia at the very moment when that intelligentsia had been penetrated by the Communists, and communism had undergone two decisive changes. First, the national Communist parties had lost all initiative and internal democracy, coming under the absolute control of the Russian bureaucracy, and second, world Stalinism had adopted the popular-front line of collaboration with the bourgeoisie.

No longer was the ideal Bolshevik the open rebel, the poet-bum chanting songs of protest, but the principled Government worker with the pressed suit and the clean-cut look. It was the day of fronts and mass organizations, of infiltrating and capturing and boring from within. As the head lines in the Daily Worker declared peace-with-capitalism, a new kind of underground Communist moved into Washington, unnoticed among the purer, pragmatic New Dealers.

Hiss is the prototype of the new-model Bolshevik (Lee Pressman and Henry Collins and John Abt, Noel Field and George Silverman were others) who was the more valuable as he seemed less radical. Far from being urged to sell the party press, he was even discouraged from reading it. These new secret workers had never been open members of the party, they did not merely hide, but pretended to be what they were not. For the first time, a corps of Communists existed for whom treason, in the sense of real deceit, was possible. There were not revolutionaries but Machiavellians, when with a double allegiance, making the best of two worlds and often, like Hiss, profiting immensely within the society they worked so hard to destroy.

Doubtless some of these new Bolsheviks were able to deceive themselves into believing that there was no actual contradiction between their real allegiance and their pretended one. What helped the self-deception was the rise of Nazi Germany as the chief threat on the world scene, and the changing role of the Soviet Union in international affairs. The blanket phrase "antifascism" covered over conflicts as deep as life itself. On the one hand, the New Deal had finally recognized the new Russian regime, and on the other hand, Communist Russia had joined the fellowship of nations. In the League of Nations (which Lenin had long before called a den of thieves), Litvinov was calling for the unity of the antifascist world. The watchword was no longer "Defend the Soviet Union," but "Establish collective security." The Communists insisted that the interests of Russia and the United States were forever identical, and the majority of liberals collaborated in the hoax which was to crash with the signing of the Nazi-Soviet pact, be ridiculously revived during the war when we were allies, and collapse once

more at the foot of the iron curtain. Here are the words of Earl Browder, written in the first flush of the Popular Front honeymoon:

"In this world movement, there stand out before the peace-loving peoples of the world two centers of resistance to the Fascist flood, two points from which leadership and inspiration can be given to the majority of mankind struggling for democracy and peace, two rallying grounds for the hard-pressed forces of progress and culture—the Soviet Union and the United States . . . The Soviet Union and the United States have common problems, common interests, and common enemies. That is a central fact in the new world situation."

The platitudes, read in their context of rallies-for-Spain sponsored by the big names from Hollywood and Broadway, seem only a little less old-fashioned and absurd than those of 1931, but we must read them with attention, remembering that they made treason easy. The bureaucrat, busy making himself a niche in the Government service while transmitting secret material to the Russians, didn't even have to pose to himself a moral either/or; in both his roles, he could consider himself serving what Browder liked to call the spirit of Jefferson, Jackson, and Lincoln.

Before the popular-front Communist the ordinary Congressman is helpless, unless there is a renegade willing to make revelations. The average legislator pursues ordinarily one of two policies in regard to Communists, springing from his profound inability or unwillingness to tell a Stalinist from a liberal. Either he lumps together as Reds everybody left-of-center (and even an occasional right-winger by mistake), or he refuses to recognize as a Communist anyone who denies it. The one kind of Communist likely to be missed by both approaches is the genteel Bolshevik who keeps his nose clean and never even reads the New Republic.

That is why the committee was at first so completely buffeted by Hiss. When he thundered righteously, "I am sorry but I cannot but feel to such an extent that it is difficult for me to control myself that you can sit there, Mr. HENRY, and say to me casually that you have heard that man [Chambers] and you have heard me, and that you just have no basis for judging which one is telling the truth," HENRY could only stutter lamely something about the degrading necessity of using low stool pigeons like Chambers and Miss Bentley.

It is easy enough to understand the shouts of "red herring" raised in the earlier days of the case by certain old-line Democrats led by President Truman. They did not dissent on principle, but merely on party lines. If a venture sparked by Republicans is admitted to have succeeded, the Democrats stand to lose votes; and one denies anything that might lose votes. But the real liberals, in and out of the Democratic Party, from whose ranks most of the actual believers in the innocence of Hiss are drawn, are a different matter. They had not even listened to the earlier testimony, out of a feeling that paying any heed to the House Committee on Un-American Activities was playing into the hands of the enemy, and that, in any event, the personnel and procedures of that committee made it impossible for it to arrive at the truth. During the trials they paid attention for the first time.

Chambers' documentary evidence was still there, of course, and his circumstantial story was told again; but by this time Hiss was able to make a better showing than he had, taken unawares, before the committee. He was imperturbable and glib in his testimony; and his lawyers were able to make Chambers seem more than ever a moral leper, turning his very virtues (the lies and half revelations by which he had attempted to protect Hiss) against him, and mocking his new-found religion. All the world distrusts a convert,

but no part of it does so more heartily than the liberals. Finally there were the psychiatrists, prepared on the basis of courtroom observation to call Chambers seriously unbalanced.

But most important of all, there arose to stand beside Hiss, one by one, a series of respectable character witnesses, an elite corps, as it were, of the New Deal, distinguished civil servants and honored judges, until it seemed as if the whole movement that from 1932 on had swept the country out of fear and toward prosperity was staking its very reputation on the innocence of this single man. We know the character witnesses did not deliberately lie. But if they were not liars—as they certainly were not—they were, in some sense, fools. It is not an easy admission, certainly not for them, but not even for those (among whom I include myself) who have admired in them a vision of national life that still appears worth striving for.

Even the wisdom of Franklin Roosevelt, the final culture hero of our liberal era, is brought into question. For he seems personally to have pook-pooked the suspicions, relayed to him in 1940 by Ambassador Bullitt, about the reliability of Hiss. How could he have done otherwise? Was not Hiss one of those young men, mocked by the reactionary press as "brain trusters," it had been his special pride to bring into political life? The big-city bosses, the unprincipled experts, and the party hacks, he had been forced to carry with him for expediency's sake, but these young idealists he had supported for the sake of principle. Superficially, the history of Hiss is the prototypical history of the New Dealer at his best. The distinguished years at Harvard Law School, the secretaryship to the almost mythical Justice Holmes, the brilliant career that began in the Nye committee and culminated at Tehran.

Certainly, a generation was on trial with Hiss, on trial not, it must be noticed, for having struggled toward a better world, but for having substituted sentimentality for intelligence in that struggle, for having failed to understand the moral conditions that must determine its outcome. What is involved is not any question of all or most of the younger New Dealers having been, like Hiss, secret agents of the GPU, but of their having been so busy denying that there was a GPU or that it mattered, that they could not identify an enemy of all the values in which they most profoundly believed.

They cannot even flatter themselves on having been fooled by master tricksters. Hiss was, perhaps, an extraordinarily accomplished dissembler, but what of the Pressmans, the Wadleighs, and the Remingtons, more obvious in their intended deviousness? Lest the New Dealers seem "Red-baiters," they preferred to be fools. Even in the case of Hiss, disquieting reports were transmitted to his superiors from time to time, and it was noticed, on at least one occasion, that information which passed through his hands had an odd way of leaking out. At one point A. A. Berle, after a conversation with Chambers, had gone to Dean Acheson, then Hiss' immediate superior, to report the rumor that "the Hiss boys" were members of a secret Communist group, and Acheson called in Donald Hiss to ask him if he and his brother were really Reds.

The naïveté of the thing is monumental. He asked Donald Hiss, and when Hiss said no, Acheson was satisfied. After all, he had known the Hiss boys since they were children; they had gone to the same schools, belonged to the same clubs, could speak man to man. Dean Acheson simply could not bring himself to believe that if the Hisses, who were gentlemen, were also Communists, they would, as a matter of course, lie. One thinks of Mrs. Roosevelt, under somewhat similar circumstances, calling the leaders of the American Student Union into her draw-

ing room, asking them please to tell her the real truth: were they Communists?

In part, the lack of realism shared by Acheson and Mrs. Roosevelt came from belonging to a world in which liberals and conservatives (and even radicals) are assumed to share the same moral values, the values of the old Judeo-Christian ethical system, however secularized; but in another sense, it arises from long conditioning of the public mind by the front organizations of the late thirties, through which the bulk of the liberals learned to maintain the paradox that (a) there were really no Communists, just the hallucinations of witch hunters and (b) if these were Communists, they were, despite their shrillness and bad manners, fundamentally on the side of justice. After all, the Communists are "left," and everyone knows that only the "right" is bad. This absurd metaphor of "leftness" managed to conceal from men of good will and some intelligence the essential fact that the Communists had ceased to subscribe to a political morality universally shared, whatever its abuses, until 1917. How many victims of this confusion were able to spend years moving in and out of Communists fronts and say blandly in the end, "To the best of my knowledge, I have never known an actual Communist."

Seen in this larger context, the half-deliberate blindness of so many decent people, which is a vital part of the total Hiss case, explains itself. The erstwhile defenders of Hiss' innocence show a growing tendency to remain silent, but their silence does not mean, alas, that they are finally convinced. Looking through Carey McWilliams' recent *Witch Hunt*, for instance, one is startled to discover in a study of the rising tide of accusations of communism, no mention of the name of Alger Hiss—nor, indeed, of Klaus Fuchs. So significant an oversight must mean, if not active skepticism about Hiss' guilt, a feeling that his case is somehow less relevant than those in which charges of communism have not been substantiated.

We must clearly understand that the failure of Hiss to confess, far from casting doubt on his guilt, merely helps to define its nature. If Hiss' guilt is of the sort I have tried to indicate, it is clear that, without some change of heart or values, he could not possibly have confessed. One has only to think of the recent trial of the 12 members of the national committee of the Communist Party. Even these avowed and open leaders of the movement, whom one had perhaps expected to cry out their faith proudly before the tribunal, could only plead—so ingrained had the popular front lie become—in the teeth of the evidence of their own early writings, that (a) they had never advocated revolution and (b) by God it was their inalienable right as American citizens to do so. What could one expect from Hiss?

If there is a note of tragedy in the case, it is provided by Chambers, the informer driven to mortify himself and to harm those he still loves. The third perioder, still pursuing the absolute, makes a tragic final appearance as the scorned squealer; the popular front can only exist in the role of the hopeless liar. It is difficult to say what factor is most decisive in cutting Hiss off finally from the great privilege of confession; opportunism or perverted idealism, moral obtuseness or the habit of Machiavellianism; they are all inextricably intermingled.

In the end he failed all liberals, all who had, in some sense and at some time, shared his illusions (and who that calls himself a liberal is exempt?), all who demanded of him that he speak aloud a common recognition of complicity. And yet, perhaps they did not really want him to utter a confession; it would have been enough had he admitted a mistake rather than confessed a positive evil. Maybe, at the bottom of their hearts, they did not finally want him to admit any-

thing, but preferred the chance he gave them to say, he is, we are, innocent

American liberalism has been reluctant to leave the garden of its illusion; but it can hardly no longer: the age of innocence is dead. The Hiss case marks the death of an era, but it also promises a rebirth if we are willing to learn its lessons. We who would still like to think of ourselves as liberals must be willing to declare that mere liberal principle is not in itself a guarantee against evil; that the wrongdoer is not always the other—"they" and not "us", that there is no magic in the words, "left" or "progressive" or "socialist" that can prevent deceit and the abuse of power.

It is not necessary that we liberals be self-flagellants. We have desired good, and we have done some, but we have also done great evil. The confession in itself is nothing, but without the confession there can be no understanding, and without the understanding of what the Hiss case tries desperately to declare, we will not be able to move forward from a liberalism of innocence to a liberalism of responsibility.

The Association, Southern Commissioners of Agriculture, Never Speaks Except on Matters Affecting Their Farm Constituency—Because of This Self-Imposed Restriction and the Conservatism Which Has Always Characterized Their Esteemed Secretary, C. C. Hanson, Members of Congress Are Usually Ready to Lend a Helping Hand to Any Request Which He Might Make

**EXTENSION OF REMARKS
OF**

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. BOYKIN. Mr. Speaker, I am today in receipt of a letter from C. C. Hanson, Washington representative and executive secretary of the Association, the Southern Commissioners of Agriculture.

It is my judgment that there is no trade or other organization or association in these United States which commends itself more to me and to the vast majority of the membership of both Houses of Congress than does the Association, the Southern Commissioners of Agriculture, consisting of the 13 duly elected or appointed commissioners of the cotton-producing States of our Southland and the State of West Virginia, represented by Hon. J. D. McLaughlin, Commissioner of Agriculture.

The Association of Southern Commissioners never speaks with respect to any matter except such as have to do with the well-being of their farm constituency.

It is because of that self-imposed restriction and the natural conservatism which has always characterized its esteemed secretary, C. C. Hanson, Members of Congress are usually ready to lend a helping hand to any request which he might make.

As you all know, last year the Treasury of the United States took a loss of some \$40,000,000 in price supporting the peanut crops by way of acquiring surpluses in order to maintain peanuts at what this Congress legislated to be equitable prices.

PEANUT INDUSTRY IN DISTRESS

With respect to this year's crop, more stringent regulations and controls were invoked to make effective the expenditure of funds to maintain prices. Rigid allotments were made for each planter—but despite all that was and could be done, again our peanut industry is distressed—and it looks as if, again, the Federal Government will have to help this year's peanut crop to the extent of \$14,500,000.

In the several conferences that Colonel Hanson and their agricultural economist have had with me, the colonel told of the studies which the Southern Commissioners of Agriculture had made with a view to reducing the moneys necessary to support the peanut prices—and, in fact, said that they looked hopefully for the day when the price support for that crop could be entirely abated.

In detailing their own economic studies, he stated their findings indicated a possibility that a more intensive study of consumer preferences would possibly be the one way to solve the problem—and do so with the expenditure of a comparatively small sum.

He pointed out what the improved packaging of vegetable oil has done to increase the sales of such products as Crisco—and how the housewife prefers a shortening sold under that trade name to many other vegetable oils of equal quality—merely because she knows that when one takes the lid off the can, it is pure white and creamy—and that it remains that way. She knows, also, that she does not have to keep it in the refrigerator—and that wherever she buys a can of that brand, it will look like all other cans, and possess the same wholesale appearance at all times.

In pointing out how much aggressive merchandising will mean to increased peanut consumption, he handed me an article by Mr. Procter Campbell of the United States Department of Agriculture, which reads, in part, as follows:

How can peanut consumption be increased? That is the question the peanut industry and Government are trying to solve today. The importance of the question is highlighted by the fact that in recent years consumption has lagged far behind production of one of the Nation's important food crops.

The peanut industry has made efforts to increase consumption of edible stocks. Some significant advances have been made in quality of the products offered, particularly in peanut butter, where a great degree of stability has been gained in the standard product. Peanut butter has been combined with honey and yeast in appetizing spreads. Individual firms have conducted research in new product development. High quality roasted stock has been marketed in handy packages and pleasing mixes.

ADVERTISING KEY TO EDIBLE MARKET

Equally important has been the strong advertising campaign carried on by many in the industry. A few firms have been particularly active in keeping their good product before the consumer—the man who must be

sold if the central problem is to be pared down without long delay. Every firm that handles peanuts, whether a sheller, peanut butter manufacturer, salter, and roaster, or confectioner, should be interested in increasing the volume of peanuts that go into edible uses. However, there is still evidence that some firms are taking the path of least resistance and are not exploiting the edible peanut market to the maximum.

Development of methods for increasing the use of peanuts at the edible price level are being investigated by the Fats and Oils Branch of the Department of Agriculture under a Research and Marketing Act project. While quick results cannot be expected from this work, possibilities for developing new and expanded market outlets for peanuts and their products will be passed on to the industry as soon as they are developed.

RICE PREFERENCE STUDY

Colonel Hanson told of the results that came out of the studies that had been conducted under the direction of Mr. Forrest E. Clements, head of the Division of Special Surveys in the Bureau of Agricultural Economics, of consumer preference on rice—and of the tremendous amount of information garnered, and to which the increased consumption of rice in these United States can directly be traced.

Mr. Speaker, this economic report, made by the Division of Special Surveys, on rice and the patterns of rice usage disclosed not alone the users and nonusers of rice—but the characteristics of those who use it—the frequency of their servings—how rice was used in the home—the reasons for its usage—the methods of cooking and the foods which it replaces.

Of tremendous interest to the rice producers, the rice industry and markets—was the information that they garnered apropos of quick-cooking rice—ready-to-eat rice breakfast foods and rice crispies. The type and size of the packages that were most desired by the housewife—the housewife's preference for certain brands—and distribution of printing recipes on packages—all afforded suggestions for increasing the use of rice—which when introduced into marketing practices, paid off handsomely.

Typical of the price factors in marketing of rice, the survey disclosed that less than one-third of those who were interviewed said they would use rice more extensively if the prices were lowered. Very few, at the time of the survey were conscious that rice and potatoes cost about the same, while a third thought it cost less.

Out of this special survey came data of inestimable value to the rice producers of these United States—and, in fact, the television today is almost daily carrying programs and marketing commercials which tell of rice cooked in 1 minute—which has meant the sale of millions of extra pounds of rice by the rice producers.

Mr. Speaker, how well I remember some years ago of a call made at my office by Col. C. C. Hanson, the Honorable Bob Goode, commissioner of agriculture of the State of Alabama, and the Honorable J. E. MacDonald, commissioner of agriculture of the great State of Texas.

Commissioner MacDonald told at length of the hundreds of thousands of

boxes of grapefruit that were being thrown into the irrigation ditches of the Rio Grande Valley as well as the surplus of oranges left to rot on the trees because of the inability to obtain even as much as the freight that it would have cost to ship these valuable food products to market.

CITRUS FRUIT PREFERENCE STUDY

Mr. Speaker, this brought forth another research study by the Division of Special Surveys on citrus preferences among household consumers—and again came a veritable arsenal of informative data obtained from householders as to their likes and their dislikes for citrus fruits and fruit juices.

In this study, one of the questions asked of each homemaker was as to her preference and her use of fresh oranges and grapefruit, and canned orange juice, grapefruit juice, and various citrus blends.

Those who said they "never used this or that type" were asked, "How does it happen that you never use the same?"

Those who indicated that they used a product less than once a week were asked, "How does it happen that you don't use it more often?" Those who stated they used some one product once a week or more were asked, "Why, in general, do you use it?"

With respect to lemons, nonusers were asked the regular questions as stated above—but additionally, those who used lemons less than daily were asked—why they did not use them more often, and the reasons reported.

The study made in Louisville, Ky., revealed the fact that both in serving and dislike of taste were by far the most frequently mentioned reasons for not using oranges. In Nelson County, taste alone was given as the predominant reason.

The overwhelming majority of all who made frequent use of oranges said they did so for health reasons. Approximately one out of three of the frequent users emphasized the general food values and a similar proportion indicated that they considered oranges as essential parts of the diet of children.

These facts as to consumer preferences—pertinent to millions—apropos of the food value of fresh oranges and grapefruit versus that of canned juices, and the reasons for using or not using either fresh fruit or canned juices, the use of the mixture of fruit blends per capita consumption, plus a multiplicity of other data pertinent to the use of citrus-fruit products, has tremendously increased the consumption of fruit juices in these United States.

FRUIT AND JUICE PREFERENCE

Mr. Speaker, there is no question but that the ever-increasing standard of living has in large manner accounted for the increased consumption of all fruit and vegetable juices during the past 10 years. In that interim, however, we have seen tomato juice increased from 2.76 pounds per capita to 4.5 pounds, or a 63-percent increase—and all juices, including prune, pineapple, and so forth, and vegetable, from 5.88 pounds per capita to 13.7 pounds, or an increase of

133 percent. While other juices increased in somewhat lesser percentages between the years of 1939 and 1950, the consumption of citrus-fruit juices has been expanded to the tremendous consumption of 229 percent during that decade.

While some percentage of this increase in the consumption of citrus-fruit juices may be attributed to the standard of living, the great preponderance of the increase and benefits which have accrued to the citrus-fruit producers, is directly due to the increased advertising, marketing, and other benefits that arose from knowing exactly what consumer preferences were, as were so ably disclosed in the work done on that product by the Division of Special Surveys.

CONSUMER PREFERENCE ON POTATOES

With a marked decline in potato consumption in the United States from 195 pounds per capita in 1910 to an approximate 125 pounds per capita in 1948—and despite a progressive decrease in acreage, the increased yields per acre had maintained the production of potatoes in the United States at a fairly high level.

Between 1930 and 1948, the average yield in bushels per acre rose from 110 to 186—chiefly because of the better utilization of lands—and technological advances made by our potato farmers, the introduction of new fertilizers and powerful insecticides and the guidance of our county agents.

Wartime legislation which gave farmers price incentive toward higher production saw a record-breaking harvest reported but a few years ago. Inasmuch as potatoes is a highly perishable crop, this created one of the greatest agricultural surplus production problems ever faced by our agricultural economy.

It was at that particular time that the Division of Special Surveys, Bureau of Agricultural Economics, United States Department of Agriculture, made that illuminating study on potatoes—particularly directed to disclosing the potato preferences among restaurant and hotel buyers.

The report of that study editorially and statistically constitutes one of the most illuminating reports on an agricultural product which I have ever read. Looking to the increased sales of agricultural products—and in the same class are the studies made on preferences among household consumers on potatoes, apples, and winter pears, women's preferences among textile products, and a host of other studies.

Mr. Speaker, the urgency of the peanut situation in these United States today with respect both to the Virginia-type and the Spanish-type is such as warrants studies comparable to those which I above recited.

PACE REPORT ON PEANUT FUNDS

Our good friend, the Honorable Stephen Pace, ex-Representative of the Third District of Georgia, while serving here in this body—devoted months if not years to intimate study of the welfare of the peanut planters of our great South. Well I recall one of his reports wherein he stated that all of the money expended by the Department of Agricul-

ture in its various studies on peanuts—edible and inedible—for hay, nuts, hull, and hogs—did not amount to as much as \$150,000 in any 1 year.

Contrast that small amount of expenditure for research on this great basic agricultural crop with the billions that we lay out for research in the Department of Defense and the millions upon millions of dollars that are spent each year for research in other departments of the Federal Government.

Contrast that small expenditure of \$150,000 for research by the Department of Agriculture—on its studies with respect to peanuts—with the \$45,000,000 that was spent last year by the Commodity Credit Corporation to support the peanut price structure established by this Government.

Better yet, Mr. Speaker, compare the few thousand dollars that are necessary to effectuate the results desired by the Association, the Southern Commissioners of Agriculture, with the \$14,500,000 of Federal funds that will be employed to support the peanut price structure in this crop year, and you will see why it is that our good friend, C. C. Hanson, is writing to ask congressional assistance in the matter of dealing with this problem.

The problem to be dealt with in making the study which the Association, the Southern Commissioners of Agriculture, is requesting, is to obtain factual information which will aid in determining the ways in which the market for peanuts and peanut oil may be expanded.

The area of the general problem to be examined in the proposed study is the uses made by household consumers of peanuts, peanut butter, peanut oils, as well as the uses made in agriculture of the peanut hulls themselves.

SCOPE OF PROPOSED STUDY

Additionally thereto, ascertainment is to be made with respect to the attitudes of householders and for preferences regarding the manner in which they would like to see the peanut products flavored, packed, and improved. It is desired that special studies and attention should be directed toward perfecting a peanut product which can be sliced and inserted between slices of bread just as bologna and other meats, together with a host of other pertinent questions, all of which are directed toward extending the markets for peanuts and peanut products.

Some degree of success has already been achieved. The Fats and Oils Branch, Production and Marketing Administration, of the United States Department of Agriculture, with George L. Pritchard as its chief, has already produced a sample run of peanut butters—not alone carrying the natural flavor—but other peanut butters that are chili flavored, chocolate flavored, lemon flavored, and orange flavored. This highly valued idea of making peanut butters of various flavors already holds great promise of expanding present markets.

CONSUMPTION IS STABLE

Mr. Speaker, it is interesting that the consumption of peanuts during the last two decades has varied by a small percent per capita from year to year. The

actual consumption is recited in the following tables:

Domestic use of peanuts for food 1929-48 (shelled basis)

Year	Total	Per capita
	<i>Pounds</i>	<i>Pounds</i>
1929	519,000,000	4.2
1930	417,000,000	3.4
1931	570,000,000	4.6
1932	536,000,000	4.3
1933	472,000,000	3.7
1934	442,000,000	3.5
1935	532,000,000	4.1
1936	608,000,000	4.7
1937	581,000,000	4.5
1938	566,000,000	4.3
1939	573,000,000	4.3
1940	652,000,000	4.9
1941	671,000,000	4.7
1942	807,000,000	6.1
1943	881,000,000	5.7
1944	951,000,000	5.8
1945	871,000,000	6.4
1946	715,000,000	5.0
1947	676,000,000	4.7
1948	615,000,000	4.3

From the above table, it becomes apparent that if we can but increase the use of peanuts by as little as 10 percent per capita per year, which is less than one-half pound per person, that it will mean an over-all market for more than 75,000,000 pounds per year.

Mr. Speaker, it is because of the above as well as other reasons that the Association, the Southern Commissioners of Agriculture, through their Washington representative, have made their plea. They desire that the sum of \$140,000 be made available to the Division of Special Surveys, Bureau of Agricultural Economics, in order to extend their marketing studies with respect to peanut preferences, as well as to carry on the splendid work being done by the Fats and Oils Branch of the Production and Marketing Administration of the Department of Agriculture.

Mr. Speaker, I share the confidence of the Association, the Southern Commissioners of Agriculture, that when these studies are complete, a veritable arsenal of data will have been garnered that will lead to the extension of the market for peanuts, both at home and abroad. Moreover, I feel with the Commissioner of Agriculture that the expenditure of the small sum of \$140,000 directed to that purpose will aid in abating the large sums which are annually spent in supporting peanut prices in accordance with legislation enacted by this Congress.

Mr. Speaker, in order that all Members of this Congress sitting on both sides of the aisle and both ends of the Capitol may have the opportunity to read the plea of the Southern Commissioners of Agriculture, made by their executive secretary, I ask unanimous consent to extend my remarks and include in the RECORD his letter dated October 15, 1951.

Colonel Hanson's letter reads as follows:

ASSOCIATION, THE SOUTHERN
COMMISSIONERS OF AGRICULTURE,
Washington, D. C., October 15, 1951.

HON. FRANK W. BOYKIN,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN BOYKIN: This writer shall always remember the first ses-

sion of the Eighty-second Congress as one of the most interesting and hardest working sessions that the Nation has seen in many decades. Nothing but the urgency, with respect to the well-being of Alabama and our Southland could cause me to write you in the last closing hours of the Congress.

Your own contribution to the well-being of the peoples of the First District of Alabama in particular, and to those of the Nation in general, has been tremendous. Nothing but that strong, vigorous frame with which God has endowed all the Boykins, from whatever State they come, has enabled you to carry on your duty from 5 o'clock in the morning until long after sundown day after day, week after week, month after month, laboring ceaselessly and untiringly for your own constituents in Alabama and for Americans everywhere.

There is a matter with respect to the peanut crop to which this writer would like to direct your attention, convinced as he is in the belief that there is no other man who could bring a greater depth of understanding to that problem or more quickly institute an action program to relieve the distress than your own good self.

Once again our peanut planters have produced a surplus crop and are in distress, not alone those planters in Alabama, Georgia, Florida, and the Carolinas, and Virginia—who produce the long runner type of nut—but also those planters in Texas, Oklahoma, and Arkansas, who produce such a tremendous volume of the Spanish type nut.

It is unnecessary for this writer to point out to you that peanuts for hay, peanuts for nuts, oil, and hulls, both edible and inedible, make peanuts in value the third basic crop produced in our great Southland.

The Nation's Congress has long since recognized the inability of the peanut planters to produce and profitably market their crops without the aid and assistance of the Federal Government. Agreeable to that finding, the Congress has on several occasions declared that it was its policy "to aid and assist in the marketing of that crop," which assistance has, in the last decade, taken diverse forms.

Notable among the instrumentalities was the establishment of a guaranteed price for crops produced and under acreage allotment control with the acquisition by the Commodity Credit Corporation of the surplus, and in their operations, millions have been spent from Federal Treasury funds in trying to effect economic production.

The remedies taken have been only partially effective. This has been largely due to variations of seasons, inability to effectively control production, the inadequacy of storage and handling facilities, to say nothing of the ordinary visitation of insects, rodents, and fungi to which the nuts are subjected.

It is in part because of the foregoing reasons that the Department of Agriculture has been compelled to go before Congress on various occasions to request certain legislation in the matter of the production of peanuts, the power to effectuate certain controls, and the appropriation of large sums of money for the purchase of surplus peanuts, in order that peanut planters adversely affected would not be impoverished, due to the conditions above described.

For the past several years the Department of Agriculture, through several of its various agencies, has been making further heroic efforts to reduce subsidy payments on a great variety of agricultural products and they have succeeded in doing so—to an incredible degree.

Consumer preference studies with respect to selected textile products, potatoes, apples, winter pears, citrus fruits, and other items of research have unquestionably not alone expanded the agricultural market at home

and abroad, but they have saved untold millions of dollars of the Federal Treasury.

In addition to the many consumer preference studies on many products done by the Division of Special Surveys, Bureau of Agricultural Economics, the Fats and Oils Branch of the Production and Marketing Administration has also been carrying on researches with respect to peanuts, peanut oil, hulls, and meal.

Their recent work in bringing out maple, orange, chocolate, and other flavors of peanut butter are studies that hold great promise for expanding the use of peanut butter as a spread. Their work of creating a sandwich filler by the production of a peanut product that can be sliced, much as liverwurst or bologna can be sliced, will undoubtedly prove of inestimable value in expanding the markets for this delicious basic crop of the Southern States.

Additionally thereto, the project which they are carrying on in your own State at Auburn, with respect to improving the handling and storage facilities, is showing tremendous prospect of reducing losses.

Congressman BOYKIN, as you well know, ex-Congressman Stephen Pace, who for years devoted his energy to the study of problems of the peanut growers of the State of Georgia, at one time estimated and made reports that all the researches done on peanuts by the Department of Agriculture did not amount to as much as \$150,000 in the very year that the price supports cost \$40,000,000.

The studied findings of the economist of the Association, Southern Commissioners of Agriculture, indicate that tremendous results can be obtained by instituting a consumer-preference study in behalf of the peanut producers with respect to consumer preference on peanuts and peanut oil.

Authoritative estimate is made that this objective can easily be accomplished when the sum of \$140,000 is made available for such a study, either by the diversion of \$140,000 from other funds now in the hands of the Department of Agriculture or by the supplemental appropriation of said sum by the Congress.

The Association, Southern Commissioners of Agriculture, has just completed extensive study of what, in their opinion, can inexpensively be done to improve the peanut situation, first with respect to abating subsidy payments, and second with respect to expanding the market for peanut products.

This study, conducted by an eminent agricultural economist, is supported individually and collectively by those who constitute the Association Southern Commissioners of Agriculture. They indicate that the real solution lies in an extensive study in packaging and marketing the edible peanut crop as well as in an educational campaign with respect to the high quality of peanut oil. This can and should be carried out by the Division of Special Surveys, Bureau of Agricultural Economics, Department of Agriculture.

To that end, the Association, Southern Commissioners of Agriculture is seeking your help—

1 To have the sum of \$140,000 diverted from the Agricultural Research Administration to the above Division of Special Surveys for the study, or

2 The appropriation of that sum by the Congress and for that purpose.

Thanking you for your always considerate helpfulness to me, as the Washington representative of the Association, Southern Commissioners of Agriculture and your never-failing and continuing courtesies, I am,

Very truly,

C C HANSON,
Executive Secretary.

None Called Him Neighbor

EXTENSION OF REMARKS
OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a review which was published in the Parkersburg News, of Parkersburg, W. Va., of an interesting new book entitled "None Called Him Neighbor," written by Marie Wood, a reporter on the Parkersburg Sentinel.

There being no objection, the review was ordered to be printed in the RECORD, as follows:

NONE CALLED HIM NEIGHBOR—MARIE WOOD
WRITTS FASCINATING BOOK ON BLENNERHASSSETTS

(By Albert Woofter)

"None Called Him Neighbor" is the striking title of a new and well-written book by a well-known Parkersburg newspaperwoman, Marie Wood, reporter of the Parkersburg Sentinel.

The book, which is being published here Wednesday, tells the story of Harman and Margaret Blennerhassett, for whom historic Blennerhassett Island was named.

Mrs. Wood's own research was undertaken more than a dozen years ago, and her story is told with numerous picturesque details not usually found in history books. School children should find the lifelike characters fascinating.

The author is the talented former Marie Beyer O'Brien, who has spent 20 years in newspaper work. She is a former employee of the Parkersburg News; also worked on newspapers in Huntington and Glenville. She spent a year with the Pittsburgh Press and 4 years with the Washington (D. C.) Times-Herald, and was known for her brilliant literary abilities.

She is the author of a 200-page book on Germany, written for the United States Army during her 2-year stay in Europe as editorial adviser for the Information and Education Branch. The book ran to an overseas edition of 29,000 copies, but has not been made available in this country.

Mrs. Wood is the mother of twin sons, 8 years of age. But despite the time and care which must be devoted to two growing boys, plus her duties on the Sentinel, she found time to compile the 32-page story of the picturesque island just south of Parkersburg in the Ohio River.

Six characters move through the pages, taking their places in history—and in the story.

They are:

A 50-year-old general who is commander in chief of the American forces and a paid agent of Spain.

A statesman, desperately in need of funds, brilliant, handsome, irresistible to women, and unscrupulous and designing. A former Vice President, he is under indictment in two States for the fatal shooting of the former Secretary of the Treasury, the feud reported to have had its start in affairs of heart when both were junior officers in the American Army.

A wealthy, disinherited beauty, mistress of an island mansion—one of America's showplaces.

Her husband, who was forced by the scandal of his marriage to his niece to leave Europe and who has come to America. Here he becomes a figure for caricature and ridicule among his neighbors for his snobbery and arrogance.

The President of the United States, diplomat and politician extraordinary and rounding out nearly 40 years of public life. His enemies know his deeply vindictive nature, and in the East he is held in such hatred that clergymen preached and prayed against him by name from the pulpit.

The Chief Justice of the United States, a 52-year-old former Virginia Congressman, midnight appointee of a bitter and defeated man who spent his last hours in the White House filling offices with foes of his successor. Both he and the President hate each other with equal venom.

Those are the characters which move through the story which begins with Harman Blennerhassett's marriage and continues through to his death to include a series of snobbish and shabby acts.

Interwoven through is the duplicity of Gen. James Wilkinson, who had two countries—both for sale—and the scheming of Aaron Burr to wrest an empire out of the Southwest. To the latter scheme Harman, because of flattery, pledged financial support far beyond his resources in an effort to recoup his fortune as well as leave the Ohio Valley, where the threat was becoming greater that his hated neighbors would learn the scandal of his marriage.

The bitter fight between President Thomas Jefferson and Chief Justice John Marshall, too often overlooked by historians, has an important place in the story.

Happenings in Washington—Program
No. 52

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a broadcast by me on program No. 52, Happenings in Washington.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

This is Ed MARTIN, speaking to you from the Nation's Capital, and bringing another discussion of Happenings in Washington.

The best evidence of the feelings of the people of Pennsylvania comes to me in the mail. The letters I receive from my constituents are an unfailing guide to their opinions on questions affecting the national interest and legislative proposals.

I cannot tell you how much I appreciate these letters. They come from sincere, patriotic Americans who are so deeply concerned about the welfare of their country. I am glad to get them for a number of reasons.

First, because the person who takes the trouble to write to me, in most cases, has a definite viewpoint to express.

Second, because a great many suggestions I have received have given me valuable guidance and helpful assistance.

Third, because the increasing volume of mail indicates a growing interest in the affairs of government and a deeper understanding of the problems and difficulties of these troubled times.

That is most important. The cause of good government cannot be advanced if there is indifference and apathy among the people.

Only an aroused and enlightened citizenship can measure up to its responsibilities

under the American system in which the people are the government.

It is extremely significant that more and more of my mail has to do with the tremendous expansion in Government spending.

It is plainly evident that most Americans are worried about how to make ends meet in the face of high taxes and high prices.

They are worried about the vast increase in the size and cost of government.

They know that every dollar the Government spends must come out of the earnings of those who work for a living.

They are worried about the new and bigger deficits which, in the next few years, will send the national debt far above the present level of \$260,000,000,000.

The people show an increasing awareness of the fact that the runaway expenditures must be paid for.

Many are aware that today the annual interest on the public debt alone is more than the entire cost of operating the Federal Government only 20 years ago.

Now, you know and I know that we are rearming to protect ourselves and our Nation against the naked aggression by the Godless forces of communism. That will cost many billions of dollars.

But I know—and your letters tell me that you also know—that a lot of the spending here in Washington is wasteful and unnecessary. We know that many Federal functions could be suspended or curtailed while we build the Nation's defensive strength.

But the spending pressure grows stronger and stronger. Every attempt to economize meets with determined and unyielding resistance from the free spenders now in control.

I wish every man and woman in America would understand how much the financial situation of the Government affects the individual citizen. According to an official Government report, the taxes paid to Federal, States and local government last year averaged \$360 for each man, woman, and child in our Nation. That is an average of \$1.440 for each family of four persons. It is more than double the taxes we paid in 1942. More than 90 percent of all the taxload was laid on the backs of our people by the Federal Government to pay for Federal spending. Increased taxes this year will push the burden upon each individual above \$500 or more than \$2000 for the average family.

Over and above all these taxes, there is the growing national debt. Already the share of that debt for each family of four persons is nearly \$7,000. It will be higher in the next year. The national debt is borrowed money which must be repaid. It is a mortgage on the future for many generations to come.

Now, I should like to read to you some of the views on taxation and spending expressed in some of the letters I've been getting. Time will permit me to quote from only a few. But, believe me, they are typical of thousands upon thousands of such letters which have been reaching my desk in recent months.

I have here a letter from a young married man with two children, from Souderton, in Montgomery County. He writes, in part:

"If taxes are further increased, or even held to present levels, it would cause a hardship due to the fact that the cost of raising a family is continuously on the rise. I trust that you will continue to fight against efforts to ever-increase our tax load. The only way to do it is to resist with all the strength at your command the efforts to continuously spend and spend, and to ever increase the scope of private government."

Now I have a letter from a Philadelphia businessman, who states:

"It appears to me that if Congress were to devote half as much time to backing measures aimed at reducing the size and cost of government as it does to bills for increasing taxes, the pressure on taxpayers could be alleviated."

I thoroughly agree with both of these men. Let me assure them that, as a member of the Senate Finance Committee, I fought hard to keep down every increase proposed in the new tax bill. My voting record in the Senate will show how I have fought to reduce unnecessary spending.

Now let me read you two letters of a type that are more and more frequent in my mail. To me, they are heartbreaking letters and I wish more could be done to help people like these.

A woman in Pittsburgh writes:

"When one is living on the income from savings, the income tax and other taxes wipe it out. I am in the forgotten class, and must do without necessities to keep a horde of Government employees."

Then there is this letter from an elderly man in Ridgway, Elk County. He writes:

"This matter of taxation is getting to be a back-breaking strain. I don't know how much longer I can stand the strain. I am a retired man and have a limited income and find it impossible to stretch the money to meet my obligations."

These letter writers are representative of a large class—those who have retired and who live on a fixed income.

Taxes bite a bigger and bigger share of their limited pension and annuity checks. Inflation makes their few dollars buy less and less. And because most of them are well along in years, they cannot return to work. They can't get jobs.

They can do nothing but to tighten their belts. It is tragic that runaway Federal spending deprives many of those worthy people of the comforts for which they worked and saved and, in many cases, even the necessities of life.

I have another letter from a disabled pensioner in Doylestown, Bucks County, who presents the same problem and goes on to add:

"The Communist leaders in Russia boast they can make the United States spend itself into bankruptcy. At the present rate their boast is likely to come true."

Now I want to read you a letter from a worried farmer of Erie County, who urges this:

"Every expense proposed by anyone, especially from the White House, should be carefully examined to see that the crazy drive to ultimate bankruptcy and socialism is stopped if it isn't already too late."

In that same vein is a sober warning from a school teacher, who says:

"During 28 years of teaching American government and economic problems in the public high school, I have become a firm believer in, and a strong advocate of, the free-enterprise system. If the Federal tax increase and the stifling controls demanded by President Truman are granted, we will be far down the road to socialism."

A man in the coal business, down near the West Virginia border, tells me in a letter:

"The salvation of our country depends upon Congress cutting the expenditures both at home and abroad. We should have a strong, sensible defense program, but the country can and is being destroyed by excessive governmental spending."

These are typical Americans—a farmer, a teacher, a merchant. Underneath they share the same uneasy concern. They feel, as they so well express it, that no nation can continue to tax and spend as our Nation has been taxing and spending, without eventually taxing and spending itself into disaster.

My fellow Pennsylvanians, many thoughtful Americans are expressing that viewpoint, these days.

A man in Pittsburgh writes as follows:

"Let us have more efficiency and economy in Government and we will then have lower taxes. If industry operated the way the Federal Government does, there would be no profits to tax."

From Williamsport comes this comment:

"It is time Congress weeded out and pruned down the Government to logical size. Let us have billions for defense and a few less billions for bureaucracy."

And a citizen of Lancaster adds:

"The average citizen is so confused and bewildered by the tactics that are being used in Washington that he has a unstable sense of security. Please try to do something about the proposed tax burden that is being imposed supposedly to curb inflation by reducing our buying power. How can a family cause inflation by overbuying when our purchasing power has been reduced by high prices and present high taxes, without considering the new tax increase?"

To my friend in Lancaster, I'd like to reply that I am doing—and shall continue to do—all that one Member of Congress is able to do in the face of the spending spree which is unparalleled in our country's history.

I vote against every proposed increase in spending unless the bill is directly related to the national defense.

I vote in favor of every proposal to cut down Government spending—unless such spending is for the national defense.

In speeches and public statements I warn against reckless spending, extravagance and excessive payrolls. I am opposed to the growing power of the Federal bureaucracy which moves in every direction to absorb functions which can be handled more efficiently and at lower cost by State and local governments.

The letters from which I have quoted are just a few of the many, many thousands that pour into my office. To me they represent a ground-swell of protest against reckless spending and excessive taxation.

These letters, from rich and poor, from housewives, working men and women, pensioners, from Republicans and Democrats in the 67 counties of Pennsylvania, are truly the voice of the people.

They encourage the hope that the sound, common sense of the American people will prevail and that the spirit of economy will return to preserve freedom of enterprise and freedom of opportunity.

I shall heed those letters. I shall continue my fight for sound fiscal policies and balanced budgets.

I hope you will continue to write to me and give me the benefit of your views on the great public problems of the day.

This is ED MARTIN, speaking to you from the Nation's Capital. I will be with you again in 2 weeks. Thank you for your attention.

Statement of J. Donald Kingsley, Agent General of United Nations Korean Re- construction Agency

EXTENSION OF REMARKS

OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. KILGORE. Mr. President, the problem of reconstructing Korea is a most important one. When we finally defeat the Communists in Korea, we will face the important problem of helping the Koreans to help themselves. For this purpose the United Nations Korean Reconstruction Agency—UNKRA—has been established and the United States is a contributing member. The task of reconstructing Korea is important not only to help these poor unfortunate

people but also to demonstrate to the world that through technical assistance and leadership, the United States through the United Nations can offer a forward-looking program and that communism is, therefore, definitely not the answer in underdeveloped areas—or any other areas.

I think we are fortunate that the United Nations has selected an American, Mr. J. Donald Kingsley, to head up this program. Mr. Kingsley recently outlined his program before the advisory committee meeting of UNKRA in Geneva, Switzerland, on September 10, 1951. I ask unanimous consent to have this statement printed in the Appendix of the Record.

There being no objection, the statement was ordered to be printed in the Record, as follows:

STATEMENT BY J. DONALD KINGSLEY, AGENT GENERAL OF UNITED NATIONS KOREAN RECONSTRUCTION AGENCY (UNKRA), TO THE ADVISORY COMMITTEE OF UNKRA IN GENEVA, SWITZERLAND, ON SEPTEMBER 10, 1951

Since the last meeting of the Advisory Committee the military situation in Korea has improved to a certain extent, but the conclusion of active hostilities has been delayed beyond our expectations and is not yet in sight. While we had hoped by this time to be on the threshold of full-scale operations, that hope has not materialized and no one can say at this moment when, in fact, it may do so.

Meantime, the continuance of bitter warfare constantly increases the magnitude of the task confronting us and multiplies the difficulties of its accomplishment. In the second liberation of Seoul, which I recently visited, for example, destruction was far more extensive than in the first. Seoul, which had been a fine modern city, the finest in Korea and one of the finest in the entire Far East, is now little more than a burned-out shell. Industrial facilities in the area have been about 80 percent destroyed, 60 percent of the houses are burned out, and the capital and government buildings are twisted shells. Water, sewage, light, and telephone systems were completely knocked out. They have now been restored on a limited emergency basis by the Army, but their final restoration must await the conclusion of hostilities and will in all probability fall to UNKRA.

I have used Seoul as an example, but it is by no means the most striking. It has changed hands only four times, whereas other towns and villages have been fought over six, eight, and ten times. There is, for example, the town of Ouljonbu, located on a strategic road intersection some 20 miles north of Seoul and a few miles from the present front. Ouljonbu was once a thriving community of some 25,000 people. When we visited it at the end of July it was nothing but a mass of rubble about 3 feet high with no more than a dozen walls still standing as high as 5 feet above the ground. The destruction is absolutely total and, while there are no towns that have been harder hit, there are many others in the same condition and very few outside the Pusan perimeter which have not been badly damaged.

Under prevailing circumstances, it is next to impossible to come by valid statistics, and I am not yet in a position to estimate accurately the capital destruction and loss suffered thus far by South Korea. We are making studies industry by industry and the Army is surveying the situation on a provincial area basis. Moreover, the Republic of Korea Government has recently completed a massive survey of war damage, which we are currently analyzing. I think my present guess—subject to future revision—would be that South Korea has suffered about a \$2,000,000,000 loss in capital goods, including factories, public

buildings, houses, damage to rice paddies, public works, transport and destruction of draft animals.

If, I think, quite clear that no loss of this magnitude is likely to be made up directly by international assistance. The vast bulk of any reconstruction effort must be made by the Koreans themselves, and this fact must constitute a primary assumption underlying our whole approach to the problem. UNKRA cannot—and should not—reconstruct Korea. It can—and should—inspire, stimulate and assist the Korean Government and the Korean people to reconstruct their own country, and in so doing to demonstrate to all of Asia and the World, the dynamic and creative force of a democratic approach to critical social and economic problems. The opportunities in this respect are enormous.

I am now convinced that, given peace, an imaginative and sympathetic approach and a good bit of luck, such an objective can, in fact, be realized. The obstacles in the way are massive but not, I think, insurmountable. There are stirring in Korea today the same dynamic forces of nationalism and the same urge for social and economic progress which are everywhere apparent in Asia. These forces can lead to destruction and chaos—as they have done in some places. But if channelled to constructive ends they can—as all history demonstrates—lead to unbelievable achievement.

This is the real challenge confronting UNKRA, and it is difficult to state it without falling into abstractions or risking a charge of impracticability. But if we are to succeed in any large sense and not merely to accomplish a dreary task of relief without historic result, we must so develop our program and so utilize our resources that the Korean people themselves experience a sort of renaissance with all of the cultural, social and economic creativity implied in the term.

I feel this very strongly after talking with Korean leaders from all walks of life. It means, I think, that we have to consider our task not merely in terms of sustaining imports—though these will be essential to its achievement—or of the replacement of capital goods—though such replacement is basic to the establishment of a healthy economic life. Our task must be more broadly conceived than this, even though these be the tools we employ to achieve it. Its emphasis must be upon encouraging the social, cultural, and economic creativity of the Korean people themselves. We must bring them into the planning and execution of our program to the maximum extent possible—and from all walks of life—even though, in some instances, initial efficiency may thereby be sacrificed. We must encourage them to develop new types of economic and social institutions, designed to foster individual initiative, freedom, and security. We must assist them to discard the deadening vestiges of Japanese colonialism which to this day stifle economic life; to develop vigorous and democratic rural cooperatives, and other forms of democratic self-help, to achieve land reform; to encourage private initiative in industrial development; to construct a democratic educational system from the ground up, to improve the health knowledge of the people. These, and dozens of other things, can be done only by the Korean people themselves. But we can help them through advice, encouragement, and pump-priming expenditures. We can help them through democratic leadership.

I am aware that I am suggesting in very general terms a far more difficult approach than is involved in the development and direct execution of an economic aid program. But unless we can succeed along these lines, we will confront in Korea a bottomless pit capable of swallowing up an astronomical volume of international assistance with no permanent result. In that event, UNKRA will fail in Korea and the

United Nations will have lost in Korea and perhaps in the world.

So much for generalities. The immediate situation before us is governed by the major factors: (1) the continuance of active hostilities with all that that implies in terms of military necessities and consequent limitations upon UNKRA activities, and (2) the constantly increasing inflationary pressures in Korea resulting from large military expenditures, the virtual absence of consumer's goods in the market, and inadequate governmental fiscal policies. These pressures are reflected in fantastic price levels (during the week ended August 3, when I was last in Korea, the retail price index maintained by the Bank of Korea stood at 2,776 6 on a base of 1947 equals 100, having risen 140 points during the week). They are reflected also in a tremendous gap between the official and "free" market rate of the won (2,500 against 9,000 on July 30); and in a constant increase in currency issue by the Bank of Korea. Unless the inflation can be checked in the near future, there is very real danger that it may become run-away. For that reason, we are putting considerable emphasis in our technical assistance program on financial and fiscal questions, and are giving priority in our initial schemes to those which will have a minimal inflationary impact.

In the economic field, the broad conclusions so far reached and which are governing our initial programing may be summarized as follows:

(a) Every effort should be made to improve the Korean foreign exchange situation. We are, therefore, fully supporting the request of the Republic of Korea Government for the immediate repayment of won advances to the United Nations Command, for which a dollar credit has been established in Washington;

(b) We believe that the foreign exchange thus made available together with that currently held by the Republic of Korea should be used immediately for two purposes: (1) the importation of consumer's goods for sale; and (2) small-scale procurement by individual undertakings of necessary repair parts and other reconstruction goods. To facilitate such purchases, Korean procedures for procuring foreign exchange should be simplified.

(c) As a general proposition—and with the exception of necessary relief items—UNKRA funds should not be used for the importation of consumer's goods. UNKRA's main emphasis should be placed on large-scale reconstruction requirements.

(d) We should encourage the Republic of Korea Government to raise won for reconstruction purposes by the sale of currently held vested properties, as well as through improvement in fiscal policies. Most of the vested properties now held by the Government constitute a drain on the budget, rather than contributing to it.

(e) At some point, when the situation has been sufficiently stabilized, consideration will have to be given to currency reform and conversion.

In the general economic area, as in all others, our policies must be flexible and dynamic and are, therefore, subject to constant adjustment as the situation develops. There is no room for doctrinaire approaches in Korea today.

After considerable difficulty and delay, formal agreement was reached with the United Command on July 18, 1951, concerning the phasing of UNKRA operations and the arrangements agreed upon were formally concurred in by the United Nations Commission for the Unification and Rehabilitation of Korea on July 27, 1951. We have, therefore, since the end of July, had an operating basis. I believe the agreement is a reasonable and satisfactory one in the circumstances, although it obviously presents many operational difficulties. It provides, as you

know, that the United Nations Command will have sole responsibility for all relief and short-term economic aid essential to military operations during the present phase and that UNKRA will be limited to: (1) technical assistance to the Republic of Korea Government; (2) assistance to the Civil Assistance Command in the conduct of relief and short-term programs; (3) long-term planning for phase II, when UNKRA will have full operational responsibility; and (4) the implementation to the extent permitted by the military situation, of aid programs additional to those of the United Nations Command.

Aside from technical assistance—where we have a broad scope, our immediate programing is therefore rather narrowly confined within a frame provided by the inflationary pressures on the one hand and military necessities on the other. There are, however, even under these circumstances, many significant things that UNKRA can do and is already doing and we shall continue to develop worth while projects in the months ahead. But any program so restricted will necessarily lack the well-rounded character of the type we should have in phase II and will appear more as a collection of unrelated projects than as a balanced attack on the problem. During this phase, therefore, budgeting and planning are extraordinarily difficult, for we must be ready to move in whenever and wherever opportunity presents, but it is not possible to predict in advance precisely what opportunities will or can be developed.

The immediate program thus far developed under those circumstances falls into three parts. (1) a program of cooperation with and assistance to the Civil Assistance Command, now charged with responsibility for relief and short term economic aid; (2) a rapidly developing and substantial program of technical assistance to the Republic of Korea Government; and (3) a series of longer range reconstruction projects which can be undertaken within our current limitations.

COOPERATION WITH THE CIVIL ASSISTANCE COMMAND

Relief and emergency rehabilitation are currently administered by the Civil Assistance Command of the Eighth Army through 14 provincial teams. Each team is composed of both military and civilian personnel and consists of medical officers, welfare officers, sanitary engineers, supply and transport officers, and administrative officers. To these have been added, in some instances, civil and electrical engineers and experts in various industrial specialties. Since February, we have been assisting the United Command by undertaking recruitment of the civilian members of these teams. Many of these have been seconded by the specialized agencies or by national Red Cross societies, but others have been recruited directly. Some, after a tour of duty, have been taken on our payroll and again seconded to the Civil Assistance Command. This was true, for example, of 12 medical personnel from the Danish hospital ship *Jutlandia*, who wished to stay on and work in Korea when the *Jutlandia* left in July.

We expect to continue and to intensify this type of assistance, so that by the time we assume responsibility for relief in Korea we will, in fact, have our teams built and will be in a position to take over a going concern at a moment's notice.

Other areas are beginning to emerge in which we may be able to render real assistance to the Civil Assistance Command and at the same time contribute to the solution of a long-term problem. The situation in respect to unaccompanied children is an instance in point. Our best estimate at the moment—and it is no more than an estimate—is that there are approximately 100,000 unaccompanied children in South Korea at present. How many of these are, in fact,

orphans is not known for it has not yet proved possible to establish tracing machinery to assist in reuniting families. That is a step which should be taken in the immediate future and which I propose to discuss at once with the United Nations Command. Highly trained staff is available for such a purpose as a result of recent sharp contractions in the operations of the International Tracing Service.

But whether orphaned or merely separated from relatives, unaccompanied children require special care. There are not adequate child welfare staffs in Korea at present and I believe the military will welcome assistance on this score. But the basic problem—as with nearly everything else in Korea—is a matter of accommodation, of housing, not only for the children but for staff as well. Only about one-third of the estimated number of unaccompanied children are in orphanages or institutions of any kind at present—in large part because space cannot be found for them.

We are undertaking to assist in this matter, if it proves feasible to do so, and are currently discussing with UNICEF the possibility of their passing on to us an offer of prefabricated buildings made to them by Yugoslavia. There are still a number of details to be worked out, including shipping arrangements and the provision of space in the Korean pipeline and we have not yet put the question to the military in any formal way. We are, however, pressing forward with this as a possible project and may have to allocate ocean freight costs for it in the near future.

TECHNICAL ASSISTANCE

I think there is very little I need to say today about the technical assistance program, which was discussed in some detail at the last meeting of the committee. Since that time, however, we have rapidly built up our staff in this area and now have actually in Korea, en route, advisers in a number of specialties. We have been working our program out in close cooperation with the Technical Assistance Administration of the United Nations, who have been of great help to us, and who have now seconded to our staff in Korea a Technical Assistance Adviser. The program will continue to expand as new problems arise and in response to new requests by the ROK Government. It is temporarily stabilized at present despite many additional needs, as a result of the severe problem of accommodation and transport in Korea. We have reached, in fact, a point where we cannot squeeze in any more staff until we can get housing built for them and increase our transport.

This is, indeed, the most critical and urgent administrative problem we face in Korea. There is no housing, there is no office space, there is no transport, there are no facilities of any kind. Our staff, even the very limited staff now in Korea, is living under completely intolerable conditions, which have to be experienced to be believed. There is no privacy, there are no adequate sanitary facilities, there are not even places to hang up clothes, which are piled on cots. In two of the Quonset huts we are occupying, water covers the floor to a depth of 3 inches during a good rainstorm, and it sometimes rains for weeks. Aside from the impossibility of doing good work under such circumstances, the health risks, always heavy in Korea, are extreme.

Until we can remedy these conditions, we will neither be able to recruit new staff nor long hold what we have. We are, therefore, bending every effort to get new housing built and hope to have decent accommodations for perhaps 75 ready by the first of the year. But this problem will be constantly with us for a very long time, even after the conclusion of hostilities. Eventually, we shall have to consider dependent housing as well, for a staff of the size and quality we require

cannot be recruited only among bachelors, and there are clearly limits to the length of time men will agree to be separated from their families.

In Tokyo, where we have a small liaison and procurement staff, conditions are immeasurably better. But even here there is an extreme shortage of housing and office space and our staff are living in Japanese hotels, two to a room, at very high cost.

INITIAL LONG-RANGE PROJECTS

It is, I believe, of the utmost psychological and political importance in Korea that we initiate and carry through some long-range projects as quickly as possible. The Korean Government and Korean people, despite their heroism, are at present understandably discouraged. They have seen their country destroyed, and while they have been saved from subjugation, the possibility of a unified Korea seems to them as remote as ever. They appreciate in the most poignant terms the staggering reconstruction task before them, and they are understandably impatient to get on with it. They are, however, realists, who believe in concrete achievement but suspect promises of future action. To a large extent, therefore, the standing of UNKRA in Korea—and the possibility of our developing the type of cooperation I have earlier emphasized, will depend upon our ability to make some substantial contribution at an early date. We believe that we can do this, even under the severe restrictions prevailing at present, in connection with at least five projects.

DRAFT CATTLE PROJECT

The first of these upon which I wish to consult you is a project for the importation of draft animals and the development of breeding and agricultural experiment stations. Oxen and other types of draft cattle are of major importance in Korea's rice economy. Losses of such animals as a result of the war have been very substantial—how substantial is not precisely known, but is estimated by the Republic of Korea Government at 200,000 head, including a large part of the breeding stock. The program which we are developing, in conjunction with our FAO agricultural adviser, envisages the importation of 20,500 working cattle and approximately 1,000 breeding cattle over a 3-year period. The working cattle will, in all probability, be obtained from Japan and the breeding cattle from Pakistan, with a few experimental breeds like the Brown Swiss from other areas. Our hope is to bring in 500 working cattle this autumn, 10,000 in 1952, and the remainder the following year. Five hundred breeding cattle would be imported from Pakistan next spring.

As a part of the program, we propose to rehabilitate a former cattle station at Incheon to serve as a quarantine station with a capacity of 500 animals per month, to construct a new station and agricultural experiment center on Chejudo Island to accommodate 500, and to develop six smaller stations on the mainland for a total of 650 cattle. With the exception of the Incheon quarantine station, all of these would also be used for breeding and agricultural development purposes.

While the total program in this calendar year will not cost over \$100,000, it will run to more than \$2,000,000 in both 1952 and 1953.

The full cattle program has not yet been cleared with the military authorities, although I discussed it in principle with the deputy commander of the Eighth Army and with President Rhee and his cabinet on my last trip to Korea. It has the merit of requiring no large won counterpart expenditures, which would contribute to inflationary pressures, and we can utilize some of the smaller ports to disembark the cattle near the programed quarantine stations. Consequently, there would be no interference with military supply.

VOCATIONAL TRAINING PROJECTS

The second project we are starting immediately is that for the establishment of two vocational training centers, primarily for the training of Korean instructors who can then establish their own centers as a part of the Korean educational system. As members of the advisory committee know, there is a severe shortage of all types of skills, even the most elementary, among the Korean people. This is due to the established Japanese practice of filling even the semi-skilled positions in Korean industry with Japanese nationals and excluding Koreans from all but manual labor. There is not at present, therefore, the skilled manpower available in Korea to carry out a large-scale reconstruction program and such a labor force must be built up as rapidly as possible.

Our approach to this problem is to open two demonstration training centers to train Korean instructors. The Koreans themselves will then open other centers for the training of the general population. The advance staff for this project is already in Korea and we are now engaged in choosing suitable sites for the two installations. At least one of them should be in operation by the first of the year. The skills to be taught will be directly related to Korean needs and the curriculum is being developed by one of the outstanding vocational training experts in the world who has been loaned to UNKRA for this purpose by the United States Department of Labor.

Again this program is one which requires a minimum of won expenditure in its initial stages and imposes no serious burden on military pipelines.

MEDICAL REHABILITATION PROJECT

A somewhat related program is that for medical rehabilitation, which, again, is the sort of thing which can be fitted in under present circumstances. There are large numbers of amputees in Korea—resulting from war injuries—for whom nothing at all is being done at present. We propose to start with them and to develop in conjunction with the program a small industry for the manufacture of artificial limbs.

In this connection, the IRO has operated one of the most extensive rehabilitation programs ever undertaken by a civilian authority, in the course of which one of our men developed a simple artificial limb which the displaced persons themselves have been able to produce. We have been fortunate enough to obtain the services of this man and he is now in Korea working on the particular problem there. We are currently recruiting a medical director for the project.

It is possible that, were we now in phase II, we would not have given first priority in a medical program to this project. But it is an urgent and appealing problem and one which we can tackle immediately. Budget estimates have been included to cover its initial stages.

There are two or three other programs which I wish to mention today, for we are anxious to get on with them, although we do not anticipate substantial expenditures on them before the next meeting of the advisory committee.

SCANDINAVIAN HOSPITAL SCHEME

One emergent program upon which commitments may have to be made in the near future is that for the establishment of a medical center and teaching hospital in Seoul.

The present Scandinavian medical units operating under military control in Korea have all demonstrated an anxiety to participate in the field of medical services to the civilian population. A project was initially proposed by the Danish Government which has not developed into a proposal for a joint Scandinavian medical unit to provide a service to the civilian population after the end of hostilities. Toward this end the Danish Government has already promised the sum

of \$860,000 and initial responses from other interested governments have been favorable although so far still unofficial and unconfirmed.

It is proposed to submit to these governments immediately a detailed project for their joint consideration. The plan is to establish a teaching hospital in Seoul in connection with the faculty of medicine of the Seoul University. At this time it is considered unwise to plan a full scale undergraduate medical college until such time as we can obtain a guaranty of continuity of outside support for a very considerable number of years. During the initial period of operation, it is planned to develop a teaching project which will concentrate primarily on postgraduate medical training in all fields of medicine, including public health, together with specially designed short courses for rural physicians, nurses, medical technicians, and sanitarians. The scheme will operate in close conjunction with the Korean medical faculty for undergraduate education in order that its standards may be influenced, but especially in order to lay a sound foundation in the hope that with long term outside assistance a total medical education program may be developed. The Korean Government has agreed to place at the disposal of UNKRA the necessary hospital and auxiliary buildings, including the University of Seoul Medical Hospital. This is a very fine 1,000-bed hospital, the buildings of which have thus far escaped damage. The equipment has, however, all been stolen or destroyed and the unit will have to be completely equipped in every respect, at an estimated cost of \$400,000 to \$500,000.

I expect, in the immediate future, to propose to the interested governments the establishment of a joint committee to work out complete details. As we have conceived the project, its financing will be tripartite: partly by contributions from the governments, partly by the ROK government, which will meet local expenses like maintenance, heat, food costs, and so on, and the balance by UNKRA. The details have not been sufficiently worked out to permit us to present budget estimates at this time.

While we hope to get this project started as soon as possible, our programming effort in the field of public health is proceeding along broader lines. We hope, in cooperation with WHO, to develop an integrated and comprehensive health program which can, at an early date, be implemented by the ROK government. I shall be reporting on this more fully at future meetings, for the health and sanitation problem which will be left when hostilities cease will be a staggering one.

HOUSING

A major reconstruction requirement will obviously be for the construction of housing. About 600,000 houses have been destroyed thus far and additional losses are occurring daily, both along the battle line and as a result of guerrilla activities far behind the lines. The military, through the Civilian Relief in Korea Program (CRIK) have so far constructed 1,000 units in the Taegu area and have additional small projects planned. But the bulk of any housing program will fall to UNKRA when hostilities have been concluded.

We are not, at present, in a position to make a concrete contribution to housing needs, in view of military control of the materials pipeline. But I would like to see whether, in connection with our planning for posthostilities housing, we cannot develop some new and improved ideas among the Koreans themselves. We consequently propose to hold a design competition for both rural and urban housing, open to Korean architects and engineers. It will be interesting to see what we get and what interest is aroused. But I am thoroughly convinced that, if the Koreans are to accept new, improved, and simplified designs, they cannot be imported from outside.

In conclusion, therefore, I should merely like to stress again my feeling that we are embarked upon a great historic mission—one which if properly handled, may directly and largely affect the shape of future events, not only in Asia, but in the whole world. It is, however, a mission fraught with difficulties, whose successful accomplishment will require the devoted attention of the best brains and talent available among the United Nations and the sustained interest and support of their governments.

Air Mail Subsidy Separation

EXTENSION OF REMARKS

OF

HON. WILLIAM T. GRANAHAH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. GRANAHAH. Mr. Speaker, under leave to extend my remarks, I include in the Record an excellent editorial from the Baltimore Sun of last Sunday, October 14, 1951, concerning the separation of hidden air line subsidies from mail pay.

As this editorial notes, last year the House Committee on Interstate and Foreign Commerce reported out a much more effective separation bill than the one recently acted on in the Senate.

Last year's report, House Report No. 3041 of the Eighty-first Congress, made by the gentleman from Texas [Mr. BECKWORTH] for the Committee on Interstate and Foreign Commerce, is the best report on air mail subsidy separation which has ever been made by any Government body or private group.

Therefore I hope that the Interstate Committee will readopt its entire report of last year, and report favorably H. R. 508.

I should like to commend the efforts of the distinguished chairman of the Committee on Interstate and Foreign Commerce [Mr. CROSSLER], the gentlemen from Massachusetts [Mr. KENNEDY and Mr. HESLTON], the gentleman from New York [Mr. ROONEY], the gentleman from Connecticut [Mr. MCGUIRE], the gentleman from New Jersey [Mr. WOLVERTON], and many others, who have been instrumental in putting forward this important bipartisan reform which has been repeatedly recommended by the President of the United States, the Hoover Commission, and six different congressional committees.

The editorial follows:

AN UNSATISFACTORY AIRLINE SUBSIDY BILL

The intent of Senate bill 436 recently passed by the Senate on voice vote was to separate airline subsidy from pay for carrying the mails in both the domestic and the international field. With mail pay and subsidy doled out at present in one conglomerate sum by the Post Office Department it is impossible for the taxpayer to discover just how his airmail dollar is divided.

The bill passed by the Senate provides that domestic subsidies be determined separately from mail pay and that they be paid separately by the Civil Aeronautics Board. The bill sets a scale of rates for domestic airmail payments to take effect next July and authorizes the CAB in future to adjust rates and standards of compensation without ad-

ditional legislation. Though these standards are somewhat clouded by national defense considerations the bill does state that the mere existence of an airline certificate "shall not be deemed conclusive" justification for subsidy.

From the beginning this bill has been weak on the international side. It is worse as amended. The cost factor which serves as a guide in the fixing of domestic rates is completely ignored. The floor set is the amount paid to foreign carriers for handling the mail and the ceiling provided is the Universal Postal Union rate of \$2.86 per ton-mile. This, as we have pointed out before, is over three times the rate for a luxury passenger and seven times the rate for air-freight and express.

Amendments to the bill would permit the international carriers to obtain Federal subsidy contracts for periods up to 5 years, with the carrier to return to the Government at the end of the contract one-half of any net profit for the operation in excess of 10 percent of invested capital minus liberal deductions. Subsidies would be restricted to United States airlines holding certificates as mail carriers.

These amendments by Senators McMAHON and McCARRAN are the jokers in this Senate bill. Five-year contracts would dodge yearly congressional review of subsidies even though the Hoover Commission called for it. "Losses and subsidies [said the report] should be made clear each fiscal year and passed upon by Congress."

Also under these amendments the CAB could conceivably grant any number of certificated carriers 5-year subsidy contracts. And Congress would be obligated, making the lack of annual review a most serious out in the Senate bill.

Last year the House passed a much tighter measure to achieve separation. That was the Heslton-Kennedy bill which died in the Eighty-first Congress. To properly implement the separation idea the House Interstate Commerce Committee should now adopt last year's hearings and report favorably the same Heslton-Kennedy bill (H. R. 508) which they approved last year.

Address of Hon. Edward Martin, of Pennsylvania, at the Fall Foliage Festival, Uniontown, Pa.

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the address to be delivered by me at the Fall Foliage Festival of Pennsylvania Week at Uniontown, Pa., Saturday evening, October 20, 1951.

There being no objection, the address was ordered to be printed in the Record, as follows:

It is always a pleasure to come to Uniontown, particularly at this time of year when nature reveals her lavish gifts of scenic beauty in all their splendor.

This festival of fall foliage is indeed a notable part of your Pennsylvania Week celebration.

Here one may enjoy in full measure the magnificent panorama of your mountains and forests, covered in glorious colors that leave the spectator breathless in admiration.

One cannot stand in the presence of such grandeur without being uplifted in spirit or without reverent acknowledgment of God's blessing upon our State and its people.

There is patriotic inspiration for every American in the proud record of old Fayette. Upon its soil were enacted events which shaped the course of civilization on the North American continent and in the world.

In the thrilling pageant of your county history we see the development of Pennsylvania's western frontier.

We see George Washington, as a young officer, leading his first command in battle at Fort Mifflin. That was the opening engagement in many years of warfare which brought to an end French sovereignty in America.

We see the British and Colonial troops of General Braddock cutting a road through the wilderness on his ill-fated expedition against the French and Indians at Fort Duquesne.

We see the great migration over the National Road as the hardy pioneers made their way westward to carve out a new empire of American progress.

Here in Fayette County we see the first small beginnings of the world famous western Pennsylvania industry based upon iron, steel, and coal.

Here was opened the first iron furnace west of the Alleghenies and the first mill in the United States to puddle iron and to roll iron bars.

Here was established the first glass works west of the Alleghenies and here the first bituminous coal was mined from the earth.

Many of the early settlers of Fayette County were veterans of the Revolution—courageous men who had endured the hardships and suffering of war because they loved liberty and independence.

They sought new homes where they could live in freedom—where they could be free to grow and prosper and to build for the future of their children.

They were men of deep religious conviction. Above all else they wanted freedom to worship God in the manner of their own faith, without fear of tyranny or persecution.

They found a land of fertile soil, virgin forests and broad rivers. They found a great treasure house of natural resources upon which they built the foundation of our economic strength and prosperity.

Since the earliest days of its history Fayette County has had an important part in making Pennsylvania the great industrial and agricultural Commonwealth it is today.

All of us who love Pennsylvania welcome Pennsylvania Week as a time to spread its fame and to share its glories with the world.

It is appropriate on occasions such as this to proclaim the greatness of our Commonwealth—not in the spirit of boastfulness—but with grateful appreciation of the elements that have given us a foremost place among the States of the Union.

It is a time to express our profound gratitude for the broad vision and deep humanitarianism of William Penn, illustrious founder of Pennsylvania.

Here, in Penn's Woods, he launched a holy experiment in government. It was a government based on social, political, and economic freedom of the individual, and good will, tolerance, and the love of God.

"If we are not ruled by God," William Penn asserted, "we will be ruled by tyrants."

That principle of freedom under God attracted liberty-loving people from every colony and many nations. These were sturdy, industrious, self-reliant men and women, willing to toil early and late in order that they might enjoy civil and religious liberty.

They did not ask the government to guarantee their security. They didn't dream of subsidies or hand-outs. All they asked was opportunity.

That spirit built the greatness of our State and Nation. It developed our rich natural resources. It built our great industries, our railroads, our centers of education and culture, our splendid churches of every faith and every creed.

We are fortunate in Pennsylvania that our people represent a mingling of varied national origins, of every race and creed, living and working at peace with each other in mutual respect and helpfulness.

Many of our forebears fled from oppression and persecution to this land of liberty and opportunity. They absorbed the ideals of patriotic Americanism and have been fused into the great body of loyal American citizenship.

And when I speak of patriotic Americanism I am reminded of a movement launched here in Uniontown that has the greatest importance to all of our people and to the future of our Republic.

Nineteen years ago a group of your fellow citizens started the annual observance of Americanism Day as a public manifestation of patriotism and loyalty.

They were veterans of World War I. They had served in a time of national peril for the preservation of our liberties.

They were alarmed at the increasing influence of communism. They saw followers of that godless, subversive philosophy working to undermine faith in America by poisoning the minds of our young people.

Under their leadership, plans for Americanism Day were formulated and while subversive organizations were holding Communist demonstrations, Uniontown proudly proclaimed its Americanism under the Stars and Stripes.

Since then Americanism Day has gained national recognition. It is observed with parades and patriotic exercises in many cities and towns. It has become an effective means of uniting and inspiring our people in loyalty and allegiance to the sacred ideals upon which our Republic was established.

I am happy to salute the founders of Americanism Day and to congratulate them on their splendid contribution to the strength and security of our Nation.

The Fall Foliage Festival which we are celebrating is dedicated to the glories of Nature and to community progress.

But when we think of all the beauty which surrounds us and all our material achievements, we must remember that the God who bestowed such rich blessings upon us gave us freedom at the same time.

Freedom of the individual is God's greatest gift to mankind. It is the driving force which sustained the pioneers. It is the fundamental principle of American liberty and independence. It is the right of every American to life, liberty, and the pursuit of happiness.

These are not rights granted by government. These are not rights that government can take away. They are inalienable rights, which we hold sacred as an endowment from Almighty God.

Today we are engaged in a great struggle to preserve these rights.

We have reached a time when all our patriotism and all our fighting spirit is called upon to safeguard freedom of the individual from the evil influences that would destroy the American system of government.

Our freedom is being undermined by crime and corruption and the breakdown of moral standards in public and private life.

Our freedom is being weakened by the inroads of communism.

Our freedom is threatened by the increasing dependence upon government which robs the citizens of self-reliance, initiative, and the will to advance through individual effort.

Our freedom is placed in danger by excessive spending, by big government which is plunging headlong into national bankruptcy and the dictatorship of state socialism.

We have all been shocked by recent disclosures of graft, bribery, political favoritism and other forms of corruption in our Government.

We have reason to be alarmed by the widespread breakdown of morality and decency which has been revealed before congressional investigating committees.

Never before in the history of our Nation has there been such a callous disregard for honesty in the conduct of public affairs.

Never before have such outrageous departures from all ethical standards been tolerated, condoned, and protected as they are today.

My fellow Pennsylvanians, when I call attention to this scandalous situation, I do so without any thought of political considerations. I speak as an American who is gravely concerned and deeply worried—just as I know you are.

Corruption must be driven out; the guilty must be punished, no matter whether they are Republicans or Democrats.

History teaches that corruption in public life has always preceded the downfall of nations.

We must awaken the righteous indignation of the American people. We must arouse the fighting spirit of our decent citizenship. We must drive out the grafters, the bribe takers, the dealers in political influence and all others who look upon public office as a source of personal gain.

This is not a political issue. It is a great moral issue of honesty against dishonesty. It will be supported by every American who places honor, principle, and integrity above selfish interest.

Victory over racketeers and grafters can be achieved only if every decent, right-thinking citizen takes an active interest in government.

We can have good government only if we elect to public office men of high moral standards who are imbued with real Americanism.

Good government in our Republic is the strongest safeguard of freedom of the individual.

The second danger to which I have referred is the poisonous influence of communism here at home. As I said before, Uniontown has set a good example by fighting this threat to our freedom with 100-percent Americanism.

Unfortunately, the Communist doctrine has made inroads among some so-called intellectuals and has resulted in subversive teachings in many of our schools and colleges.

We must drive out of every educational institution every teacher who would undermine faith in the American way of life.

We must drive all Communists and Communist sympathizers out of our Government, our labor organizations, our fraternal societies, and every other group where they can do harm.

We must teach our young people that communism is an alien philosophy which denies God and would destroy all human freedom.

We must teach the youth of our land that communism means enslavement under dictatorship and tyranny while America means liberty and unlimited opportunity.

Communism rejects the teachings of religion and worships the state. America was built on faith in God.

Corruption and communism are grave perils to the future of the United States, but the most dangerous threat to our freedom of the individual is reckless disregard for the financial stability and solvency of our Nation.

Extravagant spending by all levels of government, excessive taxation, increasing debt and deficit financing are the road to disaster.

We are a rich Nation, but there is a limit to the spending we can sustain. There is a

limit to the burden of taxation that can be placed upon the people without plunging them into financial collapse and national bankruptcy.

We have just about reached that limit now.

The latest available figures indicate that the Federal Government expects to spend \$68,000,000,000 in the fiscal year that began last July 1. In the years ahead expenditures will climb up to 80 or 90 billion dollars a year.

Do you realize what that means?

It means that the present high level of taxation will have to be almost doubled if we are to meet this tremendous cost of Government out of current revenues.

It means more deficit financing, more billions of debt, more inflation, and finally complete disruption of the free enterprise system.

When that day comes the American plan of self-government will be crushed. The people of the United States will be robbed of their freedom.

Every business, every industry, every farm and every job will be controlled by the Government. Our lives will be regimented and restricted by an all-powerful bureaucracy.

That is the direction in which we are traveling. That is the inevitable result of the wild riot of extravagant spending which always takes more and more from the pockets of our workers in taxes and high prices.

My fellow Pennsylvanians, let me impress upon you that the ultimate responsibility rests upon the people themselves.

They alone have the power to enforce the growing demand that we get back on the right road through economy in Government instead of higher taxes.

They alone have the power to preserve the solvency and stability of our Nation from the ruinous effect of Socialistic schemes that have failed in every country where they have been tried.

I recommend to you the advice of George Washington who in the dark days of the Revolution, issued an order to his officers in which he said:

"Put none but Americans on guard tonight."

Let us now resolve that we, too, will entrust the future of our country only to real Americans who will carry out the American ideals of government.

Let us resolve to place in public office only men who believe in freedom of the individual as the God-given foundation of all human hope and happiness.

We must solve our problems in the American way.

In our industry, our culture, our spiritual life and in the betterment of government there are vast opportunities if we live the lives of Americans.

If we have the patriotism, courage and faith of our forefathers we can preserve the greatness of our free Republic for all time to come.

of the Federal Trade Commission which I have had the pleasure of making with our former colleague, Senator James M. Mead, now Chairman Mead of the Commission.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

Senator KILGORE. In the business world we hear much these days about the great need of seeing that small business has a chance to survive in the competitive battle with large corporations. Much is said also about the need for special care in protecting the buying public by seeing to it, as goods and merchandise pass through the channels of trade to the ultimate consumer, that consumers are not imposed upon by unfair trade practices or the exploitation of monopoly. I feel that our people are rightly concerned about these matters and that they should have the opportunity to learn of what the Government is doing in this respect. The Federal Trade Commission is concerned not only with the Government's effort to protect the buying public from unfair and deceptive trade practices, but also of serving as a continuous check against the inception and growth of monopolistic power which tends to snuff out small business. I have with me an old friend of mine, the Honorable James M. Mead, a former Senator from the State of New York. He is now Chairman of the Federal Trade Commission. Senator Mead, I should like to ask you to tell the people of West Virginia something about the functions of the Commission and what it is doing to protect their interests.

Chairman MEAD. I shall be happy to do that, Senator. It is a great pleasure to me again to be with you here after so many years of our close association in the Senate. In answer to your question, let me say that the Federal Trade Commission has many duties and functions, and all of them are concerned with the task of keeping the operation of industry and trade on the basis of free and fair competition so that monopolistic combinations and unfair competitive tactics are not resorted to. While it is often said "Competition is the life of trade," competition is truly the basic principle of our American economy. The Federal Trade Commission has the duty of acting in the public interest to keep out of the operations of industry and commerce practices which are harmful and destructive of fair competition. Our work is directed to safeguarding free enterprise, to preventing the growth of monopoly, to preserving small business, and to protecting the consuming public in buying the things they need. Congress gave us powers of investigation and authorized the Commission to investigate and proceed against alleged offending business concerns and as a corrective to issue cease and desist orders upon evidence and hearing. These orders may be reviewed and enforced through the courts. The powers conferred on the Commission are designed to enable it to take protective action against those types of business methods which may be resorted to from time to time as harmful to the public and destructive of the principles of free and fair competition upon which our industrial and commercial system is based.

Senator KILGORE. During times of emergency when prices are high and substitute materials need to be used in many products, it seems more important than ever that our people be protected in their purchasing from being misled about the quality or character of the merchandise they need to buy, and against situations which artificially interfere with the possibilities of competition between different manufacturers and marketers by which they seek the consumers' dollar. How does the Federal Trade Commission fit into that picture?

Chairman MEAD. Among the business practices with which the Commission deals are unfair methods of competition in commerce and unfair or deceptive acts or practices in commerce which Congress has declared to be unlawful. Under this provision, any form of deception practiced by a manufacturer or distributor in commerce in the sale of his goods would, upon proof, be subject to this law and to a cease and desist order which the Commission may issue against such offender. Under this heading, all types of deceptive selling in commerce whether practiced through the medium of advertising over the radio or by the printed word, or through deceptive marking or labeling of product or through any other sales promotion which tends to mislead the buyer, are subject to corrective proceedings by the Commission. But deceptive practices used in the marketing of goods do not form the only category of harmful trade methods dealt with by the Commission as necessary for protection of the public's interest in the maintenance of free and fair competition.

Senator KILGORE. What are some of the others?

Chairman MEAD. Various types of business problems and practices have been declared by Congress to be unlawful by reason of their tendency to suppress competition or restrain trade and thus deprive the public and business itself of the benefits of unlettered competition. Correction of these evils constitutes another category of our work. Among this type of unlawful practices are:

(a) Discriminations in prices, services, and facilities furnished to dealers and purchasers in the sale of goods, wares, and merchandise of like grade and quality, as covered by the Robinson-Patman Act.

(b) Use of tying contracts by manufacturer or distributor to prevent dealers from handling the goods of a competitor, as covered by section 3 of the Clayton Act.

(c) Consolidation or merging of two or more competing corporations by acquisition of their stock or assets, which may lessen or destroy competition. This inhibition is embodied in the antimerger legislation which Congress recently strengthened by revising section 7 of the Clayton Act.

(d) Another Commission duty is that of preventing interlocking directorates between large competing corporations, as provided in section 8 of the Clayton Act.

To protect the interest of the public the Commission has the further duties of supervising associations of firms or corporations engaged in export trade under the Webb-Pomerene Act of 1918, and administering wool products labeling program. We are also inaugurating a new program to require honest labeling of fur garments under recent legislation. The Commission likewise acts as an arm of Congress in making surveys and studies of large economic problems. Much new legislation of highly constructive character has been enacted by Congress with the aid of such surveys and studies by the Federal Trade Commission.

Senator KILGORE. The manifold duties of the Commission undoubtedly require carefully thought out programs of the Commission operations. What are the principal operational programs of the Commission?

Chairman MEAD. We have several very active programs. One is our anti-deceptive practice work. It deals with all types of deceptive business practices which are harmful to the consuming public or to competition. This includes advertising of commodities, sales promotions, lack of proper labeling of wool products to enable the consumer to know what, if any, admixtures of cotton, rayon, or reused wool, has been introduced into fabrics and garments which have the appearance of wool. Furthermore, our anti-deceptive practice program embraces the big field of prevention of false and deceptive advertising of foods, drugs, devices, and cos-

The Work of the Federal Trade Commission

EXTENSION OF REMARKS

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a radio interview broadcast on the work

metics. Under such program, as had occurred in actual cases, orders, and stipulations to cease and desist are issued in many instances to stop deception of the buying public and harm to scrupulous competitors. To illustrate, a manufacturer placed on the market knit underwear described as "wool" when in fact it contained only 10 percent wool.

In respect to Ponderosa lumber marketed throughout the country to home builders and others, a widespread attempt was made to sell it as white pine, whereas the Ponderosa tree is not true white pine as understood in the trade.

In relation to a brand of baking powder long promoted as a cream of tartar powder which became expensive to produce as a result of war emergency, the manufacturer switched the ingredients to a phosphate powder, which was cheaper, but continued advertising as before without letting the public know he had changed the ingredients, thus deceiving the housewife as to the type of baking powder she was buying under the brand name in question.

More recently, a proprietary medicine was improperly advertised as a cure for a host of diseases, including such ailments as cancer, tuberculosis, etc.

All these cases illustrate instances of the many practices of deceptive and fraudulent character which have been stopped under our antideceptive-practice program.

Another phase of our work comprises our antimonopoly program. This includes action against price-fixing combinations, restraints of trade, mergers, marketing discriminations, and other violations. The extensive proceedings we have had in stopping price-fixing conspiracies and combinations of competitors in the steel and cement industries are illustrative cases in this field of our operations.

Third, we have a large program of industrial economics. Inquiries and surveys of economic questions are conducted which are of great moment to the Nation and of special significance in aid of the mobilization effort. Reports of these studies are made to Congress and to the defense agencies. They include special cost-accounting studies and financial reports of basic data needed by the Price Stabilization Agency and the Defense Production Administration. While serving the defense effort, this work is of primary value in the over-all job of preserving our free competitive enterprise system.

Senator KILGORE. I am told that unfair and harmful practices when indulged in are, generally speaking, resorted to by a minority of the industry members and that this makes it feasible to take action against the relatively few who may stoop to such methods. Sometimes, however, objectionable trade methods appear to have spread to the point where virtually all of the concerns doing business in that field, either as a means of meeting competition in kind or for the purpose of just following the crowd, are pursuing the objectionable practices. What do you do in that kind of a case?

Chairman MEAD. Well, it is often impracticable to handle that situation by individual case litigation. We attempt to give such a problem industry-wide treatment through our trade-practice conference procedure. This is another one of our programs to protect fair competition and the public interest. In such procedure we invite all members of the industry to a conference to discuss the problems to work out trade-practice rules to correct them. These rules, after study and approval as desirable and constructive, are put into effect on a given date with the view of having all members of the industry simultaneously abandon the objectionable practices and get their businesses back on a sound basis of fair competition. Such work is based on industry

and Government cooperation in elevating the standards of fair practices to keep our competitive system functioning as it should. It has proved gratifyingly successful in meeting mass problems of the kind to which you described.

The Federal Trade Commission has still another program which is highly important to defense mobilization. The Commission conducts the compliance surveys of industries under the control and allocation orders of the National Production Administration. These surveys go into the questions of how the NPA orders are operating in actual practice, the degree to which they are being complied with and what changes if any should be made. Further, in its defense work the Commission processes, under section 708 of the Defense Production Act, industry voluntary agreements and programs entered into for the purpose of advancing our national defense and security.

Senator KILGORE. I notice you seem to stress the importance of having the work of your agency lend the maximum aid in the national defense work. How do you feel about that?

Chairman MEAD. Senator, to meet the task confronting the Nation we all have our part to play; we all have a substantial contribution to make. It is by our combined efforts, by our intelligent fitting together of all our resources and of the many different segments of our industrial and commercial activities that we can meet the challenge and preserve our American way of life. We can not only preserve that way of life but also hold it aloft as the peerless example to the world—a beacon to lead humanity out of darkness into the light of human freedom and security.

There is need for substantial contribution from every segment of our economy whether it be that of big business, small business, agriculture, labor, Government, or the professions.

We in the Federal Trade Commission have recast all our work programs from the standpoint of affording the maximum aid to the defense effort. Our special task is to aid in every way possible and at the same time to see that our cherished freedom of competitive enterprise survives the emergency in a strong and healthy condition.

Senator KILGORE. Thank you, Senator Mead. It has been a real pleasure to have you on this broadcast to discuss the important work of the Federal Trade Commission.

The Sword and the Bible

EXTENSION OF REMARKS

OF

HON. RALPH E. FLANDERS

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. FLANDERS. Mr. President, I ask unanimous consent that there be printed in the Appendix of the Record an article which I have written for the October 21 issue of This Week magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

For the first time in history our Government and our people are afraid of a foreign foe. We are afraid of the governments of Russia and of China and of the organized power of the Soviet satellites.

In part, this fear is felt and spread by our National Defense Department in the Pentagon. So far as this fear is natural and spontaneous, it is easy to understand. In part,

however, the spreading of this fear is purposeful, faced with what seem to be enormous armed resources aimed against us, we can scarcely expect our Defense Department to do other than keep the people in a state of fear so they will be prepared, without limit, to furnish men and munitions.

There is also, perhaps, an internal and psychological basis for this fear-feeling in the Pentagon. The reorganization plan has not worked too well. Our Defense Department is still to a disturbing degree disorganized. It lacks confidence, consciously to some extent—subconsciously to an even greater degree.

Another center from which fear is spread throughout our people is our Department of State. Our diplomacy has gone on the defensive. The real independence of our Department of State is on arms, armies, and allies. There is no confidence left in anything except force. The fearfulness of the Pentagon and the State Department complement and reinforce each other.

True, we have the Voice of America and related activities which are concerned with building up our defenses and organizing offense in the psychological and spiritual field. But after all, in the minds of the State Department leadership—to mention no names—the Voice is an incident. The forces of which it is a feeble agent are unimagined, disbelieved, and unregarded.

Not only are the Pentagon and the State Department full of fear, but our people themselves are frightened. We are scared stiff of Communists. Our fear has led us to hysterical extremes, yet that fear is based on knowledge of successful espionage and revelations of a network of Communist influence extending how far and how deep none of us knows.

The question of attaining military, political, social and spiritual health, and of overcoming fear is not a simple subject to discuss. Yet its broad outlines can be given in condensed form. The weapons by which we will conquer fear, and perchance save the world from it, are two—the sword and the Bible.

PART I THE SWORD

To one who believes, as does the writer, that the moral law is supreme in human affairs and that the victories of the sword in our time have not brought peace, the question may well be asked—as has been done by the Quakers and others—as to why we should not give up our dependence on the sword and rely on the Bible. Is it not contradictory to advocate both the sword and the Bible?

The answer to that is simple. Massed military power in the wrong hands can for an appreciable length of time destroy the organizations and the individuals who are seeking to make the spiritual forces effective. Over generations or over centuries the spiritual forces will revive and make their strength felt. But meanwhile the death or enslavement of helpless peoples continues. Today's mass deportations in Hungary simply continue the history of Eastern Europe, the Baltic countries, and great areas in Russia itself. Unrestrained, the Communist threat approaches nearer and nearer our own shores.

So it is not wrong for us to feel a deep responsibility for our own time and for the people now living with us on this earth. In our domestic affairs we need a background of force in restraining crime and injustice. The great globe itself is no different in this respect. It is only enormously greater. Let us, therefore, see what can be done to brighten and sharpen our sword.

It was said earlier that one of the causes of fear in our Department of Defense was that the Reorganization Act and its administration had not succeeded in integrating the various branches of the service into an organized whole. To reduce this cause of fear, it is necessary to take a new look at the normal functions of each of three branches and to redefine them in such a way that they

can integrate themselves into an organized instrument for the common defense.

1. The Air Force has two functions which have not fitted together very well in actual practice. One of these functions is that of strategic bombing, the other is that of tactical support of ground forces by observation, interception, bombing of supply depots and supply lines, strafing of personnel, and other operations in support of ground troops.

These day-by-day chores of tactical air support are extremely important. But the great bombers and their flights of thousands of miles, their attacks deep in the heart of enemy territory, strongly stir the imagination which refuses to be attracted to the humble daily chores so necessary to the support of ground troops.

Some of us felt the unwisdom of this when the Reorganization Act was before the Congress, but we were not military experts. We were just boys from the country. We were talked down—but we were right. The Army should have its own tactical Air Force. Only thus can the necessary air support of the ground forces be assured.

There is perhaps an intermediate activity which may be described as providing air cover for general military operations. It is possible that some study may need to be given to this phase of air power to see to what extent, if any, it should be delegated to the Army and to what extent, if any, it should continue within the province of the Air Force itself.

2. The Army in our reorganization should be primarily a highly technical body, well equipped with the best and the latest in arms, in artillery, radar detection, communication, and all the multitude of scientific developments already made, being made, and to be made, including atomic weapons. This—together with a tactical Air Force—constitutes the heart of what should be our professional Army.

Supplementing the professional army should be the civilian army with its graduates, the Reserves, always on call. We are for the present, owing to the existing situation in Korea and the fear of larger-scale involvements, pursuing our training with older men already organized as a part of our Armed Forces. As soon as we can clear ourselves of this situation we must carry out the principles of universal military training, but on a more realistic plan than that which Congress wrote into the manpower law.

We can best assure ourselves of a supply of manpower with the least disruption of individual and family life by training young men for service at the end of their secondary education in public high schools or private preparatory schools. These young men have not started their life work. The moral influences of family and church have become ingrained in them now if ever. A 1- or 2-year period at this time is best fitted to their own interests and their country's.

3. The Navy and its subsidiary, the Marine Corps, will likewise have defined duties. The Navy will be charged with keeping the ocean communication clear by the detection and destruction of submarines and will likewise play its part in clearing enemy planes from the air over the ocean.

It is an axiom, which we have not always recognized in practice, that the Navy is in a constant state of mobilization. This axiom has its effect on naval policy so far as its air services are concerned. In an unexpected emergency it takes time to build airfields. The airplane carrier is a floating airfield constantly mobilized for service wherever air offense or defense may be required. Carriers are an essential element of the Navy's equipment for both tactical and strategic flights. For these it will be possible to use bombers less massive and of less range than the great intercontinental bombers. The Marines as a subsidiary of the Navy

must, like the Navy itself, be kept permanently mobilized.

These are the functions of the various branches of the military forces. Organized along the lines of these functions, many of the differences and disputations, top-heavy organization and overlapping lines of responsibility will disappear.

Curing our deficiencies along these lines or related ones could remove one of the bases of fear in the Pentagon. Confidence and competence would replace disorganization and frustration.

We can, then, brighten and sharpen the sword, but what if we do not have the strength to use it? That is the next problem.

The fundamental danger here is that our preparations for war may be and are, in fact, becoming so vast that they will exhaust our economy and destroy our social and political organizations. Consequently, defense efforts and expenditures must be kept within limits.

The dangers of too heavy expenditures are already evident. One of them is inflation. This is generated by heavy expenditures for armament which end up, in a large measure, in the hands of consumers. Yet the volume of consumer goods is restricted, so prices shoot up.

There is another respect in which these excessive expenditures undermine our society. Inflation leads to social conflict. Farmers, wage earners, and businessmen find it harder and harder to cooperate, therefore, find themselves in conflict with each other. We are going through the beginnings of this social conflict at the present time. Unless we can organize our effort into a better course of action, this social conflict will deepen.

What are the possibilities of reducing this heavy burden of defense expenditures? At the moment it is around \$60,000,000,000, with more billions added for economic and military aid abroad, and the certainty that the \$60,000,000,000 is only a beginning. The soothing promise of the military men is that we must go through a peak expenditure period for 2, or at the most 3 years, after which we can drop back and level off. There is nothing in past history which would let us place much confidence in such soothing sirup. The military has never considered cost, has never had enough of the things it wants. In the nature of its training and experience, we cannot expect that it ever will have a limit to what it feels to be its needs. We cannot accept the point of view that this is a peak load. It is not a peak load, it is a new way of life.

We are truly faced with a new way of living, and we must recognize the fact. What we have to do is to refuse to be pushed about by continuous new crises. We have to dig in for a national effort over the long pull. So far as this relates to the fiscal problems of the Government and the personal financial problems of its citizens, this means setting a top limit to defense expenditures. This top limit must be high. It must involve austerity on the part of the people of the country. But it must not be so high as to produce economic chaos, political dissolution, and social conflict.

This high budget limit can produce an even higher defense performance in absolute terms than would be done by greater expenditures—if the services organize for economy within the limitation, and if they reorganize themselves for improved effectiveness.

An essential part of their activity lies in the sensible doctrine that ex-Secretary Marshall recently enunciated. It is that our expenditures shall be primarily directed to the establishment of production lines and equipment rather than to accumulating vast stores of fabricated war material which may quickly become obsolete. Our military strength lies largely in our productive strength. The establishment and constant

revision of our lines of production, turning continuously at moderate speed, will fit them at almost a moment's notice to go into high gear when the emergency arises, turning out a flood of material of the latest and most effective design. This is the way to arm and this way of arming far surpasses in ultimate effectiveness the piling up of military supplies.

PART II. THE BIBLE

So much for establishing military strength. But we are making a fatal error if we rely on the sword alone. The sword has its necessary place in the restraint of evil-doing, but in these times of the widespread assault of evil on innocent multitudes, it can act only defensively and for the short pull. In the long run, true victory will be won only by spiritual forces.

Americans do not like to remember that we have had two smashing World War victories in a space of 30 years—but no resulting peace. When we do remember this, we have another cause for fear.

This is the fear that world war III, which seems approaching after a shorter interval than that between Wars I and II, can end only in a military victory whose cost will be far beyond that of any previous wars. Its resulting economic, social, and political disorganization will verge on chaos. The sword is strong to win battles; it is helpless to win peace. For that we must trust to more powerful forces.

There is a moral law in the universe as there is a physical law. That moral law has never been broken. It cannot be broken. We can break ourselves against it, but the law remains firm. It shows itself to us in two aspects. If we see it and follow it, it is full of blessings. If we disobey it, we suffer punishment.

The moral law is unlike statute law, which can be broken. It is unlike statute law in that punishment is not inflicted after indictment, trial, and judgment. The punishment is an indissoluble part of the law itself. The unlawful act carries its own punishment.

In these respects the moral law established by God for the ordering of the moral universe more nearly resembles the physical law for the ordering of the physical universe. If we decide to walk on the air and for that purpose step out of the tenth-story window, we are punished by a swift fall to the ground and sudden death. The punishment is part of the act. The same is the case with the moral law.

What is the moral law? It has been understood and taught by religious leaders of all climes and all ages. For us the Old Testament is an unfolding record of the search of a morally conscious people for the laws of the universe.

And in the New Testament we find the capstone, the pinnacle, of the law which was so finely set forth in the Old. Jesus gave His final definition of the law in His life and in His words. He summed it all up in the twenty-second chapter of Matthew.

"Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind. This is the first and great commandment. And the second is like unto it, thou shalt love thy neighbor as thyself."

So we have now arrived at this word "love." In our day it has been given meanings and connotations which sap its strength and hide its power. As a matter of fact, it is the strongest thing in the world. We must put it to the test. The question is, How shall we do it?

The world is ready

In the first place, the world is ready for such a test. Today, from pole to pole, throughout the 360 degrees of longitude, there are no peoples who want war. There are no peoples who do not hate it. There are no peoples who would not do everything

honorable and just and within their power in order to avoid it.

Not so with governments. It is peoples who in their fear and hatred of war recognize thereby their common interest and common brotherhood. Governments, not peoples, are the agents of evils.

Our State Department itself plays the game of power. With moves and counter-moves on the chessboard it plays a game which is mostly that of blocking, for it has no policy of offense worthy of the name.

There is only one way to a victorious peace. With luck we may avoid such large-scale conflict as can properly be called world war III. But if it must be, then let it be waged in a spirit and by means which the world has not yet experienced—through unloosing the spiritual powers of love and an actively practiced brotherhood.

What does this mean in practical policy? Already we have made some feeble advances toward it which we should note.

1. There was, for example, the President's speech before the United Nations Assembly a year ago, in which, like a brief, bright, pure flame in the midst of the smoke and thunder of his defiance, he made a plea for universal disarmament based on unanimous agreement and unanimously accepted safeguards. This was a direct appeal to the united desire for a disarmed world which exists among the peoples of the earth.

2. A second step was taken when 9 Members of the House and 14 Senators sent a letter to the President on February 26 of this year, reminding him of his plea to the Assembly and urging him to prosecute it with the utmost skill and energy. A gracious reply was received from the White House, but the President's proposals are going unnoticed and unadvertised through the tortuous official machinery of the United Nations.

3. A third example is to be found in Senate Resolution No. 11, expressing friendship of the American people for the people of Russia, and asking the President to transmit the message to them. This has been done and a reply received by correspondence between President Truman and President Shvernik of Russia. While the text has been published to the Russian people, it has not succeeded in breaking through the protective barrage of propaganda which the Soviet has so skillfully laid down.

4. Finally, some of the output of the Voice of America has served to strengthen this bond of brotherhood between peoples whose governments are at enmity. Too much of it, however, is still a part of the antiphonal chorus whose refrain is "You're another." We must rise above this noisy, childish disputation.

The way for this is clear. We must state and support a cause which is high enough and simple enough to override all the disputation and minor conflicts. That cause has already been stated. It is that of guaranteed disarmament.

But we must go whole hog. We must be simple and direct in our proposals. We must put aside complication and subtlety. And our proposal must be cast in iron-clad form which permits no deceptions or betrayals because it provides for foolproof international controls, including of course the establishment of a United Nations military force. This is a time for going all the way in unmistakable terms.

Taking the initiative

As a matter of tactics, we will win even though the Soviet delays and complicates and refuses. We will have taken the positive role and the Politburo will be the objectors to something which will appeal to the hearts and minds of the people the world over.

Already we have witnessed the power and appeal even of Moscow's phony "peace propaganda." Now is the time for us to take the play away from them. If we are simple

enough, if we are positive enough, if we are strong enough in our presentation and if we are everlastingly sincere, then the Soviet Government will find itself in a hopeless defensive position in the eyes of the world. That will be something new. It is time there was something new.

"Guaranteed disarmament"

The theme, the key phrase, of our moral offensive will be "guaranteed disarmament." To an impoverished, war-weary world that in itself is an explosive idea. But this one idea also carries in itself the seeds of other ideas, equally explosive. For the end of armed aggression automatically means the end of satellite states and human slavery; the return of free elections and freedom to trade, to travel, to speak, to worship God.

Here is a strategy which leads to victory and peace—if we proclaim it to all the world.

Along with the negotiations in the United Nations and between governments must go a continuous, unrelenting, constantly repeated message as to our desires and purposes directed to all the peoples of the earth. The message must go by every possible means. We must reach the people of China. We must reach the people of Russia. We must reach the enslaved people of the satellites. We must reach the neutrals for whom our present policy of a struggle for power has no attractions whatsoever.

America's real aim

Until the goal is in sight, our sword must remain unassailably strong. But let us never be confused about our final aim. The drive for guaranteed world disarmament, pursued in season and out of season, through failure and success, must be the foremost point in American foreign policy.

It must be for this that our State Department exists. It must be toward this that the words and actions of our representatives abroad are directed.

This must be the deepest aspiration and expectation of the American Government, representing the deepest hopes of the American people.

For—whatever the short-range necessities may be—our long-range goal is a world which will be, not an armed camp, but a place where all peoples may live in brotherhood and peace.

Truman Foreign Policy

EXTENSION OF REMARKS

OF

HON. ANDREW F. SCHOEPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. SCHOEPEL. Mr. President, on August 18, 1951, in the Topeka Daily Capital in the column entitled "Clif Stratton Writes," Mr. Stratton, who was Washington correspondent for the Topeka Daily Capital and for many years connected with former Senator Capper, distinguished Senator from my State, carried in his column a guest editorial written by Walt Niebarger, editor and owner of the Tonganoxie Mirror.

It is a most interesting, thoughtful, and frank article, and I ask that it be placed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

CLIF STRATTON WRITES

Personal guest writer today is Walt Niebarger, of the Tonganoxie Mirror, who writes:

"The Truman foreign policy has been aired by MacArthur and Congress, and probably will come in for further airing in 1952. By all means, let's have the airing.

"What is the Truman foreign policy? You can't tell by what is said, but only by what is done and the results that accrue. By that measuring stick, the Truman foreign policy is a war policy.

"With war goes armament, inflation and controls. We have all of these. In addition, we still are technically at war with Germany and Japan 6 years after the fighting stopped.

"We have been double-crossed by Russia and Red China, allies [sic] of World War II. The United Nations, instead of preventing war, has underwritten one in Korea.

"If Russia now is able to threaten, the Democrat administrations placed it in position at Yalta and elsewhere. Does the administration deny what it did yesterday? So when you hear people say the foreign policy is bipartisan, or that Republicans support the Truman foreign policy—what are they supporting?

"And who are these Republicans, nominal or otherwise? Are they not Republican manufacturers with war orders, companies with oil in Arabia, or little people gadding around the world with expenses paid, sticking their noses into everybody else's business?

"Yet these, and perhaps other internationalists who profit by war are going to insist, it is said, that Republicans nominate a candidate who favors Truman foreign policies—say, General Eisenhower—so the people, the little people, will have no choice in that issue in 1952.

"Isn't that of itself a 50-percent endorsement of the Democrat administration by Republican leadership? Do they think they can elect a Republican President by going around the country saying the Truman administration is half right to begin with?

"We say the people want the Republicans to tell them in plain words what is wrong with the Truman policy—where it is leading—and if they want more of the same.

"Do the people want a group of junker militarists in control digging up war scares so they can grab billions in Congress to militarize this country as completely as prewar Germany?

"Shouldn't anyone arise to inquire—with-out being termed an isolationist—what the military policy did to Germany and why we should expect the same system to work differently here?

"Do we not have universal military training and the draft here as they did in Germany—while at the same time proclaiming individual liberty? How much liberty is likely to exist in a military state?

"How genuine is our opposition to Communist philosophy when Communists and fellow travelers infest our own Government—some even convicted of spying against it? How, for example, does it happen we send American dollars to a Communist dictator in Yugoslavia and an anti-Communist dictator in Spain? Are we not drumming up a new war and lining up allies with no questions asked?

"How many American young men have been lost in every American community as a result of military adventures all over the world? Does the average person want the logical results of a war policy to extend on down to the children now playing in the streets?

"It does make a difference what kind of man is elected President. If the people defeat those responsible for wars—past, present, and future—and elect a man sincerely for peace and able to accomplish some things in that direction—wouldn't it make a difference?

"What can the average person do about it? First, refuse to fall for a policy propaganda line designed to confuse him.

"Second, fight those Republicans who want a 50-50, bipartisan, mealy-mouthed election in 1952 with no choice as to issues.

"Third, vote against any more Trumanism, domestic or foreign, in Washington. Clean the place out

"Brother, if you don't, your kid is in the chute and headed for the slaughter house.

"Wherever a military power is created others eventually arise to defeat it. Should that fate—as a byproduct of present policy—befall America in this later day?

"It wouldn't take more than one election to cure most of what is wrong in this country and return it to the Christian concept of 'peace on earth and good will toward men.'"

In 1949-50 Alabama Led All States in the Nation in the Rate of Cattle Expansion

EXTENSION OF REMARKS OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. ELLIOTT. Mr. Speaker, Alabama's beef cattle industry is expanding faster than that of any other State.

Alabama has many natural advantages in this field:

First. The State is nearer the big markets than are the States of the West.

Second. The climate of Alabama is so mild that generally speaking shelter and special care is not needed for stock. Severe winters are rare.

Third. Beef production can be expanded four times in Alabama, without encroaching on other crops

Fourth. Two acres of southern pasture will support a cow compared to 40 or 50 acres in the West.

With these natural advantages Alabama will, in my judgment, within the next 20 years become the leading beef cattle State in the United States.

The Seventh Congressional District, which I have the honor to represent in the Congress, fits beautifully into this picture. It has all the advantages which I have listed, and is rapidly getting into beef cattle production. More elastic credit procedures would greatly hasten the progress.

Under leave to extend my remarks, I include an article by the eminent agricultural economist, Dr. Paul W. Chapman, styled "Progress in Alabama," which appeared in the October 1951 issue of the Progressive Farmer. The article follows:

PROGRESS IN ALABAMA

(By Paul W. Chapman, associate dean, Georgia's College of Agriculture)

Alabama has been the Nation's leading State in percentage increase in number of cattle during the past 2 years.

The 10 top States in percentage gains in cattle population for 1949 and 1950, in order of rank, were Alabama, Georgia, North Carolina, Florida, Louisiana, Arkansas, Mississippi, South Carolina, Tennessee, and Oklahoma. These ratings were made by Harold F. Breimyer, Bureau of Agricultural Economics, United States Department of Agriculture.

Alabama's percentage gain in cattle and calves on farms for the 2-year period was 23 percent. This compares with 21 percent for Georgia and 20 percent for North Carolina.

For 10 years, States of the South have competed with each other for national leadership in cattle expansion. With an increase of 66 percent for the 10-year period, Alabama is among the five highest-ranking States.

Naturally, the South's livestock progress is watched with interest by other regions; it is checked and charted for the Nation's leading financiers and businessmen. Under the heading "Dixie beef drive," for example, an article appeared recently in *Forbes Magazine* of Business, New York. The following paragraphs were part of the article:

"The Southeastern States are a 'natural' for the cattle business. They are nearer the big markets (than are the States of the West). They have a tremendous potential market within their own boundaries, growing with the gains in farming techniques and with industrialization. Most of these States have climates so mild that no shelter or special care is needed for stock. Severe winters are rare.

"Authorities say beef production can be multiplied four times in the Southeast without encroaching on other kinds of agriculture (It takes 2 acres of southern range to support one animal against 50 acres in the West.)"

Many factors and groups are contributing to the South's gains in livestock farming. Most important is the "discovery" of grass and legumes—not native range, but seeded pastures and grazing crops

"Wherever you go in Alabama, you hear people talking pastures—and best of all, they are doing something about it," says J. C. Lowery, extension agronomist at Auburn. "Farmers know that one of their best opportunities for increasing income by better use of more land and more efficient use of labor and equipment is through grazing."

County agents reported that more than 2,000,000 acres of permanent pastures have been seeded or reworked during the past 15 years. Of these, 500,000 acres were seeded last year.

At Alabama's main agricultural experiment station at Auburn and at almost all substations, experiments have been conducted to determine how the best all-year grazing and forage crop systems can be developed; how much land is needed to produce feed for an animal unit, what costs and income can be expected. Here are three good examples of such fundamental research

1. Tennessee Valley substation, Belle Mina. At this northern Alabama substation, a 7-acre grade-B dairy experiment over the 4-year period of 1943-46 returned a net annual income of \$5,531 or \$63.57 per acre, to labor, management, and money invested from the sale of manufactured milk, seed, and grain. Permanent pasture, alfalfa, crimson clover-ryegrass mixture, and winter oats provided practically year-round grazing and hay. Cows wholly on pasture or forage (getting no concentrate) averaged 6,354 pounds of milk per year in the 4-year period.

2. Main station, Auburn. Ten beef cows and 25 acres of forage crops—10 acres of *Lespedeza sericea*, 7 acres of alfalfa, and 8 acres Johnson grass, and reseeded crimson and bur clovers—were used in a utilization study at the main station. All feed for the brood cows and their eight calves was produced on the 25 acres, and a surplus was sold. Returns (1948 prices) included Eight calves (4,115 pounds), \$822; 21 tons surplus alfalfa hay, \$840, and 2½ tons surplus Johnson grass hay, \$50. These add up to a gross of \$68.48 per acre, or a return per acre of \$58.64 to capital and labor.

3. Black Belt Substation, Marion Junction: In the 1945-47 3-year period, an 80-acre Grade B dairy experiment at the Black Belt

Substation returned an average annual net income of \$2,585 to capital and labor chiefly from the sale of milk for manufacture. Forty-four acres of white Dutch clover-Dallis grass pasture, 18 acres of Johnson grass following oats, and 18 acres Johnson grass following Caley peas provided year-round grazing and hay for the 25 grade Jersey cows that were used in the experiment

Two acres of white Dutch clover-Dallis grass pasture and 1 acre of Caley peas-Johnson grass supplementary pasture for each beef brood cow and calf in a 3-year management experiment at this substation yielded annually an average of 182 pounds per acre of beef as fall- and winter-dropped calves. In this experiment, 1946-48, fall- and winter-dropped calves were more profitable than spring-dropped calves; fall and winter calves averaged ½ pound greater gain per day, graded higher, sold at nearly 7 cents a pound higher and yielded a higher percentage of dressed weight

Alabama's farmers have always earned a very large part of their cash incomes from cotton—on a very small percentage of their total acres.

The fact that cotton acreage decreased 62 percent in 15 recent years increases the need and opportunity for making noncotton acres produce more income. The practical solution, of course, both from land use and efficient farm management is: Balance crops with livestock. This means grass and feed crops on several million more available acres.

OPPORTUNITIES STILL HERE

A traveler moving through Alabama from Muscle Shoals to Mobile Bay hears talk of expanding farm operations and higher land prices. Experienced cattlemen are moving in from the West to make their homes in Alabama

"Land has proved to be the safest long-term investment, under unsettled conditions. * * * Investors now turn to land. * * * To find land that is still cheap is difficult—but it is cheap in sections where old farming patterns have been somewhat abandoned and new patterns have not been fully formed. * * * The Cotton Belt is the only section of the Nation where such a situation exists

"In the section south of the prosperous tobacco-growing areas of the Carolinas and Tennessee there appeared to be a relatively greater shortage of investment capital than elsewhere. This has tended to retard development of new types of farming and to hold land prices down.

"This region comprises the greater parts of Alabama, Georgia, Louisiana, and Mississippi; it extends westward to the oil-producing sections of Texas.

"Climatic conditions in the Southeast are favorable

"Taxes in the Southeast are low.

"The labor situation in the Southeast is satisfactory.

"Good outlets for grain, meat, and dairy products exist. The section is experiencing a strong industrial expansion. Towns are growing rapidly.

"The upper coastal plains of Georgia and the black belt offer among the best investment opportunities to be found in the United States today. These two areas are among the few where it is logical to expect increasing values in land, even without further inflation"

This appraisal of land values in the Southeast was made by one of the Nation's best-known farm-management organizations after surveying the entire United States. It recognizes the natural economic advantage of the region: A long growing season plus ample rainfall—a combination of favorable conditions existing in no other section of the United States. Alabama, in the heart of Dixie, lies in the exact center of this favored area.

A CHANGING ECONOMIC PATTERN

Alabama is moving definitely and consistently toward a better balance between crops and livestock. This trend is shown in figures compiled by Ben T. Lanham, agricultural economist, Auburn, and published under the title "Changes and Trends in the Agricultural Economy of Alabama Since 1920." This publication shows that in the 5-year period of 1925-29, livestock accounted for 15 cents of every dollar of cash farm receipts.

Also, of general interest and importance to the entire South is the fact that Alabama's steel output—greater than that of all other Southern States combined—will be increased. The Tennessee Coal, Iron & Railroad Co., Birmingham, this year bought land in Mobile to receive rich iron ore imported from the "iron mountain" which was discovered recently in South America.

New plants continue to locate on the water front of north Alabama—the navigable Tennessee River. Among these, Chemstrand Corp.—a combination formed by Monsanto Chemical Co. and American Viscose Corp.—located at Decatur has created Nation-wide interest. Here will be made a synthetic described as "un-American fiber, conceived for American living." This is another example of the fact that the chemical industry which is growing faster than any branch of American manufacturing is finding the South its most favorable plant location.

Industrialization is creating new and better local food market outlets for farmers. It is also creating jobs for more Alabamians can live at home in this age of science in which materials for clothing are created in chemical laboratories, and in this age of power in which—to cite but one example—two men with the latest mechanical equipment can produce as many peanuts (Alabama's No. 2 cash field crop) as 12 with old methods.

Even to those of us who live with such changes from day to day, they are impressive. But imagine how astounding they would be to those forebears of today's Alabamians who selected for their commonwealth the nickname "Cotton State."

Address of Hon. Edward Martin, of Pennsylvania, at Pennsylvania Week Celebration, Brockway, Pa.

EXTENSION OF REMARKS
OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address made by me at the Pennsylvania Week celebration of the Brockway Area Chamber of Commerce, at Brockway, Pa., Friday evening, October 19, 1951.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

There is real pleasure in meeting again with the fine citizens of Brockway and Jefferson County.

The history of your county recalls the expansion of our frontier into northwestern Pennsylvania. Most of the first settlers were veterans of the Revolutionary War.

They came into this great pine forest region in search of virgin land, new homes and new opportunities.

Their progress was slow while they fought the stubborn wilderness. Their first industry was lumbering and for many years some of the largest lumbering operations in the State centered in Jefferson County.

When the timber was exhausted the people turned their initiative and energies in the development of the mineral resources. They established new industries based on mine and quarry products. Today, Jefferson County produces coal, oil, gas, clay, building stone, and a great variety of manufactured goods, including glass products, radio equipment, metal products, and food products. All of these have added to the wealth of the Commonwealth and the welfare of our people.

We meet tonight to demonstrate pride in the greatness of Pennsylvania.

We sons and daughters of the Keystone State are not a boastful people—although we all know that no State of the Union has more to brag about.

No State in the Union surpasses Pennsylvania in material achievement, in the strength and stability of its diversified industry in the development of its natural resources, or in cultural and spiritual progress.

No State of the Union is richer in historic and patriotic tradition.

No State of the Union is more steadfast in loyalty and allegiance to the sacred American ideals of social, political, and religious liberty.

Therefore, I am glad that the annual observance of Pennsylvania Week brings us an opportunity to sing the praises of our Commonwealth. It is a time to glory in the great heritage that has come down to us from the past and to express confidence in a future of greater achievement.

Pennsylvania may be truthfully described as a great empire within a great Nation. It is the Keystone State of the Union, not because of its geographical location, not because of the resources of its mines, farms, and forests, but because of its people.

Pennsylvania was most fortunate in the courageous, hard-working, God-fearing character of its first settlers.

In Philadelphia and the surrounding counties, the early arrivals were English and Welsh Quakers. They were peace loving, pious, industrious, and able at commerce.

The region a little farther west became the home of the Pennsylvania Germans. They excelled in agriculture and for 200 years their farms have been models for the entire world.

Into the same area came the Scotch-Irish. They were restless and pushed westward through the unbroken wilderness and across the Alleghenies. They understood government. They loved liberty and freedom of action above all else.

These three basic groups differed in their form of worship, but they met on common ground in their belief that freedom of the individual is God-given.

They built their homes, schools, and churches. They cleared the land, tilled the soil, and built roads.

The only thing they asked of government was protection of the good people from the lawless. They demanded economical and clean government.

They laid the foundation for the migration that poured into Pennsylvania—English, Welsh, Germans, Scandinavians, and then later from Italy, Poland, and the Balkan countries.

They brought with them many Old World skills and crafts. They were assimilated into this new melting pot, each group contributing to the growth and progress of the Commonwealth.

Today there are 21 States of our Nation that have a smaller population than the city of Philadelphia alone. More people live and work in Allegheny County than in 16 States.

Pennsylvania know-how has been an important factor in the development of industries in many parts of the country. The oil industry is one outstanding example. Our State was the birthplace of that great industry, and skilled technical men, trained in Pennsylvania, went into the South and West and had a big part in opening the vast oil fields of Oklahoma, Texas, California, and other States.

The world knows Pennsylvania as a giant of industrial production, yet more than half of the State's area is covered with forests.

We have big industries. We have billion-dollar corporations, and we have 17,000 small industries in every section of the Commonwealth.

We have 170,000 family-sized farms and, at the same time, more cities and towns than any other State.

Our industries, mines, and farms require the services of 3,000,000 men and women. Another million are given employment by our utilities, mercantile establishments, and other service units.

Pennsylvania is first in the manufacture of 56 classes of useful products.

And here in Pennsylvania we have more churches and more institutions of higher learning than any other State in the Nation.

Today, our great Commonwealth continues in the forefront—not only in production for peace and war, but also in the never-ending struggle to preserve the God-given freedoms under which our country and its people have flourished so mightily.

Today, as in the past, Pennsylvanians are leaders in the struggle to maintain sound constitutional government against socialistic schemes that would destroy freedom of the individual.

We Pennsylvanians know that when all authority is concentrated in an all-powerful central government incentive is wiped out, initiative is lost, and the people become easy victims of dictatorship and tyranny.

Pennsylvania Week is a good time to pause and give serious thought to the future.

In many parts of the world today people are suffering because they yielded to the false promise that government would provide security and a life of comfort—free of all cost.

Little did they realize that the supposed security would be purchased with their own money, paid in taxes. Little did they think that they would lose their freedom of choice and the right to exercise their own initiative. The result has been shocking.

The most well disposed of all such governments is the one in Great Britain, where the standard of living has not gone up but has come down under socialism. Many of its people are cold and hungry.

The free-born Briton today is thoroughly regimented. His basic industries, his health, his welfare, his opportunity for employment are all in the hands of his Government. Is he better off today?

Oh, no—he is worse off. His taxes climb higher and higher. He lives under rigid wartime levels of food rationing and many other restrictions.

What is the result of all the experimenting and all the manipulating by his socialistic government?

That great country, one of the world's mightiest powers only a quarter of a century ago, would crack up and fall apart without the steady stream of financial aid, pumped in by the United States, like an unending blood transfusion.

That, my fellow Pennsylvanians, is the most benevolent result of socialistic invasion upon freedom of the individual.

At the other extreme is the Russian Communist dictatorship—the brutal, iron-fisted version of socialism, which means slavery for the people. That will be the next step when the British variety of socialism fails.

Or it may come when the blood transfusion from the general, free-enterprise system of the United States is no longer available. It cannot continue forever without bleeding America white.

Pennsylvanians are on guard against another danger—the steady encroachment of big government upon our local and State governments and into our very private lives.

We must arouse all the people against that form of creeping paralysis which is destroying the fundamental spirit of Americanism.

Local government is self-government. It is home rule. It is the last line of defense against the advance of centralized bureaucracy. Local control of local affairs is the foundation of good government. It must be maintained in health and vigor if freedom of the individual is to be preserved.

The driving force of freedom which inspired the Pennsylvania pioneers and every American generation in the past must remain vigorous and unshackled. It must be here for our children and for generations of Americans far into the future.

When that flame dies, America as we know it, shall also die.

And that flame will surely die if we permit it to be smothered by a centralized, planned, and regimented economy patterned after the socialistic failures of other countries.

Because so much of our State's prosperity is dependent upon its factories and mills, we must be on guard to protect our industrial plant from bureaucratic dictatorship.

As you know, the administration advocates of a planned and controlled economy have been trying for many years to take industry away from Pennsylvania and transplant it into undeveloped areas of the South and West.

In recent years a number of attempts have been made to enact legislation which would give the administration the power to carry out that scheme. It was claimed that such a move would result in social and economic gains for the Nation as a whole. But each time the proposal was defeated.

When the Defense Production Act was before Congress this year the proposal bobbed up again. This time it was presented as a defense measure—under the pretext that it was needed to minimize the danger from atomic attack.

Again it was defeated by overwhelming majorities in both Houses of Congress.

Nevertheless, in defiance of the expressed will of Congress, President Truman issued an Executive order empowering the various agencies of Government to do the very thing that Congress had refused to authorize.

He put into effect a national industrial dispersal policy which could place all production under a virtual dictatorship.

Under this order an industry can be denied materials for new construction or expansion unless it builds where the bureaucrats say it must build.

But that's not all. Unless industry submits to this new form of control it can be denied defense contracts, emergency Government loans, accelerated tax benefits, and allocation of critical materials.

This order is a threat to the growth and expansion of every productive enterprise in Pennsylvania.

It holds over thousands of working men and women the danger that they may be forced to break up the homes where they have been established for years and seek new jobs and new homes wherever the Government directs industry to go.

I am not unmindful of the President's statement that his order merely suggests placing defense industries a few miles apart. But the fact remains that the order itself makes no mention of a few miles. It places no limitation upon the distance which can be required for the location of new or expanded industry.

What I fear most is that this is another disguised attempt to give the socialistic planners the power of life and death over American industry and the entire economic life of the Nation.

The real purpose is revealed in one paragraph of a booklet issued by the administration. It states, and I quote:

"Industrial dispersion is more than a defense measure. It is also an investment in the future welfare and progress of the Nation. It offers the added advantage of long-term economic and social benefits beyond its defense-security contributions."

In this paragraph, those who would push us into State socialism told what was really in their minds. They would force the dispersal of industry—irrespective of all practical and economic considerations—because it fits into their schemes to make over the American system.

Pennsylvania Week is a good time to get into the fight for free enterprise.

A free, unhobbled, un-socialized America, with freedom of the individual, offering opportunity for every man, is worth fighting for. I hope you will all join in this great struggle.

Federal Contributions to Highway and Road Building in the Seventh Congressional District of Alabama

EXTENSION OF REMARKS OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. ELLIOTT. Mr. Speaker, I feel it is the duty of a Member of Congress to inform the people he represents in the Congress about the spending of Federal funds generally, and in particular about the spending of Federal money in the district which he represents.

It is with this thought in mind that I will speak today about the money which the Federal Government has spent in 1949, in 1950, and through August 31 of 1951, on the roads and highways of the Seventh Congressional District of Alabama, consisting of Blount, Cullman, Fayette, Franklin, Lamar, Marion, Pickens, Walker, and Winston Counties, which I have the honor to represent in the Congress. The period I will discuss, January 1, 1949, through August 31, 1951, substantially covers the period I have served in the Congress to date.

Under laws passed by Congress, the roads and highways of the Nation are entitled to Federal aid for improvement purposes.

I will not go into the technical details of the law, but to say that improvements made to approved roads and highways in Alabama are made on the basis of one-half of the cost of the improvements being paid by the Federal Government, and the other half by the State of Alabama itself, or in some cases, depending upon the character and type of the road, by the State of Alabama and by the county where the road is located.

From January 1, 1949, through August 31, 1951, the Federal Government and the State of Alabama, and the county governing bodies, spent or bound them-

selves jointly to spend \$10,234,630.05, on the roads and highways of the Seventh Congressional District.

The Federal share of this undertaking was \$5,119,623 73, or slightly more than one-half of the total.

This money was spent, or contracted to be spent, on 63 separate projects, some of which are located in every county of the District.

The projects already completed, and those that are being worked on now, will, when completed, result in the improvement of approximately 300 miles of the roads of our district.

The work done on these projects consists primarily of paving, grading, draining, and building bridges on the various roads being built or improved.

In some cases the work done has been the removal or elimination of the dangerous hazards of railway-highway crossings, or the reconstruction of existing railroad grade crossing bridges, and the relocation of highways to eliminate grade crossings entirely. In these cases, the entire cost of such projects is borne by the Federal Government, less the amount paid by a participating railroad, and with the further limitation that not more than 50 percent of the right-of-way and property damage costs connected with such improvements may be paid with Federal funds.

The expenditure of these \$5,119,623 73 of Federal funds on the roads, highways, and bridges of our Seventh Congressional District has made highway improvements that are apparent to all of us. These improvements and those that will be made in the future will make our District a better place in which to live. They will improve communications from point to point within the District, and with points on the outside. They will, by the improved means of travel, save time for our people, and will open up our vast natural resources for inspection by interested people, and hasten the day when we will be able to bring about increased development of those resources for the use and benefit of our people.

The Federal funds spent or obligated to be spent during the period mentioned are as follows in each of the counties of the Seventh Congressional District:

Blount.....	\$731,433 25
Cullman.....	1,079,522 39
Fayette.....	373,106 23
Franklin.....	365,201 90
Lamar.....	432,594 87
Marion.....	381,876 67
Pickens.....	217,000 00
Walker.....	759,715 03
Winston.....	679,061 83

Mr. Speaker, under leave to extend my remarks, I include a letter from Hon. Thomas H. MacDonald, Commissioner of Public Roads of the United States Bureau of Public Roads, addressed to me under date of September 26, 1951. This letter goes into some detail with respect to the administration of the laws pertaining to Federal-aid road projects.

I also include a statement prepared for my use by the said Thomas H. MacDonald, Commissioner of Public Roads, setting forth pertinent detail about each Federal-aid highway project programed under contract or completed in the

Seventh Congressional District of Alabama between the dates of January 1, 1949, and August 31, 1951.

SEPTEMBER 26, 1951.

HON. CARL ELLIOTT,
House of Representatives.

DEAR MR. ELLIOTT: Your letter of September 13, 1951, requested information concerning highway improvements involving Federal-aid funds in the Seventh Congressional District of Alabama, and the operation of the Federal-aid program.

The enclosed tabulation reflects the status as of August 31, 1951, of all projects involving Federal-aid and forest highway funds in the Seventh Congressional District which have been programed, placed under contract, or completed since January 1, 1949. The projects shown as secondary projects and carrying the prefix "S" are the improvement on roads included in the Federal-aid secondary system approved for Alabama. This system includes the principal secondary roads or "farm-to-market" roads.

With respect to the operation of the Federal-aid program, Federal-aid funds are available under the controlling legislation to assist the States in the financing of improvements on eligible highways when requested by the State and matched in an appropriate amount by funds under the control of the State. For Alabama the matching funds are 50 percent except for railroad grade crossing projects in which case section 5 (a) of the Federal Aid Highway Act of 1944 provides that the entire construction cost of projects for the elimination of hazards of railway-highway crossings, including the

separation or protection of grades at crossings, the reconstruction of existing railroad grade crossing structures, and the relocation of highways to eliminate grade crossings, less the amount paid by a participating railroad, may be paid from Federal funds, except that not more than 50 percent of the right-of-way and property damage costs, paid from public funds, on any such project, may be paid from Federal funds. The act also provides that not more than 10 percent of the sums apportioned to any State shall be used for such railway-highway projects.

A highway, to be eligible for improvement with Federal-aid funds must be included in the Federal-aid highway system or the Federal-aid secondary system. The Federal-aid highway system is selected by the State highway department, subject to the approval of the Bureau of Public Roads, and is divided into two parts. The rural portion is termed the Federal-aid primary system. The portion within urban areas including all cities of 5,000 or more population is termed the Federal-aid urban system. The Federal-aid secondary system is composed of principal secondary or feeder roads in rural areas outside of municipalities of 5,000 or over in population in accordance with the latest available Federal census, including farm-to-market roads, rural mail routes, and school bus routes not on the Federal-aid highway system. The roads are selected for inclusion in the Federal-aid secondary system by the State highway department, in cooperation with the local road authorities, for our approval.

Federal-aid primary funds may be used in the improvement of roads on either the

rural or urban portion of the Federal-aid highway system, that is, on highways included in both the Federal-aid primary system and the Federal-aid urban systems. Federal-aid urban funds are restricted to use on highways and streets included in the Federal-aid urban system. The use of Federal-aid secondary funds is restricted to the improvement of roads on the Federal-aid secondary system outside of urban areas.

The initiation of improvements involving Federal-aid highway funds rests with the State and the initiation of improvements involving Federal-aid secondary funds is the prerogative of the State, acting in cooperation with the local road authorities.

Under the Federal-aid legislation, the State, subject to our approval, makes the surveys, prepares the plans, acquires the rights-of-way, and supervises the construction of improvements involving Federal-aid funds.

Forest highway funds, under the supervision of the Bureau of Public Roads, are applicable for use in the improvement of routes on the forest highway system. Both in the selection of routes to be included in the forest highway system and projects on the system to be programed for improvement are based on the joint field recommendation of the State highway department, the regional forester of the Forest Service, and the division engineer of the Bureau of Public Roads.

Very truly yours,

THOS H. MACDONALD,
Commissioner of Public Roads.

Alabama—Seventh Congressional District—Federal-aid highway projects programed, under contract, or completed since Jan. 1, 1949, as of Aug. 31, 1951

Housing for Veterans' Legislation and Results—Loan Repayment Record of Veterans of World War II Has Shown Them To Be Excellent Credit Risks—Two Million Five Hundred Thousand GI Home Loans Have Been Made—Direct Loan Program Has Brought Homes Within Reach of Rural Veterans Who Could Not Obtain Loans Through Private Sources—Program Must Be Extended to Korean Veterans

EXTENSION OF REMARKS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. ELLIOTT. Mr. Speaker, it is my purpose today to review in some detail the various housing laws enacted by the Congress as they pertain to veterans of World War II, and the results achieved under these programs. "There is no place like home." This is evidenced by the vast amount of work we do, the long hours we give to our Congressional work during the closing weeks and days of a session of Congress. It often occurs to me that if we worked as hard in the early days of a session, and with a singleness of purpose that we do in the last days that we could easily finish our work at a reasonable time each year so as to be

able to spend more time in our home districts. I personally feel the great loss that comes from the long sessions we have had for the past 3 years. Since I came to Congress on January 3, 1949, we have averaged staying in session 10 months of each year. A Representative in Congress is supposed to stay close to the people he represents so that his work will adequately reflect their viewpoints, their considered wishes, their mature judgment. I hope some way can be found to lengthen the time we can spend at home in the coming years. I believe that every effort should be made to cut the sessions of Congress to at least 8 months duration. The newspapers amuse me when they refer to adjournment as providing a "vacation" for Congressmen. I believe that all Members, and I am sure I speak for myself, work just as hard when at home in their districts as they do here. The point I am trying to make is that it is necessary that the work in the district be done, that the close contact with the people be maintained. Of course, I do not believe that we should adjourn until the necessary legislative work is finished. And, before I finish my statement I shall propose in one or two instances that this session of Congress does not adjourn until certain legislation pertaining to housing for veterans of the Korean war has been enacted.

VA GUARANTEED GI LOANS FIRST AUTHORIZED BY GI BILL, 1944

The loan-guaranty program of the Veterans' Administration was created by title III of the Servicemen's Readjust-

ment Act—Public Law 346, Seventy-eighth Congress—enacted June 22, 1944, as a readjustment benefit for the purpose of enabling veterans of World War II to secure loans from private lenders for the purchase, construction, alteration, or repair of homes, for the purchase of farms and farm equipment or for the purchase of business property or engaging in business. The favorable mortgage financing terms were to be made possible by reason of the fact that a substantial portion of the loan was to be guaranteed by the Government, thereby materially reducing the lender's risk. Under the provisions of Public Law 346, the Veterans' Administration was authorized to guarantee 50 percent of a loan to an eligible veteran except that the amount of the guaranty could not exceed \$2,000. Such loan, with maximum maturity in 20 years, was to bear interest at 4 percent, and payment of interest for the first year was to be made by the Veterans' Administrator on that part of the loan guaranteed by the Government. The act permitted the Administrator to guarantee 100 percent of the principal amount of second mortgage loans provided that such loans did not exceed 20 percent of the purchase price and that the primary loan was insured by a Federal agency. The law also specified that the purchase price paid by a veteran could not exceed the "reasonable normal value" of the property as determined by a competent appraiser. Veterans were eligible to make application for loan benefit, within 2 years of their discharge, or the termination of the war, but in no event later than 5 years after

the termination of the war. Home loans guaranteed under the act were conditioned by the requirement that payments on the mortgage securing the loan must bear a proper relation to the veteran's present and anticipated income. In the case of farm and business loans it was stipulated that the veterans' ability and experience must be such as to make success in the venture reasonably likely.

The first loan under the Servicemen's Readjustment Act was guaranteed in November 1944, and by the end of 1945 more than 49,000 loans were approved out of the 58,334 loan applications received. However, the first year of operation indicated that the program needed revision in order to meet the needs of larger numbers of veterans in obtaining GI loans and as a consequence the law was amended in several important respects by the enactment of Public Law 268, Seventy-ninth Congress, on December 28, 1945.

PUBLIC LAW 268 OF 1945 LIBERALIZED GI LOAN PROGRAM

The amendments made by Public Law 268 raised the maximum guaranty of the Veterans' Administration to \$4,000—subject to the 50 percent limitation—with respect to realty loans, but the guaranty on nonreal estate loans remained at \$2,000. A system of loan insurance was set up whereby a lending institution could be reimbursed for losses up to 15 percent of the aggregate of the insured loans it made. The time in which a veteran could apply for a loan was extended to 10 years after the termination of the war. Additional liberalizing features of Public Law 268 provided that the maximum maturity date be extended up to 25 years for home loans, and to 40 years for farm realty loans. The procedures for processing veterans' loans were streamlined by a provision for an automatic guaranty for loans made by certain supervised lenders. Another change which greatly benefited the veteran was the redefinition of the property value standard to "reasonable value"—in place of the previous limitation of "reasonable normal value". Instead of the payment by the Veterans' Administrator of the interest on the guaranteed portion of the loan for the first year a gratuity payment equal to 4 percent of the guaranteed amount was paid by the Veterans' Administration to the lender for credit on the veterans' loan.

PUBLIC LAW 856, 1946, AUTHORIZED RFC TO PROVIDE A SECONDARY MARKET FOR GI MORTGAGES

The passage of Public Law 268, in conjunction with the fact that the effect of demobilization from the Armed Forces was then making a maximum impact, caused the volume of loan applications to increase sharply in 1946 so that by December 25 of that year, a total of 518,000 loans had been guaranteed with a principal amount of almost \$2,600,000,000. The trend toward increased GI loan activity during the latter part of 1946 was accentuated by the passage of Public Law 656, Seventh-ninth Congress, on August 7, 1946, authorizing the Reconstruction Finance Corporation to provide a secondary market for the purchase of

loans guaranteed or insured under the Servicemen's Readjustment Act. Although this authority was terminated by Public Law 132, Eightieth Congress, on June 30, 1947, during the period of its operation the RFC purchased some 25,000 guaranteed GI loans with an original principal amount of about \$150,000,000.

After reaching a total of approximately 57,000 loans monthly in the fall of 1946, the volume of veterans' loans commenced to slacken in 1947 and 1948 as a result, in part, of the inability of veterans to afford the increased housing costs, and also of a decline in the relative attractiveness to investors of the 4 percent interest rate due to the rising yields of competitive securities. Thereafter, Congress passed legislation designed to channel more funds into GI loans through the resumption of purchase operations of a Government secondary market.

PUBLIC LAW 864 IN 1948 REOPENED SECONDARY MARKET FOR GI MORTGAGES THROUGH FNMA

Public Law 864, approved July 1, 1948, authorized the Federal National Mortgage Association, a subsidiary of the Reconstruction Finance Corporation, to provide, within certain specified limits, a secondary market for the purchase of GI home and farm loans guaranteed or insured subsequent to April 30, 1948. Another provision of Public Law 864 made evidence of guaranty or insurance issued by the administrator conclusive proof of loan eligibility with the exception of certain reserved defenses.

PUBLIC LAW 901, 1948, ALLOWED FNMA TO PURCHASE 50 PERCENT OF LENDER'S GI MORTGAGES

On August 10, 1948, Congress enacted the Housing Act of 1948—Public Law 901, Eightieth Congress—which authorized the Veterans' Administrator, with the consent of the Secretary of the Treasury, to increase the interest rate of GI loans to 4½ percent, if he found such action required by the mortgage market. However, following an extensive survey and study of the question the Veterans' Administration determined no change in the interest rate was warranted. This act also expanded the secondary market operations of the Federal National Mortgage Association to permit the purchase of up to 50 percent of a lender's eligible loan originations.

FIFTY-PERCENT LIMIT ON GI MORTGAGE PURCHASES BY FNMA INCREASED TO 100 PERCENT BY EIGHTY-FIRST CONGRESS

This 50-percent limit was subsequently removed on October 25, 1949, by Public Law 387, Eighty-first Congress, which permitted a 100-percent Government—FNMA—secondary market in GI home loans.

AS A RESULT, GI LOANS CLIMBED TO 50,000 PER MONTH

Following a low of about 20,000 applications during the month of March 1949, the number of veterans' loans commenced to rise again as the Government's secondary market operations accelerated, and more home building was concentrated in the lower price ranges, so that as a result, in part, of these conditions, coupled with a decline in the yields of alternative long-term investments, the rate of loan applications

climbed to 50,000 per month by April 1950.

GI HOME-LOAN LAW GREATLY LIBERALIZED BY HOUSING ACT OF 1950

The spurt which developed in the Veterans' Administration loan program was given much additional momentum by the enactment of the Housing Act of 1950—Public Law 475, Eighty-first Congress—on April 20, 1950. This law made several important changes in the Servicemen's Readjustment Act. The maximum guaranty of the Veterans' Administration for home loans was increased to 60 percent, or \$7,500, whichever was the less, for veterans who had not previously used any of their loan entitlement. The maximum term for home loans was upped from 25 to 30 years.

RECOGNITION OF HOME LOAN RIGHTS OF WIDOW OF VETERAN WHO DIED FROM SERVICE-CONNECTED CAUSES

A provision was included giving the unmarried widow of a veteran who died from service-connected causes the same rights to a GI loan that her husband would have had. In cases where a veteran's property was taken from him by condemnation, natural hazard, or other circumstances beyond his control, the loan guaranty rights used by him in acquiring such property were authorized to be restored. Public Law 475 also provided for the abolition by December 31, 1950, of the section 505 (a), the combination FHA-GI loans, which were more expensive to the veteran than the straight GI loan. The actual termination date was October 20, 1950. Veterans were also benefited by a requirement for minimum construction standards as a prerequisite to financing GI loans.

DIRECT VA LOANS TO VETERANS LIVING IN RURAL AREAS WHERE PRIVATE FINANCING NOT AVAILABLE

Another very important provision of Public Law 475 authorized the making of direct loans on a stand-by basis by the Administrator to veterans who resided in areas in which 4 percent loans could not be obtained from private lenders. The purpose of this provision was to assist more veterans to take advantage of the GI-loan program and prevent discrimination against those veterans residing in areas, mostly rural, where 4 percent money was unobtainable. The amount of a direct loan was limited to \$10,000 and could be made only after the Administrator was satisfied that the veteran was a satisfactory credit risk, and that the required monthly payments bore a proper relation to his income.

The Housing Act of 1950 also provided additional funds for the secondary market operations of the Federal National Mortgage Association, but terminated its authority to make advance commitments with respect to the purchase of loans.

GI LOANS JUMPED TO 71,000 PER MONTH

As a result of several factors, among them being the expanded operation of the Government secondary mortgage market and a changed governmental financial policy causing 4-percent money to become more attractive for investment purposes, funds for GI loans became increasingly plentiful so that during the

month of August 1950, the number of loans reached the record total of 71,000.

EFFECT OF KOREAN WAR ON GI LOANS

As a result of the outbreak of hostilities in Korea on June 27, 1950, it became necessary to sharply curtail normal housing activity in order to channel strategic materials into national defense activities. The Veterans' Administration on July 19, 1950, for the first time imposed a minimum down payment requirement for home purchasers which, in most cases, was 5 percent of the purchase price. Pursuant to authority contained in the Defense Production Act of 1950—Public Law 774, Eighty-first Congress—the housing credit restrictions were tightened in orders promulgated October 12, 1950, with respect to GI, FHA, and conventional financing. Although preserving the relative credit preference of veterans, the down payment requirement for veterans under this order ranged from 5 percent for a \$5,000 house to 45 percent for a house costing in excess of \$24,250. These restrictions were modified somewhat on March 22, 1951, to allow more liberal credit for housing of defense workers and service personnel in critical defense areas. The effect of the drastic credit restrictions did not become immediately apparent inasmuch as the financing of housing already contracted for or subject to existing appraisal requests was exempted from the application of the orders. However, the expected downward trend in loan activity became evident in early 1951, and by July of this year the number of applications had fallen to the rate of 32,000 monthly. Coupled with the restriction on building activity were certain factors in the financial picture which also contributed to the decrease in activity of the GI-loan program. Prior to the imposition of restrictions, lending activity had been conducted on such an intensified scale that the heavy commitments of the lenders materially drained available funds and carried over into 1951 as a temporary mortgage glut. In addition, Government policy changes with respect to the withdrawal of support of the bond market by the Federal Reserve Board in March of 1951, increased the tightness of the mortgage money available. Consequently, during the spring and summer of 1951, many eligible veterans found it very difficult to obtain 4-percent loans from private lending sources.

PUBLIC LAW 139, SEPTEMBER 1951, EASES RESTRICTIONS ON GI LOANS

The Defense Housing and Community Facilities and Services Act of 1951—Public Law 139, Eighty-second Congress—approved September 1, 1951, liberalized the financing on low-cost housing guaranteed or made under the Servicemen's Readjustment Act, by stipulating certain maximum down payments that may be required by regulation, as follows:

Four percent on housing with sales price up to \$7,000;

Six percent on housing with sales price over \$7,000 and up to \$10,000; and

Eight percent for housing with sales price over \$10,000 and up to \$12,000.

The down-payment requirement in these cost categories for other than loans

made or guaranteed by the Veterans' Administration is 10 percent, 15 percent, and 20 percent, respectively. Public Law 139 also amended the Servicemen's Readjustment Act to provide a liberalized home-loan guaranty of up to 60 percent, or \$7,500, whichever is lower, for a veteran who had previously used part of his loan entitlement—except for GI home loans made subsequent to April 20, 1950. Increased control against excessive fees paid by a veteran to the seller of property was also provided by the act. Furthermore, in Public Law 142, Eighty-second Congress, approved September 13, 1951, it was provided that the sale of any property to a veteran under the loan program at a price in excess of the appraised amount, as determined by proper Veterans' Administration appraisal, would render the responsible parties liable to the veteran for treble damages.

DIRECT VA LOAN PROGRAM FOR VETERANS LIVING IN RURAL AREAS WHERE PRIVATE LENDING AT 4-PERCENT INTEREST NOT AVAILABLE EXTENDED TO JUNE 30, 1953, BY PUBLIC LAW 139, EIGHTY-SECOND CONGRESS

Mr. Speaker, as the author of the House bill to extend direct VA loans to veterans living in rural areas where private lending at 4-percent interest is not available, I would like to say that in my judgment this provision of Public Law 139 is a very just provision, and it cures, at least in part, one of the major defects of the GI loan law. Hundreds of our rural veterans can meet the same qualifications for GI loans, as do their city cousins, but without the direct loan provision they could not obtain a loan with which to build their homes. The direct-loan program fills a gap in the practical administration of the law by extending the opportunity for home ownership to veterans living in rural areas. Of the approximately 3,100 counties in the United States, 2,600, or parts of 2,600, have been classified as areas where private financing at 4-percent interest is not available. The fact that this law is on the books encourages private lending institutions to extend their operations into rural areas, when they otherwise would not. Also, under this law, when a loan is approved, and as I understand it up until the loan is finally closed, the VA will allow any private lender to make the loan at the same terms that the Government had agreed to make it. Thus, at all stages of the loan procedure private lenders or lending agencies are encouraged to make the loan. If they do not, the VA makes it, and in that manner another veteran becomes a home owner. I do not believe, Mr. Speaker, that this Nation will ever regret what it has done during the past few years to extend the opportunity for home ownership to those who could not otherwise own homes, but for the VA guaranty, and direct home-loan programs, and the FHA programs as well.

I am happy to have been the author of House bill 3861 to extend to June 30, 1953, the authority of the Veterans' Administration to make direct home and farmhouse loans in rural areas where private lending capital is not available. My bill passed the House of Representatives on June 18, 1951, and was later incorporated into the Defense Housing

and Community Facilities and Service Act of 1951, and as a provision of that act it became a part of Public Law 139, Eighty-second Congress.

The operation of the direct home-loan program, which had temporarily expired on July 1, 1951, was thus extended through June 30, 1953, and the direct-loan fund was reconstituted as a revolving fund in order to make available for further loans, payments received by the Veterans' Administration from the sale of loans to private lenders or from repayments or prepayments by the veteran. As of September 25, 1951, the Veterans' Administration had approved 17,077 direct loans and there was approximately \$41,000,000 remaining out of the original direct-loan fund of \$150,000,000. In addition, principal repayments from loans previously closed amounted to about \$2,600,000 which is also now available for new loans. In the administration of the direct-loan program over 2,600 counties, or parts thereof, out of the approximately 3,100 counties in the United States, have been designated by the Veterans' Administration as eligible areas for direct loans.

OPERATION OF THE GI LOAN PROGRAM HAS SHOWN THAT THE VETERAN IS A GOOD RISK

During the operation of the veterans' loan-guaranty program from its inception through September 25, 1951, a total of 2,962,154 loan applications were received by the Veterans' Administration of which 2,778,668 have been approved. The principal amount of loans approved during this period totaled slightly over \$16,406,400,000 with closed loans aggregating slightly over \$15,560,300,000. By far the greatest bulk of this activity was centered in home loans as the principal amounts of farm and business loans accounted for but \$237,129,523 and \$431,189,498 of the closed loan figures respectively. The average amount of the GI first mortgage home loan is \$6,956 and the repayment has usually been amortized in nearly equal payments of principal and interest over a 20-year period. The operation of the loan program has clearly shown that the veteran is a good financial risk. The record indicates that foreclosure claims have been paid for all types of loans in less than 1 case out of every 100. For home loans, separately, claims have been paid in 1 case out of every 200 loans. The net amount paid out in claims on all types of loans has approximated \$23,183,100. Of this amount \$13,619,400 was paid on home-loan claims.

SUMMARY OF THE GI LOAN PROGRAM THROUGH SEPTEMBER 25, 1951

The accompanying tables show first, the number and principal amount of VA guaranteed and insured home, farm, and business loans closed and fully disbursed as of September 25, 1951, in the United States, in the State of Alabama and in the nine counties comprising the Seventh Congressional District of Alabama; second, direct loan statistics for the United States, with a separate column for the State of Alabama through September 25, 1951; and, third, a tabulation, through September 25, 1951, showing participation in the direct loan program of the counties comprising the Seventh Congressional District of Alabama.

APPENDIX TO THE CONGRESSIONAL RECORD

VA guaranteed and insured loans closed—Cumulative as of Sept. 25, 1951

	Total, all types		Home loans		Farm loans		Business loans	
	Number	Amount	Number	Amount	Number	Amount	Number	Amount
United States	2,678,784	\$15,560,146,507	2,469,007	\$14,892,127,576	61,545	\$237,120,523	148,232	\$431,189,498
State of Alabama	37,638	200,812,214	31,078	190,954,001	2,533	6,263,584	1,027	3,654,629
Alabama counties								
Blount	209	518,383	35	96,475	163	381,609	11	40,209
Cullman	128	528,633	40	217,153	71	242,962	11	68,518
Fayette	12	52,270	6	37,300	6	11,940	0	0
Franklin	118	350,416	90	291,648	26	55,168	2	5,300
Lamar	7	40,206	2	8,000	2	3,206	3	29,000
Madison	9	32,690	4	17,450	5	15,240	0	0
Pickens	79	290,678	15	87,370	62	107,962	2	5,746
Walker	84	457,033	67	416,941	7	11,721	10	28,467
Winston	31	117,861	24	119,587	5	12,077	2	4,200
Total, 9 counties	677	2,316,173	289	1,291,927	347	843,308	41	180,948

Direct loan statistics—Through Sept. 25, 1951

	United States	Alabama
1 Applications received	28,369	1,777
2 Withdrawn or rejected	7,963	577
3 Approved		
Number	117,077	908
Amount	\$109,193,258	\$6,878,993
4 Closed and fully disbursed		
Number	13,787	710
Amount	\$86,967,948	\$4,894,345
5 Closed and partially disbursed		
Number	512	6
Amount	\$1,306,481	\$18,986
6 Awaiting closing	2,111	221

The number of loans closed or awaiting closing (lines 4, 5, and 6) is smaller than the total number of loans approved (line 3) since a number of loans are withdrawn after having been approved.

Seventh Congressional District of Alabama—Through Sept. 25, 1951

County	Number of loans approved	Loan amount
Blount	15	\$33,300
Cullman	16	107,300
Fayette	8	67,550
Franklin	13	92,100
Lamar	1	21,000
Madison	19	111,450
Pickens	5	44,450
Walker	27	195,843
Winston	7	51,600
Total	113	719,983

These figures reveal the following facts, Mr. Speaker, which I desire to emphasize.

First Under the VA loan guaranty program \$15,500,000,000 was invested in veterans' loans, under the various laws which I have discussed, prior to September 25, 1951. In addition \$87,000,000,000 was loaned under the direct-loan program for veterans living in rural areas. These are investments in the future of America. As a result 2,692,571 new homes have come into existence, in which a substantial portion of tomorrow's citizens will be reared.

Second. More than 38,000 of these loans have been made in Alabama, in the amount of approximately \$206,000,000.

Third. In the Seventh Congressional District of Alabama, 800 of these loans have been made in the amount of more than \$3,000,000.

These loan programs have been slowed down as a result of the Korean war, but it is expected that short of an all-out war

there will continue to be made a considerable number of home loans. I hope the loan program can continue to the point that every veteran in America who desires to do so can take advantage of the program.

HOME LOANS FOR KOREAN VETERANS

Mr. Speaker, I hope the Congress will not adjourn until it has enacted a law providing for every veteran of the Korean war, that is, every veteran who has served in the Armed Forces since June 27, 1950, the same housing-loan privileges that have been extended to veterans of World War II. I think there is no question in the minds of any of us that we will eventually do so. The action should be taken now. There is no reason to delay further. The Korean veterans are entitled to every privilege enjoyed by those of us who are veterans of World War II. This includes housing, education, and training, and all other benefits to help them to rehabilitate themselves when their period of service is finished.

Kansas Dams

EXTENSION OF REMARKS

OF

HON. ANDREW F. SCHOEPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. SCHOEPEL. Mr. President, I ask unanimous consent to insert in the Appendix of the Record a statement which I have prepared relating to the appropriation of \$2,500,000 to begin construction of Kirwin Dam on the North Fork of the Solomon River.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. President, under the general authority to extend my remarks, I take great pleasure in recording the final action of the Congress in including an appropriation of \$2,500,000 for the Bureau of Reclamation, Department of the Interior, to begin construction of the flood-control features of Kirwin Dam on the North Fork of the Solomon River in the State of Kansas. This important item was included on my urgent recommendation by the Senate Appropriations Committee for \$3,200,-

000, and in conference the amount finally agreed on was \$2,500,000, which I am informed will be adequate for the Bureau of Reclamation to start actual construction in the spring of 1952.

I am also informed by Acting Commissioner Lineweaver, of the Bureau of Reclamation, that the designs of the Kirwin Dam have been revised after consultation with the Corps of Engineers, represented by its Omaha and Kansas offices. The corps' recommendation to increase the height of the Kirwin Dam by 13 feet was accepted by Reclamation. The capacity for flood protection will be increased proportionately.

Kirwin Dam, when completed, will be another valuable contribution to flood protection in the Kansas River Basin in the event of repetition of the disastrous floods of the summer of 1951. Cedar Bluff Dam, constructed by Reclamation, and Kanopolis Dam, constructed by the corps, proved their worth in the floods this year. Without them the flood losses in Kansas would have been much greater.

I thoroughly agree, Mr. President, that dams in the Kansas River Basin having flood-control values must be operated in accordance with plans approved by the Corps of Engineers. It is my understanding that such plans are in effect or in the making. I am advised also that the Bureau of Reclamation so operated Cedar Bluff Dam, as shown by the attached news release from the Kansas River district manager of reclamation at McCook, Neb.

Now as to three other dams in the Kansas River Basin for which Congress has not yet provided construction funds, I refer to Webster on the South Fork of the Solomon, Glen Elder on the Solomon, and Wilson Dam on the Saline River.

Following the 1947 floods, the Budget Bureau recommended construction funds for the Bureau of Reclamation for these three dams in addition to Cedar Bluff and Kirwin. The Congress, however, appropriated in that year only for Cedar Bluff. Now funds are provided to start Kirwin. It is the hope of Kansas that construction funds will soon be provided for Webster, Glen Elder, and Wilson. I am informed that the Bureau of Reclamation has Missouri River Basin project investigation funds that can be used to prepare at least one or two of these projects for early construction in order that they may be ready to serve to protect life and property in Kansas. It is our hope that this preconstruction work will be prosecuted vigorously so that Congress can justify the appropriation of construction funds. The plans, by all means, should be developed in consultation with the Corps of Engineers.

Also, full consideration should be given to the irrigation and recreational features although construction of these features

might well be deferred until the urgent flood-control facilities are completed. In any event, we should conserve water for irrigation as assurance against drought wherever feasible.

The news release referred to is as follows:

"How the recently completed Cedar Bluff Dam and Reservoir, southwest of Ellis, Kans., assisted in reducing floods in the Kansas River Basin during the past summer is described in a report issued this week by H. E. Robinson, district manager, Bureau of Reclamation, Indianola, Nebr. Mr. Robinson reported that hydrologists in the district office had just completed an analysis of the flows of the rivers during the months of May, June, July, August, and September of this year and the hydrological conclusions reached were significant especially to the cities in the Kansas River Basin below Salina, Kans.

"Floods in the Smoky Hill River Basin completely filled the Cedar Bluff Reservoir irrigation pool and 44½ percent of the flood-control pool during the first year of operation. The maximum storage of 270,600 acre-feet was reached on July 2 which amounted to approximately 550 percent of the average annual flow of the river at the Cedar Bluff Dam. All but 11,000 acre-feet of this amount was accumulated during the period May 15 through July 2 while the Cedar Bluff Dam was still under construction. The dam constructed by the Bureau of Reclamation on the Smoky Hill River near Ellis, Kans., was completed in September of this year.

"Water released from the reservoir during May 20 to July 20 period of flooding of the Kansas River and its tributaries was held to a minimum to aid in alleviating flood damage. This storage was made by the Bureau of Reclamation in cooperation with request from the Corps of Engineers to protect the lower valley in spite of the undesirability of storing this quantity of water behind a green, unseasoned dam before construction on the dam was completed. The maximum discharge through the dam was held to 1,900 cubic feet per second occurring on July 2 through the ungated flood-control notch. The ungated flood-control notch was provided in the spillway for the purpose of limiting the discharge to 4,000 cubic feet per second which is the safe channel capacity below the dam.

"The storage of floodwaters in the Cedar Bluff Reservoir was effective in preventing the Kanopolis Reservoir from filling and overflowing through the large spillway. Thus flood damage was materially reduced during the June and July period of flooding of the Smoky Hill and Kansas Rivers. The Kanopolis Reservoir is located about 150 miles downstream from the Cedar Bluff Dam just 87 miles upstream from Salina, Kans. Because of the continuous repetition of spring rains during May 15 through July 20, and because of necessity of reducing the stage of the Smoky Hill River at Salina, Kans., the Kanopolis Reservoir continued to gain storage consistently and on July 14 storage level in the reservoir was only two-hundredths of a foot below the spillway crest. If the Cedar Bluff Reservoir had not been storing water, the Kanopolis Reservoir would have spilled during the June and July floods materially adding to the flood damage on the lower river particularly at Salina, Kans.

"All through the month of June when the Solomon and Saline Rivers were adding to the flood conditions of the Smoky Hill and the Kansas Rivers, the town of Salina was protected by the combined storage facilities of Kanopolis and Cedar Bluff Reservoirs. Release from the Kanopolis Reservoir were maintained at amounts to keep the river at Salina within safe channel conditions. When the 3-day rainfall of July 9 to 11 occurred with from 8 to 12 inches of rain falling be-

tween the Kanopolis Dam and Salina, the Kanopolis Reservoir was able to reduce its outflow to 1,300 cubic feet per second. Salina, Kans., suffered some damage from local tributary inflow with a peak discharge of 17,000 cubic feet per second at Salina, but if Kanopolis had not been able to store the inflow to the reservoir the flow at Salina would have been twice as much as it received or about 34,000 cubic feet per second. The area flooded in the city of Salina would have been far greater.

"The Smoky Hill Basin above the Cedar Bluff Reservoir received less than an average of 2 inches of rainfall during the July 9 to 11 storm, but the floodwaters held in the Cedar Bluff Reservoir during June made it possible for the Kanopolis Reservoir to store all the inflow reaching that reservoir during the July storm, thus reducing flood damage in the river below."

Record of the First Session of the Eighty-second Congress

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. PRICE. Mr. Speaker, the only logical yardstick by which you can measure the record of a session of Congress is by the determination of how well that Congress did the job handed it to do. World conditions handed to the first session of the Eighty-second Congress a very particular job—to work for peace and security both at home and abroad.

Is the United States today stronger and better able to meet the threat of aggression than it was on January 3? Is the rest of the free world stronger and in a better position to join in a united effort to halt the advance of communistic aggression? Are the NATO countries better organized and better prepared to provide the military power on the continent of Europe so necessary to contain this Communist threat to world peace?

The answer to each question is, definitely, "Ycs."

So when I am asked, "What have been the accomplishments of the Eighty-second Congress?" I feel that it can be said that the accomplishments of the Eighty-second Congress have been of almost unprecedented importance and significance—they have been far-reaching and of great significance in the present and future role which the United States has been called upon to play in the pursuit of peace which is the aim and aspiration of the freedom-loving peoples of the world.

The accomplishments and achievements of the Eighty-second Congress thus far have been vital to the defense and security of our own country and of great importance toward effecting order and stability throughout the world. The Congress has measured up to the challenge of making our country strong and prepared. This has been the field in which the first session of the Eighty-second Congress has primarily worked—

for peace and security both at home and abroad.

On the whole, then, Congress must be given credit for putting first things first, and the volume of work that it managed to get through in the 10 months of its first session is nothing short of staggering.

Because it was its main job the emphasis of the session was very strongly on defense and foreign policy, and even when Congress turned to domestic affairs most of its acts were in some way related to world emergency. This was unavoidable. Congress had to deal with circumstances as it found them. Nor is there any real doubt that in appropriating some \$57,000,000,000 for defense, in authorizing overseas bases to cost \$5,900,000,000, and in providing \$7,500,000,000 to bolster the defenses and economic systems of friendly countries, Congress was reflecting the will of the American people.

The same may be said of its authorization of a supercarrier and 140 other new naval vessels, its extension of the Selective Service Act, and its passage of the Defense Housing Act. There were some short-sighted actions, such as the Senate's attempt to limit the number of American troops that can be sent to Europe, but on the whole Congress responded realistically and courageously to the world situation.

Since the outbreak of the Communist aggression in Korea—a threat to freedom and liberty everywhere—the Congress has directed its energies and attention to the problems of preparedness and defense—to the cause of peace and the security of our Nation. As all citizens know and recognize, freedom and liberty are priceless—peace does not come cheap and security is not a matter of luck. The Eighty-second Congress, in full reflection of the deep desire of all citizens of the United States to attain peace and security, has taken the most immediate steps toward that attainment, namely, the providing of the necessary funds for the building up of our defenses, and for the attainment of America's peace and security.

More than that, the Congress—also in reflection of the decent impulses of the people of the United States—has provided the free nations of the world with the inspiration and the will to exert their own best efforts toward a firm and determined stand against the threats of Communist aggression. Since communism thrives on fear and on the inability of a nation to assert its national strength and vigor, the forthright actions of the Congress to not only build our own Nation's defenses but to assist other nations, only a short time ago flat on their backs and devastated from war, to build their own comes as an historic step forward in the field of peace.

The \$57,000,000,000 voted by Congress for our armed services, the largest defense appropriations ever voted, will go toward the creation of an Air Force of 95 wings and greater, an Army better trained and equipped than any other army in the world, and two-ocean Navy,

the world's most powerful. It will provide research and development in the field of atomic energy, jet propulsion, and every modern device which would give our Nation added strength and security.

In the past week the third Russian A-bomb test has been announced. In 1946 I said the only secret of the A-bomb was in the determination and effort put forth to make it. Russia has put forth that effort and today stockpiles A-bombs. As I have repeatedly said—since the Russians will not accept an honest plan for international control of atomic energy—our only formula for security in this field is to improve our position and stay far ahead of the Soviet in the atomic field. The Eighty-second Congress has taken steps along that line by increasing appropriations for the Atomic Energy Commission and by authorizing expansion of its facilities. We have no choice but to place maximum emphasis on atomic armament.

The Joint Committee on Atomic Energy, on which I have had the honor to serve since it was created by law in 1946, has directed a resolution to the Atomic Energy Commission and the Department of Defense to transmit to the committee by January 3, 1952, a "definite and concrete report on maximizing the role atomic energy can and should play in the defense of the United States." Aside from the superior effectiveness of atomic weapons, the committee believes that a possible atomic weapons program would result in an eventual defense savings of \$30,000,000,000 a year. That is a goal, but it is not immediately attainable because the desired weapons for tactical military use are still in the development stage.

World War II proved that no nation may isolate itself and withdraw from the world and selfishly find security. Time and modern civilization have drawn us closer together and made neighbors of all the peoples of the world. In recognition of that fact, former Secretary of State Cordell Hull conceived what is now known as the Reciprocal Trade Agreements Act for furthering good will among nations through the medium of friendly trade and commercial relations. This has been called one of the greatest instruments for permanent peace ever set forth. The first session of the Eighty-second Congress has again extended this great act eliminating Communist-dominated countries from benefits of the agreements.

In a further effort to provide for our security at home and to set up a buffer against further Communist aggression in Europe, Congress approved extension of the mutual-security program for military aid to European nations—our allies and friends in Europe—in building up of a European defense army under the command of General Eisenhower. Funds in the amount of \$7,500,000,000 were voted for this program. Passage was based on the tenet that Europe, in its present economic condition, can provide men more readily than it can arm them and a dollar spent to build up Europe's defenses now will be as valu-

able—or more so—than a dollar spent at home for defense at this time. It is the hope and expectation of this program that we can hit the enemy sooner and more effectively from over there than from here. The objective is to keep war away from us—the main objective is to make the free nations of the world strong enough to deter an aggressor. The building of a defensive wall against the further spread of Communist aggression now seems a necessary insurance policy. It may stop war—certainly, should war come our allies will be better prepared to resist the aggressor.

While preparing our defenses on a world-wide basis we cannot overlook the home front and those things affecting our civilian economy. On this side one of the foremost measures approved by Congress was the Defense Production Act. This law has a two-fold purpose: First, assuring the United States of adequate production for the military build-up while providing for essential civilian requirements; and second, the prevention of run-away inflation.

As civilians learned during World War II, a high rate of military production calls for diversion to the armed services of the greater portion of our vital materials, thus reducing substantially the amount of such materials which can go into the manufacturing of civilian goods. Shortages of civilian goods are thus created and some form of price controls is considered highly desirable and essential to prevent ruinous inflation. Controls over materials and over prices were thus provided without an undue restriction of private enterprise. The full impact of the drain which military production will take from the total output of civilian goods will not be felt until 1952 and 1953 but the Congress in moving at this time to impose moderate controls has thus checked and forestalled an inflationary build-up which would rob our citizens of the fruits of their labor and their savings.

Much legislation of great benefit has been enacted in the interest of our veterans—not the least of these benefits being the extension of veterans rights and benefits to include the Korean war veterans.

One of the first benefits to be voted in behalf of the Korean veterans was the \$10,000 free life-insurance policy for all men serving in the Armed Forces subsequent to June 25, 1950—the date of the start of hostilities in Korea. Our Korean veterans will have the privilege of converting this free policy into permanent national service life insurance, with a small premium, upon their honorable discharge from service.

Another major action was the extension of benefits of Veterans' Administration hospitals and medical care to Korean veterans. Provision has also been made for providing for increased compensation and pensions to veterans having permanent and total disabilities. The legislation providing automobiles for amputees was liberalized and extended to Korean veterans. As our Korean veterans are being rotated and return home—the Congress is preparing to ex-

tend the full benefits of the GI bill of rights to them—granting educational and other benefits similar to those granted to veterans of World War I and World War II.

One of the most beneficial provisions of the Defense Production Act establishes the Small Defense Plant Corporation for direct aid and assistance to small-business enterprises of the Nation during this period of emergency.

As authorized by Congress, this service is to be a consolidation of a number of loosely operated small-business services in various agencies of the Government—the consolidation effecting a substantial economy in operations. It will, in effect, merge and consolidate all small-business offices into one for the purposes of, first, aiding small-business concerns and small-manufacturing concerns to obtain defense contracts or subcontracts; second, give information on procedure for obtaining such orders and interpret regulations and directives in the mobilization program; third, fairly distribute among large and small business the supply of critical materials so that small business will receive its fair share; and, fourth, aid in the financing of small-business expansion and retooling so that maximum participation in the defense program may be effected.

The question of a tax increase proved to be a most controversial subject during the course of the first session and Members took up the question with reluctance and hesitation because of the heavy tax load already being carried by our citizens, but also with a full sense of responsibility that the tremendous cost of the defense program must be met somehow and that a pay-as-you-go program is the wisest course. The majority of the Members were of the opinion that our boys fighting in Korea should not come home to pay the bills for defense and face the costs which the conflict against Communist aggression entails.

The taxpayers of our country would have, in the course of normal events, expected that the tax rate would be lowered rather than increased. The national tax rate was lowered following World War II, but with hostilities in Korea the pressing necessity arose to step up greatly our defense program with resulting increased costs. Therefore, a tax increase was deemed necessary and the House and Senate agreed on a compromise measure which will bring in revenue several billion dollars below the request of the President, but it was as high as the Congress felt it should be imposed, believing further economies should be effected in the operation of the Government.

One of the primary functions of Congress—in addition to its function to legislate—is the duty and responsibility to investigate. Without proper and full facts and information through investigation, the Congress would be unable to legislate wisely and properly in the interest of all our people. This applies with respect to the enactment of laws to extend benefits and to correct inequities and plug loopholes and also to the matter of the proper functioning of the departments of the Government.

There have been numerous investigations in a variety of fields during the session of Congress just closed. Exposures of corruption and irregularities in the conduct of public office were made by Democratic and Republican Members of Congress alike, and prompt and searching investigations were made of each charge.

Among the several investigations may be listed the investigation into the facts surrounding the dismissal of General MacArthur from his command in the Pacific. The Senate crime investigation in which it was disclosed that the criminal element has infiltrated into legitimate businesses and crime syndicates are in operation in our large cities. Much legislation has been proposed following this investigation.

The R&C investigation has resulted already in great changes being made in that agency. The investigation of the Maryland election will result in many changes being made with regard to political campaigns and elections—changes that will bring about a higher standard of ethics in the conduct of State and national political campaigns.

The current investigation of irregularities in the Internal Revenue Bureau is another investigation of a highly beneficial nature. Results of the investigation will be the ferreting out of the officials in that Bureau who have conducted themselves improperly. Like in all departments of the Government, honesty and integrity are essential to the maintaining of the strength of our national institutions.

The national investigation of the operations of the veterans' education and training program which disclosed many instances of irregularities has resulted in the savings of millions of dollars to the Government, as well as the assuring of a better and improved training program for our veterans.

One of their byproducts of all these investigations has been the fact that, by and large, the great majority of our Government employees and public servants are not included in the dishonest class but are scrupulous, loyal, and honest public officials. The exposure of some bad apples in the barrel has focused attention on the fact that the vast majority of the apples are sound and good. All should not be condemned.

There have been divisions and disagreement in Congress—such being inevitable in the exercise of our democratic form of Government—but on the important issues, national defense and security, the Congress has demonstrated a firm unity. The times call for the exercise of unity, the welding of our citizens into a solid front against the threats of communism and Communist aggression. Only through unity did our country grow into the greatest Nation in the history of the world, and only through a demonstration of the basic unity of our people and faith in our institutions and our Government will our country remain strong.

There is not the slightest doubt that our Nation will survive the present con-

dict and emergency, and, in surviving, America will grow to even greater heights, as the United States assumes its rightful role of leadership and destiny.

Applying the proper yardstick—whether Congress did its specific job—meeting the problems involving world security—I think it will be said of the first session of the Eighty-second Congress as I have stated earlier in this report that it responded realistically and courageously to the world situation.

NBC Radio Interview With Hon. John V. Beamer, of Indiana

EXTENSION OF REMARKS OF

HON. JOHN V. BEAMER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. BEAMER. Mr. Speaker, under unanimous consent, I insert in the Appendix of the Record a copy of the statement which I made during a recent interview over the National Broadcasting Co. network when Frank Bourgholtzer of NBC asked me how I personally became interested in the case of William Oatis.

NBC RADIO INTERVIEW WITH HON. JOHN V. BEAMER, OF INDIANA

(Interview with Congressman JOHN V. BEAMER, Representative of the Fifth Indiana Congressional District, which includes Marion, Ind., the home of William Oatis, newspaper correspondent now imprisoned by the Czechoslovakian Government. Mr. BEAMER is the author of House Joint Concurrent Resolution 140, in behalf of William Oatis, which was passed by both Houses of the Congress.)

(Mr. BEAMER was asked to tell how he became personally interested in the Oatis case, and to explain his resolution.)

Mr. BEAMER. William Oatis was born and raised in Marion, Ind., which is in the Fifth Indiana District that I have the honor and privilege to represent. I never met William Oatis but I feel that I know him.

In April of this year, when the news of his arrest first came to our attention, I began to receive letters and telegrams from his friends in Marion, Ind., with urgent requests that something be done. These letters and resolutions came from his associates, from his Christian Church where he was a faithful member, from the YMCA in which he took an active part, from labor organizations that fight communism, from his former teachers, veterans' groups, and many others. They were repeated so often that I know from their sincerity that Oatis was their friend whom they wanted to help.

Oatis had chosen newspaper work as his career. His early work was with the Marion Chronicle Publishing Co. As a reporter he immediately proved his ability. He later was employed by the Associated Press in Indianapolis and shortly thereafter was transferred to Washington, D. C. Then came his assignment to Czechoslovakia, where he continued his work as a news correspondent. In this connection, Oatis was performing his duties as any newsman would do. Apparently, however, in Czechoslovakia, the normal gathering of news was interpreted as spying. This was the charge on which he

was arrested, and, also after a sham trial that was a farce, on which he was convicted.

Early in May, I introduced House Joint Concurrent Resolution 140, which expressed indignation and called upon the agencies of the United States Government and the United Nations to take action to secure the release of William Oatis. I also kept in touch with the State Department, but soon became convinced with others that little, if any, worth-while action was being taken. Accordingly, I submitted another resolution, which called for cancellation of trade relations with Czechoslovakia. Many other resolutions from members of both parties were submitted, but all of these resolutions remained in the House Foreign Affairs Committee and William Oatis remained in a rotting prison.

An aroused public opinion, as expressed by the press and the radio, found expression in action in this committee. The committee then sidetracked other important legislation to report the Oatis resolution to the House floor early in August. When this resolution came out of committee the provision to sever commercial relations was deleted, but an amendment on the floor of the House restored this worth-while and necessary provision that would make it more effective.

(Mr. BEAMER was asked the intent of his resolution.)

Mr. BEAMER. It expresses the sense of the Congress that the United States must protect its citizens. Since the usual procedure followed by other countries in behalf of a national were not recognized by the Communist-dominated Czechoslovakian government, it was felt that the most effective means would be to sever trade relations.

The pocketbook is an important part of any political economy. Only a few years ago the United States enjoyed a favorable balance of trade with Czechoslovakia but it has continued to dwindle until our exports to Czechoslovakia are an insignificant figure in comparison with her imports into our country.

For example, in the first 4 months of this year, our exports to Czechoslovakia were only slightly in excess of \$700,000, while the imports to the United States during the same period were in excess of \$11,000,000, or a balance of trade in favor of Czechoslovakia in the ratio of approximately 15 to 1.

Czechoslovakian exports are products made by slave labor and by so-called free labor that receives perhaps not more than 20 to 25 cents per hour, and their products complete with those made by American labor.

My resolution in behalf of William Oatis has passed both the House and Senate but a resolution is only as strong as the executive department, where it now rests, can or will make it.

For this reason, on August 22, I addressed a letter to President Truman, urging him to take the action that lies in his power. The President has replied that he was doing everything in his power to stop Czechoslovakian trade and communication with the West, and otherwise to secure the release of Mr. Oatis.

Newspaper reports recently indicated that Secretary of State Acheson handed the Czechoslovakian Ambassador Prochazka a copy of my resolution which was passed by the Congress.

It is hoped that the firmness expressed by the Congress in passing this resolution will be reflected in the same determination by the President and the Executive agencies of the Government.

Some of the methods employed to put into effect the cancellation of trade with Czechoslovakia are bearing fruit. First of all, travel visas were canceled and this had the effect of discouraging buyers from the United

States who might purchase Czechoslovakian products for resale in our country.

In today's newspapers we learn that the United States had won international authorization to scrap its trade and tariff concessions to Communist Czechoslovakia by a vote of 24 to 1, only Czechoslovakia voting against the United States' request. The General Agreement on Trade and Tariffs approved the United States decision to end tariff concessions to Czechoslovakia. There also is the President's power under the basic Trade Agreements Act to withdraw any proclamation of reduced tariffs when it seems best in the public interest to do so. That method certainly would be most effective.

The new Czech Ambassador, who presented his ambassadorial credentials recently, is a top-notch Communist, trained in the highest circles of that Marxian philosophy, and he was a prominent author of the Czech Constitution and laws under which Oatis was convicted. He belongs to an order that recognizes only force and might.

If our Ambassador, Mr. Briggs, in Prague will make demands instead of requests, if our own State Department will depart from its apparent fear of "something," and if our President will show the same determination that was shown by many illustrious Presidents of this country in the past, then will the Czechoslovak Government begin to realize that the American people do not want appeasement and that the rights of American citizens are inviolate.

(Mr. BEAMER was asked what impression he gathered from the statement which Ambassador Prochazka made to the newspapermen on the Oatis case at the press conference which he held on September 25.)

Mr. BEAMER. It was interesting to note that Ambassador Prochazka, of Czechoslovakia, in his press conference on September 25 stated: "Negotiations looking toward the release of Oatis might be possible if the United States abandons its political economic warfare against Czechoslovakia."

Thus, it is apparent that Czechoslovakia is vitally concerned about the loss of trade with the United States. As previously stated, the pocketbook is a very sensitive part of the political economy of any country. This is especially true of Czechoslovakia, because apparently she wants American dollars to bolster her weakened economy, to carry on her propaganda and, perhaps, even to bull out convicted Communists.

For my part, and I know that the friends of Bill Oatis in his home city of Marion, Ind., and in the United States, share this feeling. I see no reason why or how we can trust the Czech Government, judged by its past actions to free Oatis if we withdraw the intention of this resolution.

It is gratifying that an aroused public opinion in this country now is being fruit, and I would urge that the executive agencies and the Congress of the United States continue steadfast in their demands.

There was some consideration of the severance of diplomatic relations. Editorial comment expresses the opinion that the Congress is doing its best but that the State Department was falling down badly on this matter.

Mere words are not effective weapons, but the Congress has expressed itself in adopting my resolution, which I appreciate, in behalf of the district that I represent and in which Bill Oatis was born and reared.

The question often has been asked why the executive department did not take this action without being pressured to do so by Congress. Perhaps its history of dealing with Communists within our own borders and in other countries is an answer to the above question.

With justification, many Members of the Congress have insisted that if Oatis is not released by the severance of commercial rela-

tions, then the next step would be to recall and remove all United States nationals from Czechoslovakia and close our Embassy and consulates in that country—in short, sever diplomatic relations.

This move must be considered very carefully, but action, and positive action, must be taken without delay. This action might be playing into their hands if our consulates were closed and Oatis cases could multiply if an attempt were made to remove our nationals.

Another reason that it seemed the better part of wisdom to impose only economic sanctions at this time is the fact that this would give another opportunity at a later date to sever diplomatic relations if it seemed necessary to do so to produce the desired results.

I remember so well the story of Theodore Roosevelt and his famous message to the Sultan of Morocco, "Perdicaris alive or Razula dead." In those days the American flag was respected, and other nations found it wise to heed the warning expressed by the motto of one of our famous fighting forces in earlier days—"Don't Tread on Me."

William Oatis is an American, a young man of promise, and he possesses a body that does not appear too strong. He is more than just a name in our country today. William Oatis is a symbol of the freedom of speech, freedom of press, and the right to fair trial—yes, even freedom of life.

Crusade for Peace

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. LEHMAN. Mr. President, I have just received what I consider an accolade of high praise, consisting of an editorial from a Communist paper bitterly attacking me. The Communist paper to which I refer is *De Waarheid*, which is identified as the official organ of the Communist Party of the Netherlands and is published in The Hague.

An article in a recent issue of that publication, in the best Communist manner and tradition, attacks and vilifies a number of individuals in whose company I am proud to be. These include General Eisenhower, General Clay, Attorney General McGrath, and Commissioner Edward M. O'Connor, of the Displaced Persons Commission. This editorial was called to my attention by my good friend, Commissioner O'Connor, who felt as I did, that this criticism, leveled against both of us for our condemnation of the brutal mass deportations in Hungary, as well as for our association in the Crusade for Peace, is a mark of distinction. I am proud to be in such distinguished company as well as to raise my voice against crimes against humanity now being perpetrated in Hungary, and to associate myself with so many others in the great crusade for peace.

Mr. President, I ask unanimous consent that a translation of this editorial from *De Waarheid*, the Dutch Communist newspaper, be printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

WHO ARE THE PEOPLE WHO DARE TO SPEAK OF HUMAN RIGHTS?—EISENHOWER, CLAY, MCGRATH, SENATOR LEHMAN, AND O'CONNOR AND COMPANY ORGANIZE CRUSADE FOR THE PEACE AND AGAINST DEPORTATIONS

The latest stunt of Wall Street imperialists is the American Crusade for Peace, which is said to be supported by 25,000,000 Americans. Unconsciously the USIS (the American Information Service) has proved once again that Wall Street is responsible for this act of warmongering, in that it mentions the names of the leaders of this action. And, as the old saying goes, "Names are hateful."

CRUSADE EISENHOWER

The USIS bulletin of September 5 says that the Crusade for Peace was inaugurated by a special radio broadcast from Paris in which General Eisenhower delivered the first address. Literally, he said, that every American should participate in this action inasmuch as it could prove an extremely important weapon in the struggle against Communist imperialism. The peoples behind the iron curtain long to hear the truth, for they are the victims of a godless dictatorship, he said.

It should be recalled that this Crusade for Peace is intended to combat communism in Europe and the Far East, and to this end, it is planned to strengthen Radio Free Europe.

So far all this does not sound very peaceable, but it is only directed against communism in an effort to cause the peoples of the Peoples' Democracies, of the German Democratic Republic, and of the Republic of Communist China to revolt against their governments.

We may be permitted to describe in a few words the noble crusaders against Communist imperialism and godless dictatorship; a description which is lacking in the USIS bulletin.

Gen. Dwight David Eisenhower belongs to the Rockefeller set, which dominates all oil interests. Himself a capitalist, he was directly appointed by Wall Street and the Standard Oil Co. to defend the interests of this corporation.

Who talks of imperialism and godlessness? Or does the Rockefeller-man Eisenhower perhaps represent the millions of poor American Christians?

As chairman of the action committee of the Crusade for Peace the USIS bulletin mentions Gen. Lucius D. Clay.

It is generally known that General Clay was Supreme Commander of the American Army of Occupation in Germany after the Second World War and in this capacity repeatedly gave provocation to the Soviet Union.

Like Eisenhower, Clay is also a capitalist and more in particular an instrument of J. P. Morgan, the world's richest banker, who has complete control of the United States Steel Corp.

General Clay is a director of the New York bank, the Marine Midland Trust and of the Newmont Mining Corp. (Morgan). He is president of the board of directors of the canning monopoly, Continental Can, and one of the directors of the Lehman Corp., an investment trust with a registered capital of more than \$100,000,000, which we will soon again mention.

CRUSADE M'GRATH

Another leader of the Crusade for Peace mentioned in the USIS bulletin is J. Howard McGrath, holding the highest position in the United States in the field of justice. Crusader McGrath is also a millionaire—although a modest one as he has "merely" \$4,000,000—but then he is only a henchman. Ten years ago he had only \$25,000. Now he

is a millionaire shareholder in a race course. He is the man who before a Senate commission declared that the American Department of Justice had no authority to expel the king of the underworld, Costello, one of the most ill-famed gangsters, as there was insufficient evidence against him. Like his political associate Harry Truman, now President of the United States and once supported by the gangster Pendergast, McGrath never seriously combated the American gangsters. On the contrary, the American "upper ten" and the American underworld maintain the closest relations.

And this very McGrath and his supporters, millionaires and lackeys of imperialism, are bent on "bringing the true facts before the people behind the iron curtain and on restoring freedom to them"

CRUSADER O'CONNOR

In addition to this message re the Crusade of Peace the USIS bulletin disseminates for the umpteenth time slander and distortions of the "mass deportations" in Hungary. On page 8 of the USIS Bulletin one reads the idiotic statement that "the mass deportations under the Communist reign demonstrate clearly that a plan has been set in motion to exterminate the Hungarians as a race of people." As long ago as May 20, 1950, the *Algemeen Handelsblad* (anything but a Communist paper) was better informed when it reported on the ever rising standard of living of the masses in the new Hungary.

This hysterical account of the extermination of the Hungarian people is the product of Edward M. O'Connor, the American delegate to the Displaced Persons Committee. This Mr. O'Connor reports that prominent people from all segments of the Hungarian people are being transported to unknown destinations. Of course, in the case of Mr. O'Connor, the wish is the father of the thought, for those who were removed from Budapest—a complete list can be found in the Hungarian paper *Szabad Nep* of August 7—were prominent people during the Fascist Horthy regime. Over 3,000 were deported: former members of the Ministries, former factory owners, former bankers, former merchants, former land owners, and their closest associates, in short the former Eisenhowers, McGraths, and O'Connors in Hungary, who attempted to make Budapest a center of conspiracy.

CRUSADER LEHMAN

In the same breath the USIS Bulletin mentions Senator HERBERT H. LEHMAN, of New York, who is in such a hurry to escape the fate of the Horthy Fascists—which inevitably will overtake him once the American people have gotten rid of imperialism—that he urges the American Senate to start direct warlike action. The United States must take all practical measure to bring Communist-created terror in Hungary to an end.

Who is Senator LEHMAN?

Jointly, with his brother Arthur, he controls the investment trust of which his fellow crusader, General Clay, is director: the Lehman Corp. He has close and personal relations with President Harry Truman. Benjamin Bittenweiler, his brother's brother-in-law, is deputy to the present super-American in Western Germany, General McCloy (who, by his marriage, is closely connected with the capitalistic monopoly and a brother-in-law of Chancellor Adenauer).

CRUSADERS TRUMAN AND ACHESON

We have referred to Mr. Truman several times in the foregoing. His Foreign Secretary, Dean Acheson, and he, himself, are closely watching the deportations in Hungary—according to the USIS bulletin.

Both gentlemen are denouncing it. Of anyone who, like Acheson, has interests in the Standard Oil concern, this is understandable. In addition, Acheson is allied with

Morgan (United States Steel) via Fred Searls, a director of the Newmont Mining Corp., and Herbert Swope whose brother was, for many years, a director of General Electric

A PEACE PACT BETWEEN THE BIG FIVE

The 60 families of the monopolists and their lackeys cannot carry on a war on their own against the Socialist part of the world. Hence, Truman has thus far not dared to definitely waive the proposal of the Soviet Union to conclude a five-power pact.

No one should believe that the warmongers cannot be forced to conclude a peace. This will be done the moment they will be isolated and will have been denounced before an overwhelming majority of humanity.

Inland Waterways Corporation

EXTENSION OF REMARKS

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. CANNON. Mr. Speaker, there has been some discussion of recent changes in the management of the Inland Waterways Corporation. In order that the situation may be understood I am including in the RECORD the following correspondence:

INLAND WATERWAYS CORPORATION,
Washington, D. C., October 11, 1951

Hon. CLARENCE CANNON,
House of Representatives,

Washington, D. C.

MY DEAR CONGRESSMAN: Mr. William Duval, assistant clerk to the House Appropriations Committee, stated that you would like an explanation of the item appearing in the St. Louis Globe-Democrat on September 24, 1951, relative to Captain Ingersoll's resignation as President of the Inland Waterways Corporation.

Under date of April 3, 1951, Captain Ingersoll on behalf of himself and certain employees of the barge line, asked the Secretary of Commerce for permission to submit a proposal to organize a private corporation to purchase or lease the facilities of the Inland Waterways Corporation. The Secretary considered it highly improper for him to grant such permission, since it would involve the sale or lease of Government property to Government employees who were then engaged in the management of same. The Secretary told Captain Ingersoll that he should forget having submitted such a proposal and give his full time and attention to the operation of the line in the hope of reducing the annual deficit, instead of attempting to purchase the line.

Under date of September 13, 1951, the Secretary again received from Captain Ingersoll and certain of his associates a request for permission to organize a private corporation to purchase the assets of the Inland Waterways Corporation. The Secretary considered that Captain Ingersoll's action indicated gross insubordination and ordered his immediate dismissal. However, the Secretary did modify his original decision and permitted Captain Ingersoll to resign. A copy of pertinent correspondence is attached hereto.

The Globe-Democrat article of September 24, 1951, quotes Captain Ingersoll as saying that Secretary Sawyer had turned down at least four important proposals for the sale of the system. The four proposals he refers to are:

1. The proposal of Captain Ingersoll discussed above.

2. The proposal submitted December 15, 1947, by Mr. Theodore Brent, of New Orleans, representing the Committee Favoring Private Operation of the Federal Barge Line. This offer was predicated upon Congress passing remedial legislation which was not enacted.

3. The proposal by Henry DeBardeleben, of New Orleans, representing 13 barge lines, to lease the Inland Waterways Corporation facilities for 5 years with an option to buy. This offer was rejected by the Secretary, after consultation with the Advisory Board of the Corporation and members of his staff, as being wholly inadequate for the purpose of preserving the common carrier water service in accordance with congressional edict. In addition, it failed to provide for the necessary rehabilitation of equipment. The press release of February 15, 1950, which includes the Secretary's letter of rejection is attached hereto.

4. The proposal submitted by Arnold G. Stifel, of St. Louis, representing a group of New York, New Orleans, and St. Louis bankers. This proposal was rejected by the Secretary, after consulting with the Advisory Board and members of his staff, as not being adequate. A more detailed explanation of this is to be found in the letter of the Acting Solicitor dated February 20, 1951, to Mr. Stifel, a copy of which is attached.

With further reference to the Globe-Democrat article of September 24, I am at a loss to understand Captain Ingersoll's statement that Sawyer talks one way and acts another. The Secretary has been outspoken in his desire to transfer the operations of the Federal Barge Line to private interests just as soon as private interests will undertake the responsibility of rendering to the people in the Mississippi Valley the type of common carrier water service required by statute. The Secretary has encouraged the submission of offers and when same have been rejected he has invited revised proposals in the hope of obtaining an offer which he could accept under existing law.

The Secretary has, however, urged the Congress to appropriate sufficient funds to rehabilitate the Corporation so as to replace that portion of its boats and barges which are obsolete, and which range from 20 to 30 years of age. He feels that the Corporation can then be put on a paying basis with no further loss to the Federal Treasury, can furnish adequate common carrier service to the people in the Mississippi Valley, and can operate on a sound financial basis, thereby enhancing the opportunity for sale to private operators.

If there is any additional information you desire, please let me know.

Sincerely yours,

SOUTH THIMBLE, JR.

SEPTEMBER 21, 1951.

HON. CHARLES SAWYER,
Secretary of Commerce,

Washington, D. C.

MY DEAR MR. SECRETARY: This letter is my resignation.

When I accepted the position of president of the Inland Waterways Corporation 5 years ago it was with little knowledge of the task I was undertaking. I found a vast and moribund Government enterprise with no direction and little hope for the future. My examination of this enterprise convinced me that it was the intent of Congress 27 years ago that it be converted into a successful private enterprise as rapidly as possible. Toward this single goal I have labored under succeeding Secretaries of Commerce.

It has been my great good fortune to secure the assistance of as capable a staff as can be found in the river business; the measure of their worth can be seen in the progress they have made from multimillion

dollar annual losses to the modest profit achieved in the year just ended.

Progress toward financial success has been made unduly difficult by the well-known dubious condition of the Corporation's fleet, and I have accordingly watched with hope and disappointment the repeated efforts to secure funds from Congress and the Congress' refusal to finance this enterprise further.

Although I was a little skeptical of the willingness of private capital to take on the burden of this enterprise in the light of its record, nevertheless I encouraged and fostered the several would-be purchasers who have come forward in the last 5 years, and have been concerned at their regular failure to conclude a purchase of the Corporation.

The recent failure to secure the consent of Congress to the commercial financing of the rehabilitation of the fleet convinced me and my staff that only by the sale of the Corporation as a going concern could the rehabilitation of the fleet be accomplished and the future of the Corporation assured. We believe that only as a free enterprise can this barge line rebuild itself and survive to perform the services which have become so vital to the shipping public in the Mississippi Valley.

Accordingly, after endless study we prepared and submitted to you a proposal that the management staff, the men most directly concerned with the survival of the enterprise, organize a private corporation to purchase and operate the facilities of the Inland Waterways Corporation. We were confident that as a free enterprise we could finance the necessary rehabilitation and operate the barge line successfully. This proposal represented the culmination of 5 years' work to me, and its rejection leaves me, its chief architect, no alternative but to resign, effective at your convenience.

The work of the past 5 years has been an absorbing task, rewarding in many ways. It is with considerable reluctance that I leave it but since I cannot sympathize with the further continuation of the Inland Waterways Corporation as a Government enterprise, my usefulness is obviously at an end.

Respectfully yours,

A. C. INGERSOLL, Jr.

SEPTEMBER 21, 1951

Capt A. C. INGERSOLL, Jr.,

Inland Waterways Corporation,

St. Louis, Mo.

DEAR CAPTAIN INGERSOLL: I have your letter of September 21 in which you resign your position with Inland Waterways Corporation. This will constitute my acceptance of your resignation, and I have named Mr. W. C. Oliphant as acting president. He will relieve you on Tuesday, September 25, 1951.

I will comment upon only one of the points made in your letter. As you well know, I too, have had as a final goal the transfer of this enterprise from Government to private operation under the conditions which the Congress has laid down. Meanwhile, we are obliged to operate the line and this cannot be accomplished successfully by employees who are giving their attention to the possibility of winding it up. In order to make my position clear, I will not, as a matter of public policy, consider the sale of the Inland Waterways Corporation to any of its employees, past or present.

With kindest personal regards, I am
Sincerely yours,

CHARLES SAWYER,
Secretary of Commerce.

(Copies to Mr. Henry Scherer and Mr. South Trimble.)

SEPTEMBER 26, 1951.

Memorandum to Mr. W. G. Oliphant, Acting President.

It may be well for me to send this message in order to dispel any concern on the part

of employees of the barge line who signed the request for permission to purchase which was engineered and promoted by Mr. A. C. Ingersoll, Jr., while serving as President of the Corporation.

The Secretary decided to discharge Mr. Ingersoll and asked for his resignation when it became clear that he was persisting, in spite of instructions from the Secretary, in his effort to engineer the purchase of the barge line from the Federal Government. While the Secretary felt that the sole interest of the employees should be in making it a success and not in preparing to liquidate it, he believes the responsibility for this activity rested entirely with Mr. Ingersoll. The Secretary of Commerce has told me that no one of them need worry about his job, and I would like to have you pass this word on.

Now that Mr. Ingersoll is out of the picture, I know that those remaining will give loyal and enthusiastic support to making the operation a success for the benefit of the shippers of the Midwest.

SOUTH TRIMBLE, Jr.
Chairman, Advisory Board

UNITED STATES DEPARTMENT
OF COMMERCE,

Washington, D. C., February 15, 1950

Secretary of Commerce Charles Sawyer today announced that, after a thorough review by the Department of Commerce and by the Advisory Board of the Inland Waterways Corporation, he had rejected a proposal by a group of private carriers for leasing the transportation facilities of the Corporation. The proposal was rejected, Secretary Sawyer said, because it failed to make adequate provision for rehabilitation necessary to provide proper service to the public, particularly to small shippers, and because it did not make adequate provision for getting the Government out of the business.

The Secretary stated that he was in favor of transferring the Federal Barge Line to private hands under conditions providing assurance of satisfactory service and reasonable expectation of profit. He stated further that he would be glad to consider any proposal that would accomplish that result.

In a letter to Henry F. DeBardeleben, of Birmingham, Ala., who represented the private carriers, Secretary Sawyer said: "The proposal, in my opinion, does not make adequate provision for rehabilitation of the Federal Barge Line with the most modern and efficient equipment, without which I do not consider satisfactory operation of the line possible, either in terms of service rendered or of financial returns. Neither the Government nor private enterprise can provide the type of service called for without the equipment needed to do the job."

The Secretary pointed out that rehabilitation was of particular importance in providing satisfactory service to small shippers of less than barge-load merchandise traffic.

The reaction of the Advisory Board of the Inland Waterways Corporation was expressed in a resolution on the proposal which it adopted at its meeting last week in St. Louis. The text of the resolution follows:

"While the Board favors transfer of the Federal Barge Line to private enterprise under conditions assuring satisfactory common carrier service and rates, the Board does not consider that the proposed lease give this assurance. The Board recommends that further efforts be made to get a completely satisfactory proposal for private operation of the Federal Barge Line which would provide assurance of satisfactory service at reasonable rates through rehabilitation of the Federal Barge Line with the most modern and efficient equipment. The Board also recommends that any lease or sale should provide that the lessee or purchaser take over the rights and liabilities of the Inland Waterways Corporation with respect to terminals. Since the Board is of the opinion that the improvements contemplated in the rehabilitation

program now before Congress will be needed after as well as before transfer to private operation and cannot be delayed without seriously endangering the services rendered by Inland Waterways Corporation, the Board strongly recommends that the Secretary urge prompt completion of congressional action authorizing and making appropriations for the proposed rehabilitation."

Members of the Advisory Board are: T. J. Maloney, Chicago, Ill.; George Call, Sioux City, Iowa; Frank E. Bourgeois, New Orleans, La.; Col. Malcolm Elliott, St. Louis, Mo.; Thomas N. Beach, Birmingham, Ala.; Henry M. Baskerville, Minneapolis, Minn., and chairman, South Trimble, Jr.

The Inland Waterways Corporation, organized as a Government agency, took over operation of the Mississippi-Warrior service from the War Department in 1924. The Corporation was transferred to the Commerce Department in 1939. It operates over 3,300 miles of riverway through 21 municipally owned or leased terminals, in addition to many private terminals. Its equipment consists of 21 boats and some 250 barges.

The text of Secretary Sawyer's letter to Mr. DeBardeleben is attached:

FEBRUARY 14, 1950.

Mr. HENRY F. DEBARDELEBEN,

Birmingham, Ala.

DEAR MR. DEBARDELEBEN: I have given careful consideration to the proposal for leasing the Federal Barge Line which you made on behalf of a number of private carriers in your letter of January 12, 1950. I have also had my staff review the proposal and, as you know, the matter has been submitted to the Advisory Board of the Inland Waterways Corporation, and their recommendations have been obtained.

When I undertook responsibility for the Inland Waterways Corporation as Secretary of Commerce, I reviewed the entire matter to determine whether operation of the Corporation by the Government was still necessary and in the best interests of the public and the Government. This review led me to the conclusion that satisfactory common carrier service, particularly for less than barge-load merchandise traffic, can be provided at reasonable rates, on a profitable basis, but only if the Federal Barge Line is thoroughly rehabilitated and modernized with the most up-to-date and efficient equipment, both on the water and at the terminals. The service provided by the *Harry S. Truman* and the integrated tow demonstrates the benefits of modern and efficient equipment. It was on the basis of this study and this experience that I have recommended the rehabilitation program now under consideration by Congress. If the line were rehabilitated and modernized in accordance with this program, I am convinced that private enterprise would find it desirable to take over the operation of the line, on terms satisfactory both to the Government's financial interests and to the interests of the customers of the line and the public generally.

I have given particular attention to the proposal you have submitted, because it appeared that it might provide a suitable means of bringing about a transfer of the line to private hands. However, on the basis of our study of the proposal, I have come to the conclusion that the proposal does not provide a satisfactory basis for termination of the Government's activities.

The proposal, in my opinion, does not make adequate provision for rehabilitation of the Federal Barge Line with the most modern and efficient equipment, without which I do not consider satisfactory operation of the line possible, either in terms of service rendered or of financial returns. Neither the Government nor private enterprise can provide the type of service called for without the equipment needed to do the job.

In addition, the proposal, limited as it is to the transportation facilities, would

leave the Government encumbered with responsibilities and financial liabilities with respect to the terminals served by and serving the line, without control over the traffic for which the terminals were built and without an assured income to meet the financial obligations involved. This would leave the Government in an untenable position. Furthermore, I am as much interested in getting the Government out of the terminal business as I am in getting it out of the barge business.

Accordingly, I am unable to accept the proposal made in your letter of January 12, 1950.

I appreciate the efforts you have made to reach the goal we both wish to reach, transfer of the Federal Barge Line to private hands, under conditions providing assurance of satisfactory service to the customers of the line and the public generally and providing a reasonable expectation of profit for the business, without which satisfactory service would not be possible. If the group you represent could present a proposal which would give more adequate assurance of accomplishing these ends, I shall be glad to consider it.

Sincerely yours,

CHARLES SAWYER,
Secretary of Commerce

FEBRUARY 20, 1951.

Mr. ARNOLD G. STIFEL,
St. Louis, Mo.

DEAR MR. STIFEL: In your letter to me of February 15, 1951, you request further information about the basis of the Secretary's decision that the proposal made by your group for the purchase of the Inland Waterways Corporation was not acceptable.

As your letter indicates, the Secretary has on numerous occasions stated that he wishes to carry out the duty imposed on him by law to sell the Federal Barge Line to private interests, as soon as the various statutory requirements have been met, if an offer is received which he considers acceptable, both from the point of view of the Government's financial interests and from the point of view of protection of the territory served by the line through assurance of continued service.

As your letter also indicates, Assistant Secretary Davis, Mr. Trimble, and I felt that the proposal submitted by your group on January 17, 1951, deserved thorough consideration by the Advisory Board of the Inland Waterways Corporation and by the Secretary, as it provided for an investment of new capital in the business and for a substantial purchase price, even if somewhat delayed, and as it provided some degree of assurance that continued service would be provided. Whether the offer would be accepted, we could not, of course, state, though we were compelled to point out that some of the secondary conditions specified were clearly not acceptable, such as the commitment to provide steel and the commitment to provide an RFC loan.

In accordance with our advice to you, the proposal was presented to the Advisory Board and to the Secretary, and, as my letter of February 10, 1951, stated, the matter was reviewed and considered at length by both the Board and the Secretary.

It was on the basis of the recommendations of the Advisory Board, and his own review of the proposal, that the Secretary decided not to accept the proposal. I understand that this decision was based partly on his opinion that the offer did not compensate the Government adequately for the property to be transferred, and partly on his opinion that the proposal did not provide sufficient assurance that the service now provided by the line could be maintained in the future. The Secretary's decision was not based, of course, on the reasonableness or fairness of the proposal, but upon his opinion of the desirability of the proposal to the Government and to the territory served by the line.

I had intended in my letter to make it clear that the Secretary would be glad to discuss with you in person, or with your group, the factors which entered into his decision, if you would care to do so. Please let me know if you would like me to make an appointment with him for this purpose, or if I can be of any further assistance to you.

Sincerely yours,

MATTHEW HALE,
Acting Solicitor.
(Copies to Mr. Trimble, Assistant Secretary Davis.)

Governor Murray, of Oklahoma, Blasts Federal Domination of States

EXTENSION OF REMARKS OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20 1951

Mr. SCHWABE. Mr. Speaker, the following article appeared in the Tulsa Tribune of October 16, 1951. Our Governor, Governor Murray, of Oklahoma, blasts Federal domination of the States. It is worthy of interest for the reason that Governor Murray is a staunch Democrat and apparently is convinced that the Federal Government is dominating the States to a degree that is almost intolerable.

The article follows:

MURRAY BLASTS FEDERAL DOMINATION OF STATES

CHICAGO, October 16.—Gov. Johnston Murray of Oklahoma, today charged that the national administration is violating "every conception of States' rights and local self-control," and called up the plain folks to stop it with his one-word prescription—action.

Murray, addressing the United States Independent Telephone Association here, urged the people to put an end to centralized power in Washington by returning more self-government to the States.

"The National Government," said Murray in a speech he called nonpolitical, "to keep up the ever-increasing hordes that have attached themselves like leeches to the body politic, has invaded every known field of taxation—a thing, which prior to passage of the income-tax amendment, was virtually unknown."

"And we now find both the States and the National Government alike imposing every conceivable type and kind of taxes."

"That's not all," he warned. "While one horde imposes, another is delving into the depths of human ingenuity, seeking to invent more and different kinds to impose."

Dwelling at great length on how the Constitution of this country was born, and the ideals which were incorporated into it, Murray said that such overlapping of the power to tax never entered into the minds or thoughts of the Founding Fathers of this great Nation.

The Oklahoma chief executive declared his speech was strictly nonpolitical, then explained why. As he did so, there was a degree of contradiction in his statement, particularly as to his criticism of the present National Government.

Just a few days ago the governor declared he would not join a States' rights revolt against the administration. He said he would stick with the regular Democratic Party.

"Let me say . . . that my remarks here are intended to be, and are, strictly nonpolitical and that the evils of which I

speak are as strong in one locality as they are in another.

"It is the over-all trends to which I refer, and not to specific instances, and therefore when I speak of the National Government, or of State governments, let it not be construed that I am speaking in condemnation of the present administration."

Later, he said, "It is not my intention here to enter into a defensive discussion of the national tendencies."

Murray said that although from time to time, since the Constitution was framed, onslaughts were made to enlarge the powers of the central Government and limit the sovereignty of the States.

Then he stated "until the last quarter of a century . . . we regained what might be termed a constitutional equilibrium," but that during that 25-year period "we find the ark which contains the covenant swiftly drifting toward the precipice of doom."

He then charged that the gradual and willing surrender that has been made by the people and the States to the central Government is more responsible for the Government's economic ills than any other single contributing factor known to us at this time.

"Sure," he declared, "we cuss, condemn, criticize, and castigate the President, Congress, the bureaucrats, and the many alphabetical divisions of the National Government for a condition which we know is wrong, and which is gradually but surely leading us to the place where rights of the individual and of the States will vanish into oblivion."

He said many of the surrenders he charged to people and the States have been made under the "sugar-coated guise of benefits to be received." Under such conditions, he contended, the National Government is taking from the States their rights and privileges in matters of education, public roads, public health, and the like.

This, the States have deliberately placed into the lap of the Federal Government and, in effect, said "Here is our business, here are our rights, here are our individual privileges. Take them, become our master, let us be your slaves," Murray said.

"So," declared Murray dramatically, "while these seeming benefits flow back, by reason of our surrenders, to us from the National Government, we should pause, think, and look toward the horizon when we come to the end of the trail and stand dejected, looking into the abyss, the last vestige of individualism and retained power torn from us, while we are ground away and rendered lifeless, an infinitesimal cog in the wheels of statism."

Murray called attention to the fact that many of these powers the Federal Government is exercising today—which he said violate every conception of States' rights and local self-control—have been caused by the willful and voluntary surrender by the States of their own rights and privileges.

"Year after year, session after session, we find our State legislatures entering into compacts, passing laws authorizing the creation of entities which have for their purpose dealing with the Federal Government and surrendering the rights of the States to exercise their power in matters such as public welfare and many others of vast importance."

"We know full well when we do it that if the Federal Government is going to underwrite a program for any purpose, that it is going to exercise complete control over the project so underwritten whatever it may be," Murray continued.

He said the advocates of strong centralization are neither willing to rest nor be satisfied, they seek now to enter the fields of private industry, private professions, and that this is particularly true in the public utilities division of private enterprise.

He then explained why he vetoed the Rural Telephone Act passed by the Oklahoma Legislature last session.

"I vetoed it because it seemed to be an effort to strengthen the theory of strong centralization and special privileges instead of an advocacy of the sovereign rights of the State," he declared.

"I might have been wrong, but to me it seemed to be an act that had for its purpose broadening the gate through which the Federal Government might invade a private utility," Murray said.

He said he could find no reason why a cooperative corporation should enjoy special privileges and immunities simply because it bore the name "cooperative."

"I have long taken the position that such exemptions in the matter of taxation whenever and wherever granted, are basically, fundamentally, and economically unsound."

"My father (W. H. 'Alfalfa Bill' Murray) before me advocated this doctrine," Murray said, "and vigorously opposed tax exemptions while he was Governor of Oklahoma."

"But other administrations have seen fit to grant special tax exemptions until those exempt almost equal the number of those who pay. In fact, they may exceed the number of those who pay," he said.

Murray then said the plain folks have been sleeping, and that Rip Van Winkle was a piker as compared to the sleeping proclivities of the taxpaying American citizen who ought to be awake.

He declared the Oklahoma Legislature received his requests for rigid economy in State government with fear and trembling.

"Throughout the session," he charged, "I was never able to create the public demand" for his innovations, such as retrenchment in Government activities, abolition of overlapping boards, commissions, and department, and a complete new system of tax evaluation and assessment.

He said the plain folks ought to be willing to surrender some individual liberties and their States some sovereignty when matters of national security are in jeopardy, but that in our zeal to give, they must not fail to say to the Federal Government.

"These rights and privileges (temporary surrender in time of emergency) must be returned when the emergency ceases to exist."

In conclusion, Governor Murray said that unless a man is willing to fight for what he believes is right in the administration of his government; fight until he is bloody and beaten, then stagger to his feet and fight some more, he should not be heard to complain about the manner in which it is operated.

"On the other hand, you show me a citizenship that is informed, alert, and which approaches, and which considers the business of its government a part of its business, and I will show you a nation that will stand against the ravages of 'isms,' creeds, and time."

All Engineers Are More or Less Definite in Their Opinion That Our Coal Reserves Will Greatly Outlast, by Hundreds of Years, Our Supply of Petroleum and Natural Gas

EXTENSION OF REMARKS
OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. ELLIOTT. Mr. Speaker, all civilization is powered by the fuels which give man the energy with which to build, and with which to make war. All our

sources of energy—coal, wood, water power, oil, natural gas, atomic power, power from the sun's rays—are of the utmost importance. On the one hand we must conserve, and on the other develop the most efficient means of using the energy sources we have. This is emphasized by the fact that the assured reserves of petroleum are only 16 times the recent average annual production. The assured reserves of natural gas are only 38 times the recent average annual production. Of course, it is recognized that new sources in the course of exploration and development will be found, but the fact remains that of the total area of the United States which has been definitely tested by drilling for oil and gas only 2 percent has proved to be productive.

On the other hand the recoverable reserves of coal in the United States amount to 484 times the recent average annual production.

Some experimentation is being carried on by the United States Bureau of Mines in the field of coal gasification, such as the experiment at Gorgas, in the Seventh Congressional District of Alabama, which is a joint endeavor by the Bureau of Mines and the Alabama Power Co.

It is my judgment that all experimentation in the field of synthetic liquid fuels should be speeded up against the day when the drain on our petroleum fuels may be so heavy as to make it immediately practical that we go into widespread production of synthetic liquid fuels. I think the day has arrived when our experimentation in this field should be greatly expanded. It was with this thought in mind that I introduced in this session of Congress House Resolution 471, a bill to authorize the construction and operation of facilities for experiments in underground gasification of coal and lignite, oil shale, and other carbonaceous deposits to promote the national defense and increase the energy and chemical resources of the Nation. I am hopeful that the second session of the Eighty-second Congress will take this bill up and pass it to the end that experimentation in this field may point the way to new methods in the use of the energy inherent in coal.

The experiments in coal gasification, such as the one at Gorgas, Ala., can be regarded in the light of national insurance against the day when our need for synthetic liquid fuels may become acute.

Mr. Speaker, the coal industry has had its troubles for several years now. In 1949 the economy of many areas dependent upon coal suffered greatly. The coal-producing part of the Seventh Congressional District of Alabama, which I have the honor to represent in the Congress, suffered considerably. In the Eighty-first Congress I introduced a bill—H. R. 7660—providing for the establishment of a commission to investigate and study the conditions and problems of the coal industry and report to the President and the Congress its findings and recommendations. I believe we made a mistake in our failure to enact this bill into law. True enough, conditions brought about by the impact of the Korean war and our resulting preparedness program have improved

the immediately existing conditions in the coal industry, but I believe the underlying problems in the industry are just as great now as they were then.

I believe now is an excellent time for the appointment of a commission to study the coal industry, so that it might make a more objective study and investigation when the immediate conditions of unemployment in the industry are not as pressing as they will likely become when the present war and defense program are over.

One happy development for the coal industry in recent years is the expanding use of coal for generation of electric power. In 1950 the utilities of the Nation used 92,000,000 tons of coal—18 percent of the national production.

At least one eminent authority has estimated that the use of kilowatt-hours of electricity will expand from the 275,000,000,000 of 1950 to 634,000,000,000 in 1965, or an increase of 250 percent in the next 15 years. It is then estimated that the electrical industry will use 211,000,000 tons of coal annually, or 41 percent of the production rate of 1950.

The Alabama coal fields will, of course, share in this increased use of coal for electrical generation.

Mr. Speaker, under leave to extend my remarks, I include the major portion of a very fine address entitled "The Future Outlook of the Fuel Supply for the Southeast," delivered by Dr. Milton H. Fies, consulting mining engineer, Birmingham, Ala., before the Southeastern Electric Exchange, at Richmond, Va., October 4, 1951, in which he deals with present and future developments in the field of coal and other basic fuels. The address follows:

THE FUTURE OUTLOOK OF THE FUEL SUPPLY FOR THE SOUTHEAST

(By Milton H. Fies)

My reason for accepting the invitation to talk with you about fuel is to pay my respects and, as a mining engineer, to acknowledge the noteworthy and conspicuous achievements of the utility engineers who have enabled the people of our country as a whole during the past 10 years to obtain a product so essential to their daily lives on a cost basis equal to or less than that which prevailed at the beginning of this decade, despite the inordinate increases in every item which goes to make that cost.

The increase during the 10-year period 1939-49 in essential commodities necessary to the operation and maintenance of utilities runs something like this: Building materials, 114 percent; structural steel, 68 percent; lumber, 208 percent; nonferrous metals, such as copper and aluminum, 85 percent; motor vehicles, 91 percent; textile products, 100 percent; farm products, 153 percent; labor (all manufacturing industries), 120 percent; coal, 97 percent. Notwithstanding these factors and because of increased consumption, there has been a decrease in the cost of electricity from 1939 to 1949 of 14 percent to all consumers in the Nation. If I may be pardoned for referring to Alabama, the average cost per kilowatt-hour sold to residential consumers has been reduced 28.2 percent in that period; rural consumption, 34.7 percent; commercial lighting and power consumption, urban, 26.7 percent; and the industrial consumers, 1.1 percent. This record and that of the industry as a whole cannot be described other than by the word distinguished, and since I am only a part-time employee of utilities, I can, therefore, with less reluctance insist that this accomplishment should be

more widely proclaimed from the housetops. I know of no other group of engineers or administrative officials whose accomplishments measure up to those of electric utilities and I am happy to salute you. I doubt that you will be able to maintain this record due to great increases in your cost components since 1949, but what you have accomplished has no equal.

In our discussions of fuel this morning, because of my own lack of information, I am able to make only a passing reference to the use of atomic power in the production of electricity by utilities. This problem, as you are no doubt aware, is subject to intensive research. The recent determination on the part of the Government to build a submarine to be propelled by atomic power is at least some indication of its practicality without reference to cost, but we have no definite information as to the possibility of its use in the immediate future by utilities. Some authorities state that they can see no great probability of its use within 30 years. Dr. Conant, president of Harvard University, on a visit to the State of Alabama during the past year stated that in his opinion the use of power obtained from the underground gasification of coal held greater possibility than the industrial use of atomic energy. Howard W. Blakeslee, scientific editor for the Associated Press, in reporting on the meeting of the American Chemical Society in New York on September 5, quoted Dr. Conant as predicting that "our power will come in another half century from the sun's rays rather than atomic fission." This statement from so eminent an authority warrants serious scrutiny. But, since in considering the industrial use of atomic power we are dealing with an unknown, it is impossible to give atomic industrial power authentic position in our discussion today.

You have a great stake in this matter of fuel because of its essentiality in the production of electricity in the future. You have become one of the largest consumers of coal and you are justly classed as one of the largest consumers of fuel oil and natural gas and the trends indicate that you will greatly increase your consumption of fuel as the years roll on. The consumption of coal by the Nation's utilities in 1950 was 91,865,978 tons, approximately 18 percent of the Nation's production, 75,287,618 barrels of oil, and 627,978,581,000 cubic feet of gas. If we take 4.167 barrels of oil and 24.962 cubic feet of gas to one ton of coal, the total consumption of fuel on a coal basis for 1950 amounted to 135,103,983 tons. The oil which was used in 1950, if converted to coal, amounts to in excess of 18,000,000 tons and the gas in excess of 25,000,000 tons. The consumption of fuel by utilities through May of this year is at a greater rate than for 1950.

At the May meeting of the American Mining Congress in Cleveland, Ohio, in an address entitled "Coal and Kilowatts," Mr. L. R. Ludwig, assistant to the vice president in charge of industrial products, of the Westinghouse Electric Corp., made these observations. The market analysis of his company, which is a large manufacturer of electric machinery, estimated that the sale of kilowatt-hours will increase from 275,000,000,000 in 1950 to 634,000,000,000 in 1965, or two and one-half times. As compared to the approximately 82,000,000 tons of coal consumed by the electric industry in 1950, it is calculated you will burn a minimum of 211,000,000 tons in 1965. The total will, no doubt, according to Mr. Ludwig, exceed this figure since it is doubtful that the percentage of oil and gas consumed by the industry, namely 33 percent of the total, can be maintained. The cost of fuel for all electric-generating plants, large and small, represented on the average 74 percent of the total cost. This constitutes the most important item in your cost and it will no doubt prove to be more important as time passes. The

cost of mining, the effectiveness of coal preparation, particularly as to moisture reduction, and coal freight rates, in short the delivered price of coal, is a matter for vital consideration as far as your future is concerned.

Mechanical and electrical engineers have made almost unbelievable strides in reducing coal consumption per kilowatt-hour; nevertheless, as we understand engineering principles today, you have reached a point near the end of that road. In 1900 generating plant performance was such that, on the average, it was necessary to burn 7 pounds of coal for each kilowatt-hour produced, but by 1950 plant design and performance had improved to such an extent that, on the average, it was only necessary to burn 1.19 pounds of coal per kilowatt-hour, and as little as three-quarters of a pound of coal in some of the newest steam plants. Certainly marvelous progress has been made in this respect. The turbine designer made his contribution to this progress. In 1900 the first turbines required steam with a heat content of 23,000 B. t. u. for each kilowatt-hour produced, but by 1950 the heat requirements had decreased almost two-thirds, and only about 8,000 B. t. u. in the form of steam were required per kilowatt-hour produced. Considering the design and material problems involved this showing has not been excelled, so far as I know, by any other engineering group. But Mr. Ludwig raises this question: What of steam turbines tomorrow? He states that Westinghouse engineers took a machine of 1,200 and 3,206 pounds pressure (which is the pressure at which water and steam have the same density) and found that such a machine should produce 8 percent more kilowatt-hours per ton of coal than a 1,050" 2,000-pound turbine, both employing reheat. This, these engineers calculated, would give the thermal about a 40-percent efficiency, as compared to today's anticipated best of about 37 percent.

The opportunities, therefore, for economy in the production of electricity under presently understood engineering principles lie, it seems to me, in improvement in coal mining technique, better preparation and drying of coal and better transportation methods. It is to these elements of cost that your attention must be directed. After exploring the location and extent of the fuel reserves in the country, and more particularly in the Southeast, we shall consider the contribution the electrical industry can make in furthering these means of reducing the cost of its product by directing your talents and ingenuity to this all-important end.

In considering the fuel reserves of the United States and the methods employed in estimating these reserves, particularly with reference to coal, the results in all cases must be regarded as approximate. It has been stated by some geologists that the estimates of our petroleum and natural-gas reserves are generally regarded as proven, though not in the sense that mining engineers refer to coal as measured or proven. But even when limiting specifications such as thickness, depth of deposit, etc., in determining the coal reserves of the United States, all engineers are more or less definite in their opinion that our coal reserves will greatly outlast, by hundreds of years, our supply of petroleum and natural gas. There are some mining engineers who decry the assumptions on which the estimates of our coal reserves are made that coal 14 inches in thickness, down to depths of 3,000 feet, will never be regarded as workable. Who is there amongst us who could attempt to discount what engineers may accomplish 100 years from now? When one considers the progress of the past 50 years in mine engineering and mechanization, to attempt to read into 20 generations our standards of today strikes me as being nothing short of foolhardy. But even

with the restricted specifications imposed on recent estimates of coal in the United States, we need have no concern for hundreds of years to come. The United States Geological Survey in its November 1950 Progress Report on the Nation's Coal Resources made this comment. Calculations, "based more conservatively on appraisals of proved or definitely assured reserves show that the assured recoverable reserves of coal in the United States are 484 times the recent average annual production, the assured reserves of petroleum are 16 times the average annual production; and the assured reserves of natural gas are 38 times the average annual production."

Figure 1 [not printed] shows the coal fields of the United States from a map prepared by the Geological Survey of the Department of the Interior. If you consider the area east of the Mississippi and south of the Potomac, you will note that the coal fields are centrally located with reference to our Southern States.

Only 30 percent of the total coal reserves of the United States occur east of the Mississippi River, yet this area contains 60 percent of the total reserves of bituminous and anthracite coal. The coal-bearing States west of the Mississippi River contain 70 percent of the total reserves of the Nation, but most of the coal is lignite, subbituminous, or high volatile bituminous rank.

Figure 2 [not printed] shows the remaining reserves in the United States in January 1950, and if you consider those States southern, as Alabama, Arkansas, Kentucky, North Carolina, Oklahoma, Tennessee, Texas, Virginia, and West Virginia, it will be observed that there are vast reserves in these States, exceeded only by North Dakota, Colorado, Montana, Illinois, and Wyoming.

Figure 3 [not printed] shows the remaining reserves in the United States by States according to tonnage and heat value and of the total reserves on a 50-percent recovery basis.

Figure 4 [not printed] illustrates the proved reserves of liquid hydrocarbons in the United States estimated by the American Petroleum Institute, as of January 1, 1950, with a scale of 1,000,000,000 barrels shown in the right margin of the map. You will note the tremendous reserves of Arkansas, Louisiana, Oklahoma, and Mississippi. These reserves total 73 percent of our known reserves and such total is estimated as of January 1, 1950, at 28,378,000 barrels. Some petroleum engineers argue that despite the enormous consumption of petroleum products in the United States during the past 50 years, our reserves today are greater than they were 50 years ago and for that reason there need be no apprehension on the part of our people that such a condition will not continue more or less indefinitely. There are those, on the other hand, who contend that the cost of exploration for oil has increased tremendously; that it is obtained at greater depths, that the percentage of dry holes to total holes drilled each year is on the increase, that oil companies would not go into our Gulf coast, some 50 miles offshore, to drill for oil if there were an adequate supply on land, that we are importing in excess of what we export, 1,000,000 barrels of petroleum products per day, and have concluded, therefore, that we had best begin to look for another source for our liquid fuels. I shall make reference later as to the part that coal may play in that future.

Figure 5 [not printed] is a map of the United States showing the distribution of oil fields and unproductive areas classified with respect to their relative likelihood of yielding commercial quantities of oil. You will please note the extensive area in our country regarded as unfavorable or impossible, with a fair territory still remaining classified as possible. The oil fields themselves shown in extreme black, when compared with

the remaining area shown as possible, at least gives some idea of the limitations surrounding the discovery of oil. As a matter of fact, the Report On Fuel Reserves of the United States made to Congress states: "Of the total area in the United States definitely tested by drilling 1 to 2 percent proved to be productive."

Figure 6 [not printed] shows the proved reserves of natural gas in the United States as estimated by the American Gas Association. Here, again, you will note the tremendous reserves in the southern part of our country. As a matter of fact, Texas, Louisiana, Mississippi, Arkansas, Oklahoma, Kentucky and West Virginia contain nearly 80 percent of the total reserves of the Nation.

Figure 7 [not printed] is interesting because it shows the natural gas reserves and the production from 1918 through 1949. The tremendous increase in production is evident and also the relationship between the total reserves and the production. It is extremely difficult to forecast what the future discoveries of natural gas may be. It is generally the opinion that intensified and deeper drilling for oil will likely result in future discoveries of gas. I am sure that there is no group of men in the United States who recognize more strongly than you the fact that the price of gas continues to rise, that most contracts for gas are interruptible, and that some consideration is being given by governmental authorities as to restricting the use of gas. Then, too, the increasing consumption of petroleum and natural gas should not be disregarded. I have seen recent estimates that the consumption of petroleum products in our country in 1951 will exceed that of 1949 by 20 percent.

In making these statements as to the extent of our reserves of petroleum and natural gas, I do not propose that you divide the reserves of natural gas and petroleum by the annual production in order to determine the life of these reserves. There will be additional discoveries and new fields, but even the most optimistic have concluded that as scientific techniques are accepted today, coal will prove to be the mainstay for production of electric power in the future. When one considers that petroleum is becoming increasingly important as a raw material for chemical manufacture, that 25 years ago we produced only 150,000 pounds of petroleum-derived chemicals, as compared to an estimated 8,000,000,000 pounds in 1950, and that natural gas and refinery gases yield about 3,000,000,000 pounds of ethylene per year, and that chemical products derived from petroleum and natural gas are only in their initial stage of development, the importance of coal to you must necessarily loom high.

At the risk of being repetitious, I would like to emphasize that the delivered price of coal must carry great weight in your thinking. The delivered price of coal is made up of two factors, one is the cost of production plus some reasonable profit, and the other transportation cost.

The cost of production of coal in the various sections of the United States varies greatly. As a matter of fact, it varies greatly as between mines in limited areas. Averages on the basis of cost of tons per man-day for individual States, or even the Nation as a whole, do not tell the complete story, and while they are indicative of trends, your investigations, I am sure, will lead you to the consideration of coal mines which possess advantageous physical conditions and good quality steam coal.

But even in considering national averages, great progress has been made in the tons of coal produced per man per day in all bituminous and lignite coal mines of the United States, underground and stripping. Although the working time underground has been reduced to approximately 7 hours, the number of tons produced per man per day in the United States since 1935 has increased

from about 4½ tons to nearly 6½ tons. That is an increase of about 44 percent. In underground mines the number of tons per man-day has increased from about 4.2 in 1935 to 5.5 in 1949. This includes all mines, good and bad, large and small. The difference, of course, is due entirely to mechanization. In 1949 mechanically loaded underground output and strip mined coal accounted for 73.1 percent of the total annual output as compared to 37.3 percent in 1939.

In those mines where large-capacity coal-loading equipment has been utilized with belts on cross working entries for the transportation of coal, the percentage of increase in tons per man-day has been significant, and where in recent months the new type machine has been used which rips or tears the coal from the face and loads it directly into shuttle cars underground, the reduction in cost in many mines has been almost unbelievable.

In one mine in Alabama which has been using three of these machines during the past year, it has been experienced that these machines can produce coal for one-third of the face labor cost of the conventional-type loading machine. In addition, no explosives are required, the cost of timbering is greatly reduced under certain roof conditions, and the attendant hazard of mining is greatly minimized. Few men connected with the mining profession have realized the damage inflicted on roof by explosives used in shooting coal and, as you know, 65 percent of the accidents that occur in this extremely hazardous business of mining, results from falls of roof and coal, mostly roof.

In this mine in Alabama which has been successful in the use of the continuous miner-type of machine, roof rock directly over the coal, called draw rock, and which could not be controlled or supported with the conventional method of cutting, shooting, and loading coal, remains in place with the new machine and is easily controlled. This new type machine offers great opportunity in coal fields of moderate or high cost and it is greatly to your benefit to not only interest yourselves in the progress of this and other type machines, but wherever possible to render a contributing hand from an engineering standpoint in the development of the machine and encouragement in its use.

In thick seams of coal 6 feet and over, where mine costs are low, the margin where-in costs may be reduced does not exist, and the difference in the actual cost of loading coal between the conventional machine and the new type of machine is not of great moment. However, the many other advantages mentioned, plus the fact that greater concentration of working places underground can be obtained with these newer machines, even in the thicker coals where new mines are to be developed, it will likely be found that the use of these newer type machines is economically desirable. One objection raised to these machines by coal producers has been that the machine grinds the coal and the undersize product is excessive. This now is being eliminated to a great extent in a new type cutting head for the machine, successfully employed in many mines.

A new type machine called an auger or recovery drill is being experimented with at a mine in Pennsylvania. This auger drill is designed for use in coal beds from 30 to 36 inches in thickness. It holds much promise for cost reduction in thin seams.

There has been developed largely through the research and effort of the United States Bureau of Mines in recent years a new method of supporting mine roof. This is known as "roof bolting" or "roof pinning" and is accomplished by anchoring bolts in a sufficiently strong rock above the strata immediately over the coal bed. These bolts are usually slotted at the end and have a wedge which fits in the slot and when driven into the strata expands the holes in the rock

which lies directly over the coal. Other means of supporting the roof are either with expansion bolts similar to the type of bolt used in supporting trolley-wire clamps along the haulage ways of mines, only penetrating deeper into the strata. Some 494 mines in the United States now employ this method of timbering which increases safety because the roof is supported immediately as the coal is removed, men are not required to handle heavy timbers and cross collars and the efficiency of loading machines, because of the absence of posts and props which may be knocked out in their operation, has been most marked. I have in mind one mine in Alabama where the efficiency of the conventional type of loading machine was increased from 25 percent to 30 percent.

Great progress has been made by coal producers in the preparation of coal. As mechanization has increased in mines throughout the country, and since the machine in loading does not differentiate between coal and extraneous matter, washing machinery has become absolutely essential. Dewatering screens have in many instances minimized the percentage of moisture in size, say, plus one-eighth, but with the minus one-eighth-size coal, much research is still required in order to overcome the moisture problem. After all, from the standpoint of heat units, a percentage of moisture does as much harm as a percentage of ash. The drying of minus one-eighth coal, whether by heat drying, centrifuges, or filters, has greatly improved this phase of coal preparation, but in the opinion of many engineers much effort must yet be put forth to attain the efficiency in the drying of coal that the situation demands.

As you are no doubt aware, there is a growing disposition on the part of utilities looking to the future, to make long-term contracts for coal on some reasonable margin of profit basis. This tends to stabilize the coal situation and serves as insurance. The most recent contracts of interest, with which I feel sure you are familiar, is one of a large Illinois utility with a large coal company, covering a period of 30 years; a large utility in Indiana with another large producing company, and in one of our Southern States a contract was made in 1947 for a period from 7 to 15 years covering a large quantity of coal for steam plants in that area. There are periods of depressed conditions in the coal market when coal can be purchased at prices lower than those obtained by the several utilities which I have mentioned, but if there is to be a stabilized situation with reference to this commodity, which constitutes such an important factor in the cost of producing electricity, the utilities cannot and I am sure do not expect to exist on the distressed situation in any industry. When one considers the significance of coal to the electric utility industry throughout the country, permanence of supply is fundamental.

This brings us to the matter of transportation. The cost of transporting coal in the United States from the mine to the consumer, on an average, amounts to more than the cost of the coal itself at the mine, and in many instances the cost of transportation is 25 to 40 percent more than the cost of producing the coal. The railroads have their own serious problems—increased cost of supplies, growing cost of labor, and the expansion required of them as of other utilities and industries has not been an easy task.

I hold no brief for the trucks which run over our highways, but it should be a matter of interest for your consideration, that the privilege which the trucks enjoy in selecting the type of traffic that they may choose to haul when and where they choose to haul it, has a direct bearing on coal freight rates. In other words, to meet the competition of trucks for certain classes of traffic,

the railroads must increase the rates on many commodities that trucks cannot haul, and this problem, which is essentially a railroad problem directly, may be one that affects utilities vitally from the standpoint of coal itself. It has no doubt been your experience that it is difficult for a regulated business to compete with one which is wholly or partially unregulated. It is not just.

The value of water transportation for coal has long been recognized. Good coal properties on navigable rivers have unusual value and frequently a combination of barge and railroad rates is attractive. Some large utilities, as you probably know, are investing heavily in barges for water transportation with established barge lines transporting such tons. Railroads recognize the competitive status of water transportation and the influence of such competition on rates has been marked.

But if coal can be delivered by some other means of transportation at a lower cost than the railroads presently deliver it, then those means of transportation must be utilized. The most recent interesting development is that of pumping coal through pipeline, which is now planned for construction near Cadiz, Ohio, by the Pittsburgh Consolidated Coal Co. of Pittsburgh, Pa. The proposed line will be of 12-inch pipe and 17,000 feet long. Finley ground $\frac{3}{8}$ -inch washed coal will be mixed with water and pumped through the line on a continuous basis. The Bureau of Mines in report of investigation 4799 entitled "A Survey of the Hydraulic Transportation of Coal" has assembled the most recent data on this subject, which should be of great interest to you. The Bureau's conclusion is:

"From information available, it appears that coal may be transported economically in pipelines, especially in large tonnages, to supply a steady industrial market. Before coal pipelines can be built, many more actual pumping-performance data must be accumulated. Pumps, either centrifugal or reciprocating, will require much more development. The erosion of pipe and pumps, the degradation of coal, the most economical linear velocities, and the pressure drop in line must be determined accurately for each coal mixture."

The Southern Research Institute has among its more important projects, one from a large utility which relates to the hydraulic transportation of coal.

The lowest transportation cost of heat units results from the movement of oil in tankers. The next lowest means of transportation of heat units is natural gas through a pipeline. It should be fairly obvious that as natural gas becomes less plentiful in the years to come that gas made from coal will take its place, and it may well be that if a means can be found of lowering the cost of gasifying coal that before the time of natural-gas shortage comes to pass, gas made from coal and enriched with oxygen, or for transportation for greater distances carbureted with oil, may find an essential place in our economy. I am sure that this will be possible when the underground gasification of coal will have been perfected. I was privileged several years ago to discuss the initial experiment in underground gasification before your group in Birmingham and I know that you have sufficient interest to learn of the progress of this highly intriguing experiment.

The purpose of the experiment, as I emphasized in my references to the experiment in Birmingham, is to produce a power gas and a synthesis gas for the manufacturing of gasoline. Sixty to seventy percent of the cost of producing gasoline from coal under the Fischer-Tropsch process consists of the mining, preparation, drying, grinding, and gasifying of coal in retorts. When a synthesis gas is produced through this under-

ground gasification of coal, these five costly steps will be eliminated and the entire problem relating to synthetic liquid fuels will largely have been overcome. Give the chemist carbon monoxide plus hydrogen at a low enough cost and you open up to him the infinite in the chemical world. When we produce a synthesis gas by underground gasification of coal we produce a low-cost source of electric power, which in turn means low-cost oxygen, a further boon to mankind.

The initial experiment, which I described to you, while limited in size and scope, produced encouraging results and was regarded as successful by the Bureau of Mines, Alabama Power Co. engineers and others. It was determined that there was no difficulty in maintaining combustion in coal strata in the earth; that such coal strata could be completely gasified thus, and that under sufficiently high temperature changes were brought about in overlying rock strata that gave evidence of being favorable to and useful in the gasification process.

When the accumulated data from the first experiment was studied it was decided that they warranted a second experiment on a more elaborate scale. In this second experiment the coal was fired in March 1949 and continued for 22 months. The results of this experiment thus far may be summarized as follows:

(a) As in the first experiment, no difficulty has been encountered in burning the coal in the earth.

(b) In both experiments useful gases of reasonably constant properties have been made. The gas holds great potentiality for power production, either as a means of generating steam or through the application of the gas turbine. While a chemical synthesis gas has not yet been regularly produced in large quantities, it is the opinion of Alabama Power Co. engineers and those of the Government that such a gas can be made over a long period. During the course of this second experiment a gas turbine was operated for a sufficient period of time to effectively demonstrate its practicality.

An increasing phase of this work in the present experiment is the electrolinking of two holes bored from the surface to a coal bed by the use of electric power. In this experiment, which is being conducted without any mining underground whatsoever by the continued application of an electric current to the coal bed, it has been possible to raise the temperature of the coal to a point where distillation products were evolved and over a period of time some permeability to air in the coal bed was achieved. The application of electrical current raised the temperature of the coal to a point where combustion and later gasification with air has been possible. An excellent coal or producer gas has been attained. Rough estimates of the production of gas on a commercial scale under this electrolinking process reveal that the energy from coal may be obtained on a basis of less than \$1 per ton.

The results of the electrolinking process to underground gasification indicates that it can be applied for connecting boreholes drilled from the surface to a coal seam and by this method a permeable path of high-temperature carbonaceous matter can be made ready for subsequent gas making. The capacity of the system has been small, but it is expected that this can be built up by continued operation or through a modification of the experiment that is presently being conducted.

There is another means of attaining this end, and that is by the application of the Hydrafrac process, employed in fracturing impermeable oil strata. This process, patented by the Stanolind Oil & Gas Co., will constitute another phase of the experiment at Gorgas, and holds an especial promise.

Finally, I should like to say a word to this group of engineers separate and apart from coal and kilowatts, which has no direct bearing on either subject. Since you represent many educational institutions, particularly southern universities, I cannot resist the impulse under the circumstances.

These changing times and conditions in the affairs of men require earnest thinking and in the future will require even more intensive thinking. There has been no period within my lifetime when there was greater need for the analytical mind of the engineer than today, and this need will grow. It should be our purpose to see to it that young engineers of today are not deprived of the broader aspects of education which we were deprived of. The narrow viewpoint which handicaps most of us is due to the fact that we concentrated as students too closely upon the techniques of our profession. I would much prefer to see a greater specialization within the various branches of engineering—electrical, mechanical, mining, etc.—with opportunities to acquire a greater knowledge of the arts, history and civics and the science of human relationship, than a continuation of the restrictions to professional subjects alone in the college curricula for engineers. Here, too, the influence of men like yourselves is sorely needed.

I had occasion previously to refer to security and the perversion in the thoughts of many of our people concerning that which I consider unimportant. We of today have so concentrated on luxury and leisure that we have forgotten that hardihood and discipline are not ornaments, but weapons. No incident in modern life is more strongly illustrative of these tendencies than the degradation of the social amenities which once pertained to the cultural relationship of individuals and now are based upon materialism and show, and accordingly upon insincerity.

"Perhaps security is a good thing to seek and a bad thing to find. Perhaps it is never found and all our best is in the search." Through the days to come men like you can impress the world with the knowledge that "All we need in any age is character. From that everything follows. Leveling down is the fashion now," but we should remember "the bright spies—they caught the light first and held it longest."

Are We To Abdicate?

EXTENSION OF REMARKS OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr SCHWABE. Mr Speaker, the following is an editorial which appeared in the September 29, 1951, issue of the Tulsa Tribune published at Tulsa, Okla. This editorial was written by Mr Richard Lloyd Jones, one of the best editorial writers in the United States.

I commend the reading and serious consideration of this editorial to all who cherish or want to preserve America and its traditions. The editorial is entitled "Are We To Abdicate?" It follows:

ARE WE TO ABDICATE?

(By Richard Lloyd Jones)

One hundred and seventy-five years ago the purpose of our country was proclaimed to be our inalienable rights to life, liberty, and the pursuit of happiness. The patriots

who made us freemen made no provision for any foreign autocratic power or dictator to veto those rights.

We began to vacate the principles on which we were founded, on which we prospered and grew to greatness, when we recognized the despotism of the cruel Kremlin.

Our Constitution provides that all legislative powers shall be vested in the Congress of the United States. But we abandoned the Constitution when we set aside our self-governing rights to allow a congress of foreign countries, calling itself the United Nations, to assume legislative authority over us.

The sinister influence of the legislative assumptions of the delegates from foreign nations is beginning to alarm the American people who are smart enough to be alarmed.

LAWRENCE H. SMITH, a comprehending and patriotic Congressman from Wisconsin, recently introduced in the House of Representatives a resolution which is not merely prophetic but essential if America is to survive. His resolution reads:

"Whereas Congress is composed of elected Representatives foresworn to uphold, protect, and defend the United States flag and Constitution, and

"Whereas the United States Constitution precluded the delegation of its executive, judicial, or legislative powers to foreign assemblies or other bodies of individuals not qualified to act as elected or appointed agents of the citizens of the United States, and

"Whereas, notwithstanding the above, there have come into being organizations and associations whose programs would establish predominantly foreign executive, judicial, and legislative bodies, to which our citizens would be required by law to give recognition, and whose deliberations and acts would be binding upon all; and

"Whereas these programs would further require the radical disarmament of the Army, Navy, and Air Forces of the United States of America to a point where they would be rendered powerless to defend our citizens in case of aggressive armed attack, while at the same time providing for the concentration of supreme military, naval, and air power in a predominantly foreign-controlled world police force. Therefore be it

"Resolved, That the House of Representatives is unalterably opposed to any and all plans, programs, and proposals which tend toward the development of any form of world government, or toward the establishment of any organization or the strengthening of any such organizations as may already exist, which would abolish, abridge, or otherwise limit any of the rights, privileges, or immunities now enjoyed by the citizens of the United States."

The American Legion of the State of Maryland with over 30,000 members, was prompt to officially proclaim its support of this most-needed action. Congress must make such a declaration if we are to continue to have a Congress. In its statement the Maryland commander says:

"Our Nation, with only one-seventh of the world's population, owns a large proportion of the world's wealth. We would be glad to show the rest of the world how they, too, may achieve our enviable position of freedom and happiness, but we do not propose that they, including Soviet Russia and Red China, be given any authority over the lives of our people."

It is time every patriotic society in America rally to the support of such resolution and demand that our Representatives and Senators promptly proclaim it. It is unfortunate that the two fellows Oklahoma sent to the Senate do not loom very large as statesmen.

The Daughters of the American Revolution, which has grown alert and alarmed at the dangers that confront us, declares that "the surrender of our national sovereignty to a

world-governing body will forfeit our liberty, our free enterprise, and our independence."

Submitting to the legislative dictation of the United Nations means we give to other countries their power to tax us, their power to determine what military strength we have, and where our military forces are to be placed. They take command of our fighting forces, and we will do the fighting, as we do in Korea.

We are being handed over, body and soul, to the delegates of foreign nations who are to rule us.

This one-world propaganda has a poetic appeal to the gullible. But it is turning out to be a booby trap for the United States. Where has it got us in Korea? We fought the war with Japan and won it. Then we asked other nations that made little or no contribution to the winning of that war to join us in stating and signing the terms of peace. That un-American performance had one significant value—it showed the brutal meanness and the inhumanity of the Russian bully. The Russia that has murdered millions of people and enslaved millions of others. And we have allowed them to sit in this United Nations assembly which increasingly is assuming authority over the lives of free Americans. And they demand that with them we seat in this international legislative chamber the delegates from Red China. Have we filled our Capitol with dumb men?

We don't make intellectual giants any more. Our colleges turn out skilled technicians who are not smart enough to comprehend the noble obsessions that made us freemen.

Have we Americans lost our smartness? Are we indifferent to our dangers? Are we so devoted to partisan regularity that we have lost our patriotism? Is the common cause for which America was made to be abandoned? That is what Representative SMITH's resolution puts before the lawmakers of our land.

From her beginning America has been the great peace Nation. Our flag was never carried onto battlefield except in the defense of human liberty. We have played no miserable colonial game to enrich a royalty and a parasitic aristocracy that live on the wealth abstracted from conquered peoples. We are not an England. God forbid. We are not a Belgium. We never were an Italy or a Germany. We are not Russian, and we are not Asiatic. Yet we have permitted ourselves to be lured by promises of peace into subtle objectives that are adroitly working for the destruction of the United States Government.

Our Constitution declares that "The United States shall guarantee to every State in the Union a republican form of government, and shall protect each of them against invasion. What about our Government officials whose source of power is the Constitution? When they advocate a world super government, as some of them have done, they advocate the end of our national sovereignty.

Peace, peace, they talk peace and there is no peace. Since its inception the United Nations has been confronted with numerous instances of aggression and has been unable to stop the fighting, much less to guarantee peace.

Every sane man and woman is eager to join the nations of the world in any peaceful relations and in any mutual pledge to peace. But we are finding this world of friendliness is a hoax. We have betrayed by those who have professed to be the friends of peace. Korea is the object lesson of that betrayal and hypocrisy.

The United Nations is no longer a house of diplomats. It has become a congress of racketeers. Their whole idea is to soak us. Tax us. Liquidate us. And this United Nations has increasingly become servile to Russia. Our pouter-pigeon Senators do nothing.

When such a one-worlder as Robert M. Hutchins, until recently president of the University of Chicago, joins with such a chap as Dr. Mortimer J. Adler, it is time for us to beware of our intellectuals. 'His Adler who was quoted as recently saying, "We must do all we can to abolish the United States." If we, the people, don't look out, our dumb politicians will give our country away.

Excerpts From MacArthur Hearings

EXTENSION OF REMARKS OF

HON. BRIEN McMAHON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from the MacArthur hearings.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

MAY 4 AND 5, 1951

Senator McMAHON. Mr. Chairman, I want to start by saying that I have many questions, and I will make no apology for the time that I take because we are here discussing the survival of our Nation, which means the future of civilization itself.

GLOBAL PROBLEM OF COMMUNISM AND GLOBAL DEFENSES

General, we are faced, are we not, with a global problem in the ambitions of Communist Russia?

General MACARTHUR. Faced with what, Senator?

Senator McMAHON. A global problem.

General MACARTHUR. Unquestionably.

Senator McMAHON. You have given that problem a great deal of thought, I assume? Don't you hear me, General?

General MACARTHUR. Yes. Yes; I have sir.

Senator McMAHON. And, therefore—

General MACARTHUR. With particular attention, of course, to my own theater.

Senator McMAHON. Pardon me?

General MACARTHUR. With particular attention, of course, to my own theater. My responsibilities are in my own theater.

Senator McMAHON. That is correct. As you have said on three or four occasions today, you are a theater commander.

General MACARTHUR. I was.

Senator McMAHON. I accept the amendment.

I believe you said to Senator JOHNSON that as a theater commander you had made no determination in your own mind on either universal military service or concerning the amount of troops or number of troops that we should have for our global defense.

General MACARTHUR. That is correct. That problem did not fall within my responsibilities or authorities.

Senator McMAHON. I take it, therefore, General, that you have not clearly formulated in your own mind—I do not say this critically because you were a theater commander—but you have not formulated in your own mind how we are going to put on a global defense if Russia decides to make global war upon us.

General MACARTHUR. I have my own views, Senator, but they are not authoritative views, and I would not care to discuss them. Because I understand I am here to discuss my own theater. There are other authorities that have all those responsibilities and authority. They are not mine, and I there-

fore would not superficially inject myself into those discussions.

CHANCES OF SOVIETS ENTERING WAR

I take it, General, that you believe that what we do in following out your recommendations will not necessarily bring the Soviets into the war. Is that your position?

General MACARTHUR That is my belief.

Senator MCMAHON. Suppose, General, you are wrong about that. You could be wrong about it, couldn't you?

General MACARTHUR Most assuredly.

Senator MCMAHON. You did not believe at one time that the Communists of China, Red China, would come into the conflict in Korea.

General MACARTHUR I doubted it.

Senator MCMAHON. They did. You now doubt that the Soviets—

General MACARTHUR In that I was, however, supported by practically everybody. The American Government through its Secretary of State, through its Central Intelligence Agency, who were the best-informed authorities, presented that fact.

Senator MCMAHON In other words, everybody that had to do with it turned out to be wrong.

General MACARTHUR Practically, although, Senator, I think everybody realized that that risk was involved. When we first entered Korea that was inherent to it and it was a calculated risk that was taken.

Senator MCMAHON And now, of course, we can't all agree that there is a possibility that the Soviets will come in if we adopt the recommendations that you propose to carry out.

General MACARTHUR There is that possibility, but there is the certainty as against that, Senator, that if you don't carry out those recommendations, you are going to lose Americans by the thousands every month.

SITUATION IN KOREA NOW

You are going to lose such a basis that it may endanger the entire preparedness program.

If you keep on losing men at the rate you do now for indefinite time, you may find the entire preparedness program will come up against such obstacles as might endanger it.

I believe that what you argue are possibilities. They are possibilities. Everyone will admit that, but what I am arguing against is a certainty.

There is no question about the war being in Korea. There is a great question whether the war would extend some place else.

You have got a war on your hands, and you can't just say, "Let that war go on indefinitely while I prepare for some other war," unless you pay for it by the thousands and thousands and thousands of American boys.

Now that is the responsibility of those who make this decision, and it is a responsibility, as far as I am concerned, I repeat I wouldn't want it on my shoulders.

Your policy as you enunciated there, Senator, means—

DEFENSE OF UNITED STATES IN CASE OF WAR

Senator MCMAHON. I haven't enunciated it yet. I am simply asking for information as to your views. You see, General, what I want to find out from you is this—that if you happen to be wrong this time and we go into all-out war, I want to find out how you propose in your own mind to defend the American Nation against that war.

General MACARTHUR. That doesn't happen to be my responsibility, Senator. My responsibilities were in the Pacific, and the Joint Chiefs of Staff and the various agencies of this Government are working day and night for an over-all solution to the global problem.

Now I am not familiar with their studies. I haven't gone into it. I have been desperately occupied over on the other side of the world, and to discuss in detail things that I haven't ever superficially touched doesn't contribute in any way, shape, or manner to the information of this committee or anybody else.

GLOBAL ASPECTS OF UNITED STATES DEFENSES

Senator MCMAHON General, I think you make the point very well that I want to make, that the Joint Chiefs of Staff and the President of the United States, the Commander in Chief, has to look at this thing on a global basis and a global defense.

You as a theater commander by your own statement have not made that kind of a study, and yet you advise us to push forward with a course of action that may involve us in that global conflict.

General MACARTHUR Everything that is involved in international relationships, Senator, amounts to a gamble, risk. You have to take risks.

Senator MCMAHON. I couldn't agree with you more.

General MACARTHUR What I faced in the Pacific wasn't something that was speculative in the future. It's right now. What are you going to do to stop the slaughter in Korea? Are you going to let it go on? Does your global plan for defense of this United States against war consist of permitting war indefinitely to go on in the Pacific? What is your plan or what is the other plan to stop the war there in the Pacific?

It is there. There is no sophistry of talk when you see thousands of battle casualties every month, you can't talk those off that there is no war. There is a savage war there.

If you are not going to bring the war to a decisive conclusion, what does the preparedness mean? You are faced with a fact in Asia.

You are speculating about what takes place in the rest of the global parts of the world. I assume that the plans that are being made are to meet the contingencies that may arise.

Otherwise the whole force of the United States would be poured into Korea.

Senator MCMAHON General, the purpose of this hearing certainly is not for any Senator and certainly not one who is as ill-equipped as I am, to argue this question with you at this time.

My purpose is to try to develop information that will be helpful to me in reaching my final conclusions on the matter. General, are you aware of what our atomic preparedness situation is today?

General MACARTHUR Only in a very general way, sir.

USE OF THE ATOMIC BOMB

Senator MCMAHON I am not asking you for numbers, but do you know the numbers in our stockpile?

General MACARTHUR I do not. I have no more information on that than the average officer would have. It's confined to a very select circle, you know.

Senator MCMAHON Have you ever asked about that? Have you ever asked for information on it, General?

General MACARTHUR On the atomic thing? Senator MCMAHON. Yes.

General MACARTHUR I have discussed it, but I have never attempted to pry into matters which I regarded as beyond my own authority.

Senator MCMAHON In the course of your conduct of your duties in the Far East, as a theater commander, did you ever make inquiry of the Joint Chiefs of Staff about our atomic situation?

General MACARTHUR I have made inquiries as to what might be the potentialities and possibilities of the use of the atomic

bomb in my own theater. I know what that is.

Senator MCMAHON. Have you at any time advocated the use of the atomic bomb in your theater?

General MACARTHUR Of the atomic bomb?

Senator MCMAHON Yes.

General MACARTHUR The limit of—

Senator MCMAHON Pardon me?

General MACARTHUR The limit of what I did was to ask for information as to whether there were any plans to use the atomic bomb in the Far East.

Senator MCMAHON. Did you recommend its use?

General MACARTHUR I did not. As I understand it, the use of the atomic bomb has, by fiat and order, been limited to the decision of the President of the United States.

Senator MCMAHON That is true. Of course, I wondered whether you made any recommendations.

General MACARTHUR Why should I, Senator?

Senator MCMAHON I am not asking you why, I am just asking whether you did, and you answered that you did not.

General, are you familiar with the fact that we held some tests out in Nevada a few months ago which were known as the Nevada tests?

General MACARTHUR I am aware of that.

Senator MCMAHON Are you familiar with the results of those tests?

General MACARTHUR Only in a very general way.

[Deleted.]

ATOMIC BOMB STOCKPILE OF RUSSIA

Senator MCMAHON Do you think or have you any intelligence, any access to intelligence reports about Russian potentialities in the building of atomic weapons?

General MACARTHUR Very little.

Senator MCMAHON Does that little give you an estimate as to how many they possess today?

General MACARTHUR No, sir.

Senator MCMAHON Have you sought to get that information?

General MACARTHUR Not at all.

Senator MCMAHON If, by following your recommendations, a conflict is precipitated with Soviet Russia, be it in the European theater or the United States itself, or in the Far East, you have made no study as to the kind of damage that they could do to our forces in Korea and our general situation in the Far East with their atomic weapons, is that correct?

General MACARTHUR I don't believe for a minute from my general knowledge of the situation that the enemy has the potential or the inclination to use his limited atomic weapons in such an area as Korea or China.

Senator MCMAHON You said this morning, General, that you did not believe that the Russians could land in Japan if we kept control of the sea around Japan, and in the air. Was I correct?

General MACARTHUR. Not quite, Senator. I said that they couldn't overrun Japan, that they would be limited to isolated efforts.

Senator MCMAHON Well, when I said take Japan, I meant take it effectively into their control, as I understood it, and you said it would be impossible.

UNITED STATES PREPAREDNESS FOR ALL-OUT WAR IN THE FAR EAST

General MACARTHUR With that explanation, I agree. As long as we hold command of the sea and of the air, no potential enemy can launch an amphibious force against us with any hope of success.

As long as we maintain sea and air control of the ports of Asia, from Vladivostok all the way down to Singapore, they can't successfully launch an effort against us. As long as we maintain that, the enemy would have grave difficulty in overrunning anything in our littoral island line of defense.

Senator McMAHON. Have we sufficient planes and ships, in your opinion, in the Far East today to maintain that kind of a defense, if the Russians should precipitate themselves into this battle?

General MACARTHUR. I believe they are available.

Senator McMAHON. Are they in the Far East today?

General MACARTHUR. I couldn't tell you, Senator, what the enemy would launch against us. It is speculative. I gave my best estimate of that this morning. We have certain reserves, and I am sure that if the enemy attacked in overwhelming force we could get our reserves there in time to combat them. I believe sincerely that we have the air resource to beat off such an attack, and the Navy resource is unquestioned.

Senator McMAHON. If they should precipitate that attack in the Far East, would the Russians—I take it, with the forces that they have in the Far East at this time, we would have to take some of our reserves from the continental United States and send them over?

General MACARTHUR. It would depend upon the force with which the enemy attacked.

RUSSIAN STRENGTH IN THE FAR EAST

Senator McMAHON. You said this morning that they had [deleted] thousand planes there, I believe.

General MACARTHUR. Some estimates were made. My own estimate was that they could maintain about half that at the start, and that their strength would diminish rapidly from wear and tear, but I believe that they are too far from their bases in continental Russia to keep up a magnified pressure. They have not got the potential to bring the gasoline, they have not got the potential to bring a great many things over.

I also said I thought from the disposition of the Russian forces in Siberia that they were defensive positions.

Senator McMAHON. Has your intelligence advised you of any message from the Russians as to what they intend to do if we bomb in Manchuria?

General MACARTHUR. None whatsoever. If such information exists, it has never come to me. If such information exists, I am sure it would have been sent to me.

Senator McMAHON. General, are you aware of the kind of civilian defense we have in the United States today?

General MACARTHUR. Only in a general way, Senator.

Senator McMAHON. You know it is very sketchy.

General MACARTHUR. I would assume so. Senator McMAHON. Have you thought about the possibility—

General MACARTHUR. For that matter, I am quite sure it is sketchy in every country in the world.

POSSIBILITY OF ATTACK ON UNITED STATES

Senator McMAHON. Have you thought about the possibility of the Russians launching a surreptitious attack on the United States and its vital production centers through atomic sabotage?

General MACARTHUR. In a general way only. Once again that isn't my theater of responsibility, Senator.

Senator McMAHON. I understand that, General. I am just trying to introduce a few of the considerations that the Joint Chiefs of Staff and their Commander in Chief, I presume, must have in mind in determining what kind of action should be taken in any specific theater.

General MACARTHUR. That is quite correct, Senator, I have no doubt they do. But I have just read what the opinion was of the Joint Chiefs of Staff on January 12, which was to follow in general the same concepts that I have.

If they have changed, that is something else again. I wasn't informed of it, but at that time they agreed with my concepts.

Senator McMAHON. And, of course, general, that recommendation of January 12—and I do not assert it as a fact at this time, the joint chiefs will have to explain that themselves—but there is certainly the possibility that that concurrence, if you wish to call it that, was based upon the contingency of a forced evacuation of Korea.

That possibility existed; didn't it, General?

RISKS IN THE FAR EASTERN SITUATION

General MACARTHUR. That possibility exists; yes, sir. What you are driving at, as I get it, Senator, is our enunciating the risks that come if the Soviets should attack. All I can say is that those risks should have been discounted when we entered the war in Korea.

Nothing new has developed to change it. Those responsibilities of those who sent our troops into Korea were just as great at that time as they are now. The risks were just as great then as they are now.

That was a considered action taken by the Government of the United States. I didn't have a thing to do with it. This was a policy that was given me.

Now, those risks that you are enunciating now are the risks that were involved in the original decision. They were taken by the United States.

Now, the United States has committed itself there. All I am advocating is how we can accomplish our purpose or extricate ourselves from the difficulties that have been involved.

Senator McMAHON. And now, General, before it is too late, I want to examine the risks of the course which you wish to pursue because if the risks are so great as to prejudice the existence of this Nation, then it is time we stopped and weighed those risks, until we get into a position to rebut them and to meet them.

General MACARTHUR. You assume, of course, that relatively your strength is going up much more than the enemy's. That is a doubtful assumption, Senator.

STATE OF UNITED STATES PREPAREDNESS FOR GLOBAL WAR

Senator McMAHON. Well, General, if that is not true on the short-term basis, then it will come, I am sure, as news to everybody in the United States Senate. We have been proceeding on the assumption, as our mobilization-in-chief said the other day, of no attack until 1953. By then, we will be so strong that they can't attack us, because by that time we will have the planes, we will have the bombs—amounts that we haven't got today—we will have the men in uniform, and we may be in shape to meet this attack, which we are not in shape to meet today.

General MACARTHUR. And in 2 years what will be your casualty rate of American boys in Korea?

Senator McMAHON. And, General, I ask you what our casualty rate will be in Washington D. C., if they put on an attack, an atomic attack—and I had better change it from Washington lest I be thinking about myself, to New York or the other cities of the United States, to say nothing of the American boys who are going to die in the air and sea in this logistical sort of support of the forces into China?

General MACARTHUR. All those risks, I repeat, were inherent in the decision of the United States to go into Korea.

Senator McMAHON. General, I am not saying that they were not. What I am trying to say is that now is the time, it would seem to me, to stop, look, and listen and see where we are before we plunge into a course that may take us over the precipice before we are ready.

General MACARTHUR. What is your plan, then, to end Korea?

EFFECT OF DECISION TO DEFEND KOREA ON AMERICAN PRESTIGE IN FAR EAST

Senator McMAHON. I would like to quote to you your language on going into Korea,

which was very beautifully written, and I think it ought to be in the record:

"The decision of President Truman on June 27 lighted into flame a lamp of hope throughout Asia that was turning dimly toward extinction. It marked for the Far East the focal and turning point in this area struggling for freedom. It swept aside in one great monumental stroke all of the hypocrisy and the sophistry which has confused and deluded so many people distant from the actual scene."

General, do you regard the threat to us and to our national survival—

General MACARTHUR. The quotation that you read, Senator, is quite true. It did restore at one stroke the enormous prestige of the United States. It confirmed the people of the Far East that we were not going to let them slide into slavery, that we were determined we were going to meet aggression on every front that it showed itself, that we were not going to confine ourselves and say we will defend in this sector but all the other sectors globally we will let go.

It was the enunciation which was the very antithesis of defeatism, which has been so pronounced that we could not meet aggression except in one area of the world. It meant that we, if the enemy was going to encroach in two areas, we would meet him in two areas, in three areas, we would meet him in three areas, that he was just as divided as we were; that if we could not defend wherever he aggressed or started to attack, we admit before the conflict that we are going to be defeated.

This is global, as you said yourself, this is a global proposition, and you can't let one-half of the world slide into slavery and just confine yourself to defending the other. You have got to hold every place.

Now, in the Far East there was a tremendous belief that we were not going to defend the Far East, and when we moved in to defend Korea it gave an enormous uplift throughout that entire section of the world.

If there is anything that I have said that led you to believe that I was critical of the decision to defend Korea, I would correct it immediately.

Senator McMAHON. No, General; I just thought that was such a fine statement.

ENDING THE KOREAN WAR

General MACARTHUR. The only thing I am trying to do, Senator, is to settle the thing in Korea to bring it to a decisive end. I believe it can be brought to a decisive end without the calamity of a third world war. I believe if you let it go on indefinitely in Korea, you invite a third world war. I believe the chances of the terrible conflict that you so rightly dread—and all the rest of us dread with you—would be much more probable if we practice appeasement in one area even though we resist to our capacity all along the line.

That is all I am saying. I am saying it with the acute consciousness of the dreadful slaughter that is going on in Korea today. If it is possible to bring it to a successful and an honorable end, I believe we should take the chance of doing so.

Now, in all the discussions today there has been no proposal that has been made here as to how to end the Korean problem satisfactorily and honorably. I believe in the method, as I have enunciated, and on January 12, the Chiefs of Staff believed so, too.

Now, they may have changed, and shifted. I do not know.

Senator McMAHON. We will find out.

General MACARTHUR. They will speak for themselves.

Senator McMAHON. We will find out.

CASUALTIES IN KOREA

General MACARTHUR. But still I am of that opinion, and I shrink—I shrink with a horror

that I cannot express in words—at this continuous slaughter of men in Korea.

The battle casualties in Korea today probably have passed the million-man mark. Our own casualties, American casualties, have passed 65,000. The Koreans have lost about 140,000. Our losses, on our side, are a quarter of a million men. I am not talking of the civilian populations, who must have lost many, many, many times that.

The enemy probably has lost 750,000 casualties. There are 145,000 of them that are now in our prison bull pens, prisoners, so they might be excepted from that figure because they live, but a million men in less than 11 months of fighting, in less than 11 months of this conflict, have already gone and it grows more savage every day.

I just cannot brush that off as a Korean skirmish. I believe that is something of such tremendous importance that it must be solved, and it cannot be solved by the nebulous process of saying "Give us time, and we will be prepared, or we will be in a better shape 2 years from now"—which is argumentative.

I don't know whether we will, or not, and neither do you, because you do not know, and none of us know the capacity of the enemy.

He may build faster than we do. I couldn't tell you.

I don't know that you are gambling on chances; but I say there is no chance in Korea, because it is a fact—you have lost a million men now. You will lose more than a million if you go on another year. If you go until 1953, you will lose another million.

What are you trying to protect?

The war in Korea has already almost destroyed that nation of 20,000,000 people.

I have never seen such devastation.

I have seen, I guess, as much blood and disaster as any living man, and it just curdled my stomach, the last time I was there. After I looked at that wreckage and those thousands of women and children and everything I vomited.

Now, are you going to let that go on, by any sophistry of reasoning, or possibilities? They may be there, but this is a certainty.

What are you going to do? Once more, I repeat the question, What is the policy in Korea?

If you go on indefinitely, you are perpetuating a slaughter such as I have never heard of in the history of mankind.

Now, what I am trying to do is to find some reasonable and honorable way to stop that slaughter. It is not to conquer this country or China, or anything else.

It is to bring this thing to an honorable end.

If you go on, you are going to destroy not only the casualties that I speak of, which are military, but you are going to destroy that people.

Now, I just cannot bring myself to analyze it with that shrewdness of legal capacity that you enunciate in your argument, which is an argument, to let it by.

Your entire drift has been not to do anything, just keep on fighting, losing, and bleeding there, and I think we should make some extraordinary effort to bring it to an end.

Senator McMAHON. I am not going to characterize your proposition. I do not expect that you are going to characterize my position.

I will take care of that myself.

ATOMIC PRODUCTION CAPACITIES OF VARIOUS AREAS

Now, I would like to know this, General: Is there any atomic or plane-building capacity in the Chinese mainland that you know of?

General MacARTHUR. None that I know of. The backwardness of industrial development in China precludes even the concept of such an intricate potential.

Senator McMAHON. Then, General—

General MacARTHUR. They may have some of the natural resources that go into the manufacture of them, of the bombs, I couldn't tell you about that, but it will never be done in our day. Never in our day will atomic weapons be turned out of China.

They cannot turn out the ordinary weapons. They do not have the instrumentalities to turn out airplanes, big ships, big guns, many of the other attributes of modern warfare.

Senator McMAHON. Western Europe, however, has that capacity, has it not, General?

General MacARTHUR. Senator, as I said, I have not made a study of this matter.

I suppose it has, but I don't know.

Senator McMAHON. You would not deny that the capacity, both atomic and the production of planes, of Western Europe, combined with Soviet Russia, would outproduce the United States of America—you would not deny that, would you?

DEFENSE OF EUROPE

General MacARTHUR. Not at all, and any inference from your question that I don't advocate the fullest protection and assistance to Western Europe is quite fallacious, Senator. What I advocate is that we defend every place, and I say that we have the capacity to do it.

If you say that we haven't, you admit defeat. If the enemy has that capacity and is divided on all these fronts, we should be able to meet it.

Senator McMAHON. General, I do not admit defeat. I am thinking, if this war has to be fought, about the total and complete victory. I do not want to blind myself, and, speaking for myself, General, with a devotion for my country that I will match against yours or any man's, I am only speaking about a proposition which I believe is sound, and I know that you will give me credit for believing in that which I think, the same as I certainly give you that credit.

Now, General, do you think that we are ready to withstand the Russian attack in Western Europe today?

General MacARTHUR. Senator, I have asked you several times not to involve me in anything except my own area. My concepts on global defense are not what I am here to testify on. I don't pretend to be the authority now on those things.

When I was the Chief of Staff, 20 years ago that was my problem, and I would have answered it. The Chiefs of Staff or others here are the ones to answer that query, not me.

Senator McMAHON. And so, General, you concede, it seems to me by that statement, that the Joint Chiefs of Staff, having access to global intelligence, having made global plans for our defense, may have in that information, and because of that information, made decisions contrary to your recommendations, which could be sound.

General MacARTHUR. They didn't on January 12, Senator. They had all the information available at that time, and they made the study, and their recommendations were as I read you this morning, which coincided with my own, that if you apply that type of sanction in the Far East you will bring this conflict to an end, that there is a strong possibility that that would be the result.

INTELLIGENCE ON CHINESE COMMUNIST ATTACK

Senator McMAHON. General, in September of 1950 did you have any intelligence that the Chinese were going to come in if we went to the Yalu?

General MacARTHUR. I had no concrete information, no, sir.

Senator McMAHON. Had you been advised by any of your intelligence officers to that effect?

General MacARTHUR. On September 15?

Senator McMAHON. In September, any time in September?

General MacARTHUR. I don't recall it, Senator. That the enemy was shifting his forces northward, I knew thoroughly. That he was massing forces along the Yalu, I understood. But he was at that time advertising to the world that such Chinese as went in were individuals and volunteers. He specifically proclaimed that Nationalist China was not involved in that struggle.

EFFECTIVE STRENGTH AND USE OF NATIONALIST TROOPS

Senator McMAHON. General, when you went down to Formosa, you made an estimate of the effective troops that they could supply, did you not?

General MacARTHUR. I beg your pardon, Senator?

Senator McMAHON. When you went down to Formosa, you made an estimate of the number of effective troops that Chiang could supply?

General MacARTHUR. That the Nationalist Chinese had on Formosa?

Senator McMAHON. That's right.

General MacARTHUR. They had about a half million, yes, sir.

Senator McMAHON. How many at that time did you think were effective?

General MacARTHUR. I think that the caliber of the personnel was good. Their equipment, as I explained this morning, was spotty. I think they're the same caliber of troops that we are fighting now in North Korea. I believe they could be brought to the same degree of efficiency, and I think those troops are good troops.

Senator McMAHON. In the report that you made on your visit to Formosa, did you state how many effective troops Chiang Kai-shek had, in your opinion?

General MacARTHUR. I couldn't tell you, Senator. The report that we made was made by a mission that I sent down there under General Fox.

Senator McMAHON. How many did General Fox report could be effectively mounted and used?

General MacARTHUR. They all could be if they were properly equipped and trained. How many were available at that time I really couldn't tell you.

Senator McMAHON. When the suggestion was made, General, that Chiang's troops be brought up to Korea soon after the outbreak of the hostilities in Korea, you made a finding as to their effectiveness at that time, did you not?

General MacARTHUR. I recommended that they should not be brought up to Korea at that time, that Formosa itself was threatened.

Senator McMAHON. You went so far as to say that they would be an "albatross" around our neck for months.

General MacARTHUR. That is correct. They were lacking in artillery, they were lacking in many of the necessities. We were at that time fighting in the Pusan beachhead, and untrained troops, only partially equipped, would have been of little effectiveness.

However, the main reason that I wished those troops held on Formosa was to defend Formosa, and when the Chinese troops that were threatening Formosa moved north to attack us in Korea, I recommended that the wraps be taken off of the Nationalist troops.

Senator McMAHON. That was based upon the fact that the Chinese Communist effectives had been moved north on the Yalu and they did not have anything on the mainland of China with which to carry on the attack on Formosa?

General MacARTHUR. Nothing that would seriously threaten Formosa, correct.

Senator McMAHON. Now who reported that to you, General, your own intelligence or CIA?

General MacARTHUR. I couldn't tell you. It came from various sources, largely from

the Chinese Nationalists themselves who reported the movement of the Communist troops

Senator McMAHON. And did they report to you that there were not sufficient effectives left in the south to carry on the raid on Formosa which you feared at the time that the Yalu troops were down in south China?

General MACARTHUR. There was no such report to me. That was my own estimate of the situation on the strengths and relative positions of the various forces

CENTRAL INTELLIGENCE AGENCY

Senator McMAHON. When did the CIA leave Korea, General?

General MACARTHUR. When did they what?

Senator McMAHON. The CIA, the Central Intelligence Agency operatives leave Korea?

General MACARTHUR. I couldn't tell you. The Central Intelligence Agency doesn't operate under me at all

Senator McMAHON. Were they directed to leave Korea after the Inchon landing by your command?

General MACARTHUR. I don't know what you are talking about, Senator.

Senator McMAHON. General, I understood that the Central Intelligence agents disappeared from Korea after the Inchon operation, that very brilliant operation which you directed

General MACARTHUR. The Central Intelligence agents, Senator, are not under me. As far as I know they never were in Korea. They may have been, but it is not an agency that functions under me. It functions under the Central Intelligence controls here.

AVAILABLE INTELLIGENCE ON CHINA

Senator McMAHON. You regard your information on China as today being much more extensive than it was 2 or 3 years ago, do you not?

General MACARTHUR. I don't know what you mean by that.

Senator McMAHON. General, do you think today that you are better informed about the internal situation in China, the general situation in China, than you were 3 years ago?

General MACARTHUR. I thought I was pretty well informed at both times, Senator.

Senator McMAHON. You think you were?

General MACARTHUR. Yes.

MAC ARTHUR LETTER TO EATON, 1948

Senator McMAHON. Well, I quote from the March 3, 1948, report to the Honorable CHARLES A. EATON, chairman of the Committee on Foreign Affairs in the House of Representatives, in answer to the request that was made by the House committee to you for your opinion on things in the Far East, and you said, if I have a correct copy of it:

"China, as you perhaps know, is a theater of the United States Navy, controlled outside the scope of my existing authority. I have no representatives there, and apart from general background knowledge, such detailed information as has been made available to me has been derived largely by indirection. Exhaustive investigations of the Chinese situation have been made by responsible United States officials, but these studies are not within my channel of information or command, and in consequence I am not adequately familiar therewith. I have furthermore not had the opportunity to visit China for many years."

You have not, of course, had an opportunity to go there since this time, General?

General MACARTHUR. No, sir.

Senator McMAHON (reading). "With this background, you will readily perceive I am not in a position to render authoritative advice with reference to the myriad of details on which a definitive policy for this particular must necessarily rest."

General MACARTHUR. That is all correct.

Senator McMAHON (continuing). "The Chinese problem is part of a global situation which should be considered in its en-

tirety in the orientation of American policy. Fragmentary decisions in disconnected sectors of the world will not bring an integrated solution."

Senator WILEY. What is the date of that? Senator McMAHON. I quote from the letter of the general's, dated March 3, 1948.

You also said, General: "In the determination of our global policy care must, of course, be exercised to avoid commitment of our resources beyond what we can safely spare; the sapping of our national strength to the point of jeopardy to our own security and the overburdening of our people beyond their capacity to maintain a standard of life consistent with the energies with which they are naturally endowed."

I will be glad to submit for the record the whole letter.

You remember that letter, of course, General? You referred to it earlier today.

General MACARTHUR. The basic conditions have completely changed since that letter was written, Senator. The war has been precipitated in Korea, and to attempt to apply the rationale of what existed at that time and what exists today is quite fantastic.

COLLECTIVE SECURITY

Senator McMAHON. General, do you believe in the concept of collective security?

General MACARTHUR. What do you mean by collective security, Senator?

Senator McMAHON. Do you believe in the concept of collective security upon which our foreign policy is based?

General MACARTHUR. What do you mean by collective security?

Senator McMAHON. I mean the attempt to weld together a military alliance to keep the peace such as we have attempted to do in the North Atlantic Pact.

General MACARTHUR. I have only a superficial knowledge of the North Atlantic Pact, Senator. I am not prepared to discuss it in any way, shape, or manner.

Senator McMAHON. Neither its provisions nor its implementation?

General MACARTHUR. I have only the ordinary knowledge that any officer would have on it. You have experts on that. General Eisenhower and others have appeared before you very recently with all the intimate knowledge that comes from the authority and responsibility he has.

THE NOVEMBER DRIVE AS A RECONNAISSANCE IN FORCE

Senator McMAHON. General, yesterday you said that the drive in November was a reconnaissance in force; is that correct? Do you remember your testimony of yesterday?

General MACARTHUR. That is correct; yes sir.

Senator McMAHON. As I recollect it, General, last November you issued a communique in which you said that this was the end-of-the-war offensive which would bring the boys home by Christmas

General MACARTHUR. That was my hope.

Senator McMAHON. Did you anticipate that you could get them home by Christmas with a reconnaissance in force?

General MACARTHUR. The reconnaissance would have developed the strength of the enemy. If it was not sufficient to resist us, it would have been an all-out assault and, as I explained in my communique, it would have undoubtedly destroyed the last remnants of the North Korean forces.

Where a reconnaissance in force—the line between a reconnaissance in force and an assault attack is a rather nebulous one and depends upon circumstances. What starts out as a reconnaissance in force might well result in a full-scale assault so far as your forces are concerned.

PROPOSED LIMITATIONS ON NOVEMBER ADVANCE TO THE YALU

Senator McMAHON. Was there any difference in opinion between you and the Joint

Chiefs relative to how far you would go toward the Yalu in that advance?

General MACARTHUR. The movements, all tactical and strategic movements that I made, had the prior knowledge and approval of the Joint Chiefs of Staff.

Senator McMAHON. Was there any recommendation by the Joint Chiefs that it would have been wise in their opinion to stop about 5 miles this side of the Yalu on a defensible ridge?

General MACARTHUR. The Joint Chiefs of Staff believed that it would be probably advisable, based upon the considerations at that time, to occupy the north of Korea with South Korean forces. They were adverse to having other nationals there. But the tactical conditions were such that South Koreans were not able to do so.

POSITION OF THEATER COMMANDER IN GLOBAL PICTURE

Senator McMAHON. Yesterday, General, I pursued a line of questioning concerning the global implications of your proposals, and you informed me that being a theater commander you have not taken those into consideration. Now—

General MACARTHUR. One minute, Senator. That is not exactly what I said, if you will let me interrupt you. I said—I intended to convey the idea that the theater commander was only concerned in global studies insofar as his own theater was concerned to coordinate the demands of his own theater with the global problem; a general knowledge of the global problem, of course, is necessary by all theater commanders

Senator McMAHON. General, on page 207 of the testimony you stated in answer to my question as to whether or not we were ready to withstand the Russian attack in Western Europe today.

"General MACARTHUR. Senator, I have asked you several times not to involve me in anything except my own area. My concepts on global defense are not what I am here to testify on. I don't pretend to be the authority now on those things. When I was the Chief of Staff 20 years ago, that was my problem and I would have answered it. The Chiefs of Staff or others here are the ones to answer that query, not me."

Now, General, I went into that question for two reasons.

First, this committee, of course, has a very grave duty of weighing all factors in the defense of this country. We are not confined to a theater of operations. We are called upon to implement an over-all strategy

I asked you about it, General, because in your speech to the Congress you stated as follows:

"The issues are global and so interlocked that to consider the problems of one sector oblivious to those of another is to court disaster for the whole."

General MACARTHUR. Correct.

THEATER COMMANDER'S POSITION RELATIVE TO THE NATIONAL SECURITY COUNCIL

Senator McMAHON. Now, General, you are aware I am sure of the mechanics that this Government has set up for carrying out this business of weighing these interlocking factors—in other words, our global defense as a whole.

You are aware of that. You are aware that in 1949 the Congress of the United States passed what is known as the National Security Act. In this act, and although I will not take the time of the committee to read it, I think perhaps, Mr. Chairman, that at least the pertinent portions should be inserted at this point in the record—

The CHAIRMAN. Is that the act of 1947?

Senator McMAHON. This is the act, as it is entitled, "Coordination for National Security." I haven't got the date of the act, Mr. Chairman, but it is the act setting up the National Security Agency which pro-

vides that the membership of the National Security Council should be the President, the Vice President, the Secretary of State, the Secretary of Defense, and the Chairman of the NSRB.

That is the body that has been set up by this Congress to coordinate our total global strategy.

General, I take it from what you said yesterday that you have a high opinion of the members, the present members of the Joint Chiefs of Staff.

General MACARTHUR I have.

Senator McMAHON And the present Secretary of Defense.

General MACARTHUR I have.

Senator McMAHON You recognize them as patriotic gentlemen of capability in their fields.

General MACARTHUR Unquestionably.

Senator McMAHON Now General, assuming for the sake of discussion that subsequent testimony brings out real differences between you and the Joint Chiefs on how far our far eastern strategy can best promote our global strategy, and assuming this difference of viewpoint, would you then be prepared to admit that the Joint Chiefs' judgment is better than yours and that the American people would be well advised to follow the judgment of the Joint Chiefs?

General MACARTHUR The authorities and the responsibilities of the Joint Chiefs are laid down and prescribed by law. Their position in the niche of American governmental procedure is entirely in accordance with the statutes.

Whether I should agree with it or should not agree with it is not pertinent to the actions of the Government of the United States.

As a theater commander I had my own responsibilities and I made my own recommendations, and would again. If they disagreed with those of higher authority, the question of the judgment of that higher authority is not within my hands, and I would not attempt to pass judgment upon it.

That is a matter for public opinion. I therefore would not attempt to answer such a hypothetical question as you put up, that if I were a theater commander and the Joint Chiefs of Staff in their superior authority gave me a directive which I disagreed with, I still would implement it to the very best of my ability.

A THEATER COMMANDER'S PUBLIC EXPRESSION OF OPINIONS

Senator McMAHON General, there are some fundamental basic differences between the Government and yourself as to the wisdom of the best course to pursue in the east; that is true?

General MACARTHUR Naturally.

Senator McMAHON Do you consider, General, that it comes within the province of a theater commander to register publicly with persons in political life, or out of it for that matter, his differences of opinion while he is still in active charge of the theater?

General MACARTHUR I believe the theater commander has the responsibility of registering his views as he might see fit, if they are honest views and not in contradiction to any implementing directives that he may have received.

I do not believe the implications of your question, that any segment of American society shall be so gagged that the truth and the full truth shall not be brought out.

I believe it is in the interest, the public interest, that diverse opinions on any controversial issue shall be fully aired.

I understand completely that the totalitarian and the Soviet method is entirely in contradiction to that, that they do muzzle certain segments of society. I do not believe that is the American way.

And if your question is intended to mean that I would be subservient to and not reg-

ister within the proper processes my opinions, I would refute it at once.

Otherwise you do not get what is the foundation of the very liberty that we breathe, that the people are entitled to have the facts, that the judgment of the Government itself is subject to their opinion and to their control; and in order to exercise that, they are entitled to the truth, the whole truth, and nothing but the truth, Senator.

EXPRESSION OF VIEWS BY SUBORDINATES

Senator McMAHON Now, let's assume, General, that one of your subordinate generals in the theater of your command had felt as you feel. He, too, is a military man and he, too, is subordinate to his higher command.

Do I take it that you would defend the right of a brigadier general on your staff to give his opinions as to the policy that was proceeding or that was being proceeded with by the Government of the United States?

General MACARTHUR I wouldn't have a brigadier general or anyone else on my staff that didn't freely and frankly give me his opinions in contradiction to my own. The very value of a subordinate is the freedom with which he expresses his initiative.

I have frequently had officers under my command, not only in my staff, but in my command, that disagreed with me completely and I listened to them and on occasions they have convinced me that I was wrong and they were right. That, I believe, is fundamental.

Senator McMAHON Now, General, we are not talking about the same thing, I don't think. I fully agree with you that it would be a poor commander, a poor executive of any kind, who insisted on having "yes men" around him and wouldn't listen to what they had to say.

However, General, that isn't quite what I am talking about. I assume that you had the right and exercised it at any and all times to bring any views that you might have to the attention of your superior officers.

Do you wish the question read?

General MACARTHUR I didn't get your—

Senator McMAHON Read the question, Mr. Reporter.

(The pending question was read by the reporter.)

General MACARTHUR Naturally.

Senator McMAHON And you were never restricted in any way in bringing those recommendations or thoughts that you might have on any matter to the attention of your superiors, the Joint Chiefs of Staff.

General MACARTHUR No restrictions whatsoever.

Senator McMAHON You see, General, what I was raising was the question of the advisability, if not the propriety, of any subordinate military officer to take his differences of opinion, on a governmental policy, when he is in the military command, and chain of command, to people in political life.

General MACARTHUR I do not know what you mean by "people in political life," Senator.

Senator McMAHON We have your answer, General, in the letter to Mr. Martin.

General MACARTHUR It seems to me that the American people are entitled to certain basic facts, when it involves the lives of their sons, and, perhaps, the future of our country.

I do not believe in the gag rule, if that is what you are talking about.

I am free to confess I do not quite follow what you are driving at, or how it appertains to this particular investigation.

Senator McMAHON General, you are not going to, by that statement, without a mild dissent from me, place in this record that I am in favor of what you choose to denominate as "the gag rule."

I am not an expert on military affairs. I was merely of the opinion, and always have been, from what I did know, that every officer and every man in the United States Army

reported to his superiors, and fought out his differences with his superiors.

COMMUNISM AS OUR MAIN ENEMY

Now, General, you have stated that the issue that faces this Nation is global in nature.

As I see it, there are three questions, fundamentally, in global strategy.

Who is overwhelmingly the main enemy, in your opinion?

Senator SALTONSTALL What was that question?

Senator McMAHON Who is overwhelmingly the main enemy—that we have to take into cognizance—take into consideration?

General MACARTHUR Communism, in my opinion.

Senator McMAHON When you talk about communism, do you mean as evidenced in Red China, or the Kremlin?

General MACARTHUR I mean all over the world, including the interior of many of the fine democratic countries of the world.

Senator McMAHON General, where is the source and brains of this conspiracy?

General MACARTHUR How would I know?

Senator McMAHON Would you think that the Kremlin was the place that might be the loci?

General MACARTHUR I might say that it is one of the loci.

Senator McMAHON Would you say it was one of the main loci, the main place?

General MACARTHUR I think the world public opinion would so locate it.

Senator McMAHON Pardon me?

General MACARTHUR I say, I should think that the world public opinion would so locate it.

Senator McMAHON You would not differ from that opinion, General?

EFFECT OF A CHINESE WAR ON RUSSIAN ARMED STRENGTH

General, if we were to fight a victorious war with China, will you tell this committee how the strength of the Soviet Union, the armed strength of the Soviet Union, would be impaired, assuming she does not come into the war?

General MACARTHUR Will you repeat the question, please?

(The question pending was read to the witness by the reporter.)

General MACARTHUR As I have said so frequently, Senator, our purpose, as I see it in the Korean war, is to force China to stop her aggression in North Korea. It does not necessarily mean the overwhelming of China, it simply means that sufficient pressure be brought upon her to make her stop killing our boys by the thousands in Korea.

Just how that might impinge with reference to the Soviet forces is purely speculative.

Senator McMAHON Well, General, you make a pretty good speculation if Russia does not come in, and we do go into China in a limited way for the further extension of a now limited war. Is it not true that it wouldn't impair the 175 divisions that the Soviets are reputed to have, or the 16,000 operational aircraft, nor her stockpile and growing stockpile of atomic weapons?

General MACARTHUR If you mean to say, as you yourself said yesterday, calling attention to the alliance between the Soviet and China, that the diminution of China's potential power doesn't diminish the total power of communism throughout the world, why, that would be fallacious, Senator.

Senator McMAHON I asked, General, about its diminution of their military striking power, and I listed their aircraft, their atomic weapons, and their 175 divisions. It is obvious that we agree they are our main enemy—that the Soviet Union is.

General MACARTHUR I didn't agree to it. Senator McMAHON You do not agree?

General MACARTHUR. I said that communism throughout the world was our main enemy.

Senator McMAHON. I see.

General MACARTHUR. It is your argument to confine it to one section of the world.

Senator McMAHON. I see.

And you have the feeling that if we take over China, that we will have made—

General MACARTHUR. I didn't say we would ever take over China, Senator. I said to the contrary yesterday, that we had no objectives in China proper, except to put sufficient force on China so that she would stop her depredation in North Korea.

FACTORS AFFECTING GLOBAL POLICY

Senator McMAHON. General, as I take it, you have no opinion to give us as to when we will be best prepared for a war that would include the Soviet Union, if one had to come?

General MACARTHUR. Such studies, as that, Senator, are made by higher authority than my own. They are available, I am sure, to you.

Senator McMAHON. And, as a former Chief of Staff of the Army, you realize that those higher authorities have to take into account many factors which a theater commander cannot take into account?

General MACARTHUR. Unquestionably.

Senator McMAHON. What are some of those factors, General?

General MACARTHUR. Some of those factors are the general resources that would be available to us and our allies; the strengths that would be available to the enemy, the disposition of the forces, the general political atmosphere that prevails, the controversial questions that might arise between the governments, and many other things which, of course, would be much beyond any sector commander's responsibility.

Senator McMAHON. That is very helpful, General; and those are the factors which you assumed that these men whom you believe to be competent have weighed, and must weigh, in relation to our global policy and our global defense.

General MACARTHUR. That is not only their responsibility, Senator, but it is their authority.

Senator McMAHON. And, General—

General MACARTHUR. It is inherent in their command position.

Senator McMAHON (continuing). If they show up here and say that they have weighed all of those factors, and they believe that the policy which we are pursuing in the east is the correct one, I assume that you would agree with them inasmuch as you have not studied those factors which will influence the opinion of these competent men?

PUBLIC OPINION AND DEFENSE DECISIONS

General MACARTHUR. Any decisions they'd make, Senator, are like all other human decisions. They have to pass before the high court of public opinion.

The fact that any group in authority, in carrying out its responsibilities, makes decisions, that when they make that decision every man accepts it as an infallibly correct one is absurd.

Senator McMAHON. General, I hope I am a democrat, with a small "d" as well as a large one. I say I hope I am a democrat, with a small "d" as well as a large one, but I wonder if the logical extension of your last observation does not mean that we should take a national poll or referendum on how we should conduct the strategy of defending America. You do not wish to be put in that position, General, do you?

General MACARTHUR. Not at all, Senator. Every military man is subject to assignment. If he doesn't perform his duties satisfactorily, he is subject to removal. If an administration doesn't conduct its processes satisfactorily, every 4 years we have a referendum.

Our system of government is based upon that. If you mean that I would in contradiction to that purely democratic method would accept a Soviet method of placing every issue that comes up before a vote of every member of the citizenship, I would, of course, not agree.

There is a great difference between pure democracy and a republican form of representative government. The latter is what we're operating under.

Senator McMAHON. Mr. Chairman, I still have my juncture in mind, if the chairman will just indulge me for a couple of minutes more.

LIMITED WAR IN CHINA

General, your recommendations for our operations in China would still be a limited war. We would not commit American ground forces to the operation in China under any circumstances, as I understand it.

General MACARTHUR. I would not advise it; no, sir. That is, of course, with the general limitation of the contingencies of campaign.

I believe it would be a master folly to contemplate the use of United States ground troops in China. I do not believe it would be necessary.

I believe, as I explained several times yesterday, that the application of the, if you want to call it, limited pressures would be quite sufficient to bring Red China to a reasonable attitude to gather around a peace conference table to end this savage slaughter.

Senator McMAHON. General, of course we have had undisputed command of the air in Korea, and those northern Chinese troops keep pouring down into North Korea.

General MACARTHUR. The reason, Senator, that the Air has not been more successful in stopping that pouring down is because they don't have the latitude of operation to hit deeper than the Yalu.

You understand the Yalu is only 2 or 3 days' march from the front line, and it gives the Air a very limited opportunity, especially when you would have a couple of days of obscure weather where the Air couldn't hit, you could get troops down from the Yalu to the front line without being subjected to any air attack, but if the Air could go where they are assembling, could go to the foundation roots where these armies are being assembled to be thrown at us, they could destroy them.

At least they could so decimate them that their efficacy when they reached the front lines would be most materially decreased.

The Air has done a magnificent job in Korea. Under the limitations placed upon it, it has been far in excess of any anticipation that I had.

THE IMPORTANCE OF OUR ALLIES

Senator McMAHON. General, I haven't had an opportunity to review the testimony of yesterday except very hastily, but I saw one of the newspapers had a headline that you said yesterday that we would go it alone if necessary. I am sure, General, that you do not underrate the importance of having our allies with us.

General MACARTHUR. Senator, I am not responsible for what the papers say, but in answer to your question I would say indubitably it is advantageous for us to have all of the allies that we can get and procure.

The great difficulty in the contributions that are being made, they're not in commensurate strength with what we put in. The forces we have in Korea are only token forces from everybody except the South Koreans and ourselves.

We have plenty of allies, but the numbers of them do not contribute in the same generous and noble way in which we do.

Senator McMAHON. Thank you, General. And they should put up more. These allies do have many assets which we must think about in any global struggle.

General MACARTHUR. Unquestionably, Senator, and no one is more fixed in that hope that we can protect them.

UNITED STATES EFFORTS TO COMBAT COMMUNISM

Senator McMAHON. General, you said one thing in your speech—and I will now come to an end—which interested me very much. You said many things that interested me, but this in particular I thought was interesting. You said, and I quote you: "What the people strive for is the opportunity for a little more food in their stomachs, a little better clothing on their backs, and a little firmer roof over their heads, and the realization of the normal nationalist urge for political freedom."

I thought, General, that that was a very cogent analysis of the yearnings of the people of the world.

Although I will try to later, I will not take the time now, except to suggest this question: Have you thought out, and could you give us the benefit of your wisdom as to a program that we can adopt in this country in taking the initiative against the Communist menace which is built up on the existence of conditions which you described?

General MACARTHUR. I think, Senator, that the United States has already contributed with a degree of generosity, nobility, and the breadth of character which is unique in the annals of the world, along just the lines that you are suggesting.

Senator McMAHON. I am very happy to hear you say that. That means, of course, that you see some sense in the point 4 program.

General MACARTHUR. Senator, I am not going to discuss any details that I am not familiar with.

Senator McMAHON. I see.

General MACARTHUR. I know no more about the point 4 program than what I have read in the papers. My observations were based upon my own experiences in the Far East.

Senator McMAHON. Those experiences in the Far East have brought you to the opinion that it is this kind of physical condition of the people which has made the inroads of this world-wide conspiracy possible?

General MACARTHUR. It has helped it enormously, beyond doubt.

MACARTHUR SPEECH AS CHIEF OF STAFF IN 1932

Senator McMAHON. General, and this is my closing observation, I would like now to read into the record a statement that was made by you when you were Chief of Staff in the year 1932, and I quote:

"The national strategy of any war, that is, the selection of national objectives and the determination of the general means and methods to be applied in obtaining them, as well as the development of the broad policies applicable to the prosecution of war, are decisions that must be made by the head of state, acting in conformity with the expressed will of the Government. No single departmental head, no matter what his particular function or title, could or should be responsible for the formulation of such decisions.

"For example, in every war the United States has waged, the national objective to be obtained has involved the Army in land attacks against areas held by the enemy. In every instance missions have been prescribed for the Navy that had in view the assisting and facilitating of the Army efforts. Yet in no case could these missions and objectives have been properly described by the Secretaries of War and Navy acting in unison, or by a single supersecretary acting for both. The issues involved are so far-reaching in their effect and so vital in the life of the Nation that the phase of coordinating Army and Navy efforts should not be delegated by the Commander in Chief to any subordinate authority. Any such attempt would not constitute delegation but rather abdication."

Thank you, Mr. Chairman.

General MACARTHUR. As I look back, Senator, upon my rather youthful days then, I am surprised and amazed how wise I was. Senator McMAHON. Thank you.

The Democratic Party Has a Record That Will Win in 1952

EXTENSION OF REMARKS

OF

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. BOLLING. Mr. Speaker, the speech delivered today by that distinguished fellow Missourian, the Honorable Clark M. Clifford, to the Democratic Committee of Wisconsin at Wausau, Wis., makes an important contribution to our understanding of the issues that will confront the American people in November of next year:

I am very glad to be here in Wausau tonight, with the Democrats of Wisconsin, because it gives me a chance to talk with you about the great issues which face the American people today.

I am particularly glad to have this opportunity to be in Wisconsin at this Democratic convention, because I have heard so much about the new, young, hard-hitting Democratic Party which you have built here in recent years.

You are building a vigorous party organization around principles and ideals. And you are carrying on a tradition of liberal, clean, and independent political action for which Wisconsin is justly famous and may be justly proud.

With this kind of a Democratic Party, I think no one need worry about the future political good name of this great and progressive State.

Judging from the way your Democratic vote has been rising, I believe that people are going to find Wisconsin a Democratic State in 1952.

For nearly 2 years, I have been away from the White House and I have not held any official Government position. But I haven't lost my interest in the questions of foreign and domestic policy which confront the American people. As a private citizen, I travel more, and talk with more people, than I was ever able to do in the 4 years I worked for President Truman. I see more clearly now than ever before how essential it is to the welfare of every American family that we have a Government in Washington that works day in and day out for two overriding goals: Peace in the world, and the welfare of all Americans.

And after watching from the outside for 2 years, I am more convinced than ever before that the present administration in Washington is successfully leading us toward peace and the highest level of prosperity we have ever known.

Next year—1952—is a Presidential election year. People are already throwing their hats—and other people's hats—into the ring. Now, I didn't come out here to throw hats around, and I can't tell you who will be on the Democratic ticket in 1952. A lot of people are saying that President Truman will run, but, so far as I know, he has kept his own counsel and hasn't told anyone.

But this I do know.

The Democratic Party has a record to be proud of, and we will have candidates to be proud of in 1952.

The Democratic Party has a record that will win in 1952.

The Democrats will win because of our achievements in foreign policy, and we will win because the American people know progress and prosperity when they see it, and they know who is responsible for it.

There has been a lot of discussion of foreign policy this last year, because of Korea and the tense international situation. Unfortunately, a lot of the talk has been highly inaccurate, put out by those who are trying to discredit our foreign policy for partisan political reasons.

Tonight, I would like to put this matter of foreign policy in perspective. I think it is perfectly plain, when you look at it over the last several years, that we have developed a firm, clear, and consistent foreign policy—a policy that is designed to achieve peace and freedom and human progress in the world.

Let us go back for a moment to the fall of 1945.

At that time, the world must have looked pretty soft to the men in the Kremlin. Western Europe was in ruins. Hunger and unemployment were everywhere. Factories were closed. Farms were devastated. Thousands of refugees clogged relief camps.

It looked like a situation made to order for the Communists. It looked even better to the men in the Kremlin because the United States was disarming as fast as it could. The people of our country, naturally enough, wanted to return to peaceful pursuits. President Truman saw the danger in too rapid demobilization and he advocated a system of universal military training so that we would always have well-trained Reserve forces. But his plea went unheeded.

The Kremlin was convinced that the American people were turning back to isolationism, and that we would soon have a depression.

So the Kremlin started to move. First, the Russians tightened the screws on the Eastern European countries that the Red army had captured from the Nazis. They set up satellite governments, and began converting Rumania, Hungary, Bulgaria, and the other Eastern European countries into parts of the vast concentration camp that is the Soviet Union.

Then the Russians began pushing out beyond the area its armies had captured. They stirred up a civil war in Greece. They threatened Turkey. It looked as though these two countries would be the next to fall.

But what happened? The Kremlin had reckoned without the President of the United States. Backed by the Congress, the Truman doctrine saved Greece and Turkey.

Next, the Kremlin tried to move in on France, and Italy, and Western Germany. In these countries, the winter of 1947 was expected to be the most miserable since the war. It looked as though they would fall like ripe fruit into the Kremlin's basket.

But once again the United States acted. The Marshall plan revived the countries of Western Europe. They were saved from communism, and today they are free, strong, and staunch allies.

The Kremlin tried to take over Berlin by the blockade. But once again President Truman dumbfounded Stalin and his gang. We began the airlift. England and France joined us. Berlin was saved. Today, it is strong and free.

The Kremlin continued to build up large armed forces, in a state of battle readiness, pointing toward Western Europe. Again the United States acted. Together with Canada and 10 free nations of Western Europe, we signed the North Atlantic Treaty for common defense against aggression. We now have the combined strength of these 11 nations—and Greece and Turkey are about to join—to meet any aggression.

What a glorious change from the wreckage that was Europe in 1945.

In Asia, too, the Kremlin vultures have been busy.

They have made one great gain in Asia. The Nationalist government of China, ever with billions of dollars worth of help from the United States, was not strong enough to hold the mainland of China.

But in Japan, under progressive occupation policies, the people have made rapid strides toward freedom, and the Communists have fallen far behind.

Elsewhere in Asia, new nations have arisen. India, Pakistan, Burma, Indonesia, the Philippines, Indochina, Korea—the list is long. The United States has been helping these countries maintain their independence and grow in strength.

We believe that freedom is indivisible, and that the free nations all around the world must work together for peace and prosperity if we ourselves are to remain prosperous and free.

We backed up our beliefs with action in Korea. When the Communist assault came in Korea in June 1950, the Kremlin expected at one blow to shatter the hopes of all the free nations of Asia, and to destroy the United Nations.

But they were wrong again. Because, as in every crisis in the last 5 years, the United States acted to preserve freedom.

The shock of the Communist aggression in Korea, and then the promptness of the American response, sent a thrill clear around the world.

A few days ago, our American Ambassador to Denmark, your neighbor from Minnesota, Mrs. Eugenie Anderson, described the effect in Europe of the Korean decision this way. She said, "I can remember so well those anxious hours between the first word of the Communist attack and the moment when President Truman announced that American forces were on their way to Korea. I want to tell you that I was especially proud to be the American Ambassador that day."

"There had been great uneasiness during those hours. Would we really dare to match our fine words with bold deeds? * * * If the United States had not acted immediately and decisively then, the whole world would have known that both the United Nations and the North Atlantic Treaty were as dead and as empty as a haunted house."

But, under the President's far-sighted leadership, the United States did act. And since that time, this country's troops, together with troops from other members of the United Nations, have fought brilliantly and bravely.

The Communists have had well over a million casualties—many times the casualties of the United Nations. They have spent untold blood and treasure—and they are back behind the line they started from.

We have been fighting this conflict in Korea to prevent a third world war. So far we have done just that.

No one can promise that there will not be a third world war. The obvious fact is that the Kremlin can start it at any time.

But the equally obvious fact is that, step by step, over the last 5 years, we have taken a series of positive actions that have completely changed the world situation.

Five years ago, large parts of the free world seemed open to the Kremlin for the taking. Today, the Kremlin looks out to see itself confronted by a unified, determined group of free countries, ready to defend themselves against subversion and aggression, and prepared to work together for human progress.

I know—we all know—the outcome is still uncertain. There will be trying days, hard days, before we can feel sure of the result.

But we can be buoyed up by the knowledge that the free world today is stronger, more united, and more determined than it has been at any time since 1945.

A great deal of the credit for this result, and for the profound change in the world situation which has brought it about, is due to the vision, the determination, and the great moral courage of our President—Harry S. Truman.

The Democratic Members of Congress have given him strong support. We all know that there has been differences among the Democrats in Congress on some issues. But in the field of foreign policy, it is a notable fact that the Democratic Members of Congress as a whole have been united behind our positive, constructive foreign policy.

I would also like to pay tribute to those far-sighted members of the Republican Party who put aside partisan consideration in a sincere effort to support the President in his program to strengthen the security of the free world.

Senator Vandenberg was a great exponent of the principles of a bipartisan foreign policy.

I regret to say, however, that some members of the opposition have not followed Senator Vandenberg's example of putting our national security above political expediency.

Some of these men, who have no foreign policy of their own, try to make political capital out of every unfortunate turn of events in world affairs.

They always wait to see how our policies are going to turn out before they take a stand.

If it works, they say they were for it all the time. If the going gets tough, they say they were against it from the beginning.

They operate by hindsight, and their hindsight is truly brilliant. They can spot trouble in foreign affairs the minute they read about it in the newspapers.

But you can't run a government on hindsight. When it comes to devising a program to meet trouble or to avoid it before it happens, these men have a remarkably blank record. However, despite their obstruction, the free world grows stronger every day.

But we cannot successfully maintain our world leadership and carry out our responsibilities unless we are strong internally here at home.

We must be strong economically. We must be strong morally. We must be strong in our devotion to our democratic concepts of individual rights and liberties.

I ask you to look back at the progress this country has been making. The last 10 or 12 years have been years of vast change, and vast problems. During these years, the American people have had to carry the heavy burdens of a world war, and since then, the burden of helping to rebuild shattered cities and shattered lives all around the world. The people of the United States have had to spend billions of dollars for war and reconstruction.

Has that left us exhausted, worn out, with our factories falling to pieces and our farms run down?

No! The exact contrary is true. The immense productivity of our free society has enabled us to carry the tremendous economic burdens of the last 12 years—and we are better off today than when we started.

We have grown to peaks of prosperity and production that are the marvel of the world. This country today is turning out 80 percent more goods and services than it was in 1939. You can look at any of the figures—farm output, steel production, national income—and they all show the same thing.

But the figures that impress me more than all the statistics on steel and wheat and freight carloadings are the figures that show what the increased output means to the average man. You hear a lot of talk to the effect that all the increases in income that people have had have been eaten up in higher prices and higher taxes.

But even allowing for high prices and high taxes, the fact is that the annual income

per person in this country today is 40 percent higher than it was back in 1939. I repeat, after taxes, and after taking price rises into account, the average annual income in this country has increased by 40 percent.

Now these are remarkable facts. They would do credit to Paul Bunyan—but they are not imaginary. They are real.

Why has our country grown like this? One of the main reasons is the progressive, liberal program of the Democratic Party.

Look at the farmer. Twenty years ago the farmers of this country were in terrible shape. They were losing their homes and their land, and they were burning their crops for fuel.

But the New Deal and the Fair Deal brought strength and health and hope to farm families. Better credit was made available. Educational efforts were stepped up. Electricity was brought to the farm. Conservation measures were encouraged. Markets for farm crops were improved.

All these measures were immensely successful.

Why? Because they were based on the great secret of democratic progress; these measures freed the farmer from his old chains of debt and poverty and drudgery. And farmers, free to use their skill and energy, have responded magnificently to the challenge of recent years. Productivity on farms has gone up 25 percent since 1940—that means that 3 acres now will do the work that 4 acres used to do.

The income of farmers in this country is 50 percent higher than in 1939—after taxes and after allowing for higher prices.

But the farmer isn't the only one who is well off. Look at the industrial worker.

Twenty years ago, the workers in this country were in as bad shape as the farmers were. Jobs were scarce. Millions were unemployed. Unions were shattered.

Then came the New Deal and the Fair Deal. Social security and minimum-wage laws were passed. Housing and health programs were started. Collective bargaining became the basic element in labor-management relations.

And these programs were successful, too—for the same reasons our farm programs were. These programs set the workers of the United States free: free from sweatshop wages; free from poverty in old age; free to join unions of their own choosing, free to participate in decisions about wages and hours and working conditions.

The working men and women of this country have responded magnificently to their challenge of the last 10 years. Productivity per man-hour has risen more than 30 percent. The factories of America were the arsenal of freedom during World War II, and they are now again.

Working people have shared in increased prosperity. Annual wages and salaries of employees—after allowing for price changes—have nearly doubled since 1939.

Today the working people of the United States are better off—materially and spiritually—than any workers in history. The Democratic Party has had a lot to do with that, and we should all be proud of it.

So far, I haven't mentioned businessmen, and you may be thinking that all these gains for farmers and workers have come out of the hides of businessmen. Nothing could be farther from the truth.

Business also was lifted to its feet by the New Deal in the early 1930's. Business, too, has prospered under the Fair Deal. The annual income of corporations, after taxes, and after allowing for price increases, has more than doubled since 1939.

But there are some other figures I am also proud of. Since 1939, the number of independent businesses in this country has grown from 3,000,000 to 4,000,000. That is evidence again that the New Deal and the Fair Deal are on the right track by helping

to turn loose the energies of our people—helping to free them from the iron grip of restricted credit, low wages, poor prices and business depression.

There is one great lesson to all this: It is within our power as a people to make full use of our tremendous resources of farm, and factory, and human skill. We know how to do it. We are doing it. We can continue to do it.

But we can maintain this progress only if we continue the positive, liberal type of Government we have had in this country since 1933.

Now, we hear a lot of talk these days about the danger of communism in the United States. Much of this talk is sheer nonsense. There isn't the slightest danger that the Communists can take over this country from within. The Communists were never at a lower ebb in this country.

This state of affairs didn't just happen. It is the result of a long, hard fight—a fight that this administration, backed by the liberal and progressive forces in this country, has been waging for years.

The great strength of this country is our best defense against communism, abroad and at home. Our productive power is the keystone of the resistance of the free world. Our prosperity is our best bulwark against communism at home.

The Communists are practically powerless in this country because, first of all, the policies our Government has followed have made the country prosperous. Communism doesn't spread when people have jobs and the economy is booming. Prosperous people don't accept the fallacious doctrines of communism.

Communist influence is at an all-time low today because the liberal elements in our population have fought against it. They have met Communist propaganda head-on in their labor unions, and in their political organizations, and have stopped it dead in its tracks.

Communist influence is at a low ebb because the Government has had a steady, practical program of anticommunism. Long before our political opponents began their present hue and cry, President Truman had begun the Government loyalty program to eliminate Communist influence from the Government. This program has worked—without fanfare and without injury to innocent persons. Furthermore, the administration has worked for years, successfully, to break up the illegal activities of the Communist Party. Leading Communists have been indicted, tried, and jailed, all in accordance with process of law. Communist espionage has been met with all the forces of the FBI.

This is the record, and it is a good one. Furthermore, this is the right way to fight communism. The wrong way is to spread reckless charges and rumors, to spread fear and suspicion, and to whip up such hysteria that free speech and the bill of rights are in danger.

That is the wrong way to fight communism, because it plays into the hands of the Communists. They function best in an atmosphere of fear and hysteria. It is the wrong way because it undermines our basic freedoms.

The theory that a man is presumed to be guilty until he proves himself innocent is as dangerous to our way of life as a Soviet atom bomb.

There is no use in spending billions to fight communism if we are going to frighten ourselves into another form of totalitarianism.

If we stick to the policies of the Democratic administration, if we keep our heads, and adhere to our principles of free speech and fair play, communism will never be a threat to the internal security of this country, no matter how recklessly charges of

communism in Government are thrown around.

Now, there's another form of smear that is being spread around the country, and it is one on which our opponents place great hopes. They are filling the papers these days with charges of corruption in the Federal Government.

Your Government—and I know the Government pretty well—is filled from top to bottom with hard-working, decent, honorable men and women. There have been some instances of dishonesty in the Government. There have been a few men and women who have betrayed the public trust. But they are rare and isolated cases, and the administration throws them out and punishes them whenever they are found.

I say to you there is no more honest man in America than Harry Truman. No one is more determined to stamp out every single instance of dishonesty in the Government service.

This smoke screen of accusations should not obscure the fact that our opponents are trying to divert public attention from the basic issues that exist. In five successive elections the other side has lost on the issues. This time they are trying the strategy of clouding the real points of difference and repeating over and over again the cry "corruption."

The Democratic Party must continue its efforts to locate and weed out all unfaithful servants and, at the same time, we must keep the real issues clearly before the public.

There is nothing that will kill off our opposition faster than getting the real issues across to the people. What we must do is to cut through all the scare words and propaganda, the smoke screens and phony issues, and get the truth to the people. For once, our citizens know what is really going on and what is really at stake in this country and the world—once they know these facts, the Democratic Party will have nothing to fear at the polls.

I have tremendous confidence in the good sense of the American voter. We all should have confidence. We should all remember what happened in 1948.

And we should all remember that every time we get the issues over to the people it will happen again.

That is our big job. And I know you Democrats out here in Wisconsin are going right to work on it. It is the greatest public service you can render to the people of this fine State.

After all, ours is the party that has a definite, positive program to put before the country—a program to benefit all Americans and all the free peoples of the world.

And ours is the party that can offer the country real leadership. We have demonstrated that time after time. President Truman and President Roosevelt before him have given our country—and the whole free world besides—a record of hard-hitting, firm, constructive leadership that is unequalled in our history.

Think what kind of man we have as President of the United States and as head of our Democratic Party. I only wish you all had the chance to know him as I have. And I want to tell you this about him—he has more courage, more integrity and more human decency than any man I have ever known. He is a wonderful representative of everything that is best in the tradition of our great Midwest.

That is why the record of this administration will have a great place in history. That is why the Democratic Party can go before the country with a program it can be proud of.

It is not an accident that the whole free world looks to America for help and guidance and support. It is not an accident that the people of this country have put a Demo-

cratic administration in office five times running.

These results have happened because our country under Democratic leadership has earned the trust and confidence of the free world by the firm positions it has taken and the deeds it has performed. And in just the same way, our Democratic administrations have been returned to office because they have earned the trust and confidence of our own people here at home.

We Democrats have a real program. We have real leadership. We stand on the right side, the constructive side, the forward-looking and progressive side of every major issue that confronts this country and the entire free world.

This is our record. This is our achievement as a party.

This is why I have full confidence that the Democratic Party in 1952 will triumph once again.

Government Planning Comes High

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. SCHWABE. Mr. Speaker, Dr. George S. Benson is president of Harding College at Searcy, Ark. He is a very popular lecturer in our part of the country and in great demand for public addresses. His lectures are both entertaining and instructive. Above all, I think he pitches them on the sound basis of the American free enterprise system, which has made this country the envy of the rest of the world.

My attention has been directed to an article by Dr. Benson, entitled "Government Planning Comes High," which appears in the September 1951 issue of the Independent Petroleum Association of America Monthly, and I am pleased to quote the same, as follows:

When the economic planners of England's Labor-Socialist government blithely wasted \$100,000,000 of hard-pressed Britain's money on a scheme for growing peanuts in British East Africa, and were obliged last January to publicly admit utter failure, the limit seemed to have been reached on the high cost of bureaucratic bungling. But the facts regarding our own Interior Department's plan for irrigating a small section of Arizona desert land, would suggest that the English Socialists are, after all, only small-time spenders.

The construction cost of our own economic planners' Arizona irrigation project, together with its so-called multipurpose trimmings, is to be \$738,780,000. But that's just the beginning of what the American taxpayers would have to pay. The Interior Department itself admits that actual cost to the taxpayers, counting interest on the borrowed money necessary to build it, would be \$2,784,509,000. That's almost 10 times the total value of all farm lands and buildings in the whole State of Arizona as recorded by the United States Census Bureau.

A FANTASTIC PROPOSAL

The astonishing facts about the Interior Department's central Arizona project are disclosed in an article by Towner Phelan, distinguished economist, in the July 16 issue of the Freeman magazine. "From the standpoint of costs in relation to expected benefits," he writes, "possibly nothing more fan-

tastic than the central Arizona project has ever been proposed."

Mr. Phelan points out that the \$2,784,509,000 figure is the economic planners' own estimate of the ultimate cost, with interest, and that actually the cost probably would be 2 or 3 times this amount—or from \$6,000,000,000 to \$10,000,000,000. "History shows," he says, "that in most cases the initial cost estimate of a Government project is very low, later estimates much higher, and the final cost higher still. The Hoover Commission gives many examples such as the Hungry Horse project in Montana. It was estimated to cost \$8,500,000 but actually cost \$93,500,000."

According to Mr. Phelan's well-documented article, the object is this: Water is to be diverted from the Colorado River to provide irrigation for 152,500 acres of land now being irrigated by a dwindling supply of ground water—pumped by private means, and an additional 73,500 acres of desert wasteland. To reach the land to be rescued the Colorado's water must first be raised nearly 1,000 feet by pumping, and then transported some 300 miles by canals and pipelines.

HALF A TRILLION

More than half the land to be watered by the Government's engineering colossus is owned by 420 landowners with 500 acres or more—thus more than half the multi-billion-dollar cost would actually be expended for the direct benefit of only 420 farmers. Mr. Phelan estimates that the cost allocated solely to the irrigation phase of the multipurpose project calls for \$7,159 of taxpayers' money to be spent for each acre of land to be irrigated—on the basis of the Government's own estimates. On past performances, this figure likely would be closer to \$25,000 per acre.

The writer shows that on a pro rata basis the economic planners are proposing to bring water to the 420 larger farms at an average cost to the taxpayers, counting interest, of \$2,118,000 per farm. His article also states significantly that the central Arizona project is only one of a batch of such projects that have been officially planned by the planners at an estimated cost of \$57,506,200,000 and which would probably cost \$500,000,000,000—half a trillion dollars.

Yes; planning by Government economic planners comes high. It is bankrupting England and pulling the citizen down to socialized poverty. Must we, too, become its victims?

LET'S LOOK AT ANOTHER SOCIALISTIC EXAMPLE

There once lived a popular political leader who seemed destined to change the basic economic and political concepts of his nation. He had been born to "blue blood," had attended the best schools, and as he'd grown into manhood he'd begun to influence people disarmingly with his charm and oratorical talents. When he rose to the administrative leadership of his nation, he immediately established a paternalistic program of economic planning and social reform to improve, he said, the plight of the common man.

Prices and wages were set by government decree. Virtually all of the tax load was placed on the middle and upper income brackets. Government pensions, unemployment compensation, and regular grants in all categories of welfare were begun. Special benefits were provided for various groups. Government bureaus were set up throughout the country.

The leader's ego thrived. It was said he actually considered himself incapable of error. Yet, after a number of years, the reform ideas began to go sour. Both the common man and his uncommon neighbor were in a sorry plight. The monetary structure of the government was giving trouble. The economic planning wasn't paying off. The peerless leader manipulated money values

but in the end this only aggravated the situation. Members of his administration were caught stealing public funds.

Within 10 years the country was critically weakened morally and financially. The impractical reformer was removed from office, his abortive programs cast off. Yet, the damaging effects lingered on. Some historians subsequently termed him "imposter" and "charlatan."

His name was Wang An-Shih. He was chief-of-state in China from 1069 to 1079. Historians are not in agreement on the long-range extent of the injuries done by his 10 years of political paternalism and economic planning. However, history does record that the nation did not have the necessary moral and physical strength when, many years later, the godless hordes of Genghis Khan, bent on world conquest, overrun and plundered the whole country.

The lesson. Throughout the ages paternalistic governments have been fashioned by peerless leaders and when continued for long they have ruined nations—again and again and again.

The New Call for Leadership in Business and Finance

EXTENSION OF REMARKS

OF

HON. BRIEN McMAHON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. McMAHON. Mr. President, I ask unanimous consent that I may insert in the Appendix of the Record an address by W. H. Wheeler, Jr., president of the New England Council and president, Pitney-Bowes, Inc., Stamford, Conn., before the Twenty-first New England Bank Management Conference, October 19, 1951, Hotel Statler, Boston, Mass.

There being no objection, the address was ordered to be printed in the Record, as follows:

THE NEW CALL FOR LEADERSHIP IN BUSINESS AND FINANCE

I puzzled a bit over what I might say to you who are attending this annual New England Bankers' Conference. While I serve on the board of a bank, I am hardly an expert on banking problems, and what little I do know would certainly not do as the subject matter for a talk to such a knowledgeable group as this. But I can, as its president, extend to you the most cordial greetings of the New England Council to which so many of you have given your able help and support over the years—for the good of New England and the Nation. And I can give you some personal reflections on a few of the problems which face us all.

I am most fortunate in having this opportunity to talk to men of finance. No group carries greater influence in business thinking. We in business have the highest respect for your views as bankers. Even though you come to us most frequently when we don't need you, and we go to you most frequently when you don't want to see us, we just can't get along without one another. And I think we've done a good job together in New England in the past.

These are fretful, if not fearful times. Management and capital are worried about rising costs, taxes, and the state of political affairs. Labor is worried about wages, rising prices, and profits. The huge, amorphous white-collar group is worried about getting caught in the inflationary squeeze,

and about its relative impotency in an age of organization and power. The Government, apparently, is worried about all of us, and everything. And we, all of us together, are faced with the threat of moving from one costly war to a larger, more horrible one.

The Politburo could not have planned a more diabolical effort to undermine us. There is good cause for this worry. And it is only normal that each group should be worried about the things which most directly affect it. The curious thing, however, is why, with this unanimous concern over the state of things, are we not doing better?

As I see it, there are two reasons:

First, while it is quite true all of us are worried about our economy, it is not quite true that we have faced up to the full implications of the job we have set for ourselves. Guns and butter is a most appealing idea. We would be less than human if we didn't find it so. But I believe we must begin now to question seriously whether it is practical or not. We are committed to a goal of preparedness and strong defense, but we are not, so far, committed to the enormous task which this goal imposes on all of us. And by all I mean just that—business, labor, agriculture, the general public, and Government.

Second, our worries do not produce more curative actions because, I think, too many of us insist that our particular narrow point of view gives the only answer. We lose much of our strength in argument and conflict. Divide and conquer threatens to work even here.

The ancient story of the three blind men coming upon an elephant and each reaching a different conclusion as to the shape and nature of the elephant because of the particular part he laid his hands on, has never been more appropriate. It seems to me, than now. You will remember, one feeling his tail, said he was like a rope, another feeling his trunk said he was like a vine, and the last feeling one of his legs said he was like a tree.

"Perhaps so," you may agree, "but what has this got to do with New England? Are we doing any worse than any other section of the country?" My answer is most assuredly not, we are probably doing better. But the question is, Are we doing as well as we should? Are we furnishing the very high degree of leadership which our favored position and heritage should induce? I say "favored" advisedly, because I believe that we here in New England are probably the most fortunate group of people to be found anywhere on this earth. We have our economic problems, of course—many. But we have a top standard of living. We have a traditional ruggedness and courage of character that is unsurpassed anywhere. And, as the oldest culture in the new world, we should have the wisdom to use it effectively.

Character and wisdom together are an unbeatable combination. I'm sure none of you will quarrel with me as to essentially of character if we are to meet our No. 1 national problem of mobilization—guns with less butter for all.

You may differ as to what constitutes wisdom. But to be on the practical level, wisdom is simply the ability which enables us to visualize all parts of the elephant and see him function as a whole, instead of only those parts which we are accustomed to feel and handle. Mere knowledge of the parts alone is not wisdom.

Judge Learned Hand once wrote that "The spirit of liberty is the spirit which is not too sure it is right . . . which seeks to understand the minds of other men and women . . . which weighs their interests alongside its own without bias."

I would say that applies equally to wisdom—and without wisdom we certainly shall not long preserve the liberty born here in

New England and of which the judge wrote so eloquently.

Two old men—one a bit deaf, were once listening on a park bench to an outdoor orator. After half an hour the deaf one, who was able to catch only a word here and there, despite much sonorous language and gesticulations on the speaker's part, leaned forward to his friend, his hand cupped to his ear and whispered loudly, "What's he talkin' about?" The other old man disparagingly spat on the ground and replied, "He don't say yet."

To escape that accusation, but at the risk of inviting others, I am going to venture a few of my personal reactions on several controversial issues, as an indication of what I think more New England wisdom in business might contribute toward meeting national and regional problems.

And as a prelude, lest I be misunderstood, let me say I could make, I believe, quite an effective, though perhaps less controversial, speech dealing with the failures and shortcomings of Government, labor, and even the public. But we have had plenty of such speeches, perhaps too many from our own group. Let's examine the mote in our own eye, if any, for a change. We may be able to do something about that, even if we can't get the one out of the other fellow's eye.

First, it seems to me that economic wisdom requires a broad philosophic understanding on the part of businessmen that the whole progress of civilization can be measured by the extension of more equality of opportunity to human individuals, that the trend is not only good but absolutely inevitable, that eventually it must be world-wide; that our problem is basically one of maintaining an orderly rate of improvement susceptible of digestion without sacrifice of the opportunity itself, here or abroad, but that in any case the trend will not and cannot be denied, particularly in a democracy like ours, except by the destruction of democracy itself. Socialism comes when we leave the furthering of that trend entirely to Government, instead of helping it along ourselves.

Second, it seems to me we must recognize that while business leadership has made tremendous strides in the past generation in a new-found sense of public responsibility, we must go even faster in the next generation if we are not to further abdicate in favor of Government. Government must inevitably play an increasing part in human affairs, but our job is to keep Government the servant of the people and to improve it by active participation.

Next, more of us must frankly recognize that real business leadership essentially involves a high degree of courage and morality; that we are presently suffering from a rash of pseudo-public and industrial-relations programs which are synthetic and expedient and which will not permanently meet the challenge, that no expediency, no smartness, no sophistication, can ever equal character leadership in any sphere; that the lack of principle in political and labor circles which we decry has its counterpart in too many segments of business, that if we are competing for leadership with Government and labor, that competition is basically in terms of character and in no other.

I don't like to wear a hair shirt any more than you do, but if character and wisdom involve earnest self-examination, then let's take a look at some recent issues:

On the specific issue of Korea, I think more of us should see that, despite the superficial futility, risk, and stalemate, probably no American lives have ever been sacrificed for as great a chance of ultimately gaining world peace and averting another world conflict.

On our far-eastern policy since the war, let each critic be sure his foresight would be as good as his hindsight, and that neither are blinded by politics.

On inflation, I think that there are not enough of us in business and banking who really understand that we, as well as the public, Government, and labor, have been to blame for the necessity for Government controls and the difficulties of administration, that on the whole we failed in our position of public leadership after Korea, failed in not aggressively discouraging scare buying, in not refraining from raising prices and wages and from buying up scarce raw materials. Yes; we contributed our full share, if not more, to inflation.

On high business taxes—and particularly the excess-profits tax—it seems to me a great many of us asked for them. Too many instances of high profits, due to lack of restraint after Korea, made it virtually a political impossibility to avoid the inflationary excess-profits tax.

On the castigation of men in public office we reached an all-time high, or low if you prefer, when one of our leading industrial organizations characterized two great businessmen in Government, Charles Wilson and Eric Johnston, as prisoners of their subordinates, the bright slide rule and figure boys who get up the charts, interpret the statistics, write the speeches and feed them the data on which their thinking is based. Can you think of a better way to keep able men out of Government? And we certainly haven't sent enough of them into public service.

A number of you must have been as shocked as I to read in John Harriman's Boston Globe column the other day, this comment by a businessman consultant to NPA with whom Harriman had talked recently: "There is no longer the slightest hesitation on the part of industry to evade or to ignore the spirit as well as the actual rules of the game as laid down by our defense mobilization program."

"It's a Boston Tea Party with our whole economic stabilization effort being dumped into the harbor," Mr. Harriman continues.

"What this means, actually, is that the business, farming, and, to a lesser extent, the labor interests of this country are refusing to accept controls under conditions short of a shooting war," he concludes.

This picture may be exaggerated, but not too greatly. One of industry's top leaders this week publicized a reference to the Wage Stabilization Board as the "wage stimulation board" and spoke of its practical collapse. If it does collapse the record will show it was due as much to the pressure of management as to labor, management being unwilling to stand up to labor for fear of lost profits.

On the one hand we are worried sick about the dangers of inflation; on the other, scarcely aware of our contradictory behavior, we are tearing down the program designed to check inflation. How this must please Joe Stalin. He planned it that way. He didn't rank us high in either character or wisdom. And the pitiable part of it to me, is that all this is caused by a relatively small minority, whom the rest of us, with more tolerance and understanding, might at least render unpopular, if nothing more. It's time we were more vocal.

I know, of course, that all of us have every right to disagree forcefully when we question the wisdom of methods proposed by the Government, whether by Mr. Wilson or any other official. But none of us has any right, I believe, to circumvent and undermine the program once it is decided upon by Congress and becomes official policy. And we only hurt our own cause when some of us permit ourselves the luxury of name calling and motive questioning, as too many organizations and individuals often do. It's a form of demagoguery—business demagoguery—only unlike labor and political demagoguery, it makes no new friends and influences nobody. Certainly it wins no votes.

Don't misunderstand me. I don't say that as many in labor, agriculture, and Government have not been just as short-sighted, just as avaricious as some in business. But I am a businessman, and I am concerned about our getting our own house in order before we expend all our efforts in blasting and sniping those with whom we disagree.

You will remember the brief recession we had in 1949. When it started, too many businesses got panicky, talked depression, cut down too sharply on inventories, and laid off workers—more proportionately here in New England, incidentally, than elsewhere. I imagine that many were the same businessmen who had bitterly opposed the full employment legislation right after the war, insisting that Government should not be responsible for propping up a declining economy. I don't like that either, but if we want to avoid it, more of us must behave with courage and faith.

If we businessmen are to accept the challenge to provide leadership, an increasing number of us need to be more flexible in our social and economic thinking. I don't mean we should sacrifice principle, or cheapen our character. I simply mean we should be less rigid and dogmatic in our views. Perhaps the other fellow has as much character and maybe even more wisdom, particularly in the social and political fields where we of businessmen have necessarily had so little experience.

A case in point is the recent Report on the New England Economy, by the President's Council of Economic Advisers. In my opinion it should be studied carefully by everyone interested in the welfare of New England. It deals with New England's undeniable problems, both material and psychological, as seen by a group of New England's outstanding economists. It cannot intelligently be laughed off by anyone as politically inspired or gratuitous Federal boondoggling. It is profound and far reaching.

I did not agree with every recommendation in the report. It is natural and good that there should be controversy about it. But it seemed to me too many people blinded themselves to what the report had to offer, by their inflexible attitude toward Federal aid or intervention.

Granted that many of the recommendations were so phrased that it was difficult to vote an unqualified no, the large response to the New England Council's poll by responsible and intelligent New England executives with a majority voting against only one of the report's 37 recommendations, may give some of us cause to wonder if there may not be a change in attitude taking place.

The fact that 6 percent of New England's income is being diverted through taxation to help other parts of the country is a point to arrest attention. That's not necessarily all wrong, but I am not at all sure that some of that cannot more properly and in sound principle be used by the Federal Government in New England to do "that which the people cannot do as well for themselves," as Abraham Lincoln once described the role of Government.

Actually, Federal aid itself is not the sort of thing that one can or should be either for or against, without qualification. New England already accepts much Federal aid—from social insurance to channel dredging—and apparently without suffering too much spiritual deterioration as a result. Isn't the question of Federal aid one which must be decided by careful study of each proposal involving it? It seems so to me. Federal aid can be dangerous and unhealthy, or it can be beneficial and necessary. I think, depending on what it is being used for. But I can't believe all Federal aid is a sin. If it is, the good, rugged State of Vermont which uses proportionately the most in New England, is the greatest sinner among us.

We need great character and great wisdom in the job ahead. Let not the one muddle

the other. The country is crying for strong and responsible business and financial leadership. As Deane Malott, newly elected president of Cornell, told the meeting of your own American Bankers Association in Chicago last week: "These are not the times for sedateness in the banking fraternity"—and I may add nor the business fraternity.

But what is there to do about all this? I haven't any pat panacea, but I do suggest that some of us might at least count 10 before expressing opinions on these things, if not pondering on some of them overnight with a searching wisdom and courage.

I would like to see more of us measure our own actions and utterances and those of others against the yardstick of public interest. I would like to see us render highly unpopular the smart move, the shrewd play, and the wisecrack, when the welfare of our region or of our Nation is really involved.

Those are just a few of the things we can do which I am sure occur to you as they do to me. The road is a tough one at best.

We have done a job together in the past and done it well. We did it, I think, because we were willing to take the leadership in developing our great region in the material arts and the physical sciences. Let us now also show the way in the human arts and social sciences which constitute the severest challenge of the future, here in New England, in our Nation, and throughout the world.

Taft's Vital Leadership

EXTENSION OF REMARKS OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. SCHWABE. Mr. Speaker, the following editorial appeared in the Tulsa Daily World of October 17, 1951. I invite the reading of this clearly expressed opinion of the author to his consideration of TAFT's vital leadership:

TAFT'S VITAL LEADERSHIP

ROBERT A. TAFT is, literally, dynamically, out in front in the presidential race. His is the first positive announcement in the 1952 campaign, which will now proceed to take definite shape. His declaration is a challenge to President Truman to come out into the open, and it is a challenge to his opponents for the Republican nomination. It is requisite that those most concerned with the major-party nominations to follow the TAFT lead with unequivocal declarations.

Whether they favor him or not, most people with any worth-while political discernment will readily admit that Mr. TAFT is of presidential caliber and that he has nearly all the necessary elements of appeal. He is not glamorous and he has qualities of which politicians generally are not fond—Independence of thought and directness of action. He has for years been a real Republican leader. At times he has sided with the administration to an important extent—in matters of housing, foreign aid on a scale much reduced from the Truman plan, support of intervention in Korea. Perhaps his most conspicuous accomplishment, however, was directly against the President; that was in the passage of the Taft-Hartley Labor Act and its subsequent adoption over the President's veto. To do this he had to conduct a bipartisan fight and effect a temporary coalition between conservative Republicans and Democrats. That labor measure was supposed to

end his political career, it was supposed to confirm the Democratic-labor-big-city coalition for many years. Yet in 1950, 2 years after Truman had carried Ohio, TAFT got a truly sensational majority for Senator. That unavoidably put him in strong position for the fight he is now making.

Entry of Senator TAFT, ahead of at least two strong contenders and several eligible possibilities, reduces the Republican contentions to tangible form. It is now necessary for the Dewey-Duff-Eisenhower elements to declare their intentions. Gov. T. E. Dewey and Senator JAMES DUFF have taken over the Eisenhower campaign and are handicapped because the general doesn't say that he is a candidate. General Eisenhower is in a rather doubtful position. He could have stopped this talk of his nomination by simply saying "No," or he could have announced and ended a prevalent mystery. The general is further handicapped by the fact that Democrats are after him, too, and that a considerable element may try to nominate him on that ticket.

Senator TAFT has been conspicuous in presidential politics for 15 years. Three times he has been distinctly passed over—when Willkie and Dewey were named. He now bases his campaign on the flat declaration that "I am going to run because I believe I can conduct the only kind of a campaign which will elect a Republican to office." He is going all-out against the Truman administration and its principal doings.

The fact that Senator TAFT has held leadership so long and has been able to work with conservative Democrats to good effect may be a main reliance. He is running as a stalwart partisan, but he has effectually worked in several instances, with Senators WALTER GEORGE, HARRY BYRD, and PAUL DOUGLAS. They and their fellows form a real economy bloc in a spendthrift era.

In the matter of background, Mr. TAFT has emphatic advantage. He has worn well in strenuous political life. He has the advantage of his father's remarkable record—Judge, Governor General of the Philippines, Secretary of War, President, Chief Justice of the Supreme Court. The younger TAFT will not be running upon any reputation other than his own, but the family background, superior in many ways, will be no handicap.

Senator TAFT is probably the best qualified man in either party to be President of the United States. His unqualified announcement gives warning to any who wish to oppose him that they are taking on the champ when they start the battle.

"Oil for Education" Amendment

EXTENSION OF REMARKS

OF

HON. LISTER HILL

O. ALABAMA

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which I have received from Dr. Arthur S. Adams, president, American Council on Education, advising of the endorsement by the executive committee of the council of the "oil for education" amendment to Senate Joint Resolution 20.

The "oil for education" amendment is sponsored by the Senator from Oregon [Mr. MORSE], the Senator from Illinois [Mr. DOUGLAS], the Senator from Connecticut [Mr. BENTON], the Senator from New Hampshire [Mr. TOBEY], the Senator from West Virginia [Mr. NEELY],

the Senator from Alabama [Mr. SPARKMAN], the Senator from Tennessee [Mr. KEFAUVER], the Senator from Minnesota [Mr. HUMPHREY], the Senator from New Mexico [Mr. CHAVEZ], the Senator from Missouri [Mr. HENNINGSEN], the Senator from Iowa [Mr. GILLETTE], the Senator from New York [Mr. LEHMAN], the Senator from Montana [Mr. MURRAY], the Senator from North Dakota [Mr. LANGER], the Senator from Michigan [Mr. MOODY], the Senator from Vermont [Mr. AIKEN], the Senator from Arkansas [Mr. FULBRIGHT], and myself.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AMERICAN COUNCIL ON EDUCATION,

Washington, D. C., October 20, 1951.

The Honorable LISTER HILL,
United States Senate,

Washington, D. C.

MY DEAR SENATOR HILL. At the last meeting of the executive committee of the American Council on Education, on October 4, the committee unanimously adopted the recommendation of the Committee on Relationships of Higher Education to the Federal Government—

"That the American Council on Education endorse the Hill amendment, Senate Joint Resolution 20, and authorizes the president to communicate such endorsement to Senator HILL and through such other channels as he deems desirable."

The council has sent to all college and university presidents a copy of the speech which you made before the Congress in the original presentation of your resolution.

If hearings are planned on this resolution, please let us know in order that we may have someone present the policy of the council on this very important matter.

Sincerely yours,

ARTHUR S. ADAMS.

Summary of Legislative Record of First Session of Eighty-Second Congress—Digest of Major Legislation by Senator McFarland (S. Doc. No. 84)

EXTENSION OF REMARKS

OF

HON. ERNEST W. McFARLAND

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Friday, October 19, 1951

Mr. McFARLAND. Mr. President, in accordance with unanimous consent heretofore granted on Friday, October 19, there follows the summary of the legislative record of the first session of the Eighty-second Congress—digest of major legislation, Senate Document No. 84:

THE NATIONAL DEFENSE CONGRESS—SUMMARY OF THE LEGISLATIVE RECORD OF THE EIGHTY-SECOND CONGRESS, FIRST SESSION (FROM JANUARY 3 TO OCTOBER 20, 1951)

SUMMARY OF THE FIRST SESSION OF THE EIGHTY-SECOND CONGRESS

(By the Honorable ERNEST W. McFARLAND, majority leader, U. S. Senate)

When this Congress assembled in January of 1951, the very existence of the free way of life was under savage attack in Asia, and the alarm bells of danger were ringing throughout the world.

In the Far East, the entry of the Chinese Communists made the Korean conflict a showdown struggle between the slave em-

pire of communism and the forces of freedom. In Europe, the countries of the Atlantic alliance faced the menace of a Soviet attack with the bitter knowledge that arms and men were not available to stop the Red armies short of the English Channel.

Ten months later, when the Congress had completed the monumental tasks of its first session, the whole atmosphere of the world was transformed. The actions of the Congress played a vital part in bringing about that tremendous transformation.

With a tide of American arms authorized by Congress, the United Nations troops in the mountains of Korea had battered the Chinese Communists and the North Koreans to a standstill.

With American arms and men approved by Congress, the North Atlantic Treaty forces under General Eisenhower had grown strong enough to lift the cloud of fear from Western Europe.

Once again, America had become the arsenal of democracy.

Once again, the productive power of America had been turned in time into strength sufficient to halt the evil forces of totalitarianism.

Once again, American action had revived the fighting spirit and the hopeful faith of freemen everywhere.

In a year of great danger and great need, the American people looked to their leaders in Congress for bold and far-reaching initiative. Americans spoke up clearly and candidly, calling for courage and vision at home and abroad.

This Congress heard and heeded the call of the people. This Congress recognized the dangers and the urgent demands of this crucial hour of history. This Congress labored long and hard for America and the free world, and the results of its labors were felt from India to Korea, from the Rhine to the borders of Siberia, from one end of the earth to the other.

Under measures hammered into shape by this Congress, the United States astounded its friends and stunned its foes by proving that a great free nation could have guns and butter, too.

The United States worked one production miracle after another, arming and equipping millions of men, turning out thousands of tanks and millions of shells, expanding its giant atomic energy plants, sending to sea the most powerful Navy ever to cruise the oceans, developing fabulous new weapons, and at the same time building millions of automobiles, millions of television sets, thousands of new homes, and vast new networks of roads and highways.

In a year dedicated largely to rearmament, while the Nation girded itself to meet any Communist challenge that might come, the American people were better fed, better housed, and better clothed than they had ever been before. While bombers and tanks and artillery rolled from defense plants, the American standard of living went steadily upward—and American prosperity spread benefits to millions of other people all over the world.

How did the Congress help to create these magnificent achievements? Here are the principal accomplishments of the first session, briefly summarized in the main fields of legislative action.

National defense

Arming America to preserve peace through military power, this Congress put aside many matters which might have received much attention in other years.

The Congress concentrated upon the vital needs of national defense, knowing that the survival of America was at stake. The Congress gave thorough and thoughtful consideration to each big step taken this year, knowing that mistakes might mean disaster for 150,000,000 Americans and destruction for the free world.

Convinced of the necessity for a huge expansion of American military services, the Congress acted early in the session to summon young Americans to the colors on a fair and orderly basis. The manpower bill lowered the draft age to 18½, provided for the registration of all youths at the age of 18, and permitted the Defense Department to maintain a maximum of 5,000,000 men under arms. This bill also laid the foundation for universal military service, which has been advocated by American leaders since the days of George Washington, to give every citizen training for the protection of the Nation.

For arms, equipment, training, and the general operations of the Defense Establishment, the Congress appropriated nearly \$57,000,000,000 in one measure. Other bills provided additional billions for the construction of military bases here and abroad, and billions to buy arms for allies in the other free nations.

Altogether, the Congress appropriated more than \$77,000,000,000 for military and general national defense purposes—the largest sum ever granted by any Congress for defense, except in a time of all-out global war.

This sum included nearly \$3,000,000,000 for the modernization of the Navy and the construction of new ships—one of them a 57,000-ton aircraft carrier. It included money for the building of experimental atomic submarines which might revolutionize naval warfare. It included many millions for the development of guided missiles and pilotless planes which gave promise of becoming superweapons of enormous power.

Committees of the Congress constantly surveyed the work of the Defense Department, to eliminate waste, to improve conditions for men in training, to push along the creation of scientific devices which might save American lives.

Carrying out the will of the American people, this Congress took every possible step to make this country the strongest power and the most advanced Nation in the world.

International relations

After a long and thorough debate, which explored every aspect of a momentous decision, the Senate adopted a resolution approving the dispatch of American troops to Europe under the provisions of the North Atlantic Treaty. By voicing its approval of the President's policy on this issue, the Senate demonstrated to our allies that America was fully committed to a course of mutual endeavor for security against communism. The Senate vote proved conclusively that the old isolationism was dead.

The Congress also approved a vast mutual security program, consisting of \$6,000,000,000 in military assistance to allied nations and about \$1,300,000,000 in economic aid to enable these nations to maintain the economic strength necessary for rearmament.

By extending for 2 years the authority to enter into reciprocal trade agreements, the Congress made it plain to the friendly nations of the world that the United States desires to continue the expansion of international commerce and the gradual removal of trade barriers.

Realizing at the same time, however, that trade with the Communist countries might help to increase their war-making powers, the Congress approved a strong bill banning exports of military items to Soviet Russia and her satellites, replacing the unworkable Kennan amendment. The new law denies American aid to any country making such exports on a wide scale.

In the humanitarian tradition of America, both Houses approved the granting of an emergency loan of \$190,000,000 to India, for the purchase of grain to alleviate famine in that suffering country.

Domestic affairs

Two of the most important steps taken by the Congress in the field of domestic policy were the extension of the Defense Pro-

duction Act for a year and the passage of a tax bill designed to raise enough revenues to meet some of the costs of rearming.

The Defense Production Act gave the President authority to allocate materials for defense uses, to control prices and wages in order to prevent disastrous inflation, and the power to limit civilian production to give priority to military construction.

The tax bill provided for increases in individual income taxes and in some excise taxes, both effective November 1, 1951. Corporation taxes were also increased retroactive to April 1. The bill is expected to raise at least \$5,690,000,000 in additional revenue, urgently necessary to meet rising defense costs and reduce deficit spending.

When major floods in the Ohio and Mississippi Valleys destroyed hundreds of millions of dollars in property and crops, the Congress acted swiftly, appropriating emergency funds to repair roads and bridges, to rehabilitate devastated homes, and for temporary relief for thousands of homeless families. But more important, the ravages of the floods emphasized the need for long-range planning to conserve natural resources and the construction of dams to check the floods at the headwaters. It is significant that the flood loss to the taxpayers all over this country—not just in the flood areas—was four times as much as the cost of all the dams projected by the Army engineers to prevent such floods. Unfortunately, expenditures for conservation of natural resources always receive a severe set-back in times of urgent national defense spending. Since the outbreak of the Korean conflict the Congress has consistently refused to authorize any such projects, and no major irrigation or reclamation project has been authorized during this session.

In the fields of housing, health, and general welfare the Congress took several important actions.

Federal aid was provided for the construction of housing and community facilities for workers in defense areas, and direct housing loans to veterans were continued until July 1, 1953.

The Senate passed a bill authorizing Federal aid to State and local governments for the development of public-health units, and a similar bill was introduced in the House and pending when the Congress adjourned.

The House took no final action on a Senate amendment which provided for an increase in monthly payments to the aged, the blind, and dependent children. The Senate approved this amendment, which was introduced by the majority leader with the co-sponsorship of other Senators from both political parties.

Veterans and servicemen

The increase in the size of the Armed Forces and the fighting in Korea led to a recognition by Congress for the need for legislation to provide for new veterans and new servicemen called to active duty in the emergency.

Legislation granting the same benefits to Korean veterans heretofore made available to World War II veterans was drafted and undergoing hearings when the Congress adjourned. The Congress intends that educational and vocational assistance, housing loans, and loans to help them get started in business shall be available to veterans of the Korean fighting. A broad GI bill of rights is definitely slated for enactment by the Congress. Meanwhile, a number of important veterans measures were enacted in the first session.

Both Houses passed and the President quickly approved a bill extending to Korean veterans the same hospital and medical benefits available to veterans of World War II. Another bill made special provisions for housing loans for Korean veterans. Congress also enacted a bill which extended the time for prisoners of war to file claims under the War Claims Act and granted free

postage to members of the Armed Forces in Korea and other specified areas.

By large majorities, the Senate and the House voted to override the President's veto of a bill which increased pensions by about \$60 a month to veterans of World Wars needing full-time attendants because of disabilities not connected with military service.

Congress also authorized the issuance of free \$10,000 life-insurance policies for members of the Armed Forces, permitted veterans of both World Wars to renew their term insurance, and provided vocational rehabilitation and training for all veterans with service-connected injuries incurred after June 27, 1950. Still another measure made available to certain disabled and blind veterans, payments up to \$1,600 each, toward the purchase of automobiles.

Investigations

Although most of its energies were devoted to national defense and the development of foreign policy, both Houses took time to launch a number of investigations and hearings into the far-flung operations of the Federal Government. Tied in directly with national defense were the 2-month hearing into the dismissal of General MacArthur, a lengthy hearing on the sending of American troops to Europe, and a study leading to the enactment of the first universal military-training law in the history of the Republic.

Actually, during the first 2 months of the session, the time of the Members of the Senate was devoted almost wholly to participation in various hearings relating to foreign policy and national defense. The session also marked the wind-up of a year's study of interstate crime by a special committee and its recommendation for certain remedial legislation in this field, five such bills receiving committee approval and one, a measure sharply increasing penalties for narcotics law violations, becoming law.

While there were other investigations and hearings, involving charges of mismanagement in some Government agencies and attempts to wield influence, it must be admitted that in the main these congressional probes resulted from prior studies conducted by the agencies themselves. However, a noteworthy job was being done by the Senate Preparedness Committee, a subcommittee of Armed Services, which swung a steady spotlight on the military preparedness program. Following the practice of the Truman committee during World War II and conscious of the vast expenditures going into armament, this committee concerned itself with Army housing, the acquisition of strategic materials, and profiteering in the supplying of certain essential materials. Its work was expected to save the taxpayers hundreds of millions of dollars.

Work done

It is clear from an analysis of the record that the work of the first session of the Eighty-second Congress compares well with that of any preceding session. The House passed 1,193 measures. The Senate was in session 172 days, passed 1,059 measures, and confirmed more than 26,000 nominations. The work of the Congress resulted in the enactment of more than 200 public laws, but rarely in congressional history has the percentage of significant and far-reaching laws been as large. National defense appropriations totaled \$77,250,000,000 and accounted for 85 percent of the \$91,500,000,000 appropriated for all purposes during the first session. Significantly, a fact generally overlooked is that despite the huge amount appropriated, the Congress nevertheless made tremendous savings in cutting appropriations below original budget estimates by the departments and agencies; actually Congress sliced budget estimates by nearly \$4,750,000,000.

At home, as well as abroad, the actions of the first session of the Eighty-second Congress were designed to keep America in the

forefront of the free nations, for the welfare of the American people and the good of all mankind.

SECTION B DIGEST OF MAJOR LEGISLATION PASSED BY THE SENATE OF THE UNITED STATES DURING THE FIRST SESSION OF THE EIGHTY-SECOND CONGRESS (CONVENED JANUARY 3, 1951, ADJOURNED OCTOBER 20, 1951)

During the first session of the Eighty-second Congress, the Senate passed more than 1,000 public and private bills and resolutions, and confirmed the nominations of more than 26,000 individuals to positions in the executive and judicial departments of the Government.

National defense, however, was the primary concern of the Senate. With the exception of 3 years during World War II, no single session of a Congress in the entire history of the Republic passed more bills directly concerning the national defense or appropriated more money for the national defense. The first session appropriated approximately \$77,250,000,000 for national defense alone and its total authorizations for the same purpose were in excess of \$19,000,000,000. National defense spending represented fully 85 percent of the total of \$91,626,541,716 appropriated during the first session. An additional estimated \$8,874,689,207 is not included in this total since these are permanent indefinite appropriations such as interest payments on the public debt for which specific appropriations bills need not be enacted. Although appropriations were large, savings were proportionately large, the Congress actually having reduced budget estimates by \$4,718,624,204.

The first session also has been popularly described as an "Investigation Congress" and in the Senate nearly 3 months of the entire session was devoted to hearings, largely concerned with national defense matters.

The MacArthur dismissal hearings took nearly 8 weeks and, in addition to taking the full time of 26 Members of the Senate, were of such concern to most other Members that normal Senate business was brought almost to a standstill. Other lengthy hearings involved the problem of bringing to an enactment stage for the first time in the entire history of the Nation a universal military training law. Other studies and lengthy hearings were held on the progress of military and economic aid to European nations, aimed at building a bulwark against Soviet Russian domination and aggression throughout the world. Nonnational defense hearings which attracted major attention included those of the Special Committee to Investigate Interstate Crime, the hearing into operations of the Reconstruction Finance Corporation, and hearings involving 5-percenters and influence peddlers.

Legislation passed by Senate

The digest of bills which follows is a summary only of the major bills passed by the Senate during the session. Many became public law following House approval and signature by the President and public law numbers are shown, together with date of final approval.

For convenience sake, all appropriations relating directly to the national defense appear immediately following the digests of national defense legislation, and will be found under the index heading "National defense appropriations." These same appropriations are included in the complete "Appropriations" section.

National defense

Mutual Security Act of 1951. Authorizes total expenditure of \$7,483,400,000 for military, economic, and technical assistance to strengthen security by furnishing military and economic aid of—

(a) Six billion fifty million dollars to Western Europe of which \$5,028,000,000 will

be military aid and \$1,022,000,000 will be economic aid;

(b) Five hundred and fifty-six million two hundred and fifty thousand dollars to the Near East and Africa of which \$396,250,000 will be military aid to Greece, Turkey, and Iran, and \$160,000,000 will be economic and technical aid to various Near East and North African countries;

(c) Eight hundred and seventeen million seven hundred and fifty thousand dollars to Asia and the Pacific areas of which \$535,250,000 will be military aid to the Philippines, Korea, and China, \$237,500,000 will be economic and technical aid to China and the Philippines, \$46,000,000 to the United Nations Korean Reconstruction Agency for reconstruction work in Korea;

(d) Fifty-nine million four hundred thousand dollars to the American Republics of which \$38,150,000 will be military aid, and \$21,250,000 will be technical aid.

Administration of military aid is to be carried out by the Secretary of Defense, administration of economic aid through June 30, 1952, by a mutual security agency headed by a director with a proviso that after that date the President is to advise the Senate and House Foreign Relations Committees which powers and duties should be vested with the agency, administration of the technical aid by the Department of State, overall coordination of the entire program, including apportionment of funds between countries is vested in the President, law to terminate June 30, 1954, or earlier by concurrent resolution of Congress.

Public Law 165 (H. R. 5113), approved October 10, 1951.

Military and naval construction. Authorizes the expenditure of \$5,864,301,178 by the Secretaries of the Army, Navy, and Air Force, under the direction of the Secretary of Defense, to establish, construct, convert, or develop military installations as follows:

(a) **Army:** Inside continental United States, \$940,450,398; outside continental United States, \$175,341,130; confidential facilities, \$302,234,000; total, \$1,418,025,528.

(b) **Navy:** Inside continental United States, \$629,272,960; outside continental United States, \$89,043,090; confidential facilities, \$113,531,800; total, \$831,847,850.

(c) **Air Force:** Inside continental United States, \$1,993,603,800; outside continental United States, \$415,420,000; confidential facilities, \$1,071,638,000; total \$3,480,661,800;

(d) **Joint military installations** (all confidential): Army, \$55,766,000; Navy, \$15,000,000; Air Force, \$63,000,000; total, \$133,766,000.

These funds include authorizations for housing projects to be constructed under title VIII of National Housing Act. The Senate Armed Services report disclosed that the total housing expenditure proposed is \$1,438,480,820 of which \$1,174,055,108 is for troop housing inside and outside of the United States, \$153,280,212 for bachelor officers' quarters inside and outside the United States, and \$111,145,500 for family quarters inside and outside the United States.

Public Law 155 (H. R. 4914), approved September 28, 1951.

Naval vessels: Authorizes the construction of 140 major new naval vessels costing \$1,070,940,000, including (a) the construction of a new supercarrier; (b) the conversion of 292 vessels to cost \$1,297,143,000; (c) the acquisition of ammunition to cost \$382,000,000; and (d) prohibits the disposal of combat vessels without the approval of Congress.

Public Law 3 (H. R. 1001), approved March 10, 1951.

Transfer of naval vessels: Authorizes the transfer, under the mutual defense assistance program, of 24 old-type destroyer escorts to six countries, as follows: (a) eight to France of which six already are being used by her under lend lease, leaving two

to be transferred; (b) one to Great Britain already being used by her under lend lease; (c) eight to Brazil all of which are already being used by her under lend lease; (d) two to Denmark; (e) two to Uruguay, and (f) three to Peru. Title transfer to be made as soon as certain specific requirements are met by the recipient countries.

Public Law 146 (H. R. 3463), approved September 15, 1951.

Control radio emissions: Authorizes the President, in times of war or declared emergency, to control substantially all radio emissions in the United States, permitting shut-down of certain radio facilities to prevent radiations from such facilities operating as a radio beam for attacking aircraft or missiles. The President's authority extends to specified frequencies, including standard and FM radio, television, and those used for certain common-carrier facilities, industrial heating, and certain other uses. Fine and imprisonment for unauthorized use of radio facilities in violation of a shut-down is provided, but payment for damages sustained by such shut-down is authorized.

Public Law 200 (S. 537), approved October 24, 1951.

Selective service, UMT: Principal provisions include (a) selective service extended to July 1, 1955, (b) draft age lowered from 19 to 18½, registration at 18 with 19- to 26-year-olds to be inducted first; (c) period of service for inductees increased from 21 to 24 months; (d) sets ceiling of 5,000,000 men on active duty in the Armed Forces until July 31, 1954; (e) mental standards reduced from a score of 70 to 65 designed to bring in approximately 150,000 IV-F's; (f) until July 1, 1953, President authorized to call organized reservists or National Guard men for 24 months' active duty, but allows inactive reservists, who are World War II veterans, to be released within 17 months; (g) student deferment left up to local draft boards; (h) until July 1, 1954, suspends the existing 2-percent limitation on the number of women in the Regular components of the Armed Forces; (i) 4 months' basic training required before being assigned for duty outside the continental limits; (j) number of aliens to be enlisted by June 30, 1955, increased to 12,500 (raised from 2,500); (k) service required totals 8 years—2 active and 6 Reserve; (l) voluntary enlistments extended until July 1, 1953; (m) five-man National Security Training Commission is created to submit to Congress within 4 months following confirmation the broad outline of a UMT program to be acted upon 45 days after the recommendations are received by Congress.

Public Law 51 (S. 1), approved June 19, 1951.

Strategic minerals acquisition: Amends the Export-Import Bank Act of 1945 to increase the lending authority of the Export-Import Bank of Washington from \$3,000,000,000 to \$4,000,000,000 and extends to June 30, 1958, the period within which the bank may exercise its functions. Purpose of the \$1,000,000,000 increased capital is to facilitate the development and acquisition of strategic materials from foreign countries.

Public Law 158 (S. 2006), approved October 3, 1951.

Mutual security controls: Establishes a congressional policy with respect to trade carried on by nations receiving American military, economic and financial assistance under various aid assistance programs with the purpose of restricting trade with Communist Russia and satellites. Major provisions include:

(a) Shipment of arms, ammunition, and implements of war, atomic energy materials, petroleum, transportation materials of strategic value, and items of primary strategic significance used in the production of arms, ammunition, and implements of war is prohibited to any nation or combination of na-

tions threatening the security of the United States.

(b) Military, economic, or financial assistance will not be given any nation unless it embargoes such shipments.

(c) All assistance may be terminated to any nation in violation after 60 days' notice of items covered.

(d) Mutual Defense Assistance Administrator made responsible for carrying out the provisions of the act.

(e) Administrator has primary responsibility to determine items to be embargoed after consideration of interested agencies' views.

(f) President may, on advice of the Administrator, continue assistance if circumstances indicate cessation of aid is detrimental to security of United States.

(g) Embargoed items to be reported to selected congressional committees.

(h) Administrator is to coordinate activities of the departments and agencies concerned with security controls over exports from other countries.

(i) Repeals subsection (d) of section 117 of the Foreign Assistance Act of 1948 as amended (Public Law 472, 80th Cong.) and subsection (a) of section 1302 of Third Supplemental Appropriation Act, 1951 (Public Law 45, 82d Cong.).

Public Law 213 (H. R. 4550), approved October 26, 1951.

Financing defense contracts: Amends the Assignment of Claims Act of 1940, which was enacted for the purpose of inducing private financial institutions to participate in financing contracts under the defense program of that period, to: (1) Remove the requirement in existing law that copies of assignments be filed in the General Accounting Office; (2) eliminate requirement on assignees to repay any amounts received by them since July 1, 1950, under an assignment merely because the assignor may not have been entitled to receive or retain such amounts; (3) enlarge the authority now given the Defense Department to include a "no set-off" clause to be included in contracts entered into by the General Services Administration, Atomic Energy, or other departments designated by the President but such authority would hereafter be available only during time of war or national emergency; (4) amplifies existing "no set-off" clause to include any liability of the assignor on account of renegotiation fines, penalties, taxes, or social-security contributions, or the withholding or nonwithholding of taxes or social-security contributions whether arising from or independently of the assigned contract; (5) not affect or impair rights or obligations accrued prior to the date of enactment.

Public Law 80 (S. 998), approved May 15, 1951.

Defense contract renegotiation: Provides for elimination of excessive profits from national defense contracts by directing renegotiation of those contracts performed after June 30, 1950, and proceeds from which accrued after January 1, 1951. Creates a five-man board to administer the act. Limits renegotiation to those contracts and subcontracts in excess of \$250,000 in a single-year period but subcontractors with 1-year totals in excess of \$25,000 whose income is derived from commissions and fees are subject to renegotiation. Mandatory exemptions from renegotiation include contracts involving agricultural commodities, products of a mine, oil or gas well, or other mineral or natural deposit, and transportation common carriers. Government agencies which come within provisions of the act include Defense Department, Army, Navy, Air Force, Commerce, General Services Administration, Atomic Energy Commission, Reconstruction Finance Corporation, Canal Zone Government and Panama Canal Company, Housing and Home Finance Agency, and such others

as the President may designate. The law expires December 31, 1953.

Public Law 9 (H. R. 1724), approved March 23, 1951.

Troops for Europe: This resolution, having no force in law, (a) approves the action of the President in (1) designating Gen. Dwight D. Eisenhower as Supreme Allied Commander in Europe, and (2) sending four additional division to Western Europe in implementation of article 3 of the North Atlantic Treaty, but suggests congressional approval should be first obtained before further forces are sent; (b) provides (1) that the United States should seek to eliminate all provisions of the existing treaty with Italy which imposes limitations upon her military strength and prevents fulfillment of her obligations under the North Atlantic Treaty to contribute to the full extent of her capacity to the defense of Western Europe; (2) for consideration of the revision of plans for the defense of Europe to provide for voluntary utilization of the military and other resources of Western Germany and Spain, but not exclusive of the military and other resources of other nations.

Senate Resolution 99, adopted April 4, 1951.

Troops for Europe: This resolution, also having no force in law but requiring House approval, contains the identical provisions of Senate Resolution 99 with the added proviso that Greece and Turkey are to be included in the suggested revision of existing plans for the defense of Europe.

Senate Concurrent Resolution 18, adopted April 4, 1951. Pending in House.

Gifts for defense: Reenacts a provision of the Second War Powers Act permitting the Government to accept gifts or services from donors who stipulated specific uses to further the defense effort. The original provision was repealed in 1946 which has since limited the Government to accept only unconditional gifts.

S 1230, passed Senate May 17, 1951. Pending in House.

Marine Corps: Authorizes four full-strength combat divisions with four full-strength air wings, and the necessary supporting organization in the Marine Corps; provides (a) that the Regular Marine Corps shall not exceed 400,000 in personnel, (b) that the Commandant of the Marine Corps shall be a consultant to the Joint Chiefs of Staff on all its problems and have a voice on matters pertaining to the Marine Corps.

S 677, passed Senate May 4, 1951. Pending in House.

Korea-free postage: Extends for 2 years, until June 30, 1953, the present law providing free postage for members of the Armed Forces of the United States serving in Korea and certain other specified areas.

Public Law 54 (H. R. 4393), approved June 26, 1951.

Postage-armed services: Provides that any first-class mail, including air mail, may be sent free of postage by a member of the Armed Forces of the United States while on active duty, or while confined in a military or naval hospital, to any person in the United States, including the Territories and possessions.

S 826, passed Senate June 21, 1951. Pending in House.

Alaskan civil defense: Removes the matching fund limitation for Alaska required from all States and Territories under the Federal Civil Defense Act of 1950.

S. 1244, passed Senate May 17, 1951, pending in House.

China embargo: Requests the General Assembly of the United Nations to take action which would lead to placing an embargo on the shipment by all member nations of all war materials to Communist China.

Senate Concurrent Resolution 31, adopted by Senate May 15, 1951; by House May 15, 1951.

Aircraft carrier. Directs that the first large carrier be named the *Forrestal* in honor of the late James V. Forrestal, former Secretary of Defense.

Public Law 90 (H. J. Res. 67), approved July 30, 1951.

Navy-Marine Corps officer personnel: Authorizes the President to set aside certain provisions of the Officer Personnel Act so as to permit the retention on active service of some 300 Navy and Marine Corps officers. Existing law requires that when Navy and Marine Corps officers twice fail selection board approval for promotion they must be separated from active service, which would result in relieving about 300 officers from duty during the existing national emergency. The requirement was modified for the Army and Air Force, and this act will permit the same modification for the other services.

Public Law 67 (H. R. 4200), approved June 30, 1951.

Air Force reorganization: Establishes a more detailed organization of the Air Force by (a) reaffirming the authority of the Secretary of Air Force to administer the Department of the Air Force, (b) providing for a Chief of Staff to preside over the Air Force to be appointed for a 4-year term by the President by and with the advice of the Senate, (c) providing for Vice Chief of Staff and five Deputy Chiefs of Staff who shall be general officers of the Air Force detailed to these positions, (d) providing for an Air Staff, with the manner of its organization, performance of duties, and title of members left to the determination of the Secretary of Air Force, but requiring that an Air Force officer be assigned to advise the Secretary and Chief of Staff on matters relating to Air Force Reserve, (e) providing that, except in time of war or national emergency hereafter declared by Congress, not more than 2,800 officers of the Air Force may be detailed or assigned to permanent duty in the Department of the Air Force for tours of duty not to exceed 4 years.

Public Law 160 (H. R. 1726), approved September 19, 1951.

Experimental submarines: Amends the act of 1947 which authorized the construction of two experimental type submarines by increasing the cost limitation from \$10,000,000 to \$48,000,000. The original cost estimate was based upon 1944-45 construction experience and wage-price levels. The increased authorization is necessary because of a speed-up designed to obtain earlier delivery, within the next 6 months, thus increasing cost due to overtime and certain design changes.

Public Law 176 (H. R. 1227), approved October 16, 1951.

San Diego water supply: Authorizes the Secretary of the Navy to provide for new and enlarged facilities for the transportation of Colorado River water to the San Diego, Calif., area in order to insure an adequate water supply for defense establishments there.

Public Law 171 (H. R. 8102), approved October 11, 1951.

Atomic tests: Authorizes the Navy Department to use the incomplete submarine *Ulua* as a target for certain atomic explosive and related tests. Existing law requires the Navy to complete construction of any vessel which was 20 percent or more complete on March 1, 1946, work on the *Ulua* was suspended in 1945 but was about 60 percent complete.

Public Law 173 (S. 1994), approved October 12, 1951.

Release atomic information: Amends the Atomic Energy Act to authorize the United States to release to other countries certain specified information or data relating to atomic energy under definitely prescribed conditions and circumstances to permit certain tangible benefits to the defense of the United States.

Public Law 235 (S. 2233), approved October 30, 1951.

National defense land transfers: Grants the Secretary of the Navy authority similar to that presently vested with the Secretary of the Army and the Secretary of the Air Force dealing with condemnation of lands, granting of easements, and acquisition and disposal of real property generally; authorizes Navy to make nine specific easements in or near certain naval fields, depots, and stations for pipelines, roads, railroad tracks etc.

Public Law 210 (H R 1215), approved October 25, 1951

Air bases construction. Amends an authorization heretofore granted the Secretary of the Air Force of \$121,338,000 for the construction of certain facilities essential to the support of a 95-air-wing program by transferring the authorizations as follows: (a) \$50,792,000 to construct facilities at McGuire Air Force Base, Wrightstown, N. J., (b) \$1,746,000 for air defense facilities at Sioux City, Iowa, (c) \$18,800,000 for B 36 strategic reconnaissance wing facilities at Travis Air Force Base, Fairfield, Calif.

H R 5425, passed Senate October 19, 1951
Pending in House

Reenlistment bonuses. Authorizes payment of reenlistment bonuses to members of the Army and Air Force who reenlisted for an indefinite period prior to October 1, 1949.

Public Law 217 (H R 5405), approved October 26, 1951

Military post offices. Authorizes the Postmaster General to establish postal stations and branch post offices at military, naval, and Coast Guard camps, posts, or stations during any national emergency which is proclaimed by the President.

S 2078, passed Senate October 19, 1951.
Pending in House

Increase espionage penalty. Increases the maximum penalty from 30 years to life imprisonment for persons convicted of gathering or delivering certain defense information to aid a foreign government in time of peace or war.

S 1292, passed Senate October 19, 1951.
Pending in House

State military compact. Grants the consent of Congress to an interstate compact between New York and New Jersey which provides for mutual military aid in time of extreme emergency.

S 968, passed Senate October 19, 1951.
Pending in House

Withholding of patents. Provides that, when the granting of a patent would disclose information detrimental to the national security, the Secretary of Commerce shall withhold the patent and order that the invention be kept secret.

H R 4687, passed Senate October 20, 1951
Pending in House

National defense highways. Authorizes an additional appropriation of \$35,000,000, of which \$20,000,000 is to be made immediately available for contract, for the construction of access roads certified by the Secretary of Defense as being essential to the national defense. Also permits \$5,000,000 of the total authorization to be used for reconstruction, maintenance, and repair work on roads within military maneuver areas, on certification by the Secretary of Defense. The original authorization for access-road construction under the Federal-Aid Highway Act of 1950 was \$10,000,000. This bill increases the authorization to \$45,000,000. (See also Public Law 175 under Transportation and Commerce.)

Public Law 177 (H R 5504), approved October 16, 1951.

Schools in defense areas. Provides for the construction, operation, and maintenance of schools in critical defense housing areas by (1) authorizing the Commissioner of Education to extend Federal financial assistance to local educational agencies for construction of facilities in critical defense housing areas; (2) increasing Federal aid for operation and

maintenance of local educational agencies which have had an attendance increase of 10 percent in last 3 years because of Federal activities; (3) providing additional Federal assistance where the local educational agency is not otherwise able to operate.

H. R. 5411, passed Senate October 19, 1951.
Pocket veto.

National defense appropriations

Department of Defense Appropriations: Appropriates for the Defense Department—Army, Navy, Air Force, Marine Corps—\$58,939,568,030 for the 1952-53 and succeeding fiscal years (which is \$740,057,670 below the budget estimate) for the following major activities:

1. Nineteen billion eight hundred and eighty-eight million thirty-two thousand and thirty dollars for the Department of the Army, including (a) \$2,787,990,000 for the Quartermaster Corps, of which (1) \$1,506,681,000 is for clothing and equipment, (2) \$603,309,000 is for subsistence, (3) \$465,000,000 is for regular supplies of the Army, (b) \$1,213,707,000 for the Signal Corps, (c) \$307,792,000 for the National Guard and Organized Reserve, (d) \$1,214,412,700 for the Corps of Engineers, of which (1) \$1,166,049,000 is for engineer service, (2) \$48,363,700 is for military construction, (e) \$3,297,076,000 for Army pay, (f) \$269,580,000 for medical service, (g) \$22,300,000 for Army training (h) \$1,138,130,000 for general administration of the Department of the Army.

2. Fifteen billion five hundred and forty-four million eight hundred and ninety-one thousand dollars for the Department of the Navy including (a) \$2,538,541,000 for military personnel of the Navy and Naval Reserve which includes pay, allowances, travel, and authorized transportation of dependents, (b) \$97,570,000 for training, education, and general expenses of naval personnel; (c) \$580,604,000 for military personnel of Marine Corps and Marine Corps Reserve, including pay, subsistence, clothing, travel, and authorized transportation of dependents, (d) \$923,293,000 for aircraft and facilities, (e) \$4,000,000,000 for construction of aircraft and related procurement, (f) \$1,537,452,000 for ships and facilities, which includes design, maintenance, operation, and alteration of vessels, (g) \$1,420,650,000 for construction, acquisition, and conversion of ships, (h) \$1,819,503,000 for ordnance and facilities, which includes production, procurement of ordnance and ammunition, (i) \$135,770,000 for medical care, which includes maintenance and operation of naval hospitals, procurement of supplies and training of personnel, (j) \$485,102,000 for service-wide supply and finance activities.

3. Nineteen billion nine hundred and seventy-five million seven hundred and eighty-five thousand dollars for the Department of the Air Force, including (a) \$12,990,800,000 for construction, procurement, and modification of aircraft and equipment (b) \$3,018,700,000 for military personnel of the Air Force, which includes pay, allowances, subsistence, transportation, (c) \$106,943,000 for maintenance of Air Force Reserve and Air National Guard, (d) \$40,600,000 for expenses necessary for the maintenance, operation, and administration of the activities of the Air Force.

4. One million seven hundred and sixty thousand dollars for related agencies, including (a) \$160,000 for the National Security Council, and (b) \$1,600,000 for the National Resources Board.

5. One billion five hundred and twenty-nine million one hundred thousand dollars for the Office of Secretary of Defense.

6. Provisions are added: (a) terminating a contract if it is determined gratuities were offered a Government employee or officer; (b) prohibiting flight pay unless assigned duties involve actual combat missions or involve flight in excess of 20 hours per month;

(c) allowing release of involuntary reservists having served 18 months on active duty since June 26, 1950, if they served at least 12 months between December 7, 1941, and September 2, 1945; (d) prohibiting retirement pay after October 18, 1951, for any officer who retires voluntarily unless physically unfit, has reached retirement age, or retirement is approved by Secretary.

Public Law 179 (H R 5054), approved October 18, 1951

Mutual Security appropriation. Appropriates \$7,328,903,976 (which is \$198,623,814 below the budget estimate) for the fiscal year 1952 for military, economic, and technical assistance to strengthen security which includes (1) \$5,840,852,457 to Western Europe of which \$4,818,852,457 will be military aid and \$1,022,000,000 will be economic aid, (2) \$772,405,866 to Asia and the Pacific of which \$535,250,000 will be military aid and \$237,155,866 will be economic aid, (3) \$556,250,000 to the Near East and Africa of which \$396,250,000 will be military aid and \$160,000,000 will be economic aid, (4) \$50,395,653 to the American Republics of which \$38,150,000 is military aid and \$21,245,653 is for economic aid, (5) \$100,000,000 is added for assistance to Spain.

Public Law 249 (H R 5684), approved October 31, 1951

Military bases appropriation. Appropriates \$4,094,546,392 for construction of various military installations in the United States and elsewhere and for other national defense purposes for the fiscal year 1952, including:

1. Three billion eight hundred and ninety million two hundred and ninety-six thousand three hundred and ninety-two dollars for the Department of Defense for military public works for (a) \$1,000,000,000 for the Department of the Army for military construction, (b) \$819,096,392 for the Department of the Navy for public works, (c) \$2,071,200,000 for the Department of the Air Force for acquisition and construction of real property.

2. Two hundred million dollars for the Atomic Energy Commission.

3. Four million two hundred and fifty thousands dollars for the Federal Security Agency for defense community facilities and services. Provisions are included that (a) not more than 50 percent of the funds appropriated by this act for employment of persons engaged in domestic information functions shall be used for that purpose, (b) Secretary of Defense must approve payments for cost-plus contracts where cost estimates exceed \$25,000 for work within continental United States.

Public Law 264 (H R 5650), approved November 1, 1951

National defense—fourth supplemental. Appropriates for national defense purposes \$6,442,608,000 for the 1951 fiscal year (which is \$46,985,000 below the budget estimate) for the following:

1. Fifty-nine million three hundred and twenty-three thousands dollars for Atomic Energy Commission.

2. Six billion three hundred and seventy-nine million six hundred and seventy-three thousand dollars for the Department of Defense of which (a) \$2,847,570,000 is for the Department of the Army, (b) \$1,645,439,000 for the Department of the Navy, and (c) \$1,886,664,000 for the Department of the Air Force.

3. Three million six hundred and seventy-two thousand dollars for the Department of the Interior for construction by the Bonneville Power Administration.

Public Law 43 (H R 3842), approved May 31, 1951.

Additional defense appropriation: Included in the independent offices appropriation bill is \$1,208,532,750 for national defense for the 1952 fiscal year for the following:

(1) One billion one hundred and thirty-ninth million nine hundred and thirty-two

thousand seven hundred and fifty dollars for Atomic Energy Commission;

(2) Sixty-seven million six hundred thousand dollars for National Advisory Committee for Aeronautics which includes \$11,700,000 for contract authority for construction and equipment at laboratories and research stations;

(3) One million dollars as a fund for the President for emergencies affecting the national interest, security, or defense.

Public Law 137 (H. R. 3880), approved August 31, 1951.

Additional defense appropriations: Included in the eighth supplemental appropriation bill is \$1,187,520,682 for national defense for the 1952 fiscal year for the following:

(1) Two hundred and sixty-five million nine hundred and sixty-five thousand dollars for Atomic Energy Commission;

(2) Seven hundred and ninety million two hundred and sixteen thousand five hundred dollars to the General Services Administration for acquisition of strategic materials;

(3) Seventy-four million nine hundred and forty-five thousand dollars for civil defense;

(4) Thirty million one hundred and fifty-four thousand dollars for Selective Service;

(5) Twenty-two million five hundred and fifty-five thousand one hundred and eighty-two dollars for Department of Defense of which \$22,500,000 is for government and relief in occupied areas;

(6) One hundred and eighty-five thousand dollars for National Security Training Commission;

(7) Three million five hundred thousand dollars for the National Science Foundation. Proviso is added requiring that any funds in this appropriation used for personnel engaged in domestic information services must be reduced by 50 percent.

Public Law 253 (H. R. 5215), approved November 1, 1951.

Total national defense appropriations (including Mutual Security appropriation of \$7,250,000,000).....\$77,201,739,830

Total national defense authorizations.....19,324,273,998

(Approximately \$13,000,000,000 of this total was actually appropriated and is included in total above).

Agriculture

Mexican farm labor: Authorizes the Government to carry out an agreement with Mexico under which Mexican nationals may be legally imported into the United States subject to the immigration laws for temporary agricultural employment if the Secretary of Agriculture certifies that such workers are needed and that American labor is not available. The Secretary of Labor is authorized to recruit farm workers in Mexico, transport them to the United States, and guarantee that American employers will comply with the individual work contracts entered into between them and the Mexican workers as it relates to wages and transportation. The law expires December 31, 1953.

Public Law 78 (S. 984), approved July 12, 1951.

Mexican farm labor appropriation: Appropriates \$950,000, of which \$750,000 is reimbursable, to carry out the terms of the Mexican Farm Labor Act.

Public Law 113 (H. J. Res. 311), approved August 16, 1951.

Farm mortgage loans: Amends the Bankhead-Jones Farm Tenant Act as follows: (a) Secretary of Agriculture authorized to insure up to \$25,000,000 a year of farm mortgage loans on the basis of bona fide applications and the availability of farms; no change is made in the use of the remaining \$75,000,000 original authorization which is loaned on the basis of farm population

and prevalence of tenancy; (b) Secretary is authorized to postpone refinancing insured mortgage loans until the borrower has sufficient equity to meet the requirements to which the holder of the insured mortgage may be subject in making uninsured loans; (c) the limit of initial production and subsistence loans is increased from \$3,500 to \$7,000 and the total outstanding indebtedness of any borrower on all such loans from \$5,000 to \$10,000; (d) term of repayment of operating loans and the maximum period which a borrower may be indebted in order to be eligible for further financial assistance is extended from 5 to 7 years; (e) Secretary is authorized to postpone the initial annual repayment of both real estate and production assistance loans for two full crop years after the date of the loan if it is determined that the farm income will not be sufficient to make the payment at an earlier date.

Public Law 123 (S. 684), approved August 23, 1951.

Poisonous weed control: Provides general authorization for the eradication and control of Halogeton glomeratus, a poisonous weed growing on the range and pasture lands of the United States which has caused serious loss to the livestock industry. Establishes a Federal policy authorizing needed work without regard to land ownership and provides for cooperation between State and local agencies and the several agencies of the Federal Government having land management responsibility. Authorizes: (a) surveys to detect the presence and effect of the weed; (b) measures and operations necessary to control, suppress, and eradicate; and (c) authorizes funds to be appropriated to the Secretary of Agriculture and the Secretary of the Interior, from time to time, as may be necessary to carry out this program.

S. 1041, passed Senate August 9, 1951. Pending in House.

Sugar tax and quotas: Extends the Sugar Act of 1948 to December 31, 1956, and amends the Internal Revenue Code by continuing excise tax on sugar to June 30, 1957. Increases annual quota allocation to Puerto Rico by 170,000 tons and to the Virgin Islands by 6,000 tons. Establishes an annual quota of 300,000 gallons of liquid sugar for the British West Indies. Quota allocations for the various producing areas on the mainland of the United States, Hawaii, and the Philippine Islands remain the same as in existing law. A slight increase is provided in the allocation to foreign countries, except Cuba, which ship sugar into the United States, restoring to these countries their prewar ratio of sugar imports. Cuba's percentage share of imports is reduced, but the actual tonnage of Cuban sugar to the United States is expected to increase.

Public Law 140 (H. R. 4251), approved September 1, 1951.

Peanut acreage allotments: Amends Agricultural Adjustment Act of 1938 to authorize an increase in acreage allotments for edible and other types of peanuts for the 1951 crop year. Allotment increase of 84,900 acres for inedible peanuts is authorized; edible peanuts acreage increase is allotted on a proportional basis by States to farmers producing this type. Total acreage increase for all types is 97,743, making final 1951 allotment 1,771,117 acres, which is a reduction of 331,334 acres from 1950 allotment of 2,200,194 acres.

Public Law 17 (H. R. 2615), approved April 12, 1951.

Transfer horse-breeding farm: Directs the Secretary of Agriculture to transfer to Vermont Agriculture College some 942 acres of land comprising the former United States Morgan Breeding Farm, to be used by the college for general agricultural purposes, including the continuance of breeding Morgan horses.

Public Law 26 (S. 271), approved May 7, 1951.

Bar entry of destructive mollusks: Prohibits importation into the United States of certain land and fresh-water snails, and particularly the giant African snail, destructive to agriculture, by authorizing the Secretary of Agriculture to establish rules for inspection and treatment of goods entering the United States, and establishes penalty of \$500 fine and 1 year imprisonment for violation.

Public Law 152 (H. R. 4443), approved September 22, 1951.

Federal land banks: Repeals the authority of the Secretary of the Treasury to subscribe to the capital stock of Federal land banks since such subscriptions are no longer needed by the Federal land banks.

S. 2091, passed Senate October 1, 1951. Pending in House.

Tobacco quotas: Authorizes the Secretary of Agriculture on the basis of certain findings to increase the marketing quotas and acreage allotments for certain types of tobacco sufficient to meet the demand.

Public Law 178 (H. R. 4475), approved October 17, 1951.

Timber sales: Raises from \$500 to \$2,000 the limitation on the amount of national forest timber that may be sold by the Secretary of Agriculture without advertisement.

S. 1517, passed Senate October 1, 1951. Pending in House.

Virgin Island experimental station: Authorizes the transfer of certain lands and facilities in the Virgin Islands from the Secretary of the Interior to the Secretary of Agriculture and authorizes the Secretary of Agriculture to conduct an agricultural research and extension service program in the Virgin Islands.

Public Law 228. (H. R. 4027), approved October 29, 1951.

Import baler twine: Authorizes the duty-free importation of twine used in baling hay, straw, and other fodder which is now subject to duty at 15 percent ad valorem.

Public Law 219 (H. R. 1005), approved October 25, 1951.

Appropriations

Agriculture Department appropriation: Appropriates for the Department of Agriculture \$802,988,626 for the 1952 fiscal year (which is \$17,216,920 below the budget estimates) for the following major activities:

1. Four hundred and thirty-four million one hundred and sixty-seven thousand four hundred and ninety-one dollars for Production and Marketing, Administration which includes (a) \$256,500,000 for the 1952-crop-year soil-building program, and (b) \$10,000,000 for the acreage allotment and marketing quota programs;

2. Seventy-one million four hundred and seventeen thousand eight hundred and sixteen dollars for Agriculture Research Administration of which (a) \$30,628,650 is for agricultural engineering research and plant quarantine, (b) \$23,828,928 for the Bureau of Animal Industry for meat inspection, animal research, disease control, (c) \$12,795,798 for maintenance of experimental stations throughout the United States and its possessions, (d) \$1,475,000 for the Bureau of Dairy Industry, (e) \$1,350,000 for the Bureau of Human Nutrition and Home Economics, (f) \$550,000 for eradication foot-and-mouth and other contagious diseases of animal and poultry;

3. Sixty-three million two hundred and twenty-two thousand three hundred and eight dollars for Forest Service for research, protection, management, fighting forest fires, development of roads and trails;

4. Sixty million eighty-three thousand two hundred and ninety-one dollars for Soil Conservation Service which includes \$6,872,800 for flood control;

5. Seventy-six million eight hundred and eight thousand dollars to Commodity Credit

Corporation to discharge indebtedness incurred under the International Wheat Agreement Act of 1949;

6. Twenty-seven million, nine hundred and eighty-five thousand dollars for cooperative agricultural extension work;

7. Twenty-seven million, eight hundred and twenty-five thousand dollars for Farmers Home Administration but includes borrowing authorization of \$153,000,000 for production and subsistence loans to farmers.

8. Seven million, seven hundred and fifty thousand dollars for rural electrification program but includes authority to borrow \$209,000,000 for loans to rural electric cooperatives.

9. Seven million, nine hundred and forty-nine, nine hundred and eleven dollars for Federal crop-insurance program;

10. Six million dollars for control of forest pests, which includes \$3,300,000 for control of white pine blister rust.

11. Four million, nine hundred and ninety-eight thousand, three hundred and four dollars for Bureau of Agricultural Economics of which (a) \$2,150,000 is to be used for economic investigations, and (b) \$2,848,304 for publishing crop and livestock estimates.

12. Four million seven hundred and fifty thousand dollars for research and marketing.

13. Two million, seven hundred and twenty-five thousand dollars for Farm Credit Administration of which \$2,325,000 is an advance from farm credit agencies.

14. Six hundred and fifty thousand dollars for Commodity Exchange Authority;

15. Six million, six hundred and fifty-six thousand, five hundred and five dollars for general administrative expenses of the Department of Agriculture

16. Provisos are added reducing all appropriations for personal services by 10 percent and prohibiting filling more than 75 percent of vacancies in publicity and information service personnel

Public Law 135 (H. R. 3973), approved August 31, 1951

Civil functions appropriations: Appropriates \$597,262,713 for the 1952 fiscal year (which is \$65,175,130 below the budget estimate) for civil functions administered by the Department of the Army, which includes:

1. Three hundred and sixteen million, five hundred and forty-four thousand and one hundred dollars for the general flood-control program including (a) \$7,060,000 for maintenance and operation of the program, (b) \$1,000,000 for planning of flood-control projects, and (c) \$308,484,100 for construction of approximately 84 flood-control projects.

2. One hundred and ninety-two million, six hundred and fifty-seven, six hundred and thirteen dollars for the rivers and harbors program including (a) \$66,965,000 for maintenance of rivers and harbors, (b) \$500,000 for planning of rivers and harbors projects, (c) \$125,192,613 for construction of approximately 43 rivers and harbors projects

3. Sixty million, five hundred thousand dollars for flood control on the Mississippi River and its tributaries

Public Law 203 (H. R. 4386), approved October 24, 1951.

Department of Defense appropriations: Appropriates for the Defense Department—Army, Navy, Air Force, Marine Corps—\$56,939,568,030 for the 1952-53 and succeeding fiscal years (which is \$740,057,670 below the budget estimate) for the following major activities

1. Nineteen billion, eight hundred and eighty-eight million, thirty-two thousand and thirty dollars for the Department of the Army, including (a) \$2,787,990,000 for the Quartermaster Corps, of which (1) \$1,506,681,000 is for clothing and equipment, (2) \$803,309,000 is for subsistence, (3) \$465,000,000 is for regular supplies of the Army; (b) \$1,213,707,000 for the Signal Corps, (c) \$307,792,000 for the National Guard and Or-

ganized Reserve; (d) \$1,214,412,700 for the Corps of Engineers, of which (1) \$1,166,049,000 is for the engineer service, (2) \$48,363,700 is for military construction; (e) \$3,297,076,000 for Army pay, (f) \$269,580,000 for medical service; (g) \$22,300,000 for Army training, and (h) \$1,138,130,000 for general administration of the Department of the Army.

2. Fifteen billion five hundred and forty-four million eight hundred and ninety-one thousand dollars for the Department of the Navy, including: (a) \$2,538,541,000 for military personnel of Navy and Naval Reserve which includes pay, allowances, travel and authorized transportation of dependents, (b) \$97,570,000 for training, education, and general expenses of naval personnel, (c) \$580,604,000 for military personnel of Marine Corps and Marine Corps Reserve, including pay, subsistence, clothing, travel and authorized transportation of dependents, (d) \$923,393,000 for aircraft and facilities, (e) \$4,000,000,000 for construction of aircraft and related procurement, (f) \$1,537,452,000 for ships and facilities, which includes design, maintenance, operation, and alteration of vessels and facilities, (g) \$1,420,650,000 for construction, acquisition and conversion of ships; (h) \$1,819,503,000 for ordnance and facilities which includes production, procurement of ordnance, and ammunition; (i) \$135,770,000 for medical care, which includes maintenance and operation of naval hospitals, procurement of supplies and training of personnel; (j) \$485,102,000 for service-wide supply and finance activities

3. 5. Five hundred and fifty thousand five hundred dollars for the legislative branch for contingent expenses of the House of Representatives.

6. Three million six hundred and thirty-five thousand dollars for the Department of the Interior of which (a) \$636,000 is for Indian Affairs; (b) \$3,000,000 for the Bureau of Reclamation.

7. One hundred and eighty-six thousand eight hundred dollars for the Department of Agriculture for flood control. Provisions are included that (a) not more than 50 percent of the funds appropriated by this act for employment of persons engaged in domestic information functions shall be used for that purpose; (b) Secretary of Defense must approve payments for cost-plus contracts where cost estimates exceed \$25,000 for work within continental United States.

Public Law 254 (H. R. 5650), approved November 1, 1951

Permanent indefinite appropriations for 1952 (estimated): These total \$8,874,669,207, but are not annual appropriations by the Congress. They are annual expenditures by the Federal Government, authorized by permanent legislation. They include the following general and special funds: (a) \$5,800,000,000 for interest on public debt; (b) \$16,000,000 for refunds and draw-backs on customs duties; (c) \$4,900,705 for interest on uninvested trust funds; and (d) \$2,768,000,000 for refund of internal revenue collections.

Total appropriations by Congress	\$91,626,541,716
Savings below budget estimates	4,718,624,294
Total permanent indefinite appropriations (estimated)	8,874,669,207
Total national defense appropriations	77,201,739,830

District of Columbia

Rent control: Extends the District of Columbia rent-control law until June 30, 1952,

and permits rent increases up to 20 percent above the January 1, 1941, level, inclusive of adjustments already made. New housing, if rented on January 1, 1951, will be frozen as of that date. (Public Law 10, approved March 31, 1951, extended the Rent Control Act for 3 months until June 30, 1951.)

Public Law 63 (S. 1590), approved June 30, 1951.

Settlement of claims: Authorizes the Commissioners of the District of Columbia to settle claims and suits up to \$10,000 against the District; adds a new section (5) authorizing the Commissioners, with consent of the corporation counsel, to compromise a claim or suit, exclusive of taxes or special assessments, provided the compromise does not reduce the claim or suit more than \$10,000.

Public Law 95 (S. 262), approved July 31, 1951.

Cancer and malignant diseases: Authorizes the Commissioners to require that cancer, sarcoma, lymphoma (including Hodgkin's disease), leukemia, and all other malignant growths be reported to the Director of Public Health of the District of Columbia. These reports will be kept confidential except upon order of the court or upon written authorization of the Director of Public Health. Authorizes the Commissioners to prescribe a reasonable penalty or fine, not exceeding \$100, for the violation of any regulations under this act.

Public Law 83 (S. 260), approved July 27, 1951.

Disbursing office procedure: Provides that the disbursing officer of the District of Columbia shall disburse moneys in strict accordance with vouchers certified by the Auditor of the District of Columbia and holds both accountable for their official acts.

Public Law 84 (S. 259), approved July 30, 1951.

Disbursing office personnel: Provides that the Commissioners of the District of Columbia shall appoint a deputy disbursing officer and such assistant disbursing officers as are necessary.

Public Law 88 (S. 494), approved July 30, 1951.

District of Columbia hospital construction: Authorizes the Federal Works Administration to meet up to 50 percent of the construction cost of new nonprofit hospital facilities for those hospitals in the District of Columbia which do not participate in the Hospital Center planned under Public Law 648, Seventy-ninth Congress.

Public Law 221 (H. R. 2094), approved October 25, 1951.

Finance, commerce, and industry

Defense Production Act: Amends the Defense Production Act of 1950 and the Housing and Rent Act of 1947 by establishing certain controls:

1. Extends price and wage controls through June 30, 1952, with certain provisos: (a) Ceiling prices on nonagricultural commodities cannot be lower than the lowest prevailing price at the time ceiling is established, or prevailing price between January 25 and February 24, 1951;

(b) Roll-backs of nonagricultural commodities permitted if the ceiling price either (1) is based on highest price received for material or service between January 1 and June 24, 1950, and reflects adjustments for subsequent increases or decreases in costs occurring prior to July 26, 1951, or (2) is established under regulations issued prior to enactment of this law;

(c) Slaughtering quotas are banned;

(d) Ceiling price on agricultural products, including livestock, cannot be set below 90 percent of price received by producers, on May 19, 1951.

2. Continues until June 30, 1952, authority to issue priorities and allocate materials for defense, requisition needed materials and acquire property by condemnation as well as

other means of transfer; and empowers Government agencies to stockpile defense materials, to establish mineral and metal production incentives, to contract for purchases and sales until June 30, 1962, and to use subsidy payments if an adequate supply of critical materials from high-cost sources is threatened.

3. Continues through June 30, 1952, Federal Reserve Board power to limit consumer credit, but relaxes regulation W for the purchase of new or used automobiles extending credit to 18 months with one-third down-payment required, permits trade-ins to be used as down-payment on household appliances and furnishings and extends credit period to 18 months; residential repairs require 10 percent down with 36 months to pay.

4. Continues rent control through June 30, 1952; in areas now controlled rent increases are allowed up to 20 percent over levels of June 1947; in newly designated critical defense areas rent roll-backs to pre-Korean levels are permitted (rent controls had previously been extended by two resolutions from March 30 to July 31, 1951).

5. Establishes Small Defense Plants Administration to assist small business.

6. Extends until June 30, 1952, import controls on fats, oils, dairy products, peanuts, and rice products.

Public Law 96 (S. 1717), approved July 31, 1951.

Defense Production Act amendment: Amends the Defense Production Act of 1950, as amended, to permit the Office of Price Stabilization to set up ceiling prices on an industry-wide basis rather than on an individual seller basis under a formula requiring that the ceiling price cannot be lower than the highest level of prices prevailing just before the issuance of the regulation, or the highest level of prices prevailing between January 25 and February 24, 1951. OPS must take cognizance of cost increases up to July 26, 1951, which are necessary and unavoidable. Permits on application and showing only those suffering financial hardship to secure relief whereas under existing act any seller could request price adjustments regardless of whether he was sustaining financial hardship.

S. 2170, passed Senate October 4, 1951. Pending in House.

Defense housing: Authorizes the construction of housing, community facilities and services in connection with the national defense by providing (a) \$1,500,000,000 in Government-insured mortgages as an incentive for private construction of defense housing; (b) \$60,000,000 in loans and grants for the installation and maintenance of community facilities, exclusive of schools; (c) \$50,000,000 for Government construction of rental housing in critical defense areas but private builders would have 90 days in which to undertake such projects; (d) \$15,000,000 in loans for the production and distribution of prefabricated and mobile housing with a limitation that not more than \$500,000 shall go to one company or individual; (e) \$10,000,000 revolving fund for the acquisition and improvement of sites for defense housing for resale to private builders; (f) an additional 2-year period during which veterans will have the right to obtain GI loans at 4 percent interest from a Government fund of \$150,000,000 if the loans are not otherwise available; (g) relaxed credit controls on GI housing selling for \$12,000 by reducing scale of down payments to range from 4 to 8 percent and allowing 25 years to pay, similar relaxation on nonveteran housing selling for less than \$12,000 with scale of down payment ranging from 10 to 20 percent and allowing 25 years to pay; (h) suspension of residential credit restrictions under the Defense Production Act of 1950 relating to housing sold at \$12,000 or less, or rented at \$85 or less per month; relaxation of credit

restrictions on all other housing in such a manner and to such extent as the President finds necessary to obtain the production of housing needed in defense and military areas.

Note—Additional housing construction at military installations was authorized in a separate law, providing \$1,438,480,820 for that purpose. See Military and Naval Construction Act under "National Defense" heading in this section. See also "Appropriations" under "National Defense."

Public Law 139 (S 349), approved September 1, 1951.

Flood disaster housing: Authorizes the Federal Government to build temporary housing or other emergency shelter in flood disaster areas and relaxes credit regulations for Government-insured mortgages, permitting 100-percent guaranties in the disaster area instead of the customary 95 percent.

Public Law 107 (H J Res. 303), approved August 3, 1951.

National rent control: Extends National Rent Control Act for 3 months until June 30, 1951.

Public Law 8 (S. J. Res. 39), approved March 23, 1951.

National rent control: Extends National Rent Control Act additional month until July 31, 1951.

Public Law 69 (H J Res 278), approved June 30, 1951.

Price discrimination: Provides that in any proceeding charging price discrimination under the Robinson-Patman Act, the seller may show that his price differential or furnishing of extra facilities was made in good faith to meet the practices of a competitor, and this shall be a complete defense unless it is proved that he knew his competitor's practices were unlawful.

S 719, passed Senate 42 to 34 August 2, 1951. Pending in House.

Charter private corporations: Establishes as congressional policy to grant Federal charters to private corporations under following conditions

(a) Only nonprofit corporations organized and operated for charitable, educational, patriotic, or civic-improvement purposes will be awarded a charter by act of Congress;

(b) Corporations will not be chartered until the Department of Justice has carefully investigated the purposes as well as the incorporators

(c) Private corporations chartered by act of Congress will be subject to an annual audit by certified public accountants at the corporation's expense. The annual audit will be filed with the General Accounting Office and retained as a public record for at least 10 years, and the report of such audit will be made to the Congress by General Accounting Office

S 1898, passed Senate August 9, 1951. Pending in House

Parcel-post limitation Amends or repeals all existing laws relating to size and weight limitation on fourth-class mail, parcel post, and reduces package size to 72 inches in girth and length combined (present, 100 inches) for all zones, and lowers the weight to 40 pounds in zones 1 and 2 20 pounds in zones 3 through 8 (present weight is 70 pounds for all zones). The new limitations do not apply to parcels (a) addressed to any third- or fourth-class office or to rural areas, or (b) mailed at any third- or fourth-class office or on any rural or star route, or (c) containing baby towl, live plants, trees, shrubs, or agricultural commodities (not including manufactured products thereof); or (d) to books which do not contain advertising

Public Law 199 (S 1335), approved October 24, 1951.

Export controls: Extends until June 30, 1953, President's authority to control exports by limiting shipments of scarce materials, by channeling exports to countries

where needs are greatest and where our foreign policy and national economy will best be served.

Public Law 33 (H. J. Res. 197), approved May 16, 1951.

Fur labeling: Requires mandatory labeling of fur articles and invoicing of furs moving in interstate or foreign commerce to show (a) name of the animal that produced the fur; (b) the country of origin; (c) whether the fur has been dyed, bleached, or is composed of inferior pieces such as paws, tails, or waste fur. Permits retailers to substitute own label for that of the manufacturer, jobber, or wholesaler, but record of such substitution must be kept for 3 years; failure to label properly and maintain required records is an unfair method of competition under the Federal Trade Commission Act, penalty for lack of records is \$100 fine for each day of violation

Public Law 110 (H. R. 2321), approved August 8, 1951.

Cooperative bank debentures: Authorizes national banks and State member banks of the Federal Reserve System to receive commissions on the sale of debentures issued by the Central Bank for Cooperatives as they do on the sale of other bonds.

S. 2025, passed Senate October 1, 1951. Pending in House

Bank mergers Establishes the terms for a merger of two or more national banking associations and for a merger of State banks with national banking associations and provides that only the dissenting stockholders of the absorbed bank may demand cash value for their shares.

S 2128, passed Senate October 2, 1951. Pending in House

Foreign relations

Reciprocal trade agreements: (1) Extends until June 12, 1953, the authority of the President to negotiate trade agreements through the mutual exchange of goods, (2) reestablishes the peril-point system, adopted in the Eightieth Congress, which requires the President to report his reasons to Congress if he fails to follow the Tariff Commission's recommendations on import duties on goods which might cause injury to our domestic industry manufacturing competitive goods; (3) requires an escape clause in all future agreements and directs the President, as soon as practicable, to insert an escape clause in all existing agreements; (4) provides for the suspension or withdrawal of tariff concessions to Communist areas; (5) limits the imports of perishable farm commodities under certain circumstances.

Public Law 50 (H R 1612), approved June 16, 1951.

Aid to India Provides \$190,000,000 emergency credit aid to India for the primary purpose of obtaining food to relieve famine. Of the \$190,000,000 credit, not less than \$100,000,000 is to be made available from ECA funds appropriated for fiscal 1951, \$90,000,000 is to be made available from any balance of such funds unallotted and unobligated as of June 30, 1951, and, if insufficient, the balance is to be obtained by Treasury purchase of ECA notes. Credit terms are to be the same as those for Marshall plan loans with payment extended over a period of 33 to 35 years, interest rate of 2½ percent, and a grace period of 6 to 8 years before any principal payments are due. The terms include provision for partial repayment by transfer to the United States of certain critical materials not available in this country. Interest payments by India, as might be agreed upon for the first 5 years up to \$5,000,000 are to be held in a special account for educational, scientific, and philanthropic purposes in India. Assistance to India may be terminated by the President whenever he, or Congress by concurrent resolution, deems assistance is no longer necessary

Public Law 48 (S 872), approved June 15, 1951.

Friendship: Reaffirms the friendship of the people of the United States for all peoples of the world, including specifically the peoples of the Soviet Union, and requests the Soviet Government to inform its people of the text of the resolution.

Senate Concurrent Resolution 11, adopted unanimously May 4, 1951; adopted amended by House June 4, 1951; conference report adopted June 20, 1951.

Communist China: Requests that the United Nations should immediately declare Communist China an aggressor in Korea.

Senate Resolution 35, adopted unanimously, January 23, 1951.

Communist China in U. N.: Declares sense of Senate that Communist China should not be admitted to membership in United Nations as the representative of the Government of China. (House of Representatives adopted similar resolution, H. Res. 96, May 15, 1951.)

Senate Resolution 36, adopted, 91 to 0, January 23, 1951.

Protest to Czechs: Expresses indignation over the arrest and conviction of William N. Oatis, American citizen and bureau chief of the Associated Press, by the Czechoslovakian Government for "espionage", requests that the executive agencies take all possible action to bring about his release; and approves termination of all commercial relations with Czechoslovakia until Oatis is freed. House adopted August 14, 1951.

House Concurrent Resolution 140, adopted, 81 to 0, August 23, 1951.

Korean relief. Expresses the hope that Americans will respond generously to the appeal of American Relief for Korea, Inc., and authorizes the President to set aside as soon as practicable a period of at least 1 month for special clothing collection appeal for relief of the refugees in Korea.

Public Law 138 (H. J. Res. 281), approved August 31, 1951.

Mailing privileges: Provides for free transmission of official mail of members of the armed forces of nations serving with or under United Nations military commands with which the Armed Forces of the United States are serving. The official mail, not exceeding 4 pounds in weight, must have been addressed within these commands for delivery within the United States

S. 855, passed Senate June 21, 1951. Pending in House.

International Children's Fund. Authorizes an appropriation of \$12,000,000 for contributions to the United Nations International Children's Emergency Fund for the 1952 fiscal year, to continue world-wide operation of health training programs, mass health programs, and disease control in Asia, the Middle East, and Latin America, as well as continue emergency relief in certain European and Near East areas. Contributions by the United States thus far amount to \$75,000,000.

S. 2079, passed Senate October 1, 1951. Pending in House.

Ship sales to South Korea: Authorizes the Secretary of Commerce, within 1 year from date of enactment, to sell up to 50,000 tons of United States war-built coastal vessels to the Government of South Korea.

Senate Joint Resolution 104, passed Senate October 1, 1951.

Diplomatic privileges: Authorizes the President to extend to representatives on the Council of the Organization of American States the same diplomatic privileges and immunities now authorized by law to foreign envoys in the United States; terms and conditions of the privileges are to be determined by the President and are subject to corresponding conditions and obligations

S. 2042, passed Senate October 9, 1951. Pending in House.

End war with Germany: Formally terminates the state of war between the United States and Germany, declared by Congress on December 11, 1941, and provides that the rights and privileges of the United States and its nationals which were acquired by the unconditional surrender of Germany on May 8, 1945, remain unchanged.

Public Law 181 (H. J. Res. 289), approved October 19, 1951.

Display United States flag: Prohibits the display of flags of international organizations or other nations in equal or superior prominence to the flag of the United States except that the flag of the United Nations may be placed in a position of superior prominence at the headquarters of the United Nations or where an official meeting of the United Nations is in progress. Violation is punishable by a penalty of \$250 fine and 6 months in jail.

S. 2039, passed Senate October 19, 1951. (Motion to reconsider pending.)

Foreign decorations: Prohibits the acceptance by an officer of the United States of any present or decoration presented to a foreign government unless it has been tendered through the Department of State after authorization by Congress.

S. 2165, passed Senate October 19, 1951. Pending in House.

General government

Readjusted postal rates—annual leave: Increases postal revenues by about \$117,000,000 first year, \$121,000,000 the second year, and \$125,000,000 the third year by (a) raising postal-card rate from 1 to 2 cents and drop-letter rate from 1 to 2 cents both effective February 1, 1952, (b) raising second-class rate (newspapers and magazines) by 10 percent annually each year for 3 years effective April 1, 1952, but exempts publications by nonprofit organizations and those designed for classroom or religious instruction; (c) raising minimum rate for third-class bulk mailings from 1 to 1½ cents effective July 1, 1952, but exempts from increase mailings of certain nonprofit organizations; (d) raising special-delivery rate from 15 to 20 cents. Another section of the bill provides for a graduated system of annual and sick leave for Government employees, allowing annual leave ranging from 13 to 26 days based on years of service and up to 13 days' sick leave annually.

Public Law 233 (S. 1040), approved October 30, 1951.

Postal employees pay increase: Authorizes pay increases from \$460 to \$800 annually for all postal employees in the field service of the Post Office Department, retroactive to July 1, 1951, with fourth-class postmasters to be increased not more than 20 percent of their present salary, and hourly employees to be increased 20 cents an hour over their present compensation; eliminates the first two grades in the automatic grades, and advances by two grades all those entering the service on or after July 1, 1945, who have not, through previous legislation, been advanced one or two grades but in cases where employees have advanced one grade, they would receive a one-grade promotion.

Public Law 204 (S. 355), approved October 24, 1951.

Civil service: Permits secretaries and law clerks who have served 4 years to any justice or judge of the United States, and whose separation from the service is involuntary and without prejudice, to acquire upon passing a noncompetitive examination, a classified civil-service status for transfer to a position in the classified civil service if the transfer is obtained within 1 year from the date of separation.

S. 216, passed Senate March 12, 1951. Pending in House.

Reorganize RFC: Reorganization Plan No. 1 proposing a reorganization of the Reconstruction Finance Corporation by (a)

establishing Office of Administrator to be appointed by the President by and with the consent of the Senate; (b) abolishing present Board and transfers functions to the Administrator; (c) appointment by the President with the consent of the Senate of Office of Deputy Administrator; (d) prohibits other employment by the Administrator or the Deputy Administrator; (e) establishes Loan Policy Board, all ex officio members, Administrator as Chairman, Deputy Administrator as Vice Chairman, Secretary of Treasury, Secretary of Commerce, one other member designated by the President from among the officers of the United States who are required to be appointed by and with the consent of the Senate; (f) granting and denial of loans will be governed by Loan Policy Board; (g) providing that all applications for loans in excess of \$100,000 are to be considered by a board of review, to be made up of five persons designated by the Administrator from among personnel of the Corporation.

(NOTE—Resolution (S. Res. 76—CAPHEART) disapproving plan defeated 41 to 33 April 13, 1951. Plan became effective April 30, 1951.)

Government employment: Prohibits collection of a fee by a private employment agency from a person for referring his name to an executive department or agency unless such a service has been requested in writing by the department or agency. Penalty of \$1,000 fine or imprisonment of 1 year for conviction.

Public Law 141 (S. 15), approved September 13, 1951.

Administrative Rules Commission: Establishes an Administrative Rules Commission consisting of a Member of Congress, an Assistant Attorney General, head of an independent agency, the chief judge of the judicial circuits, the dean of a law school, and a practicing lawyer, to formulate and transmit to the Attorney General for report to Congress general rules of practice and procedure for agencies, including forms and appropriate rules respecting judicial proceedings for the enforcement or review of agency action. The rules of practice and procedure are to be presented to the Congress within 30 days of the beginning of a session and, unless disapproved by concurrent resolution, shall become effective 10 days after the adjournment sine die of that particular session.

S. 17, passed Senate June 21, 1951. Pending in House.

Postal service: Extends benefits now enjoyed by star-route contractors to screen vehicle postal contractors by authorizing the Postmaster General to renew any screen-vehicle contract for an additional 4-year term at the rate prevailing at the end of the contract term; permits readjustment of the compensation of the screen-vehicle contractor for increased or decreased compensation costs occasioned by changed conditions occurring during the contract term, in exactly the same manner as applies to star-route contractors. Screen-vehicle contract operation involves carrying mail to and from post offices to railroad stations, boat landings, etc., and requires special equipment suitable for such service.

S. 759, passed Senate June 21, 1951. Pending in House.

Rules of evidence: Amends United States Code to permit evidence to be introduced, whether the original is in existence or not, of photographic, photostatic, microfilm, microcard, miniature photographic, or other process, which accurately reproduces the original.

Public Law 129 (H. R. 4106), approved August 28, 1951.

Protect congressional witnesses: Amends sections 1505 and 3486 of title 18 of the United States Code to make it a violation of law for any officer of the Federal Gov-

ernment, both civilian and military, to dismiss or discipline a Government employee for testifying before a committee of Congress.

S. 1390, passed Senate July 23, 1951. Pending in House.

Secret Service: Broadens the basic authority of the United States Secret Service by writing into substantive law certain authority now exercised by the Secret Service and supplementary existing law by providing: (a) that persons who fraudulently alter, deface, or mutilate United States coins or foreign coins in circulation as money in the United States, or who pass such coins shall be subject to a fine up to \$2,000 or imprisonment up to 5 years, or both; (b) that persons who design, engrave, print, circulate, or use any professional card, notice, circular, or advertisement imitating an obligation or security of the United States shall be fined up to \$500; (c) that persons who make or possess likenesses of coins shall be fined up to \$100; and (d) authorizing the Secret Service, subject to the direction of the Secretary of the Treasury, to protect the President and his immediate family, President-elect, and Vice President at his request, execute warrants issued under authority of United States, carry firearms, offer and pay rewards leading toward the apprehension of criminals.

Public Law 79 (H. R. 2395), approved July 16, 1951.

Condemnation suits: Amends subdivision of the general rules of practice and procedure in United States district courts to provide that parties to a condemnation suit may, on demand, request a jury trial on the issue of what is just compensation under a condemnation proceeding. Under existing law the Supreme Court submitted on May 1, 1951, a rule (rule 71) which abolished the right to jury trial in condemnation proceedings and permitting it only at the discretion of the court.

S. 1958, passed Senate August 9, 1951. Pending in House.

Government employees' pay increase: Provides an increase, effective July 1, 1951, of 10 percent or \$800, whichever is less, with a minimum of \$300, in the rates of compensation for certain employees of the Federal Government, but does not cover postal employees who are provided for under other legislation. The increases apply (a) to the entrance salary grade for all classified employees, (b) to the basic compensation for Foreign Service officers, physicians, dentists, nurses, and other employees in the Department of Medicine and Surgery in the Veterans' Administration; (c) and to the gross salaries of legislative employees, but excludes Senators and Members of the House of Representatives. The aggregate amount of the basic allotment for each Senator's office is increased by 10 percent but there is no automatic salary increase for employees in the office of a Senator or Congressman.

Public Law 201 (S. 622), approved October 24, 1951.

Modify Bankruptcy Act: Amends section 55 of the Bankruptcy Act by providing that the first creditors' meeting after adjudication of bankruptcy shall be not less than 10 days nor more than 30 days after the adjudication and that the meeting shall be at a place within the judicial district reasonably convenient to the parties in interest.

Public Law 32 (H. R. 3292), approved May 16, 1951.

Transporting obscene matter: Adds to the existing prohibition against transportation in interstate commerce of obscene matter by the mails or common carrier for commercial purposes, a similar prohibition against such transport by any person in a private conveyance. The prohibition applies to books, pamphlets, pictures, films, recordings, electrical transcriptions, or any other matter of indecent or immoral character, and a \$5,000

fine or imprisonment of 5 years is provided for violation.

S. 27, passed Senate January 29, 1951. Pending in House.

Notice to creditors: Amends section 58 of the Bankruptcy Act to provide that in addition to publication of notices to creditors the clerk of the court must mail such notices and certified copies of every court order in the proceedings to the local collector of internal revenue, the Commissioner of Internal Revenue and the Comptroller General, and in the case of a debt to the Government of the United States a notice must be mailed to the head of the agency involved.

Public Law 71 (H. R. 1746), approved July 3, 1951.

Mailing obscene matter: Broadens existing law prohibiting the mailing of obscene matter to cover the mailing of all obscene, lewd, indecent matter. Existing law limits the ban to letters, packets, or packages containing obscene matter.

S. 34, passed Senate January 29, 1951. Pending in House.

Post Office Department checks: Authorizes the Postmaster General to issue duplicate checks without requiring bond when checks of the Post Office Department are lost while in the custody of the United States or without fault of the owner.

S. 1411, passed Senate October 1, 1951. Pending in House.

Drug prescription safeguards: Amends the Federal Food, Drug, and Cosmetic Act to bar the sale without prescription of certain barbiturates, narcotics, and new experimental drugs and to relieve retail pharmacists from unnecessary restrictions with regard to drugs sold for use without the supervision of a physician by (1) providing a statutory definition of certain prescription drugs and prohibiting their sale without a prescription; (2) permitting oral prescription by a physician for all drugs, (3) permitting refilling of a prescription, without reauthorization by physician, for drugs which are not dangerous.

Public Law 215 (H. R. 3298), approved October 26, 1951.

Administrative procedure changes: Subjects to the requirements of the Administrative Procedures Act, all administrative and judicial procedures under the Social Security Act Amendments of 1946, Sugar Control Extension Act of 1947, Housing and Rent Acts of 1947 and 1948, Rubber Act of 1948, Defense Production Act of 1950, International Wheat Agreement Act of 1949, Export Control Act of 1949, and others which were exempt.

S. 1770, passed Senate October 11, 1951. Pending in House.

Personnel selection: Authorizes the Civil Service Commission to make certain changes in its operations which will provide a more effective method of selection of persons for positions in the competitive civil service, establish standards for personnel operations, and provide a systematic transfer plan for Federal employees.

S. 1135, passed Senate October 19, 1951. Pending in House.

Transfer Government jobs: Authorizes the Administrator of General Services to transfer over a period of 3 years 50,000 Government positions now located within 20 miles of the White House to locations beyond 150 miles from the White House, under a permanent decentralization program. Not more than 50 positions in any one agency may be transferred unless approval is obtained from the proper Senate and House committees.

S. 2251, passed Senate October 19, 1951. Pending in House.

Additional judgeships: Provides for the creation of 2 additional circuit court judgeships and 18 permanent and 3 temporary district court judgeships as follows: One circuit court judgeship for the fifth circuit and one for the ninth circuit, permanent district court judgeships for (a) the southern

district of California, (b) Colorado, (c) Delaware, (d) the southern district of Florida, (e) the northern district of Georgia, (f) the northern and southern districts of Indiana, (g) Nevada, (h) the eastern, middle, and western districts of North Carolina, (i) the northern district of Ohio, (j) the eastern district of Pennsylvania, (k) the western district of Tennessee, (l) the eastern district of Texas, (m) the eastern district of Virginia, (n) the western district of Washington, and (o) Alaska. The present temporary judgeships for the southern district of Texas, the eastern and western districts of Missouri, and the northern and southern districts of West Virginia are made permanent. One temporary judgeship is authorized for Arizona and two for the southern district of New York. Other provisions include authority for the President to appoint additional judges when a judge eligible to retire for disability does not do so, and designates certain places for the holding of court.

S. 1203, passed Senate October 9, 1951. Pending in House.

Increase narcotics law penalties: Provides more stringent penalties for violations of laws relating to narcotics and marihuana by fixing maximum fine of \$2,000 for each offense with minimum and maximum prison terms of from 2 to 5 years for first offense, 5 to 10 years for second offense, and 10 to 20 years for third offense with no probation or suspension of sentence after the first conviction.

Public Law 255 (H. R. 3490), approved November 2, 1951.

Immigration—Naturalization

Admission of aliens: Extends for 12 months from date of enactment the period for admission of alien spouses or unmarried minor children of citizens of the United States who are members of the Armed Forces, and waives racial inadmissibility as a cause for exclusion. In the cases of alien spouses the marriage must have taken place before 12 months after the date of enactment of this legislation.

Public Law 6 (H. R. 1030), approved March 19, 1951.

Japanese evacuation claims: The Evacuation Claims Act of 1948 was enacted to authorize the Attorney General to determine, according to law, any claim by persons of Japanese ancestry against the United States for losses due to their forced evacuation from the west coast, Alaska, or Hawaii during World War II. A total of 24,684 claims have been filed against the Government amounting to in excess of \$130,000,000. This new law permits the Attorney General to effect compromise settlements not exceeding \$2,500 per claim, with the purpose of more rapidly disposing of a large majority of the 13,915 claims for amounts up to \$2,500, and a portion of the 3,939 claims for amounts between \$2,500 and \$5,000. The original act required the Attorney General to make a formal, regular, and final judgment of each claim and a more expeditious method of handling became necessary because of the unexpected large number of claims.

Public Law 116 (H. R. 3142), approved August 17, 1951.

Modification of deportation-immigration provisions: Requires the Attorney General to remove bar against certain involuntary membership in subversive organizations by clarifying the interpretation of the act of 1918, as amended, relating to exclusion and deportation of subversive classes of aliens. The act of 1918, as amended by the act of 1940, excluded from the United States aliens who were or have been members of or affiliated with any organization, association, society, or group that believes in, advises, advocates, or teaches certain subversive doctrines. Thereafter, section 22 of the Internal Security Act of 1950 added to the excludable classes of aliens those who are or were members of, or affiliated with, the Communist

Party, the Communist Political Association, or other totalitarian parties. The new law directs the Attorney General to provide by regulation that the terms "members of" and "affiliated with" shall include only membership or affiliation which is or was voluntary, and shall not include membership or affiliation which is or was solely (a) when under 16 years of age, (b) by operation of law, or (c) for purposes of obtaining employment, food rations, or other essentials of living.

Public Law 14 (H. R. 2339), approved March 28, 1951.

Passports—Citizenship: Provides that the statute of limitations applicable to violations of the passport laws and the laws relating to the falsification of citizenship be extended to 10 years instead of the 3 years under the existing law.

(Public Law 65 (H. R. 2396), approved June 30, 1951.

Displaced persons: Amends the Displaced Persons Act of 1948, as amended, to (a) extend to December 31, 1951, the termination date for the issuance of visas for eligible displaced persons; (b) extend to June 30, 1952, the terminal date of the period during which 5,000 nonquota visas can be issued to eligible displaced orphans.

Public Law 60 (H. R. 3576), approved June 28, 1951.

Alien detention facilities: Authorizes the Attorney General to establish facilities for the detention of aliens who are illegally in the United States and subject to deportation.

S. 1932, passed October 19, 1951. Pending in House.

Restore citizenship: Enables those persons who lost their United States citizenship by reason of voting in a political election or plebiscite in Italy on June 2, 1946, or on April 18, 1948, to regain it. The law will not permit reinstatement if citizenship has been lost for any other reason. Those qualified to regain American citizenship under this act must take an oath, within 2 years after enactment, that they have done nothing to promote the cause of communism. Approximately 3,000 former American citizens are affected by this act.

Public Law 114 (H. R. 400), approved August 16, 1951.

Natural resources and reclamation

Central Arizona project: Authorizes construction (but prohibits during present national emergency any appropriation or construction) of the central Arizona project at Bridge Canyon on Colorado River in northwestern Arizona, which includes (a) a dam and incidental works at Bridge Canyon, (b) certain necessary appurtenant dams and incidental works which will effectuate coordination with other Federal power projects on the Colorado or its tributaries, (c) a related system of canals for diverting the waters of the Colorado River to needed points which can be served by the project; (d) power generating and related transmission equipment for the production and transmission of electrical energy to various points in the Southwest, (e) flood control and related purposes.

S. 75, passed Senate, 50 to 28, June 5, 1951. Pending in House.

Conserve oil and gas: Authorizes the extension and renewal of the interstate compact to conserve oil and gas for a period of 4 years to September 1, 1955. The purpose of the compact is to conserve petroleum resources, prevent their waste, and aid the industry to achieve a relatively stable situation. The act does not authorize the signatory States to limit the production of oil or gas for the purpose of stabilizing or fixing the price, or to create or perpetuate monopoly, or to promote regimentation. The original compact was entered into by six States in 1935, and 20 States now participate.

Public Law 128 (S. J. Res. 42), approved August 28, 1951.

Duck stamp fund: Amends the Migratory Bird Hunting Stamp Act of 1934 to permit 15 percent of the migratory bird conservation fund (duck stamp fund) to be used for enforcement and administrative purposes and 85 percent for other purposes of the act. Existing law provided that Fish and Wildlife Service may use 90 percent of the fund for acquisition, maintenance, and development of wildlife refuges and 10 percent for enforcement and administration.

Public Law 182 (S 509), approved October 20, 1951.

Assessment—mining claims: Amends basic law (sec 2324, Rev. Stat.) by changing the year during which assessment work is to be performed from the 12-month period beginning on the 1st of July each calendar year to the 12-month period beginning on November 1. Assessment work required to be performed on mining claims during the period beginning July 1, 1950, may be performed during the additional 4-month period ending on November 1, 1951.

S. 1726, passed Senate June 26, 1951. Pending in House.

State-owned lands: Enables the State of Arizona to develop public lands by removing restrictions imposed by the Federal Government in the Arizona Enabling Act. Permits oil and gas leases to run for as long as oil and gas is produced in paying quantities after the primary term of not more than 20 years, reserves a royalty to the State of not less than 12½ percent of production, and extends the exemption from the restrictions contained in the original enabling act which now applies to agricultural and grazing lands to also include commercial and home-site leases.

Public Law 44 (S 108), approved June 2, 1951.

Grand Canyon-scenic views: Provides protection to scenic values by directing that on certain lands along the Grand Canyon Park South Approach Road the rights of locators of subsequently filed mining claims would be limited to minerals, and title to the surface would remain with the United States; use of the surface by the locator would be restricted to the needs for mining purposes, the timber cutting would be subject to national forest timber cutting rules.

Public Law 77 (S 109), approved July 12, 1951.

Power facilities in Tennessee: Authorizes the construction, operation, and maintenance of facilities for generating hydroelectric power at Cheatham Dam on the Cumberland River in Tennessee at a cost of \$18,200,000.

S. 87, passed Senate October 1, 1951. Pending in House.

Social welfare

Public health units: Amends the Public Health Service Act by authorizing the establishment and maintenance of local public health units under approved State plans, aided by Federal grants, and administered by the Surgeon General to provide the following basic services: (a) gather vital statistics; (b) control and prevent communicable and chronic diseases; (c) improve sanitation methods; (d) provide laboratory services for diagnosis and examination; (e) aid in maternal and child health care; (f) provide source for health education.

S. 445, passed Senate, 38 to 35, March 16, 1951. Pending in House.

Increase aid to aged: Authorizes an increase in the Federal share payment to States for the aid to the aged, blind, and disabled by \$3 per month bringing the Federal payment to \$33 per month, and \$2 a month for each dependent child bringing the Federal payment to \$18 per month. The provision was made through an amendment (by McFARLAND) to a bill excluding discharge of indebtedness from gross income for tax purposes.

H. R. 2416, passed Senate July 19, 1951. Pending in House.

Union elections: Authorizes discontinuance of mandatory election procedure in reaching union-shop agreements, but provides that a labor organization shall not be authorized to conclude a union-shop agreement unless, within the preceding 12-month period, it has received notice from the National Labor Relations Board that it is in full compliance with section 9 (non-Communist affidavit requirement) of the Labor Relations Act. Mandatory election is necessary if 30 percent or more of the employees in a bargaining unit disapprove a union-shop agreement and present a petition.

Public Law 189 (S. 1959), approved October 22, 1951.

School construction: Provides that no reduction should be made for prior construction under WPA, PWA, or NYA programs in determining the amount which local educational agencies are to receive for school-construction purposes. Existing law (Public Law 815, 81st Cong.) authorized funds for construction but allowed deductions for work completed after June 30, 1939, with Federal assistance.

S. 703, passed Senate August 27, 1951. Pending in House.

Shoshone and Arapaho Tribes: Extends for an additional 5 years the authority to make a semiannual per capita distribution of two-thirds of the trust funds of the Shoshone and Arapaho Tribes and permits earnings and income from oil royalties, and income from all other sources, to be available for distribution.

Public Law 133 (S 950), approved August 30, 1951.

Menominee Indian payments: Directs the Secretary of the Interior to pay \$150 to each of the 3,000 Menominee Indians, the funds to be withdrawn from that portion of tribal funds now in the Treasury bearing interest at 5 percent. Payments come from funds derived from logging and sawmill operations and from a judgment for \$8,500,000 made by the Court of Claims to this tribe.

Public Law 118 (H R 3782), approved August 20, 1951.

Ute Indian payments: Directs the Secretary of the Interior to distribute to the Ute Indians \$1,000 per capita, and the tribal council to use about \$5,000,000 over a 3-year period for a rehabilitation program. Funds are to come from a judgment of \$31,460,216 awarded the tribe against the United States in payment for 11,720,000 acres of land taken from them, but not more than one-third of the judgment sum plus certain other trust funds totaling about \$40,000 may be distributed.

Public Law 120 (H R 3795), approved August 21, 1951.

Release of prisoners: Provides that a Federal prisoner who has served his sentence, less good-time deductions, shall be released unconditionally if there remains less than 180 days to serve under the maximum term or terms of his sentence.

Public Law 62 (H R. 2924), approved June 29, 1951.

Modify parole laws: Amends the Criminal Code (sec. 4202, title 15) to (a) permit the parole of prisoners serving a term or terms of over 180 days instead of limiting parole to offenders committed for more than 1 year as under the present statute; (b) provide that prisoners sentenced to terms of over 45 years may be considered for parole after serving 15 years; (c) includes youth offenders under the exemption now provided for juvenile delinquents. Existing law provides that a Federal prisoner serving a term or terms of over 1 year may be paroled after serving one-third of his term or 15 years of a life sentence.

Public Law 98 (H. R. 3455), approved July 31, 1951.

Rehabilitate prisoners: Authorizes the Attorney General, in his discretion, to make loans not exceeding \$150 to Federal prisoners out of commissary funds to be secured by the personal note of the prisoner and to be repaid monthly with interest up to 6 percent. The Attorney General is also authorized to accept gifts or money bequests for credit to the commissary fund.

S. 1365, passed Senate July 23, 1951. Pending in House.

War claims in Philippines: Authorizes payment out of the war claims fund to religious organizations in the Philippines which gave aid to American citizens and military forces in World War II and whose facilities for educational, medical, or welfare work were destroyed.

S. 1415, passed Senate October 1, 1951. Pending in House.

Change railroad retirement: Amends the Railroad Retirement Act and the Unemployment Insurance Act to (a) increase pensioners' and annuitants' benefits by 15 percent; (b) increase survivors' benefits by 33½ percent; (c) increase a spouse's benefit up to 50 percent of the retired employees' benefit but not more than \$40 per month; (d) provide over-all guaranty that in no case will a railroad retirement beneficiary receive less than under social-security program; (e) provide that employees with less than 10 years' service upon retirement are to be paid benefits from the general social-security system and with guaranty that neither railroad retirement fund nor social-security fund will be adversely affected by this arrangement.

Public Law 234 (H R 3669), approved 9 30 a m (eastern standard time), October 30, 1951.

Taxation

Revenue Act of 1951: Provides total additional revenue of \$5,691,000,000 annually (\$2,280,000,000 from individual income taxes, \$2,207,000,000 from corporation taxes, and \$1,204,000,000 from excise taxes) by: (a) increasing individual income taxes by 11 percent on the first \$2,000 and 11½ percent above \$2,000, effective November 1, 1951; (b) increasing normal corporation tax by 5 percent to 52 percent, retroactive to April 1, 1951, and limits combined corporate normal and excess profits tax to 60 percent; (c) increasing excise taxes on alcoholic beverages, smoking tobacco, gasoline, automobiles, numerous electric appliances except washing machines and vacuum cleaners, all effective November 1, 1951; (d) imposing a new 10-percent tax on all money wagered and a \$50 occupational tax on those engaged in wagering but parimutuel installations are exempt; (e) subjecting a percentage of the income of mutual savings banks and building and loan associations, and the undistributed income of cooperatives to corporation tax, but patronage dividends and refunds by rural electric cooperatives and certain mutual insurance companies are exempted; (f) modifying provisions of the corporate excess-profits tax by lowering the present 85-percent exempt base to 83 percent of the average earnings of the best 3 out of the 4-year period 1946 through 1949, but allowing special hardship exemptions for certain newer corporations whose earnings in the base period were low and setting effective date as July 1, 1951; (g) increasing the rate on long-term capital gains 1 percent to 26 percent but limiting coal royalty income for capital-gain purposes.

The law reduces revenue yields by: (a) increasing some percentage depletion rates and extending depletion allowances to cover coal, asbestos, sand, gravel, sodium chloride; (b) providing some income-splitting advantages for an unmarried head of household; (c) taxing owner of an interest in a family partnership regardless of the method of acquisition; (d) providing that proceeds from sale of a residence shall not be treated as income except as it exceeds the purchase

price of a new residence, (e) removing present limit of 5 percent on deductions for medical expenses for taxpayers 65 years of age or over; (f) allowing regular \$600 exemption to be taken for dependents whose earnings are less than \$600 per year; (g) continuing to January 1, 1954, the existing exemption from income tax on the pay of members of the Armed Forces serving in Korea, (h) abating any income tax that may be due from a member of the Armed Forces who died in combat, or who is hospitalized as a result of wounds, (i) providing that no State may be deprived of Federal grant-in-aid payments because of State law which permits public access to lists containing names of persons receiving such assistance, if the State law prohibits the use of such information for commercial or political purposes.

Public Law 183 (H. R. 4473), approved 2 07 p. m., October 20, 1951.

Excess profits Extends the time for corporations to file excess profits tax statements from September 15 to November 15, 1951, grants Secretary of Treasury subpoena powers in cases involving the denial or revocation of industrial alcohol permits.

Public Law 145 (H. R. 4014), approved September 14, 1951.

Tax exemption Exempts gain realized from involuntary conversion of property from income tax where (1) taxpayer purchases replacement property before he receives the proceeds from the converted property; or (2) where a part of the proceeds from the converted property is used to pay off its indebtedness, and (3) eliminates present requirement that proceeds from the converted property must be traced into the replacement property.

Public Law 251 (H. R. 3590), approved October 31, 1951.

Suspend copper tax Suspends the 4-cent-a-pound import tax on copper, copper-bearing ores and concentrates, and the 3-cent-a-pound tax on various articles containing copper so long as the average monthly market price of copper is 24 cents or more a pound. The tax suspension applies to articles entered for consumption, or withdrawn from warehouse for consumption during the period beginning April 1, 1951, and ending February 15, 1953, or at the end of the present emergency, but if during that period the average market price of electrolytic copper, delivered Connecticut Valley, has been below 24 cents per pound for one calendar month, the Tariff Commission, within 15 days after the end of that month, shall advise the President, and the President shall by proclamation not later than 20 days after he has been advised, revoke the tax suspension.

Public Law 38 (H. R. 3336), approved May 22, 1951.

Savings bonds Authorizes the Secretary of the Treasury to provide a convenient method of handling the maturity of series E United States bonds by either (a) paying holder cash, according to the original terms of the contract, or (b) permitting holder to retain present bond up to an additional 10 years after original maturity at the same rate of interest, or (c) permitting holder to exchange bond for a current income savings bond of series G in authorized denominations.

Public Law 12 (H. R. 2268), approved March 26, 1951.

Gasoline tax deduction Permits gasoline consumers to deduct for Federal income-tax purposes, beginning in the 1951 tax year, State taxes on gasoline or other motor-vehicle fuels imposed on wholesalers and passed on to consumers.

Public Law 29 (H. R. 136), approved May 12, 1951.

Military gift importation Extends for 2 years the law which permits members of the Armed Forces on duty abroad to return bona fide gifts, not exceeding \$50 in value, with-

out payment of customs duties, charges, or exactions, or internal revenue taxes.

Public Law 1 (H. R. 2141), approved February 21, 1951.

Refund estate taxes Extends until January 1, 1952, the authority to refund any additional Federal estate tax overpaid, if the overpayment resulted from the tax exemption of members of the Armed Forces who were killed in action or who died of wounds or disease incurred in line of duty between December 7, 1941, and January 1, 1947.

Public Law 34 (H. R. 2654), approved May 17, 1951.

Suspend scrap tax Continues suspension for another year until June 30, 1952, of the import tax on scrap metal which ranges from 37½ cents per ton on ferrous to three-quarters cent per pound on zinc, 20 cents per pound on magnesium, 2½ cents per pound on lead, 2 cents per pound on copper, and 1½ cents per pound on aluminum.

Public Law 66 (H. R. 3181), approved June 30, 1951.

Estate, gift tax changes Clarifies and simplifies certain provisions of estate and gift tax laws, relating to the power to determine the manner in which the property of another shall be disposed by repealing certain technical provisions enacted in 1942, and establishes standards on rules to determine taxability.

Public Law 58 (H. R. 2081), approved June 28, 1951.

Admission tax exemption Exempts members of Armed Forces from Federal admissions tax when admitted free of charge to sporting events, moving-picture theaters, or any other place subject to admissions tax.

Public Law 124 (H. R. 4601), approved August 24, 1951.

Panama Canal income tax Eliminates the retroactive provision of the 19.0 Revenue Act affecting Federal employees in the Canal Zone by making the tax apply to compensation received in taxable years beginning after December 31, 1950, instead of beginning December 31, 1949.

Public Law 82 (H. R. 3804), approved July 23, 1951.

Transfer of distilled spirits Permits any necessary national emergency transfers of distilled spirits and allows heretofore authorized tax-free removals to be made to and from industrial alcohol establishments if the spirits are 160 proof, provides that upon such transfer any liens for sales or otherwise shall be transferred to the premises of the transferee, except where spirits are transferred to an internal revenue bonded warehouse; and authorizes the Secretary of Treasury temporarily to exempt proprietors of distilleries from statutory requirements except payment of taxes.

Public Law 76 (H. J. Res. 73), approved July 11, 1951.

Tax on blended whiskies Exempts from rectification tax blended whiskies and brandies not under 80 proof, existing exemption limited to whiskies and brandies not under 90 proof.

Public Law 161 (H. R. 2745), approved October 10, 1951.

Transportation and communications

Long-range shipping Amends the Merchant Marine Act of 1936, to extend aid and provide incentives for expansion of the United States merchant marine by: (a) granting unsubsidized and subsidized shipping operators the privilege of accelerated amortization at a rate not exceeding 10 percent of the adjusted tax basis of the vessel, (b) making available construction-differential subsidies to any citizen who builds vessels to be used in foreign trade and commerce of the United States regardless of whether vessel is to be used on essential trade routes; (c) providing that balances due on a purchase contract for a passenger vessel will be secured by a first preferred

mortgage and, in case of default in payment, the purchaser's obligation will be discharged by surrendering the vessel and all rights to the Government. (In order to gain the benefits of the nonrecourse loan provisions, the passenger vessel must be not less than 7,000 gross tons, have a speed of not less than 16 knots, accommodate not less than 200 passengers, construction cost be not less than \$10,000,000, and be approved by the Navy Department); (d) reducing the minimum age from 17 to 12 years in determining obsolete vessels for turn-in by the owner to the Government for an allowance of credit to be applied upon the purchase of a new vessel and authorizing the Government to purchase obsolete (documented for at least 10 years) vessels engaged in domestic trades (formerly allowed only for vessels engaged in foreign trade); (e) allowing unsubsidized lines to deposit their earnings in the construction reserve fund on a tax-deferred basis; (f) authorizing the use of construction reserve funds for reconstruction and modernization of vessels and for liquidation of purchase money indebtedness; (g) extending to vessels operating on the Great Lakes the right to extend use of construction reserve funds, (h) permitting officers and employees of subsidized companies to be paid salaries in excess of the present limitation of \$25,000.

S. 241, passed Senate August 21, 1951. Pending in House.

Philippine vessel charters Authorizes the Department of Commerce to extend to April 30, 1952, charters of certain United States vessels to private corporations of the Republic of the Philippines, continuing the original authority granted during the Seventy-ninth Congress, which made United States Government vessels available to the Philippines to replace vessels which had been destroyed by enemy action in World War II.

Public Law 25 (H. J. Res. 223), approved April 28, 1951.

Great Lakes shipping Permits vessels of Canadian registry to transport iron ore between the United States ports on the Great Lakes during the 1951 shipping season. The number of available ore carriers in the American fleet is insufficient to handle the ore demands of United States steel mills.

Public Law 15 (S. 683), approved March 29, 1951.

War-risk insurance Authorizes the Secretary of Commerce to provide war-risk insurance for aircraft, air cargo, aircraft crews, and persons transported by air, when such insurance cannot be obtained on reasonable terms from commercial insurance companies. This authority may be exercised only with the approval of the President and after consultation with interested Federal agencies as the President may require. Expires 5 years from date of enactment.

Public Law 47 (S. 435), approved June 14, 1951.

Alaskan airports Permits the Secretary of Commerce to lease real estate belonging to public airports in Alaska for periods of 20 years for purposes of erecting structures necessary to the operation of such airports.

Public Law 160 (S. 1183), approved October 10, 1951.

Water transportation to Alaska Extends until June 30, 1952, authority for Canadian-flag vessels to transport passengers between Skagway, Alaska, and other points in Alaska, between Haines, Alaska, and other points in Alaska, and passengers and merchandise between Hyder, Alaska, and other points in Alaska, or the continental United States, either directly or via a foreign port.

Public Law 55 (H. R. 157), approved June 27, 1951.

Vessel transfers Prohibits transfer of ships owned or partly owned by a citizen or a corporation of the United States to foreign-flag registry without prior approval of the Secretary of Commerce, the Secretary of Defense, and the Secretary of State.

must pass upon all requests to sell, mortgage, or agree to sell or mortgage any vessel or any interest therein owned by a citizen of the United States and documented under the laws of the United States to any person not a citizen of the United States.

S 1704, passed Senate July 23, 1951. Pending in House.

Motor Carrier Claims Commission. Extends the termination date of the Motor Carrier Claims Commission to June 30, 1953, or until such time as the final report is made to Congress on all claims filed. This Commission was established in 1948 to hear and determine existing claims by motor-carrier transportation systems for losses and damages sustained by them as a result of seizure, operation, and use of their properties during World War II.

Public Law 75 (S 1042), approved July 11, 1951.

Communications Act changes. Amends the Communications Act of 1934 to clarify existing law and remove certain ambiguities, separate the judicial and prosecutory functions of the Federal Communications Commission, reorganize the administrative set-up of the Commission. The original bill was a Senate measure, S 658, but the Senate also subsequently added the provisions to a House bill which merely authorized the Commission to purchase land for the construction of buildings for monitoring and research activities.

S 658 (H R. 1730), passed Senate March 12, 1951. Pending in House.

Navigational aids. Authorizes the Coast Guard to install and maintain navigational aids in the Trust Territory of the Pacific Islands, and beyond the territorial jurisdiction of the United States wherever naval and military bases are located or where such aids to navigation were established prior to June 26, 1948.

Public Law 52 (S 1025), approved June 22, 1951.

Air mail subsidy separation. Separates payment for the transport of domestic and foreign mail on United States airlines from subsidy payments to airlines by providing: (a) that the rates for the carriage of domestic mail shall be fixed from time to time by the Civil Aeronautics Board and payment made by the Postmaster General; (b) the rates for the carriage of American mail destined for delivery abroad shall be fixed by and paid by the Postmaster General; (c) that the amount of subsidy to airlines carrying mail both domestically and foreign shall be fixed by and paid by the Civil Aeronautics Board. Subsidy payment may be made only to certificated airlines which carry mail, each carrier must bear the burden of proving the need for and the amount of the subsidy, subsidy contracts may not be made for longer than 5 years with an airline operating to foreign countries, and for not longer than 3 years with a domestic airline providing it repays to the Government half of all profits over and above 10 percent of its capital investment.

S 436, passed Senate September 19, 1951. Pending in House.

Marine reserve fund. Extends for 1 year, until March 31, 1952, the time within which deposits in the construction reserve fund, under the Merchant Marine Act, may be used for the acquisition of new vessels.

Public Law 157 (H J. Res 333), approved October 1, 1951.

Emergency highway repair. Authorizes an increase of \$10,000,000 (present limit is \$5,000,000) in the amount available under the Federal Aid Highway Act as an emergency relief fund for the repair of highways and bridges damaged by floods or other catastrophes.

Public Law 175 (H R 5257), approved October 15, 1951.

Grain transport on Great Lakes. Authorizes ships of Canadian registry to transport grain between United States ports on the Great Lakes until December 31, 1951.

Public Law 162 (H R 3436), approved October 10, 1951.

Safety at sea: Authorizes the President to proclaim certain regulations for the safe operation and navigation of United States vessels on the high seas which were approved by the International Convention for the Safety of Life at Sea.

Public Law 172 (H R. 5013), approved October 11, 1951.

Transportation policy. Amends the policy section of the Interstate Commerce Act to require that the Interstate Commerce Commission in considering application or transfers of certificates shall weigh factors which will tend to keep all modes of interstate transport under its jurisdiction free of racketeering, extortion, acts of terrorism, or unethical business practices, and declares congressional policy is to keep interstate transportation free of such evils.

S 1899, passed Senate October 1, 1951. Pending in House.

Bankruptcy Act changes. Amends section 77 (c) of the Bankruptcy Act to permit a railroad in bankruptcy proceedings to finance purchase of safety equipment by clarifying the powers of the bankruptcy court so that it can direct that indebtedness certificates for safety equipment purchases shall have repayment priority over all existing obligations, or State or local taxes.

Public Law 194 (H R 4693), approved October 24, 1951.

Treaties

Double taxation on estates. Establishes formal agreement between the United States and the contracting nation to prevent double taxation on the estate of a United States citizen who was a resident of one signatory country and domiciled in the other by (a) permitting the amount of tax due on the property in one country to be credited against the amount due on the same property in the other country, (b) but no credit may be established in excess of the amount actually paid to the country in which the property is situated, and (c) where the United States estate tax is due solely to citizenship, full credit for all estate taxes on property situated in other countries must be allowed. Regulations governing the imposition of estate taxes relating to citizenship, domicile, residence, and situs of property are agreed to and the signatory countries pledge each other to lend certain assistance in the collection of estate taxes.

Executive FF, between the United States and the Union of South Africa, signed April 10, 1947; ratified September 17, 1951.

Executive R, between the United States and Norway, signed June 13, 1949, ratified September 17, 1951.

Executive E, between the United States and Ireland, signed September 13, 1949, ratified September 17, 1951.

Executive K, between the United States and Greece, signed February 20, 1950, ratified September 17, 1951.

Executive S, between the United States and Canada, signed May 24, 1951, ratified September 17, 1951.

Double taxation on income. Establishes formal agreement between the United States and the contracting nation to prevent double taxation on the incomes of citizens or corporations of the respective countries.

(a) With respect to corporations, United States enterprises in a treaty country are subject to a tax by that country on all income derived there if the enterprise has a permanent establishment in the treaty country and a reciprocal policy applies to treaty country enterprises in the United States.

(b) With respect to individuals, residents of the United States earning income in a treaty country are subject to a tax by that country on income earned there if they are in the treaty country more than 183 days out of the year and if they work for other than a resident of the United States and a recipro-

cal policy applies to residents of treaty countries earning income in the United States.

(c) To avoid double taxation, the tax imposed on United States residents by a treaty country for income derived there shall be a credit against the United States tax on the income of such residents and a reciprocal policy applies to the treaty country allowing credit for United States tax on residents of the treaty country but no credit may be established by the taxpayer in excess of the amount of tax actually paid to the country in which the income is earned. Reciprocal administrative assistance between the countries is provided to facilitate collection of taxes but extraordinary expenses in collecting shall be borne by the country seeking to collect.

Executive O between the United States and the Union of South Africa, signed December 13, 1946, ratified September 17, 1951.

Executive J between the United States and New Zealand, signed March 16, 1948, ratified September 17, 1951.

Executive Q between the United States and Norway, signed June 13, 1949, ratified September 17, 1951.

Executive F between the United States and Ireland signed September 13, 1949, ratified September 17, 1951.

Executive L between the United States and Greece, signed February 20, 1950, ratified September 17, 1951.

Executive R between the United States and Canada, signed June 12, 1950, ratified September 17, 1951.

Executive N between the United States and Switzerland, signed May 24, 1951; ratified September 17, 1951.

Veterans

Veterans' insurance. Authorizes free life insurance to persons in the armed services by providing: (a) \$10,000 automatic insurance for all members of the Armed Forces on active duty after June 27, 1950, with protection covering period of active service plus 120 days after separation from service, (b) veterans may obtain nonparticipating Government veterans' insurance after separation from service if disabled in service and ineligible for a normal veterans' coverage, and in cases of total disability a waiver of premiums may be granted, (c) World War I or II insurance policies may be continued in force by those in active service or if such policy has been surrendered for cash, it may be reinstated or a new policy issued on the same plan and in the same amount without medical examination, (d) beneficiaries are limited to members of immediate family of insured, (e) maximum indemnity to be paid in monthly installments of \$92.90 each over a 10-year period and is exempt from claims of creditors and taxation, (f) application for a term policy up to \$10,000 may be made within 120 days after discharge at 2 1/4 percent per annum.

Public Law 23 (H R. 1), approved April 25, 1951.

Veterans' education. Clarifies misinterpretations by the Veterans' Administration of Public Law 266, Eighty-first Congress, which authorized funds for education and training of veterans, by declaring it the sense of the Senate that: (a) customary cost of tuition and other charges required by educational institutions for training of veterans are intended to apply to all courses of training covered by contract or other agreement regardless of calendar duration established or weekly hours of attendance required for such courses, (b) a contract, including tuition, fees, or other charges, for a course will be considered as an entity in determining the rate or rates to be paid to the institution for such course, (c) any institution will be regarded as a nonprofit institution for the purpose of applying the governing statutes and applicable regulations of the Veterans' Administration relating to payment of tuition and other charges if it is exempt from

taxation under certain provisions of the Internal Revenue Code, no matter when it was certified as such by the Bureau of Internal Revenue, and (d) the rate established in the most recent contract by any educational or training institution which has entered into one or more contracts in two successive years will be considered the customary cost of tuition.

Senate Resolution 124, adopted August 27, 1951.

Renew Insurance: Grants World War I veterans the privilege of renewing expiring 5-year level-premium term policies of United States Government life insurance every 5 years without further legislation.

Public Law 101 (H. R. 1072) approved August 2, 1951.

Pension rates: Fixes the pension rates for veterans of certain wars at \$60 a month for those with 70 days but less than 90 days service but \$78 a month if they require aid or attendance; and at \$90 a month for 90 days or more service but \$120 a month if they require aid or attendance. The new rates apply to veterans of the Spanish-American War, Philippine Insurrection, and Boxer Rebellion.

Public Law 108 (H. R. 315), approved August 4, 1951.

Renew term insurance: Permits World War II veterans to renew for successive 5-year periods their 5-year level-premium term national life insurance policy without further medical examination and at the premium rate for the attained age. This removes the bar which limited such renewal only to policies issued before January 1, 1948.

Public Law 104 (H. R. 4000), approved August 2, 1951.

Gold Star lapel buttons: Provides gold-star lapel buttons for widows, parents, and next of kin of members of the Armed Forces who lose or lost their lives in any war activity of the United States (Applies to veterans of World Wars I and II and the Korean conflict).

Public Law 121 (H. R. 3911), approved August 21, 1951.

Veterans' representation: Permits veterans appealing separation from the Federal service to name as their representative an accredited representative of certain veterans' organizations provided the organization and its representatives comply with the rules of the Civil Service Commission.

S. 831, passed Senate May 17, 1951. Pending in House.

Government insurance dividends: Provides that unless the policyholder of veterans' insurance has advised the Veterans' Administration in writing that the dividend is to be paid in cash, any dividend payable after January 1, 1952, will be used toward payment of the premium. If a policyholder continues to pay premiums and permits dividends to accumulate, interest will be paid based on a rate determined by the Secretary of the Treasury and the Veterans' Administration.

Public Law 36 (H. R. 321), approved May 18, 1951.

Missing Persons Act: Clarifies and broadens section 12 of the Missing Persons Act of 1942 by providing for the transportation of dependents of dead or missing veterans from abroad to their home, and for carriage of any household goods, or automobile, from the embarkation port to the home of the missing or deceased soldier. Existing law was limited to carriage to the United States of personal property, including automobiles.

Public Law 131 (H. R. 1199), approved August 29, 1951.

War claims payments: Authorizes the War Claims Commission in making payments to claimants who are minors or under other legal disability, and for whom there was no provision under the War Claims Act of 1948 to certify such payments to those charged with their care. Payments would be made for the use of the claimant to the natural or legal guardian, committee, conservator, or

curator under the laws of the State of the claimant's residence, or to the superintendent, manager, or chief officer of the hospital or institution in which the claimant may be a patient or a resident.

S. 1669, passed Senate August 9, 1951. Pending in House.

Prisoner claims: Extends until March 31, 1952, the time for filing claims with the War Claims Commission and directs the Commission to make every effort to locate soldiers and civilians who were prisoners of the Japanese and advise them of their rights to secure compensation for periods of imprisonment.

Public Law 16 (S. J. Res. 40), approved April 5, 1951.

Philippine burial expenses: Authorizes the Administrator of Veterans' Affairs to furnish a flag and to pay a sum not exceeding \$75 for the burial and funeral expenses of any person who served in the military forces of the Commonwealth of the Philippines during World War II. Included are those who served in organized guerrilla forces while such forces were in the Armed Forces of the United States pursuant to the July 26, 1941, military order of the President of the United States and permits claims to be filed for 2 years after the date of enactment.

Public Law 21 (S. 82), approved April 25, 1951.

Veterans' hospitalization: Extends to persons who have served in the Armed Forces on or after June 27, 1950, medical and hospital care, compensation, or pension commensurate with World War II veterans.

Public Law 28 (S. J. Res. 72), approved May 11, 1951.

Automobiles for disabled veterans: Authorizes payment up to \$1,600 to eligible veterans by the Administrator of Veterans' Affairs for the purchase of an automobile or other conveyance. Veterans eligible are those who: (a) served in the active military, naval, or air service of the United States on or after June 27, 1950, and prior to such date as shall be determined by Presidential proclamation or concurrent resolution of Congress, (b) are entitled to compensation for the loss, or loss of use, of one or both legs at or above the ankle, loss or permanent loss of the use of one or both hands, or permanent impairment of vision of both eyes. Application must be made within 3 years after enactment, or within 3 years after the date of discharge if discharge occurs after enactment.

[Public Law 663 of the Seventy-ninth Congress was the first law enacted giving automobiles to certain disabled veterans of World War II. The Eightieth Congress enacted Public Law 161 continuing the authority and an additional appropriation of \$5,000,000 for this purpose was included in Public Law 271 of the Eightieth Congress. Public Law 785, Eightieth Congress, appropriated \$1,500,000 and Public Law 904, Eightieth Congress, appropriated an additional \$5,000,000 for the fiscal year ending June 30, 1949. Public Law 843, Eighty-first Congress, extended funds and the law for automobiles until June 30, 1950. Public Law 798, Eighty-first Congress, authorized the sum of \$800,000 and extended the law for 1 year to June 30, 1951, and Public Law 843, Eighty-first Congress, appropriated an additional \$375,000. To date \$42,675,000 has been appropriated for the purchase of automobiles and other conveyances for World War II veterans.]

(Passed Senate August 9, 1951; passed House September 17, 1951; President vetoed October 18, 1951; Senate override veto 55 to 10 October 19, 1951; House override veto 223 to 53 October 20, 1951).

Public Law 187 (S. 8664), enacted October 20, 1951.

Widows' pensions: Broadens eligibility of veterans' widows for pension payments by eliminating dependency clause, but requiring widow to be unmarried, at least 60 years old, to have married the veteran at least 10 years

prior to his death, to have lived with him continuously from date of marriage to his death, and is applicable to widows of veterans of Civil War, Indian wars, Spanish-American War, Boxer Rebellion, and Philippine Insurrection.

H. R. 3549, passed Senate July 23, 1951. Vetoed August 6, 1951; no further action.

Non-service pensions: Increases existing pension payments for veterans with non-service-connected disability from \$80-\$72 to \$120 a month. Eligible are veterans of World War I, World War II, and the Korean campaign who (a) are totally and permanently disabled (not due to misconduct), or blind or so helpless as to require the constant aid of another person at all times, regardless of whether the injury is service connected; and (b) whose income is not more than \$1,000 annually if single, and \$2,500 annually if married. Note: The increase to \$120 makes the pension rates for veterans of all wars uniform, but the differences in eligibility requirements still exist with veterans of the Civil War, Indian wars, and Spanish-American War being entitled to a \$120 pension if they require the regular aid and attendance of another person regardless of the veterans' income. (Passed House June 20, 1951; passed Senate July 23, 1951; President vetoed August 6, 1951; House override veto by a vote of 318 to 45 August 17, 1951; Senate override by a vote of 69 to 9, September 18, 1951.)

Public Law 149 (H. R. 3193), enacted September 18, 1951.

Veterans' housing overcharges: Amends Servicemen's Readjustment Act of 1944 to permit veterans to sue for treble damages for whatever amount they were overcharged above the reasonable value in the purchase of property where a loan by the Veterans' Administration is involved. Determination of the reasonable value is to be made by an appraiser designated by the Veterans' Administration, and the liability for damages lies against whoever is knowingly involved in such sale whether or not they receive any part of the consideration. If the veteran does not bring action within 30 days from the time the overcharge is discovered, the action may be brought by the Government and in such case, the Government may recover two-thirds of the damages and one-third goes to the veteran.

Public Law 142 (H. R. 319), approved September 13, 1951.

Housing benefits for Korean veterans: Grants veterans of the Korean conflict the same benefits given to veterans of World War II under the National Housing Act, such as preference in the rental of low-rent housing units, in the purchase of war housing under the Lanham Act, and in obtaining special FHA mortgage insurance advantages.

Public Law 214 (S. 2244), approved October 26, 1951.

Multiple sclerosis: Increases from 1 year to 2 years after separation from active service the time limitation within which any veteran developing multiple sclerosis may claim a service-connected disability. Compensation for such cases range from \$15 per month for 10 percent disability to \$150 a month for total disability.

Public Law 174 (H. R. 3205), approved October 12, 1951.

Vocational rehabilitation training: Extends the vocational rehabilitation benefits enacted by the Seventy-eighth Congress for World War II veterans to all service-connected cases who need vocational rehabilitation to overcome a disability handicap incurred in or aggravated by service since June 27, 1950. The extent and type of training to be determined by the Veterans' Administration.

Public Law 170 (H. R. 3932), approved October 11, 1951.

Veterans' disability benefits: Provides hospitalization and out-patient treatment for veterans of World War II who develop a

psychosis within 2 years from their release from active duty.

Public Law 239 (H. R. 320) approved October 30, 1951.

Correct military records. Authorizes the Secretaries of the armed services to correct any military or naval records where it is necessary to remove an injustice, and authorizes payment of any money which is found to be due as a result of such correction.

Public Law 220 (H. R. 1181), approved October 25, 1951.

Family Farmers—The Record Will Show in Many Instances I Have Tried to Help the Family Size Farmer—I Am Glad the Department of Agriculture Is Showing Much Interest

EXTENSION OF REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. BECKWORTH. Mr. Speaker, under leave granted to extend my remarks in the Record, I include the following statement by the Secretary of Agriculture, Hon. Charles F. Brannan:

BACKGROUND AND PURPOSE OF THE FAMILY FARM POLICY REVIEW

(Statement by Secretary of Agriculture Charles F. Brannan, prepared at the request of Senate Committee on Expenditures in the Executive Departments during hearings on S 1149, submitted October 19, 1951)

In such times of national emergency as now confront this country, there is an ever-increasing need for the maximum effort on the part of all agencies of Government to make certain that the programs they are operating are being carried out in the most efficient and effective and economical way possible.

Although the Department of Agriculture—as any good, operating, administrative agency should—is constantly studying its operations from the standpoint of improving efficiency and otherwise giving maximum assistance to the American farmer as authorized by the Congress, it seemed desirable that at this time a very thorough study of our operations in terms of their objective, methods, and efficiency should be undertaken. Such a study could be undertaken by the existing staff with relatively little additional expense, and could be completed in a few months.

In searching for the best common denominator of objectives for the programs of the Department of Agriculture, the decision was reached that this denominator was how the programs served the American farm family. There are many recitations in the statutes authorizing the programs of the Department which indicate that the principal objective, or, at least, the major objective, of practically all of them is service to the family farmer. Hence, the Family Farm Policy Review was selected as the identification of the program study. Our objective has been to carry on this study along with our other work during 1951.

All that we are doing is asking everyone interested to take a good look at our present programs and tell us if they are serving the family farms properly, or whether changes need to be made.

We feel that any group sincerely interested in agriculture should welcome such an op-

portunity for a constructive, critical analysis of our efforts. Across the Nation generally, that has been the reaction to this family farm policy review, despite a concerted effort of the president of the American Farm Bureau Federation to distort its purpose and make it some kind of a political issue.

THE BACKGROUND

From its very inception, the family farm policy review has been and continues to be a reappraisal and reexamination of the authorized programs of the Department to ascertain whether or not they are being utilized and are properly constituted to best serve family farming in the United States.

The Department of Agriculture maintains a standing Policy and Program Committee, consisting of representatives from each agency in the Department, to conduct a continuing review and study of ways of improving our programs, policies, and service to agriculture.

The current review is part of that continuing study.

As a program appraisal and review, it could well have been undertaken as a routine matter by the Department. It could well have been undertaken by the staff in Washington alone. But it seemed to us that the field organization of the Department should be given an opportunity to express its views, and in so doing to secure the reactions of farmers as to how the programs were affecting them. It also seemed to us advisable to consult the farm organizations, church groups, land-grant colleges, and other groups interested in the American farm. Hence, the inclusion of our whole Department field force and outside organizations in the study and review.

For this specific purpose a family farm policy review subcommittee was created, consisting of representatives from each agency of the Department, plus representatives from several nongovernmental groups invited to participate. Membership on the subcommittee was by agency or organization, rather than as individuals, with different persons participating at various times during the several months' series of meetings required to prepare for the broad review we have undertaken.

GROUPS PARTICIPATING

The National Council of Churches, the National Catholic Rural Life Conference, the National Lutheran Council, the National Council of Farmer Cooperatives, the Association of Land Grant Colleges and Universities, the National Grange, the National Farmers Union, and the American Farm Bureau Federation were among those invited to participate, and which were represented at meetings at which the study material was developed, and procedures for carrying the review out into the field were adopted. However, the Farm Bureau, at the final meeting of the subcommittee after months of participation, asked to be dissociated from the project.

All of these groups have been invited to send representatives again to meetings of our subcommittee later this year when it undertakes study of the reports now being compiled from open farmer meetings and discussions at the State and county levels, where we have also encouraged participation of church groups, farm organizations, and other groups interested in agriculture, as well as individual farmers.

PUBLIC REACTION

The criticisms brought to the attention of this committee represent but a small minority of the opinion that has been expressed in regard to the family farm policy review. In all fairness I believe some of the reaction of other groups should be called to your attention, including:

From the report of a conference on the churches and agricultural policy, sponsored by the National Council of Churches of

Christ in the United States of America at Haverford, Pa., in June.

"We are pleased to note the current re-examination of our own land policy and practices within the Department of Agriculture, known as the family farm policy review. We urge the Department to carry this study to a conclusion and boldly to institute such changes as will make it a full, effective ally of the family farm."

From the Reverend William J. Gibbons, S. K., of the National Catholic Rural Life Conference.

"The family farm policy review of the United States Department of Agriculture appeals to me as a good summary and guide for further discussion. It is unfortunate that all who are professionally interested in agriculture do not see fit to use it as a starting point for what should be a most important national discussion."

From Ray Gibbons, director, Council for Social Action of the Congregational Christian Churches of the United States of America.

"The Council for Social Action of the Congregational Christian Churches vigorously supports the family farm. We believe it embodies many human and social values and contributes to others. We are eager to see it continued and strengthened as the dominant pattern of land tenure in America. We want you to know that we welcome and approve the family farm policy review, which we understand to be a genuine effort of the Department of Agriculture to strengthen its programs in behalf of the family farm. We are doing and shall continue to do all we can to cooperate with the review program and to solicit cooperation from our constituency."

From the Agricultural Bulletin of the Federal Reserve Bank of Richmond.

"In spite of some misunderstandings in a few States, the reaction to the family farm policy review and its purposes have been very favorable. There have been few signs that the statements of some of the Farm Bureau leadership have been backed by the rank and file farmers. In almost every State farmers have shown great interest and enthusiasm in the proposals of the Department for active local participation in its policy making. In Texas, for instance, the Governor set aside a week as Family Farm Policy Review Week. One could guess at two reasons for the attack of the Bureau leadership: Allan Kline's personal antagonism toward Secretary Brannan, and fear on the part of the leadership that many of the proposals of the USDA will be acceptable to the members of the Bureau."

During my testimony before your committee, I called attention to some of the deliberate attempts of the national president of the American Farm Bureau Federation to distort the purpose of this review, centering around misleading attacks upon the provisional report.

When plans for the review and procedures for compiling the provisional report were outlined to the farm organizations at the very inception of this project, Allan Kline, president of that organization, wrote to Under Secretary McCormick saying, in part:

"Let me say that the idea of a thorough review of the various activities in the Department seems to us a good one. Further let me say that the method which you have devised for use within the Department seems both unique and well-fitted to the purpose of an objective appraisal."

The criticisms that have been called to the attention of this committee represent but a very small majority of the opinion being reflected at thousands of meetings of farmers all over the country, and are based principally upon misunderstanding that has been deliberately created in opposition to our sincere effort to obtain constructive suggestions for improving our service to American agriculture.

A better idea of the extent of participation in this review can be gained from the fact that 950 community meetings have been held in Tennessee, and 760 in North Carolina. And those two States are just typical of what is going on right across the country.

CONCLUSION

In compliance with the committee's request, and for your further information, I am herewith submitting:

1. A copy of the leaflet, *The Family Farm's Future*, explaining objectives of the family farm policy review and inviting participation of everyone interested;

2. A copy of the provisional report and tentative recommendations of the Department of Agriculture's Family Farm Policy Review Subcommittee, compiled with the cooperation of nongovernmental organizations;

3. A copy of Memorandum No. 18 setting forth instructions to State agricultural mobilization committees for conducting the family farm policy review;

4. A copy of Memorandum No. 1280 designating membership on the State and county agricultural mobilization committees to whom the family farm policy review has been assigned.

Your attention is particularly directed to the leaflet entitled *"The Family Farm's Future"* for a thorough understanding of this project. On the cover of that leaflet I make the following statement which I believe sums up the Department's attitude toward this review:

"Because so much of the world is rural, every opportunity for farm people to better themselves and the conditions surrounding rural life can do for world peace something that great armies cannot possibly accomplish.

"If democracy is to be a continuing source of hope to rural people elsewhere in the world, democracy must continue to advance in rural America.

"Despite the remarkable progress of our agriculture these past 20 years, we all know that there are still many problems to be solved. That's why we have started an analysis of all our programs and agencies to see how we can improve our services to the Nation's family farms.

"I believe that all farm organizations and all public institutions concerned with agriculture can and will unite in a definite, vigorous program to strengthen family farming in America."

Publicity for the Cheaters

EXTENSION OF REMARKS

OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks in the Appendix, I include an editorial which appeared in the *Reporter-Dispatch*, a newspaper published in White Plains, N. Y., on Tuesday, October 16, 1951. The editorial follows:

PUBLICITY FOR THE CHEATERS

It is encouraging to receive reports from Washington that at long last some practical, effective method is being sought whereby cheaters and chiselers on the relief rolls may be detected and tossed out of the public trough.

Under the present provisions of the Federal Social Security Act it has been ruled that Washington may deny Federal relief

funds to any State which opens its relief rolls to public inspection. Indiana, which dared to defy this edict, has been arbitrarily cut off and stands to lose \$20,000,000. But hearings before the House Ways and Means Committee on legislation introduced by Senator JENNER, Indiana Republican, and Representative HARRISON, Virginia Democrat, indicate a strong public and legislative desire to see this antipublicity provision repealed.

The argument of opponents is that publicity might embarrass or humiliate recipients of relief. That argument may have been sound 50 or even 20 years ago, when it was considered disgraceful to accept public funds for support. But that sentiment has long since died under the bounty of the New Deal and the Fair Deal. There are so many now who receive fiscal aid that there is no longer any embarrassment whatever from any substantial percentage of recipients.

On the other hand, experience has proven beyond doubt that publicity and publicity alone will serve to get the cheaters and the chiselers off the rolls. There is more than a suspicion that thousands of such cases are fraudulently receiving aid not due them.

Those who are honestly deserving of relief, we feel, should be the first to demand that the crooks be kicked off. For by the amount which the crooks collect the honest recipients are deprived of legitimate aid.

Then, there are the taxpayers to consider. They are, we believe, willing to aid the deserving. But they are not willing and should not be called upon to support the lazy, the friends or relatives of relief supervisors, or those placed on the rolls for political purposes.

Only the right of public inspection of the relief rolls will end this expensive fraud.

Director of Refugee Division, World Council of Churches, Comments on New Immigration Policy

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. JAVITS. Mr. Speaker, appended is the following letter from Mr. Charles S. Sowder, director of refugee division, World Council of Churches, commenting on my bill, the Selective Immigration Act of 1951, H. R. 5313, which provides for the admission of alien workers possessing skills needed in the United States, with a priority for the surplus working force of those European nations cooperating in the European recovery and mutual security programs:

WORLD COUNCIL OF CHURCHES,

Munich, September 15, 1951.

Representative JACOB K. JAVITS,
House Office Building,
Washington, D. C.

DEAR MR. JAVITS: I was pleased and encouraged to read in the *Stars and Stripes* about the bill you introduced to admit 500,000 aliens into the United States in the next 5 years.

The refugees of varying categories which are in western Germany, and present a serious economic problem and threat of tension, constitute a real potential asset to American life and industry. The adjustments they have made here under severe handicaps indicate that their adjustment in the United States would come comparatively easy. They

are worthy, fine people who are here because they prefer freedom to the easy way out.

The United States displaced persons program, and the IRO larger efforts have given us some valuable experience which would stand such a project as you propose in good stead.

The chief difficulty is the technicalities of the United States immigration laws and administrative procedures. For such a project to be successful, some of the present barriers would have to be removed by an act of Congress.

The present DP act, unlike the schemes of other countries, is permissive only. There is no provision for the aliens to be brought into the United States. They may come if someone else in the country provides the assurances. In most cases the assurances were provided by people who were total strangers to the DP's, and in many cases such strangers were called upon to go the extra mile and provide a \$1,000 bond. The religious organizations provided over 95 percent of the assurances. Without their work the program would have failed.

It was my job to procure the assurances for the Protestant organization (Church World Service). After that was done I came here to direct the selection and processing of the people so selected. It was very difficult to secure those assurances. The church groups went away out on the limb by signing the guarantees and providing the inland transportation, housing (frequently taking the DP's into their own homes), and the first costs of getting the families established. Industry, which benefited from the influx of these workers, did nothing to carry its rightful share of the costs. Getting the assurances is a very costly business, and the churches have already about reached the limits of their ability. The costs of securing assurances and making good on the breakdown cases is staggering. All this was borne by the church groups, with no help from the Government or industry. They now consider their obligation about discharged and are in no mood to do it all over again for another five hundred thousand.

Therefore, inasmuch as any immigration program under the present United States laws is primarily an assurance-procurement program, special legislation will have to provide the method and means of resettlement without expecting the churches and synagogues to do it again.

The best plan now in operation is the Canadian scheme. They handle the job through the Canadian consulate and a special selection mission. Applications are received within skill or professional categories, and people who qualify are processed within 2 to 4 weeks (the United States DP processing takes from 6 months to 2 years). The workers are then sent directly to their jobs in Canada. The families are visaed at the same time and sent to a retention center near the port of embarkation. They are cared for there at Canadian Government expense until the worker can find suitable rooms or housing and send their passage money. We find that the families follow the worker within 2 months on the average.

The Australian and New Zealand schemes did not work quite so well. Their plan was to move the entire family to a retention center in the countries of resettlement. The psychology of the Canadian plan is that each man is on his own after being given an opportunity, and the results are much better.

I am writing all this because I feel certain that most people who look at the DP program don't realize that underlying it all is the altruistic benevolence of churches and Jewish communities across the United States. This source of assurances cannot be taken for granted in a new and expanded scheme. I find that much of the church support was given begrudgingly. People feel that they were drawn into a sectarian plan

which they don't like. Then, too, different groups were able to secure assurances with different degrees of liberality. Thus the religious faith of a DP was the deciding factor as to whether or not he would get an assurance. Any new project should avoid being forced into a similar sectarian pattern. It should be handled on the good old American community basis. The communities (with all their social-service resources), industry and the Government should cooperate to handle the new scheme without throwing the burden again on the churches and synagogues.

One other important lesson from the DP operations is that people cannot be processed and moved fast enough under the existing machinery to provide workers when they are needed. Jobs will no longer be available at a given factory if the people straggle in over an uncertain period of 6 months to 2 years, and many not coming at all. There are a lot of employers still mad at the DP program and the voluntary agencies for just this reason.

I believe we now have enough experience to make such a project as you propose really successful if new legislation can correct the present cumbersome procedure. Your proposed bill will also have a great humanitarian effect here, as well as real benefit to the United States of America. More power to you!

Very truly yours,

CHARLES S. SOWDER,
Deputy Director.

South Carolina's Forests

EXTENSION OF REMARKS OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr BRYSON. Mr. Speaker, the timber resource of my State is declining while every phase of our economic activity is demanding more and more wood. Thousands of my people find their livelihood in the growing and processing of lumber and paper and hundreds of other wood products, and yet we are not growing enough trees to keep pace with the cut. Timber products mean for my State a hundred and seventy-two million dollars from trees which were largely nature's gift, and we accept it with scant appreciation. New pulp mills and other industries are knocking at our door, but we are not now growing as much wood as our existing mills require. I am concerned as to what the people of my State and my district will think of me 10 years hence if I do not declare my position in this matter now.

The Southeastern Forest Experiment Station of the United States Forest Service, working in cooperation with the South Carolina Commission of Forestry, has just completed an interesting survey of the forest situation in my State of South Carolina. I am in possession of a comprehensive report on the survey which is full of interesting facts bearing on our timber stands, the rate of cutting and growth and various problems that affect forests and woodlands. The findings of this survey will enable my people to learn exactly where we stand in the matter of timber resources.

From what I have already learned, I am convinced that it is time we were doing a better job of conserving and rebuilding our forest resource. It is inconceivable that the newspapers of our country are largely dependent upon imports for essential newsprint.

I am sure that no one in my State in 1936 thought that the sawtimber resource would decline 10 percent by 1947. No one would have thought that the pine sawtimber in the southeastern part of South Carolina, one-third of the whole State, would decline 29 percent in the same 11 years. No one knows how much it has declined in the past 5 years of exceptionally heavy cutting for home building, for factories, for paper and other uses of wood. Pine trees grow like "hair on a dog's back" in many abandoned fields in our Piedmont country, yet the volume of trees 5 inches in diameter and larger declined by 5 percent from 1936 to 1947.

The number of wood-using plants in South Carolina doubled between 1936 and 1947. The use of wood for pulp is rising with each expansion of existing mills and with the erection of new mills in and adjacent to South Carolina. The demand for paper in many forms—newsprint, packaging, building paper, bookstock—continues greater than the supply. I am delighted with this show of economic prosperity, but I want to be sure that these great mills and the thousands upon thousands of people dependent on the forest resource, are safeguarded.

I am at a loss to understand why we let our timber volumes decline. We have nearly 12,000,000 acres in woods on which we are growing about one-fourth of the trees the land could support. One and two-tenths million acres, formerly in crops or pasture, were released for timber growth during the period 1936 to 1947. The area of land available for commercial forests in my district, the Fourth Congressional District of South Carolina, increased by 25 percent from 1936 to 1947. We have all the land we need to grow timber, and we can be sure that the timber crop will sell. We can process every tree we can raise. Neither lack of land nor lack of a market is the cause of our failure to grow the timber. Our pine trees mature in far less time than do the spruces of Canada. Yet, under modern conditions, they are just as acceptable for newsprint. There are, of course, several forces involved in the reduction of our forest resources. The more important are fire, overcutting, mismanagement of land and tree disease.

We have an efficient, alert forestry commission in South Carolina. My State was the first in the South to have organized, State-wide forest-fire control. With 11,930,000 acres of forest land under protection in 1950, the average loss in South Carolina was only 2 acres burned for every 100 acres protected. This compares favorably with the record on 133,000,000 acres under protection in 11 States in the South. Nevertheless, careless or willful persons set over 8,000 fires in South Carolina last year, and the total area burned exceeded 239,000

acres. We lost a lot of growing trees in those fires.

Timber is a crop. It should be grown and harvested as a crop. But, the timber crop differs from other crops in the element of time involved in its growth. We cannot plant the trees in the spring for the fall harvest. The timber we cut during the next 10, 20, or 30 years will be grown almost altogether on the trees we save today as we harvest the crops of trees started 10, 20, and more years ago. We must husband the stands of immature trees now growing in South Carolina, if we would have timber to tide our processing plants through, until we can grow new crops from the seed we or nature hope to plant tomorrow and tomorrow. By husbanding the timber crop, I do not mean withholding all trees from cutting. Many stands in my district are overcrowded. If more thinning were done in my district, it would relieve some of the pressure on the coastal plain area of South Carolina. If the stands on the hill farms of our Piedmont were thinned, the trees left would grow faster so that we would never miss the wood salvaged in the thinning.

The South Carolina Commission of Forestry has a competent group of foresters available to advise woodland owners on their timber-harvesting practices. They have been doing a sound, competent job for a number of years. The pulp mills, the larger sawmills and other large landowners use good cutting practices on their own land. However, 3 out of every 4 acres of forest land in South Carolina are in small ownerships. One hundred and eight thousand small owners have 7,500,000 acres. These small owners average 69 acres per holding. Many small owners are under financial pressures of one sort or another so that they feel impelled to sacrifice their resource in young growing trees for immediate cash. Perhaps they have not learned how to manage timber land for successive crops of good quality timber. In spite of a competent and thorough job by the commission's foresters and by progressive industry representatives, only about two in one hundred of the smaller owners follow conservative cutting practices. Each owner who clears cuts young, thrifty growing stock, depletes our State backlog of timber for the difficult years ahead.

We have one large forest tree nursery in South Carolina growing some 28,000,000 trees a year, for use in planting idle forest lands. Our State forestry organization grows quality trees at minimum cost and advises woodland owners in planting. But, we have over 1,500,000 acres of idle and nonstocking forest land, and we are adding to it faster than we are planting. My district has well over 150,000 acres of idle land, much of which might properly be put to work growing trees. We have enough idle land to grow the trees required for the pulp industry in the State if we could get it all planted. We can supply all our present industries, and more too, if the existing growing stands are maintained while we grow our pulp requirements from seed.

We have still another problem. There is a disease on the short-leaf pine trees

down in our State that kills trees of any size within a very few years after they are attacked. It is known as the little leaf disease and centers right in my district. It is believed that the fire and erosion that has been going on for many years has weakened the trees so that they readily die from this new disease. Foresters are studying the disease, and perhaps they will have a solution one of these days. We salvage as many of the dying trees as we can, and we avoid planting short-leaf pine. That is about all we know to do now. Meanwhile, we lose a lot of our trees to disease and insects.

It would perhaps be more pleasant just to turn our backs on the situation. Some people argue that we do not need large trees for saw timber, poles, cross ties, and so on. They say that we can grind up the smaller trees and make anything we want. Others suggest that as the timber is exhausted we can use metals or plastics as substitutes. Some argue that when times become less prosperous we shall use less timber, and our forests will restock. This happened between 1929 and 1933, and our South Carolina forests did build up so that we had timber to cut for World War II and to use in the building boom since the war. Some of our industry people argue that the sole justification for growing these trees is for the grower and industry to make a cash profit. They want no surplus that might reduce the price of products made from wood.

But, I cannot reconcile myself to these and other similar arguments. The way I see it, the price of wood products is too high, even now. Even under the simple process of felling a tree and sawing it into a board that I know how to cut and nail, the price keeps on rising. What that board will cost me when it has to go through a multi-million-dollar plant and high-paid distribution system, I fear to guess. Then, too, the only resources we have down in South Carolina come from the soil. The experience of some 300 years suggests that the only crop for about 12,000,000 acres of our small State is trees. It will not help the economy of our State to substitute metals or plastics when we do not have metals or abundant supplies of other materials from which plastics can be made in competition with the products of other sections.

I do not think it will be helpful to the economy of the Nation to lose any more of the productive capacity of South Carolina's forest soils. Much of our timber and the products made therefrom are transported in raw or partially fabricated form for refabricating or use in other parts of the United States. Nor can I look forward with proper anticipation to the possibility that a set-back in our economy will force our people to do without various products including houses, paper in many forms, and other articles made of wood, while the tree crop catches up. Finally, I do not think we want to risk the possibility of a long, drawn-out struggle with Russia with our own timber resources dwindling. Russia has more timber and grows more timber than we. We must have wood in unlimited quantities to insure against defeat resulting from inability to supply

our fighting men with gunpowder, lumber, gunstocks and other wood products.

The report of the United States Forest Service and the State commission of forestry shows that South Carolina is growing 5,600,000 cords of wood in all forms of products. The State needs to grow 6,200,000 cords to meet current demands by the several industries. The forest lands of South Carolina could grow 12,000,000 cords, or more than twice what we are growing. The potentialities in our timber-growing lands are tremendous. Our return of \$172,000,000 from forest products could be increased to perhaps \$340,000,000. Therein lies a vast opportunity for our people—opportunity for employment, for factories, for satellite services.

Do you have doubts that our Nation could use twice as much timber as we are now growing? Well, let us go back a few years. What would you have said of the possibilities for expansion in the paper industry back in 1930? United States wood-pulp production averaged 4,000,000 tons annually through the twenties. Wood-pulp production in the United States today is over 15,000,000 tons and is increasing rapidly. This is four times the production of 20 years ago. In spite of this amazing increase, we are not yet producing enough wood pulp.

And so, I wish to take this occasion to reiterate the statement that our timber resources are declining. The example I have given from my home State is, I am sure, no exception. In fact, I am confident that South Carolina is, if anything, better than the average, both in the matter of existing forest resources and in efforts to conserve and rebuild them.

I wish to pledge my continuing support for measures that will bring the support of our Federal Government more adequately behind the several programs for the conservation and rebuilding of our forest resources.

Time Magazine—Jewish Theological Seminary

EXTENSION OF REMARKS OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. JAVITS. Mr. Speaker, as a member of the board of overseers of the Jewish Theological Seminary, which is located in New York City in the community which I represent in the Congress, I am gratified to insert the appended excerpts from the story published in the October 15 issue of Time magazine on Rabbi Louis Finkelstein, president of the seminary, and on the work of the seminary. I hope that it will be of interest to every Member to get a deeper insight into the moral and ethical teachings of the Jewish faith.

The excerpts follow:

A TRUMPET FOR ALL ISRAEL

Wrapped in his long-fringed, white prayer shawl, and dressed in a white linen robe,

Rabbi Finkelstein stood on the dais; looking to the east, with his back to the congregation, he faced the Ark of the Covenant. On the lectern before him lay the great scrolls of the Torah, the book of the law of Moses. Rabbi Finkelstein's clenched right hand beat upon his breast in the traditional gesture of sorrow. Clear and strong, in the twang and guttural of the Hebrew chant, his voice rose:

"Eloheinu velohe abotenu! Our God and God of our fathers, let our prayer come before thee, hide not thyself from our supplication, for we are not arrogant and stiff-necked, that we should say before thee, O Lord our God and God of our fathers, we are righteous and have not sinned; but verily, we have sinned."

Thus in Manhattan and in almost every other corner of the world, one day this week, as they have for thousands of years, Jews prayed to the God of their fathers. It was the most dreadful and solemn day of the solemn and dreadful Jewish year—Yom Kippur, the Day of Atonement. During the 10-day period of penitence beginning with Rosh Hashana, tradition teaches, each man's deeds are judged in heaven, to be punished or rewarded in the year ahead.

It is for this that Jews call the 10 days the Yamin Noraim—the Days of Fear. But when the trumpet call of the ram's-horn, shofar, has split the air for the last time on Yom Kippur, the mood traditionally changes to one of joy and hope. The New Year has indeed begun.

For Rabbi Louis Finkelstein, teacher of future rabbis at Manhattan's Jewish theological seminary and leader of perhaps the most influential school of Jewish theology in the United States today, the shofar will herald the most stirring joy and hope of a lifetime. For he believes—and on abundant evidence—that United States Jews are returning to their synagogues and temples as never before.

The old, half-deserted synagogues are filling up again, new congregations are forming, new synagogues are being built. Young married couples are sending their children to religious schools to learn the fundamentals of their faith—then forming study groups so that they will know what their children are talking about. The word that such young Americans use, over and over again, when they are asked what they are looking for, is "heritage."

"When I was a seminary student 40 years ago," says Finkelstein, "it seemed so clear to us that our faith could not survive here that we even wondered for what purpose in the divine economy the Jews had been brought to the New World." The ghetto and the pogrom had annealed Judaism in the hearts of countless generations of Jews, almost since the great dispersion. But in the freedom and prosperity of the "melting pot," that braided faith seemed to be fading out, says Finkelstein.

"Then came a tragedy which none of us had foreseen. The great first century Rabbi Eliezer once said: 'The Messiah will never come until the Jewish people repent.' When they asked him, 'What if the Jews do not repent?' he answered: 'The Lord will raise up a king worse than Haman to smite them, and then they will repent.' This is just what happened. Hitler was something we never thought possible."

"I remember how stricken we were when 47 Jews were killed in a pogrom in the Ukraine. We had days of mourning and fasting. But 6,000,000! That dreadful calamity—and the whole spiritual and material crisis of our time—are bringing American Jews back to the faith of their fathers."

THE LAW ENDURES

There is no one spokesman for United States Judaism, no central authority, no high priest. All good Jews, in varying degrees of literalness, believe in the law, but United States Judaism is a spectrum shad-

ing off by minute gradations from ultra-orthodoxy, to ultramodernism. In this spectrum, Finkelstein, a traditionalist with one keen, dark eye on the future, stands almost dead center.

Judaism's spectrum can be roughly divided into three parts, roughly equal in number of active followers and reflecting three traditions in United States Judaism:

Orthodox Judaism tries to maintain the letter of the law. To the outsider it sometimes looks like literalism and nothing else. It is a religion that demands strict, hour-by-hour adherence to sacred custom. Promptly at sundown each Friday night, the Sabbath begins, and Orthodox Jews are required to be indoors (to travel in a vehicle on the Sabbath is counted as a sin). Twenty minutes before sundown, the housewife lights the candles which will burn through the Sabbath's 24 hours; any other lights must be turned on before that time. Synagogue services are entirely in Hebrew, and men and women sit apart, with their heads covered. The Orthodox Jew is expected to study the Torah every day and to observe the dietary laws with such strictness that separate plates and utensils must be used for cooking milk and meat dishes. On Yom Kippur, Orthodox Jews keep an absolute fast for 24 hours, and should spend about 13 hours at the synagogue in five services. Their strictly regulated life sets them apart from the rest of mankind, and is intended to, with a persistence undiminished by centuries, they feel themselves to be the chosen people.

Reform Judaism in the United States is barely 75 years old. It was affected almost equally by nineteenth century idealism and nineteenth century skepticism. Its first leaders were German rabbis, some of whom carried the new doctrines to Britain, France, and the United States. Reform Jews pay scant attention to dietary laws, hold their services mainly in English, the principal one on Friday evening instead of Saturday (a few hold it on Sunday), and stress the ethical teachings of the prophets more than the ritual laws of Torah and Talmud. With the Reform Jews, the sense of being a chosen people is dim or extinct.

Conservative Judaism is newer still, and born in the United States. It represents a middle way between Orthodox and Reform Judaism. Its founders considered orthodoxy too adamantly withdrawn from United States life, reform too spiritually attenuated. They fashioned a synagogue service in which English is used but Hebrew predominates. Men and women sit together, as they do in reform congregations; the men cover their heads, as among the orthodox. Conservative Jews are taught that, as Jews, they have been chosen by God for a spiritual purpose, but that those of other faiths, including Christians and Moslems, have also been chosen. Conservative Judaism is the middle ground on which Rabbi Finkelstein has taken his stand.

SERVICE IS NOT EXCLUSIVE

The citadel of conservative Judaism is the Jewish Theological Seminary, and Rabbi Finkelstein has been its president for 11 years. With his flashing eyes, floating hair, and black beard heavily streaked with gray, he looks, at 56, like a reasonable modern facsimile of an Old Testament patriarch. Sometimes he talks like one, sometimes like the scholar he is, and sometimes like the successful fund raiser that he is, too.

After graduating from the seminary, Finkelstein took a small congregation in the Bronx, where he stayed for 12 years. When he was midway in this work, the seminary's next president, Cyrus Adler, persuaded him to join the faculty for a year or two. He

stayed for 15 years, and when Adler died, 44-year-old Louis Finkelstein succeeded him.

SHIFT OF CENTER

The seminary he was called to lead was neither the oldest nor the biggest in the United States. It was founded in 1887, with eight students and three teachers, then met in a small Spanish-Portuguese synagogue. When Louis Finkelstein took over in 1940, it had a set of handsome, six-story Georgian buildings on Manhattan's academy-studded Morningside Heights—and perhaps the most distinguished faculty of rabbinical teachers in the English language. By the standards of 1940, it was turning out a fair number of graduates, 8 or 10 young rabbis a year, an equal number of qualified teachers for Jewish schools.

As he read the news from Europe, Louis Finkelstein saw a double challenge. (1) Thanks to Hitler's campaign against Jewish learning, the seminaries of central and eastern Europe—for example, Berlin, Breslau, Vienna—were being wiped out of existence, and (2) the massacre of 6,000,000 European Jews was leaving United States Jewry, by simple default, the central Jewish community in the world. Jewish Theological Seminary has grown to meet those challenges as swiftly as possible. It now has 1,000 students enrolled in its 4-year courses.

ZION TROUBLE

In exchanging the life of a teacher for that of an administrator, Finkelstein was true to one of the deepest currents of his faith. For Judaism is a this-worldly rather than an other-worldly religion, its basis is action rather than dogma. Obedience to the law is far more important than belief. For the law is truth set forth in terms of action.

ISAIAH'S MEANING?

This week the directors of the seminary announced that Dr. Finkelstein will assume a new post as chancellor. And that his presidential duties will be taken over by a three-man team of two vice chancellors and the seminary provost. Louis Finkelstein hopes the arrangement will give him more time for scholarship, for writing, and for travel. But most of all he hopes it means more time to work for a renaissance of spiritual Judaism in United States life.

The auguries of such a renaissance are on all sides, he is sure. "It is not just a transient phenomenon. I predict that within 25 years the vast majority of the 5,000,000 Jews in this country will have returned to their faith and will be keeping the Sabbath."

"I say 25 years, because the change will come mainly through the young people. Many of the fathers I know can't understand what has happened to their children. A friend of mine who is a very successful industrialist is still amazed by the fact that his son is turning into a brilliant theologian; just a short time ago I talked to the 16-year-old boy whose father runs a chain of retail stores. 'Father wants me to go into his business,' he said. 'I am the only child. But why should I waste my life in business? I want to go to the seminary and become a rabbi.'"

"[Philosopher] Alfred North Whitehead once said to me: 'What America needs is not a philosopher but a prophet.' What I see and what I hope for the Jewish community in America is that it will give birth to a school of prophets and rise toward its own spiritual potential as a holy people. And this will have a profound effect on America and on the whole world. Even a tiny minority, when they are spiritually dedicated, can have a deep influence on the world around them—like the Essenes among the ancient Hebrews, or the Pharisees, or the early Christians, or the Quakers."

"To me, the prophetic message is summarized in the idea of the Suffering Servant in Isaiah. The Christians take this to be the foreshadowing of Jesus Christ, but Jewish tradition sees it as the role of the Jews in the world. And the important part of the concept is the word 'servant.' Suffering, too, if necessary—and it often seems to be necessary. But suffering by itself is not enough."

IMPIOUS QUESTION

There must be action and example. One way in which United States Jews can serve their country and the world, says Finkelstein, is "by bringing people together and helping them understand each other."

Finkelstein himself has done plenty to bring people together. In 1938, he helped found the Institute for Religious and Social Studies, a "graduate school" of clergymen and lay religious leaders, Christian and Jewish which holds 13 sessions a year in Manhattan and 6 in Chicago. This year, for the twelfth time, he was elected president of the Conference on Science, Philosophy, and Religion, which meets each year at Columbia University. "When I am at work on those enterprises," he says, "I feel that I am obeying the Commandments just as much as when I go to the synagogue for prayer."

As they grow more spiritually minded, he thinks, United States Jews will more and more observe the law's injunction to make "peace between man and his fellow," a part of their religious duties. "When sometimes I am talking about this and someone asks me why we Jews should bear the burden when other groups don't seem interested in doing anything, I consider it an impious question. Jews must see themselves as God intends them to be—His servants and the servants of mankind."

CHALLENGE AND PARADOX

For many Jews, this will be a hard teaching. God has chosen them for a special purpose, but seemingly the price of God's election has been a bitter portion. Exile, humiliation, and persecution have dogged them through history, from Babylon to Buchenwald. Persecution has driven the Jews in upon themselves, they have sometimes set up barriers against the world simply in order to survive. But of what use is their survival, asks Louis Finkelstein, if their mission is forgotten?

The essence of that mission is a challenging paradox. To be a people set apart—and yet not apart. Louis Finkelstein calls on the withdrawn Jew to serve his old persecutors, his brothers, to join the human race, and calls on the assimilated Jew to take up his heritage.

In modern times, millions of men and women of Jewish origin have renounced Judaism as their spiritual country. Such men and women think (or say they think) that the word "Jew" should be on a par with "Baptist," "Congregationalist" or "Catholic"—and should apply only to the Jews who have elected to be, or to remain, Jews. Rabbi Finkelstein's Torah teaches him that the covenant God made with Israel is an inescapable covenant. "The choosing by God," says he, "was like selective service." It is binding on all Jews, to the last generation on earth.

Yom Kippur in this year 5712 was drawing to a close. In the synagogues of the world the chant went up: Hear, O Israel: the Lord our God, the Lord is One.

Three times Rabbi Finkelstein and the congregation repeated: Blessed be His name, whose glorious Kingdom is for ever and ever. Seven times the shout arose: The Lord, he is God.

And the shofar of joy and hope sang in the ears of Israel its hoarse, triumphant cry.

The Attack on the Schools

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. JENNER. I ask unanimous consent, Mr. President, to print in the CONGRESSIONAL RECORD the following broadcast by John T. Flynn, of America's Future. Mr. Flynn describes the way in which the collectivists have been working for decades to plant their propaganda in the schools, the textbooks, and the teachers' colleges in order to transform us into a Socialist dictatorship before we wake up to the danger.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

BEHIND THE HEADLINES

(By John T. Flynn)

THE ATTACK ON THE SCHOOLS

I want to talk to you today about something which I am sure is very close to your minds and your hearts as Americans. You have heard, I am sure, of what might be called the war in the schools. I refer to the war between those who want to use the schools to indoctrinate the children with Socialist ideas and those who are opposed to that. I have tried to tell this story in an article which I wrote for the Reader's Digest and which appears in the current issue of the Digest. It is called Who Owns Your Child's Mind? One thing we are all sure of and that is that the State does not own the child's mind—neither your mind nor your child's mind nor anybody's mind. That is the Russian system.

The function of education in our public schools is to train the child to use his mind, to give him information, to train him to think and to inculcate in him those principles of moral conduct which are the accepted code of our society.

Do you think a teacher has a right to use the classroom to change the religion of the child, to make them all into Catholics or Protestants or Christian Scientists? Such a teacher would be promptly dismissed. Do you think she has a right to use the classroom to make them into Communists or Fascists or Socialists or to teach them that our system of government and our Constitution are wrong and must be changed to be more like those in Socialist England? Now if a teacher does not have a right to do this, do you think a dozen teachers in a school have a right to gang up quietly and do it, to sneak socialism over on the pupils. Of course not.

Now I make this charge and I do it deliberately, knowing full well all the facts relating to it. I charge that a group of teachers, very important in the teaching profession, many of them high up in the councils of the national teacher organizations, have been carrying on a conspiracy for a number of years to use our public schools for the purpose of indoctrinating the students in the principles of socialism. I do not mean they have succeeded in all or even in most of our schools. I do say they have succeeded in many, and maybe, in your own town.

Now let me tell you what they did. One of the leaders in this whole left-wing educational group is a gentleman named Dr. George S. Counts, a professor of education at Teachers College in Columbia University. He is a distinguished educator and is entitled to his opinions. Away back in 1932 he wrote a book called Dare the Schools

Build a New Social Order? In that he said that we are in an era which has shifted away from considerations affecting human liberty and to considerations which have to do with the production and distribution and consumption of wealth. He then declared that our capitalist system no longer works, that there is no longer a choice between individualism and collectivism—that is socialism.

The choice is between two forms of collectivism: one democratic and the other feudal. Then he says plainly that the society of the future—and I quote him—"is to be a planned, coordinated, and socialized economy." Now that's plain enough, isn't it? How are we going to do this, he asks. We must do it through the schools. Dr. Counts says that the teachers should deliberately reach for power and then make the most of their conquest. He says they must shape the social ideals and behavior of the coming generation and they must shape it in the direction of collectivism or socialism.

Now you will say, after all, this is just one man's opinion. But he did not stop there. He and some other educators got a grant of \$300,000 from the Carnegie Foundation to make a study of the schools. They brought this study out in 17 volumes. And in the final volume the conclusions of the study was stated in plain language that no man can misunderstand. I read it exactly as it appears there. "The age of individualism is closing and the new age of collectivism is emerging." And then the report says that the teachers must go to work on the minds of the pupils to prepare them for the new collectivist society. And this report was brought out under the auspices of the American Historical Association and paid by the Carnegie Foundation.

Harold Laski, one of the leaders of the British Socialist Labor Party in England, read this study and said, "This report is an educational plan for a Socialist America. It is a direct criticism of the ideas that have shaped American capitalism."

Now I have given you their own words, and these people are not unimportant people. But they did not rest here. And I'll tell you what they did. How do you reach the mind of a child in the public schools? You reach them through the textbooks and through the teachers. Therefore, the first thing they set out to do was to get the textbooks slanted in the direction of collectivism. They do not call it communism or socialism. They are too slick for that. They sneak it into the child's mind with prettier words.

Now the next thing they set out to do was to get into the schools of education where teachers are made. They have gotten into some of the greater schools of education and to whatever extent they have been able to influence these schools they have been turning out Socialist teachers by the thousands.

Now if a citizen finds this sort of thing in his school and criticizes it, he is denounced by these birds as an enemy of the schools. The real enemies of education are this gang that is trying to sneak socialism into our public schools. They are the enemies of the schools.

Now let me call your attention to another magazine article printed in McCall's magazine and written by a gentleman who was at one time a commentator on the air for the extreme left-wing organ, the Nation. The article is Who Is Trying to Ruin Our Schools? Its principal purpose is to destroy the reputation of a brave and patriotic American woman who has been trying to combat this European collectivism in our American schools—Mrs. Lucille Cardin Crain. This article uses the well-known smear technique. Its purpose is to discredit Mrs. Crain.

The article picks out two other people—Allan Zoll, branded as a former Hitlerite, and the other Gen. Amos A. Fries, who mixes

up in his propaganda an anti-Catholic motif. Zoll on one side is discredited as pro-Hitler and Fries on the other side is discredited as anti-Catholic, and then Mrs. Crain is put in between these two in a kind of squeeze play to smear her with the odium which the writer attaches to Zoll and Fries. But Mrs. Crain is the real target and the whole article is written in such a way so far as she is concerned to make her seem like a crackpot. I know Mrs. Crain. She is an able, judicious, brave American woman, and this article on her is one of the shabbiest things I have ever seen in a magazine, with the assumed reputation of McCall's. This is a strange cause for McCall's to support.

Now let me tell you what Mrs. Crain does. She brought into existence an organization called the Educational Reviewer. Its only purpose is to study and review school textbooks to determine whether or not they are slanted in the direction of socialism. Books are referred to professional educators to study and the reviews are available to anybody who wishes to have them.

Now let me tell you how this organization came into being. A businessman sent his daughter through a leading women's college. Being a top student she won a scholarship to a famous British school—the London School of Economics. Not knowing anything about it, the parents sent her there. She returned in 2 years a confirmed Socialist. Of course she did. That is the official educational institution of the British Fabian Socialist Society. Its purpose is to make Socialists for the British Labor Party.

The parents wondered why an American college stercored their daughter into a British Socialist school. Her father wondered if there was anything like that in his community. He had the local high-school textbooks studied and was amazed at what he found. To help other parents he and some other gentlemen joined with Mrs. Crain in forming the Educational Reviewer. This highly intelligent and orderly institution has hit these sneak Socialists a very hard blow. They have set out to discredit and liquidate her. And McCall's magazine lends itself to the attack.

There's plenty more to this story. I intend to tell you more about it. I will introduce you to some of these textbooks and to some of the curious people who have been writing them. And I will tell you how to go about getting the facts straight about the schools in your town. Remember, they do not teach communism. They do not teach socialism as such. The scheme is first to break down the child's faith in our form of government and then to sell him a half dozen ideas which, when all put together, mean socialism. You will see this more plainly when I introduce you to some of the textbooks.

Phony Price Controls Fail on Inflation

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. BENDER. Mr. Speaker, during the last reported period from August 15 to September 15, retail prices rose more sharply than at any other time since the freeze on prices and wages began. The cost of living index went from 185.5 to 186.6, which automatically meant a wage boost for some 100,000 workers.

Under present formulas of the Wage Stabilization Board, these increases be-

come part of a regular pattern. The net result is that prices push wages upward and wages then push prices still higher. The statisticians figure that the gross average hourly earnings of our factory workers have risen 3.8 percent while the cost-of-living index has gone up 2.8 percent since the phony freeze.

Somewhere along the line, someone with courage is going to have to cry "Halt." Otherwise, we shall find ourselves in the very difficult position of stabilizing instability. Nothing will be accomplished until the White House with its executive authority chooses to do something about inflation beyond its regular pious statements that it is making great progress. If Mr. DiSalle has learned nothing else during his Washington sojourn, he has learned how to say nothing and make it sound like something every time.

Letter From W. H. Evans, Jr.

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. JENNER. Mr. President, I ask unanimous consent to print in the CONGRESSIONAL RECORD the following letter from W. H. Evans, Jr., who was relieved of duty in the Navy because he warned that the State Department intended to let South Sakhalins and the Kuriles fall permanently under Russian control.

Mr. Evans was angry, but as he says, "It is no fun getting shot at and exposed to mines without being able to destroy the source of the attack."

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U S S "ROGERS" (DDR-876),
CARE OF FLEET POST OFFICE,
San Francisco, Calif., March 16, 1951.

Mr. ALFRED KOHLBERG,
New York, N. Y.

DEAR MR. KOHLBERG: Keep up the good work. I just received your questions to Red Dean Acheson. I post your open letters for all the officers on the ship to read and they feel the same way as I do.

Now that the time for a Japanese Peace Treaty is nearing, for the love of God, let's keep our pro-Communist and pro-Soviet State Department from again putting the interests of Soviet Russia or the pro-Soviet United Nations above the welfare of the United States.

I greatly fear that the Red Dean Acheson clique will allow Soviet Russia to retain southern Sakhalin and the Kurile Islands because the insane or Communist Roosevelt (Alger Hiss) gave them to Russia. To hell with the Yalta betrayal. The Japanese Peace Treaty should be signed on American terms, as we did defeat Japan by ourselves.

Here is the essence of a sensible and pro-American-Japanese Peace Treaty:

1. Japan still owns Kurile Islands.
2. Southern Sakhalin to be returned to Japan. (Eventually all of Sakhalin when the opportunity presents itself.)
3. No reparations from Japan to anyone (because the United States will have to loot the bill as usual).

4. A fully rearmed and industrialized Japan in alliance with the United States to regain the balance of power in the Far East.

5. 1 Japanese, Nationalist Chinese, American alliance against communism in Asia.

We are out here waiting for "Acheson's agrarian reformers" to attempt an invasion of Formosa. Now, instead of allowing the Nationalist Chinese and the Seventh Fleet to attack the mainland to break up any such plans before they start, we have to fight with both hands tied behind our back. One hand bound by Acheson and his pro-Red gang and the other hand by the pro-Soviet United Nations. When are the American people going to wake up; when it is too late, I guess.

That pro-Soviet one world administration of ours * * * would rather have Americans slaughtered than attack Red China everywhere. In the history of warfare, was any Nation so restricted even though it could destroy its enemy readily if its hands were freed?

Damn the United Nations. Long live the United States.

The Roosevelt-Truman-Acheson-United Nations followers in the United States should be loaded onto ships and used as shock troops in Korea, instead of America's best citizens, Americans are dying by the thousands, thanks to the pro-Red administration.

If you desire, you may reproduce any portions of this letter and send an open letter to Congress in another appeal. I wish that you would because it is no fun getting shot at and exposed to mines without being able to destroy the source of attack.

God bless Alfred Kohlberg. There are too few like him though.

Most respectfully,

W. H. EVANS, JR.

A Statement on Behalf of John Hvasta

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. RODINO. Mr. Speaker, it gave me much satisfaction last August when this House—and later the Senate—passed a resolution, House Concurrent Resolution 140, expressing its profound indignation at the arrest and unjust conviction of William N. Oatis, the Associated Press correspondent in Prague. I was very proud when the President and the Secretary of State expressed to the Czechoslovak Government in such forceful terms the protests of the American people at the shameful way it is treating this American newspaperman. And I certainly hope that the Executive will continue its resolute efforts to effect his release.

My one regret is that the Congress before its adjournment, was not able to take action in regard to John Hvasta, an American citizen whose case is very similar to that of William Oatis and in whose behalf I had the honor of introducing a resolution during the recent session. John Hvasta, a Czechoslovakian by birth but a naturalized American citizen and a resident of New Jersey, served in the American Navy in 1945 and 1946 and went to Czechoslovakia to study under the GI bill of rights in 1948. There, in 1949, after a secret trial, he

was sentenced to 3 years' imprisonment on sham charges of espionage. In 1950 his sentence, after another trial in secrecy, was increased to 10 years. For a long period no American official was permitted to visit Hvasta in the Red prison, although recently such visits were permitted.

The Communist treatment of John Hvasta is every bit as outrageous as that accorded to William Oatis. But the adjournment of Congress without any action on his behalf gives some substance to the statement that he is a forgotten man. Yet, Mr. Speaker, where American citizens are concerned there should be no "forgotten men." It is a basic principle of American democracy that there are no second-class citizens. When an American citizen entitled to that protection which the American flag gives, is persecuted, imprisoned, or otherwise unjustly victimized by a foreign tyranny, then it makes no difference what his status in life may be, or how many or how few may be the champions ready to spring to his defense. A relatively unknown and "forgotten" GI student is just as American as anyone else. I sincerely hope that the Eighty-second Congress will slam the door against any possible charge that the United States makes distinctions among its citizens, and will schedule the case of John Hvasta as its first order of business when the second session opens in January.

The Dismissal of General MacArthur and the Military Situation in the Far East

EXTENSION OF REMARKS

OF

HON. HARRY P. CAIN

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. CAIN. Mr. President, I ask unanimous consent to have printed in the RECORD a statement summarizing the major findings of eight Republican members of the Joint Armed Services and Foreign Relations Committees of the United States Senate as reported in Senate Document 69, Eighty-second Congress, on the MacArthur hearings.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE DISMISSAL OF GENERAL MACARTHUR AND THE MILITARY SITUATION IN THE FAR EAST: A SUMMARY OF THE MAJOR FINDINGS OF EIGHT REPUBLICAN MEMBERS OF THE JOINT ARMED SERVICES AND FOREIGN RELATIONS COMMITTEES OF THE UNITED STATES SENATE, AS REPORTED IN SENATE DOCUMENT NO. 69, EIGHTY-SECOND CONGRESS, ON THE MACARTHUR HEARINGS.

Mr. President, for 7 weeks ending June 27, 1951, the Senate Armed Services Committee, acting jointly with the Senate Foreign Relations Committee, conducted a searching inquiry into the military situation in the Far East and the circumstances surrounding the recall of Gen. Douglas MacArthur.

As a result of that investigation eight Republican members of the joint committee—STYLES BRIDGES, of New Hampshire, ALEXANDER WILEY, of Wisconsin; H. ALEXANDER

SMITH, of New Jersey; BOUWER B. HICKEN-LOOPER, of Iowa; WILLIAM F. KNOWLAND, of California; HARRY P. CAIN, of Washington; OWEN BREWSTER, of Maine; and RALPH E. FLANDERS, of Vermont—established certain facts and reached definite conclusions. Since the joint committee had agreed to issue no formal reports, our views were printed in the appendix of the hearings. By order of the Senate on September 5, 1951, the views of the eight Senators were also printed as Senate Document 69, Eighty-second Congress.

We determined to make our conclusions public because we believe that we have a clear responsibility to the Nation and we are convinced that the discussion of a cessation of hostilities should not distract attention from fundamental questions in the conduct of our national affairs abroad. It is significant that in reviewing the evidence brought out in the exhaustive hearings we found that many of the points that were covered in our report were matters on which there is remarkable unanimity of agreement from all sides. Certainly it is clear that the inquiry was definitely in the public interest. The hearings have exposed some glaring mistakes, evasions, contradictions, and significant admissions which will enable the American people more properly to evaluate our future course of action.

Despite the fact that our report was over 100 pages long and documented in detail, the public has demonstrated considerable interest in reading and studying it. In order to make at least our major findings more widely available to people in all walks of life, I have prepared the following summary of highlights arranged under the headings of the major issues arising out of the investigation:

I. THE PRESIDENT'S REMOVAL OF GENERAL MACARTHUR

1. While the President's authority for the removal of a military officer is readily conceded, his method of removal was ill-advised and the reasons assigned for the removal were utterly inadequate to justify the act.

2. General MacArthur had never violated any military directives.

3. There was no serious disagreement between General MacArthur and the Joint Chiefs of Staff as to military strategy in Korea.

4. The military in no way initiated or recommended the recall of General MacArthur.

5. The sincerity of MacArthur's motives in recommending military policy to end the Korean conflict in victory remains unquestioned. Throughout the hearings, many tributes were paid to his integrity, ability, and accomplishments. His contribution toward preventing the spread of communism in Japan is universally acknowledged.

II. DIPLOMATIC BUNGLING AND UNPREPAREDNESS THAT LED TO WAR

1. The administration's Far East policy has been a catastrophic failure, and sole responsibility for this failure rests with the State Department. Far-eastern policy was never a part of the so-called bipartisan foreign policy.

2. The foreign policy of the United States since the middle 1940's has been based on expediency rather than the principles of liberty and justice. Our military victory of 1945 in the Pacific has been squandered by our diplomats.

3. Yalta—a great tragedy of American diplomacy—was the turning point of American Far East foreign policy. The myths that Russian participation in the Japanese War was a military necessity, and that the Yalta concessions were necessary to achieve that participation, have been adequately refuted.

4. The advice and information of our ablest and most experienced officials has been ignored. Ambassador Hurley was not informed of the Yalta agreements; Admiral Leahy's advice on the lack of necessity for Russian entry into the Pacific war was not followed; General MacArthur was not consulted on the Far East situation when Marshall went to China, as Special Ambassador in 1945, nor was he consulted in 1950 before the President's decision to fight in Korea; General Wedemeyer's recommendations on China and Korea were ignored and suppressed; Admiral Badger's advice on the need for military assistance to the Republic of China was not accepted.

5. It has not been the consistent policy of the United States to support the Republic of China; some United States officials were so opposed to Chiang Kai-shek that they were automatically on the side of the Red regime. Despite administration claims that it is the "firm and continuing" policy of the United States to support the Nationalist Government, the record is replete with evidence of a lack of both moral and material support.

6. The administration has been unduly preoccupied with the defense of America in Europe to the neglect of the defense of America in Asia. If the Republic of China had received effective military aid from the United States as late as 1948, the Chinese Communists might have been defeated. The myth that the Republic of China fell because the Chinese troops refused to fight is again refuted by sworn testimony.

7. Throughout the hearings, it was not possible to determine who wrote the 1945 mission to China instructions for General Marshall. Under these orders he was to bring about the "unification of China" by encouraging acceptance of Communist officials into the anti-Communist Chiang Kai-shek government on a coalition basis, at a time when Russian domination of Chinese Communists was already known to United States officialdom.

8. The administration believed that Chinese Communists would work in harmony with the Nationalists in a coalition government despite our previous experience that the Communist objective is invariably to take over, "lock, stock, and barrel," any government of which Communists become a part.

9. The propaganda campaign against the Chinese Nationalist Government and the attacks on the leadership of Chiang Kai-shek were vicious. Mismanagement and corruption are not confined to the Orient; it ill behooves the Government of the United States to cast the first stone.

10. The State Department directive of December 23, 1949—announcing to our Foreign Service officers that Formosa was not of strategic importance to the United States and that control of Formosa by the Communists would not imperil our Far East position—was a policy statement calculated to prepare the way for the abandonment of Formosa to the Chinese Reds.

11. The military potential of the United States has not been maintained at a level commensurate with our potential commitments or financial expenditures since V-J day. From 1945 to the outbreak of the Korean war, \$95,000,000,000 was spent on national defense; yet General Vandenberg testified that we still have only a "shoe-string" Air Force, and Generals Marshall, Bradley, and Collins acknowledged the inadequacy of our present defenses.

12. The failure of the United States Government to train adequately and to supply equipment to the South Koreans made them tempting targets of aggression. Since the State Department and the United Nations has the sole responsibility in Korea, they must answer also for the failure of the intel-

ligence missions to anticipate the June 25, 1950, attack.

13. The publication of the 1947 Wedemeyer report on Korea might have alerted the Government and the people of the United States; but General Marshall, then Secretary of State, suppressed the report.

14. The problem of Communist infiltration in our Government is still unsolved. It is difficult to secure information from an administration which is determined to keep the facts from the Congress and the people.

III. PRESIDENTIAL ACTION AND UNITED STATES-UNITED NATIONS CONDUCT OF THE WAR

1. The involvement of the United States Armed Forces in the Korean conflict is without precedent in American history. Congress has not declared war nor has the President proclaimed a state of war. The Korean conflict, with its 200,000 American casualties, is improperly labeled a "police action." The United States should never again become involved in war without the consent of Congress.

2. Political considerations have prevented full exploitation of American air and naval superiority in the Korean war. The Secretary of State has assumed military functions. Despite these facts, our Armed Forces in Korea have acquitted themselves with a gallantry unsurpassed in our history.

3. The command function delegated to the United States by the United Nations has not worked out in practice and has been subjected to veto by a minority of participating nations. There has been a lack of adequate military support from United Nations allies; at the same time, we are unable to comprehend why the administration has persisted in its attitude of refusing the offer of 33,000 fighting men advanced by Chiang Kai-shek. Some of our allies, moreover, have displayed an unfortunate attitude with respect to economic sanctions against Red China.

4. The thirty-eighth parallel in Korea has no military significance, and its political significance has never been satisfactorily explained by anyone in the administration.

IV. PROSPECTS OF ACHIEVING A DECISIVE VICTORY AND PEACE

1. The administration has no positive plan for achieving a decisive victory. The successful completion of the Korean conflict is essential since the United States cannot afford the costly destruction of its manpower. The immoral policy of a military strategy which involves merely the killing of more Chinese Communists is unlikely to produce victory or to enhance the stature of the United States in the family of nations.

2. The risk of precipitating world war III through adoption of a positive program for victory in Korea is no greater now than before. It is utterly inconsistent for the administration to take the calculated risk of provoking Russia in Europe through the Atlantic Pact while cowering at taking a similar risk in Asia.

3. The limited war now being fought in Korea by the United States is impossible to define. Cessation of hostilities, based upon restoration of the status quo at the thirty-eighth parallel, will be a victory for aggression. Any peace short of the liberation and unification of Korea is a delusion. Any settlement at the thirty-eighth parallel is a Chinese Communist victory. The termination of hostilities in Korea will not eliminate responsibility in that area.

4. The United States will not allow Formosa to fall into hostile hands. It will continue to support the Government of the Republic of China. In the MacArthur hearings, no administration official advocated the unseating of the Nationalist Government or the seating of the Communist government of China in the United Nations. Time will tell whether the administration will hold to this admirable determination.

Sad Sack**EXTENSION OF REMARKS
OF****HON. HOMER E. CAPEHART**

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. CAPEHART. Mr. President, I ask unanimous consent to insert in the Appendix to the RECORD a copy of a telegram which I received from Mr. George Baker.

Mr. Baker is the creator and owner of the comic book character Sad Sack. This character was used several weeks ago in a book circulated by the Department of Defense to stimulate reenlistments in the Armed Forces.

At that time, one of my constituents objected to certain material in the book on the ground that it placed private employers in the worst possible light. I agreed with him. Subsequently, the Department of Defense destroyed the books, 500,000 copies of which had been purchased at a cost of \$17,544.06.

Mr. Baker sent me a telegram explaining his position with reference to the matter, and, in fairness to him, I wish to place a copy of that telegram and my reply in the RECORD.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

Under Washington dateline of September 10 the Associated Press carried a statement by you with reference to a comic book using the character Sad Sack and severely criticizing the content thereof. Relying on the American sense of fair play I am sending this wire to you so that the grave injustice done me as the originator and owner of the character Sad Sack will to some extent at least be minimized. For this purpose I give you the following facts which I shall verify if you desire verification in any form requested. As the owner of the character I was requested as a patriotic gesture to permit the use of Sad Sack in a comic book designed for use by the United States Army in procuring reenlistments. I gave my consent that the character might be used without 1 cent of profit or royalty or payment of any kind to me. The publisher of the proposed comic book, Harvey Publications, Inc., through Alfred Harvey informed me that it was printing the comic books as a public service. I had nothing whatever to do with the preparation of the content or material or story line in the comic book. When I saw the material prior to delivery to the Army I was informed by Mr. Harvey that every bit of material in the comic book had been cleared with the United States Army. Whatever question I may have had with reference to the content was resolved by the fact that the book was designed for a specific purpose by the Army and that the proper officials of the Army had worked with Mr. Harvey's staff in preparing the material so that I made no criticism of the content. I have subsequently been informed that the story line itself as set forth in the comic book was the joint product of Mr. Harvey's employees and designated officials of the United States Army who had charge of this project. I am endeavoring to verify this information and will give you the benefit of whatever material I am able to obtain as soon as I obtain it. If there is any other information which I can obtain that you may find helpful in your investigation please feel free to call upon me.

At this time however I would appreciate it if you would do whatever you can to remedy the damage caused me by your original statements.

GEORGE BAKER.

BEVERLY HILLS, CALIF.

Your telegram of September 12 with reference to one of my favorite comic-book characters, Sad Sack, is deeply appreciated. At no point, of course, did I intend criticism of the character itself. It did and still does appear to me that Sad Sack was used in this instance for a propaganda purpose which I am sure you, as his creator and owner, never intended that he should be. Your patriotic gesture in permitting the use of Sad Sack for so worthy a purpose as procuring reenlistments is wholly commendable. What I believe we both object to is the use of the powerful Sad Sack influence in such a way as to belittle responsible American employers.

It is my purpose, as soon as the busy schedule of the Senate will permit, to bring the matter to the attention of my colleagues in a brief speech on the Senate floor.

It is my purpose, also, to be perfectly fair with both you and Sad Sack. Therefore, I will include the text of your telegram in my remarks to the Senate.

Thank you for calling to my attention the possibility that I may have been unfair to you. Any unfairness, I assure you, was wholly inadvertent and will be corrected by making your telegram a part of the record.

HOMER E. CAPEHART.

**Confusion in the State Department—
Double Dealing in China****EXTENSION OF REMARKS
OF****HON. LAWRENCE H. SMITH**

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, the State Department is now finding some long-forgotten secret documents regarding its policy in China.

In an attempt to defend the nomination of Ambassador Philip C. Jessup, the Department has produced a hitherto secret memo dated July 18, 1949. In this long-suppressed interdepartmental note, Secretary Acheson instructed Jessup "that it is a fundamental decision of American policy that the United States does not intend to permit further extension of Communist domination on the continent of Asia, or in the southeast Asia area."

Why was such a clear declaration of policy a high secret of state from July 18, 1949, until October 4, 1951? Between those dates, the Nationalist Government had been driven from China, isolated on Formosa, denied effective military aid by the United States; the Communists had taken almost complete control of the China mainland and Tibet, driven deep into Indonesia and launched organized armed aggression against South Korea.

Obviously the Acheson memo of July 18, 1949, is sorely needed at this late date to absolve Jessup of charges that he, as an alleged Communist sympathizer, helped guide American policy in favor of the Communist triumph in Asia.

But the new Acheson memo trips up Secretary Acheson's testimony of June 1, 1951, before the MacArthur inquiry in the Senate. On that occasion Acheson testified:

I, in August 1949, as Secretary of State, reported that I could no longer guarantee that economic and diplomatic means would be successful in keeping Formosa out of the hands of a power which might be hostile to us.

So the full picture is this: Acheson wrote on July 18, 1949, that containment of communism was the first point of American policy in Asia, but 1 month later, in August 1949, he was already convinced that Formosa would fall to the Communists—which has not happened yet.

Upon receipt of Acheson's letter in July 1949, Jessup set up the historic China round table of October 1949. Harold Stassen, a delegate to the round table, says it was guided by Owen Lattimore to conclusions favoring the Communist conquest of Asia.

In denying Stassen's charge, the State Department acknowledges that 13 of the 18 men in its round table "recommended that recognition be extended to Red China." Lattimore was in this group. But Stassen and four others resisted recognition.

How fervently then did Jessup follow the Acheson secret memo of July 18, 1949, within 3 months, by October, he had assembled a round table overwhelmingly inclined toward immediate recognition of Communist China—at a time when the cardinal point of our Asia policy, it now appears, was to check and restrain the extension of Communist power.

In December 1949 the Defense Department strongly urged a broadening of United States military assistance to Formosa. Acheson told of this recommendation when he appeared before the MacArthur inquiry—page 1674—adding:

It was disagreed with by the State Department.

So our policy in July was to hold the line against communism, Jessup in charge. And by October the State Department round table favored recognition of communism in China—13 to 5. By December the State Department vetoed the Defense Department's recommendation for more aid to the Nationalists marooned on Formosa.

This conflict between the Defense and State Departments was carried to President Truman. Truman sustained Acheson—page 1675.

In that same month of December 1949 the State Department sent a top-secret memo to all its diplomatic agents in Asia warning them to prepare for the "possible fall of Formosa to the Chinese Communist forces."

This document was not made known to the American people until June 1, 1951.

It had been dispatched to China on December 23, 1949.

When had the State Department decided Formosa would fall to the Communists? Acheson gave the answer—page 1672:

There were two studies made, in September and October (1949) * * * Those

studies unanimously reported that the fall would occur, and would occur probably in the year 1950.

Why was this secret decision on vital policy withheld from public view until June 1, 1951?

Indeed what was our policy in China—to stem communism, as outlined in the July 18 memo to Jessup, or to recognize Communist China and surrender Formosa as determined by Acheson in October-December 1949?

If we had in fact two policies in China it would appear better that both should have been published.

Had these two diametrically opposing policies been disclosed, the American people might at least have inquired which were we actually following?

Such an inquiry in 1949 would have averted much misadventure and tragedy.

In the light of events, the real policy of our State Department obviously was to deliver Asia to communism. No other conclusion is reasonable as the facts are revealed.

But Mr. Acheson always had in the top drawer of his desk his secret memo of July 18, 1949, instructing Jessup to contain communism—should such a declaration be needed in a pinch.

The pinch came when Lattimore and Jessup were caught in the act of delivering Asia to communism.

Throughout the delivery of Asia to communism, extending over a period of 2 years, Acheson was always protected at his rear—by his secret memo of July 18, 1949.

Mr. Speaker, the facts in China policy as they are being revealed today leaves but one conclusion, namely that our policies directly resulted in the defeat of the Nationalist Government for many years our friends. The American people are today paying a terrific price for this inexcusable conduct. When the land mass in China was turned over to the Red Chinese with the help of the State Department, Korea was doomed, yet President Truman made the decision to send American boys into a undeclared war, contrary I am sure to the advice of his military leaders. I repeat—the Chinese and Korean policies have been “inexcusable and cannot be defended.”

The New Railroad Retirement Law

EXTENSION OF REMARKS OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record, a statement by me explaining the benefits of the new railroad retirement law.

There being no objection, the statement was ordered to be printed in the Record, as follows:

Mr. President, Congress has now passed, and the President has signed, the much-

needed legislation to increase the railroad retirement benefits, bringing them more into line with the increased cost of living. The new law takes effect on November 1.

Since I had the honor of being chairman of the Senate Labor Subcommittee which held hearings on and reported this bill to the Senate, I have been asked to explain its provisions in simple terms.

By the time these remarks become generally available, most retired railroad workers and their families will have received checks from 15 percent to a third more than they have been receiving. In a very few cases, where the Railroad Retirement System will have to be keyed in with social security, there may be some delay, but everyone should be receiving the higher benefits by the first of next year.

I should like to point out that our subcommittee's actions in this matter were aimed at getting the very maximum in benefits that could be obtained while assuring that the railroad retirement system would remain financially sound. We wanted to make certain that we were maintaining the soundness of the fund so that its future beneficiaries would be completely cared for and protected.

SUMMARY OF IMPROVEMENTS IN NEW LAW

With this in mind, we were able to include in the law the following new improvements:

(a) A 15-percent increase in pensions and annuities.

(b) A 33½-percent increase in survivors' benefits.

(c) A new benefit for a husband or wife aged 65 or over, amounting to 50 percent of the employees' benefit, up to a maximum of \$40.

(d) A guaranty that the railroad retirement benefits will at least equal social-security benefits.

(e) Credit for service after age 65, up to a maximum of 30 years.

(f) Unlimited right to revoke a joint and survivor annuity election.

(g) Transfer to social-security system of workers who leave railroad work after less than 10 years' service.

Let me explain each of these improvements more fully.

FIFTEEN-PERCENT INCREASE IN PENSIONS AND ANNUITIES

There are two features in the new railroad retirement law which increase the benefits paid to pensioners and annuitants and their families.

First, the basic benefits themselves are increased by 15 percent.

Second, a new feature has been added to the railroad retirement system whereby any pensioner or annuitant who has a wife (or husband) 65 years of age or over gets an extra benefit amounting to 50 percent of his basic pension or annuity, up to a maximum of \$40.

TABLE SHOWS NEW BENEFITS TO PENSIONERS

The following table shows how the new system will work for pensioners:

Comparison of benefits for railroad pensioners—old law and new law

Former law	New law	
	Single or with husband or wife under 65	With husband or wife 65 or over
\$40.00	\$46.00	\$69.00
50.00	57.50	86.25
60.00	69.00	103.50
70.00	80.50	120.75
80.00	92.00	138.00
90.00	103.50	155.25
100.00	115.00	172.50

SIMILAR INCREASES FOR ANNUITANTS

The table below shows how the new law will work for railroad annuitants, who have paid into the fund for various lengths of service:

Comparison of benefits for railroad annuitants—old and new law

Average monthly compensation	Former law	New law	
		Single or with hus band or wife under 65	With hus band or wife 65 or over
10 years' service			
\$100	\$36. 00	\$ 50. 00	\$ 75. 00
200	36. 00	1 65. 00	1 98. 00
300	48. 00	1 80. 00	1 120. 00
20 years' service			
\$100	\$60. 00	\$80. 00	\$104. 00
200	72. 00	83. 00	123. 00
300	96. 00	110. 00	150. 00
30 years' service			
\$100	\$63. 00	\$72. 00	\$109. 00
200	108. 00	124. 00	164. 00
300	144. 00	166. 00	206. 00

¹ By reason of guaranty contained in bill that no beneficiary under the Railroad Retirement Act will receive less than he would have received had he been covered by social security.

BENEFITS TO SURVIVORS INCREASED BY ONE-THIRD

The next major step forward in the new law is an increase by 33½ percent of benefits to survivors of railroad workers, such as widows, children, and aged parents. The following tables show examples of how the benefits will increase for widows, either with or without surviving children, whose benefits are figured on the basis of both 10 and 15 years of taxable service:

Comparison of old and new survivors' benefits—10 years taxable service

Average monthly compensation	Former law	New law
Widow only, 65 or over		
\$100	\$27.00	\$38.00
200	35.00	49.00
300	39.00	60.00
Widow and 1 child ¹		
\$100	\$45.00	\$75.00
200	58.00	97.00
300	65.00	120.00
Widow and 2 children ¹		
\$100	\$63.00	\$84.00
200	82.00	109.00
300	91.00	130.00
Widow and 3 children ¹		
\$100	\$72.00	\$96.00
200	94.00	126.00
300	105.00	150.00

¹ By reason of guaranty contained in bill that no beneficiary under the Railroad Retirement Act will receive less than he would have received had he been covered by social security.

² Regardless of widow's age if dependent children are under 18.

Comparison of old and new survivors' benefits—15 years taxable service

Average monthly compensation	Former law	New law
Widow only, 65 or over		
\$100	\$28.00	\$38.00
200	37.00	46.00
300	41.00	60.00
Widow and 1 child¹		
\$100	\$47.00	\$75.00
200	61.00	97.00
300	68.00	120.00
Widow and 2 children²		
\$100	\$65.00	\$87.00
200	86.00	130.00
300	96.00	150.00
Widow and 3 children²		
\$100	\$75.00	\$100.00
200	98.00	150.00
300	109.00	150.00

¹ By reason of guaranty contained in bill that no beneficiary under the Railroad Retirement Act will receive less than he would have received had he been covered by social security.

² Regardless of widow's age if dependent children are under 18.

RAILROAD RETIREMENT BENEFITS GUARANTEED TO EQUAL SOCIAL SECURITY BENEFITS

Another major feature of this new railroad-retirement law guarantees to every railroad worker that he will receive at least the same benefits to which he would be entitled had he been covered by social security. The new law also contains a guaranty that casual employees (those with less than 10 years of railroad service) will in no case receive less than the amount of their contributions to the railroad retirement fund, plus an allowance for interest. This corrects an inequity that has long stood in the railroad retirement laws.

SERVICE OVER AGE 65 NOW GIVEN CREDIT

Still another distinct improvement in this new railroad retirement law is the provision which gives full credit for continued service after age 65, up to a maximum of 30 years' service, in computing average monthly compensation. This is only fair, since anyone who goes on working under the system after 65 continues to pay his retirement contributions. There is no reason why he should not receive the credit.

Probably most railroad workers know that average monthly compensation—which is the basis for computing the benefits received upon retirement—is based upon the average monthly wage received during the period 1924-31 (in the event of railroad service prior to 1937), when wages were generally very low, and upon the average monthly wage received since 1937. Up to now, a railroad worker has been prevented from including the railroad wages he earns after the age of 65, even though these are usually the highest wages of his career and would be a big help in boosting his average monthly compensation. The new law permits such a worker to include the wages he receives after 65, up to a maximum of 30 years' service, so that the high wages he receives at the end of his career can pull up his average monthly compensation.

JOINT AND SURVIVOR ANNUITY ELECTIONS CAN NOW BE REVOKED ANY TIME

Before survivor benefits were incorporated into the Railroad Retirement System in 1946, anyone who wanted to provide for his

wife or family after his death could elect to reduce his own annuity payments during his lifetime, so that the remainder would be paid to his family after his death. However, he was not allowed to change his mind about the reduced annuity payments, even if his wife died before he did. When the survivor benefits were added to the system in 1946, there was a year during which those workers who had made the reduced-annuity choice could change their mind. The 1951 law withdraws the limitation entirely, so that the joint and survivor annuity election may be revoked at any time. This gives a wider range of choice to the annuitant to adapt the payment plan to the changing circumstances of his family.

NONCAREER EMPLOYEES WITH LESS THAN 10 YEARS' SERVICE TRANSFERRED TO SOCIAL SECURITY

One of the features of the new law designed to save money for the railroad-retirement system, and help finance the increased benefits, provides for the transfer to the social-security system of employees who leave railroad work after less than 10 years' service. There would be transferred to the social-security system an amount equal to the social-security contributions of such an employee. But since these are much smaller than his railroad retirement contributions, there will be a surplus of contributions left in the railroad-retirement fund, which will help to pay for the increased benefits provided by this law.

It should be noted, however, that these employees will get higher benefits by being paid according to social-security provisions than if they were to stay under the railroad-retirement system.

This is likewise a new advantage to the worker transferring out of the railroad industry, who, prior to this new law, could not carry with him into his new position any credit for the contributions he had paid into the railroad-retirement system.

CONTRIBUTION RATE HAS NOT BEEN INCREASED

We have been able to achieve these increased benefits without any substantial change in the present financing of the retirement system. We have relied principally upon certain savings features, such as the transfer of noncareer employees to the social-security system, to pay for these increased benefits. There is no increase in the present contribution rates. There is no change in the right of retired employees to work if they so desire. There is no change in the taxable or creditable compensation base.

THOROUGH STUDY OF RAILROAD RETIREMENT SYSTEM PLANNED

While our Senate subcommittee felt that certain additional savings features should have been adopted, in order to assure the long-run soundness of the railroad retirement system, an additional safeguard has been provided. Our subcommittee recommended, and the Congress enacted a resolution setting up a Joint Congressional Committee on Railroad Retirement, made up of members of the House and Senate, with a competent staff, to make a thorough study of the system. This should enable us not only to determine what changes, if any, may be necessary to insure the long-run safety of the fund, but also to determine whether further benefits will be possible.

RETIREMENT BOARD TO PREPARE BRIEF PAMPHLET ON THE NEW LAW

I understand that the Railroad Retirement Board will shortly prepare a pamphlet explaining all the provisions of the new law in some detail. This should be available around November 9, in every field office of the Railroad Retirement Board.

In Illinois, these offices are located in Chicago at 844 Rush Street and at 208 South Canal Street; in Decatur, at the Standard

Office Building, 132 South Water Street, and in East St. Louis in the Goldman Building, 338 Missouri Avenue.

NEW LAW OFFERS PROTECTION AGAINST EFFECTS OF INFLATION

Mr. President, I know that inflation hits hardest at the most helpless in our society, those who are living on fixed incomes, such as pensions and annuities, who are less able to find work to supplement their incomes and who must sit by helplessly and watch rising prices eat into their incomes. That is why I have tried to fight inflation on all fronts in Congress, by trying to cut down on non-essential spending, to put this country on a pay-as-you-go system, and to control credit, and also by fighting for a strong price-control law. Yet prices have continued to rise, and the difficulties of fixed-income groups have likewise increased.

It was a real satisfaction to me, therefore, to head the subcommittee which helped push this much-needed railroad retirement legislation through to enactment during the 1951 session of Congress. I want to express the gratitude of our committee for the fine cooperation it received in working out this measure from our colleagues in the House, from the officials of the Railroad Retirement Board, and from the representatives of the various interested groups, particularly the railway unions.

I hope and believe that the increased benefits provided in this law will help to provide new protections against the harmful effects of inflation and rising prices for thousands of men and women who have given a lifetime of service to the American railroads.

Report of the President, Hon. John L. McClellan, of Arkansas, of the National Rivers and Harbors Congress

**EXTENSION OF REMARKS
OF**

HON. JOHN L. McCLELLAN

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the RECORD a resolution and report on the National Rivers and Harbors Congress.

There being no objection, the resolution and report were ordered to be printed in the RECORD, as follows:

NATIONAL RIVERS AND HARBORS CONGRESS,
Washington, D. C.

PRESIDENT'S CALL FOR SPECIAL MEETING OF OFFICERS AND DIRECTORS

Whereas since June 25, 1950, the Armed Forces of the United States have been engaged in conflict with the forces of a foreign nation; and

Whereas on December 16, 1950, President Truman proclaimed the existence of a national emergency; and

Whereas it now appears unlikely that the armed conflict hereinbefore referred to will be settled in the very near future, and

Whereas the threatening international situation continues to constitute a grave peril to our domestic peace and tranquility,

Now, therefore, I, JOHN L. McCLELLAN, president of the National Rivers and Harbors Congress, hereby issue this call for a special meeting of the officers and directors of the said Congress to convene at the Mayflower Hotel in the city of Washington, D. C., on Friday, the 11th day of May 1951, at the

hour of 1 p. m., eastern daylight saving time, to take such action as may be deemed appropriate or desirable in the premises.

The permanent projects committee of the congress will meet at 10 a. m. on Thursday, May 10, 1951, in the Mayflower Hotel, to consider individual projects for which the endorsement of the congress is desired. The committee's rule requiring personal appearance before it is waived, and proponents of projects are requested to furnish in writing and by mail the supporting data called for by the committee for each project (Application blanks will be sent upon request to this office.)

Presidents, or the executive heads, of chambers of commerce, navigation, flood control, irrigation-reclamation and conservation associations; industrial, business, agricultural, labor and civic organizations, are invited to attend the meeting of the officers and directors of the congress and to give them the benefit of the views of the organizations referred to.

Assurance has been given by the management of the Mayflower Hotel that sufficient accommodations will be available provided a majority of those attending share double rooms. Early reservations are, therefore, advisable in order to insure satisfactory arrangements.

Dated at Washington, D. C., this 15th day of March, A. D. 1951

JOHN L. MCCLELLAN,
President.

Attest:

J. G. BURKE,
Secretary.

REPORT OF THE PRESIDENT, SENATOR JOHN L. MCCLELLAN, OF ARKANSAS, NATIONAL RIVERS AND HARBORS CONGRESS, MAY 11, 1951

Officers and directors of the National Rivers and Harbors Congress, and invited guests, it is again my privilege and pleasant duty as your president, to report on the activities of this organization since we met in March 1950, for our fortieth annual convention. At that time we met in full congress, with accredited delegates from every part of the country.

This year, however, I felt the international situation and many other factors were not favorable to our undertaking a full meeting of the congress. I deemed it advisable therefore to limit this year's session to a meeting of the officers and directors, which might also be attended by a limited number of other interested persons.

It is always desirable and pleasant to report that progress has been and is being made toward our objectives. And we have made progress during the past year, but the trend of national and world affairs has presented a number of limiting factors. As I pointed out in the call for this meeting, since we last assembled our country has become engaged in war with the forces of another nation, our President has proclaimed the existence of a national emergency, we have been thrust into a rearmament and mobilization program that compels us to set up limitations upon the construction of projects of national development. We have been compelled to subordinate our program to that which is entirely pertinent and vital to the national defense.

During our deliberations at this meeting we must bear in mind the administration's position on the necessity for reduction of nondefense spending, and the inhibition against starting any new projects except those specifically mentioned in the President's budget as essential to the defense program. We are compelled to relate our consideration of flood control and navigational needs to the priority of national defense. To do otherwise would be unpatriotic and unworthy of the traditions and the record of this body's deliberations in the past

and would fall of the necessary support of public opinion.

In my judgment there are only two classes of projects which should receive attention and consideration during this special meeting—first, those that contribute directly and unreservedly to the national defense, principally power projects; second, those that are needed and come within the category of preserving and protecting projects already completed and improvements heretofore made.

The problems of orderly development of all aspects of our water resources, flood control, navigation, harbors, irrigation, and reclamation, and other related water uses are continually before us. We have noted with pleasure the final passage at the second session of the Eighty-first Congress of H. R. 5472, the authorization bill which provides for a grand total of \$1,564,814,825 for new projects. That same session also passed the civil functions appropriations bill, under which the civil works programs of the Army engineers was allocated for use during the current fiscal year appropriations totaling \$618,564,650. These congressional grants provide for a curtailed program of activity, screened to comply with Presidential and congressional defense criteria and approved by the Bureau of the Budget.

Major Gen. Lewis A. Pick, Chief of Army Engineers, gave assurances that his organization could carry forward this program of construction without any interference with the full and efficient execution of its military functions. He further stated these funds were adequate to assure continued progress on projects under construction.

Flood control activities of the current fiscal year received allocations of \$430,527,150, and \$186,142,500 is being spent on rivers and harbors. There is \$340,394,750 in the flood control general program, for 101 projects in 33 States. There is \$113,780,500 for rivers and harbors for 51 projects in 30 States and Alaska. The Mississippi River and tributaries flood-control project is allocated \$46,800,000 for construction. There is also \$2,016,500 for construction work on the Sacramento River flood-control project.

It appears self-evident that the provision of these funds by Congress in a year when efforts are being made on every hand to reduce Federal spending and whenever greater demands are being made upon the Federal Treasury reflects a growing public consciousness of the importance of this work to preserve and control and develop the water resources of the Nation.

Public opinion must also have measurably influenced the recommendations made in the President's budget message to Congress regarding appropriations for the fiscal year of 1952. Here we find the President and the Budget Bureau suggesting expenditures of an over-all \$220,240,000 next year for rivers and harbors, and a grand total of \$328,365,000 for flood control planning and construction. This totals \$548,605,000 proposed for expenditure in these two related fields, a total sum approximately \$250,000,000 less than was similarly recommended to Congress by the President in the last previous year.

This decrease, mainly in sums proposed for flood control projects, naturally is disappointing to all of us who have a very ardent and sincere enthusiasm for expansion of this national program rather than its reduction. We must bear in mind, however, that such recommendations, if enacted into law, will provide some continuity for the vast works already started, even though there will be no money available to initiate any new projects.

It is especially discouraging when we think of the World War II years during which this work was practically at a standstill and the Nation failed utterly to keep pace with increasing needs. The upswing in the program since the war ended must now give

way, at least partially, to new threats of war and the expenditures which must be made directly to meet these threats. This, added to the burdens of a Treasury already engaged in a headlong course of deficit spending, and with our fiscal difficulties mounting by the hour, leaves little to hope for in the immediate future. Rather may we be thankful for an enlightened public and Congress which sees complete justification of our aims, and enables the work to be continued, at least in small part.

The citizenry may rest assured that whatever these sums provided by Congress may amount to, they will be efficiently and conservatively administered under the guidance of the Army engineers, and that money spent for conserving and building water resources and to combat flood destruction of life and property will provide public benefits that far outrun their cost.

Continuance in the budget message this year of the policy initiated in the last previous message which made no provision for starting new projects, regardless of necessity and economic justification, and budgeting only for river and harbor and flood-control improvements already started, gives us increasing concern and it may be emphasized here that this policy is going to bring our program to a complete standstill if followed for another year or two.

We can only hope that an all-out war may be avoided, and in due time conditions will improve so that the Congress may resume making appropriations adequate to accelerate the construction of many needed projects in the scheme for full development of these great natural resources.

The immense wealth of our Nation has come about largely because of prudent development of our natural resources. Nor can we hope to prosper in the future by accident. There must be continued proper development of our land and water resources. The future of this work, coupled with the future safety of our people from devastating floods, is going to be measured by the amounts of money appropriated from the Federal Treasury. While these sums naturally must be consistent with the Nation's economic conditions, we hold that they should not be related to the economic status of other nations. Enormous expenditures abroad are more and more being required to run the gauntlet of these vital needs at home, time-tested and proven aids to the development and protection of this great land.

This Congress continues in its known opposition to President Truman's policy favoring creation of valley or regional authorities to administer all major river basins of the country. We regard such authorities as unjustified, unnecessary, and in opposition to our democratic principles, and we are most apprehensive lest complacency in this matter may lead to the removal of existing agencies from the field of natural resources development, with great danger to State interests, and those of the Nation.

We are in accord with President Truman's expressed views on the need for increased production and transmission of hydroelectric power, but we go further to emphasize that such production must come from projects which are economically justified, and we continue to hold that they should not be in competition with the private industry.

The faith of this organization in the work of the Corps of Engineers of the United States Army in the planning, construction, and operation of Federal improvements for navigation, flood control, and allied purposes is an old, old story, but it loses nothing in the retelling. One of the few pleasures in the task of leadership assigned to me by this Congress has been to continue to lead the battle against encroachments in this field. We always have been, and still

are, unalterably opposed to any transfer of civil works function of the Army engineers to any other agency, regardless of who advocates it, or how strongly, and we regard the reasons advanced by such advocates as without merit.

The Bureau of Reclamation has been commended by this congress for its progress in reclamation of the arid and semiarid lands of the 17 Western States. These areas have acute problems of irrigation which will continue to require the devoted attention of the Reclamation Bureau in the foreseeable future. We urge that this Bureau be given adequate funds by Congress to do this job properly and well, as it has in the past.

Another problem which has received attention with notable progress to date is the problem of soil erosion which confronts the Soil Conservation Service of the Department of Agriculture. Erosion causes not only dangerous losses of fertile soil from hill lands, but results in choking the channels of navigable streams, and we believe that continued appropriations of Federal funds to the Department of Agriculture and the Corps of Engineers for continuance of their efforts to halt this danger will continue to pay national dividends.

This congress is already on record as favoring State ownership and development of tidal lands as promising to contribute to the national economy and our prosperity, provided that the States' right be subordinate only to the Federal right with respect to improvements for national defense, navigation and flood control. We reaffirm that proper development of tidelands will come only by this path.

Attacks which continue to menace the marine transportation industry cause this congress great concern. Railroads which have increased freight rates 87 percent from 1941 to 1950, seek now to eliminate competition of barge lines whose rates have actually declined during that period. The railroads claim they must have relief from section 4 (1) of the Interstate Commerce Act, for specific commodity haul rates much lower than rates for short hauls. This congress must join this battle, and provide legislation to limit the Interstate Commerce Commission's powers to exempt rates.

We continue our active support of the American merchant marine, and urge the Government to interest itself in this matter to the extent of inducing private capital and the maritime industry to expand the present facilities; to devise fair and adequate Panama Canal tolls, with proper consideration of the Canal's tremendous value in the defense scheme; and to reinterpret and reactivate, if necessary, the policy laid down by the United States Congress in 1936 respecting the equal importance of the American merchant marine to other defense components.

I should like also to reemphasize the endorsement of this body which has been given to legislation pending before both Houses of Congress to provide additional authorization for funds to rehabilitate the Federal barge lines. Thousands of shippers in the Mississippi Valley area are served by the Inland Waterways Corporation, and such service is absolutely essential to the continued well-being of this vital region. With its equipment modernized, that corporation could not only operate without expense to the taxpayer, but could pave the way for eventual advantageous sale of the system to private enterprise. Speedy enactment of legislation to bring about this rehabilitation is strongly recommended.

In conclusion I am glad to announce that the important projects committee held its hearings yesterday and its report will be made available to us before the end of this session. We can expect its recommendations as always to be most constructive and helpful.

Congress' Actions Affecting Wisconsin Farming

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, October 16, 1951

Mr. WILEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the Record a statement prepared by me on Congress' actions affecting Wisconsin farming.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

CONGRESS' ACTIONS AFFECTING WISCONSIN FARMING

What actions did the Eighty-second United States Congress take in its first session from January to October 1951 affecting American farming and Wisconsin dairying in particular?

The purpose of this report is to present an answer to that question.

Each year I report to the farmers of my State and to the folks of our city areas on important legislation, important votes, and important events in the Congress affecting them.

I am happy, therefore, to present this account, in this instance, to the farmers of my State on a dozen or so issues vitally affecting their welfare. I hope that they will find this report of interest. Their response to previous similar reports has always been very gracious indeed.

In this report, I will mention some of the leading controversies on the Senate floor. I will describe how I voted on some of the major issues, and will point out some of the matters still pending before us as we head into the second session of the Eighty-second Congress, which opens next January 1952.

The comments and reactions of my readers are more than welcome.

DAIRY PRICE PROBLEM

Perhaps the most important single issue facing the farmers of Wisconsin and the Nation is the matter of the price returns which they receive for their farm products.

No farmer need be told that his costs have constantly risen—the costs of labor, the costs of machinery, the costs of feed, the costs of repair on his farm buildings, the costs of farm supplies. Farmers have naturally wanted to make sure, therefore, that in the defense-production law they were guaranteed a sufficient return for their hard labor. The farmer after all does not work an 8-hour day; he and his family work long before sunup and long after sundown. Remember, too, a cow can't be put on a 5-day week.

MEAGER MILK RETURN

I would like to quote from a frank letter which I have received from a farmer in Scandinavia, Wis.:

"DEAR SENATOR WILEY: Why are most of the older folks having auctions and selling off their farms? They can't pay their young folks to stay on the farm. They get better pay in the city. Something has to be done. With the investment the farmer has, he certainly should have better income than the laborer has. Why can't the farmer have the conveniences that our city neighbors have?"

"It should be \$5 per hundredweight for 8.5 percent milk compared to other things. All we get around here is \$3.40 for 8.5 percent milk. You know how badly we need the family-sized farm. The farmer's milk price is his bread and butter."

These well-justified questions and comments written by a typical farmer in my State speaks loads in terms of the general reactions of the great agricultural segment of Wisconsin.

When the farmer points out that he is getting in effect only around 8 cents per quart of milk while the city consumer buys that same milk for triple or so that price) the farmer is pointing out the hard facts of life which he faces.

Now, let us look at a specific Senate vote in that connection.

MY VOTE FOR THYE AMENDMENT

1. On July 28, 1951, Senator EDWARD THYE (Republican, of Minnesota), offered an amendment on the Senate floor in connection with the defense price control bill, S 1717. Senator THYE sought to have the Secretary of Agriculture make sure that before ceiling prices were fixed on producers of milk or butterfat used for manufacturing dairy products, that such ceiling prices were reasonable and equitable. This, in my judgment, was a very fair amendment and was essential in order to assure justice for the dairymen.

I voted for the amendment, therefore. Unfortunately, however, the amendment was defeated by a vote of 29 for to 52 against. That defeat was a regrettable blow to the farmer.

ST. LAWRENCE SEAWAY DELAY

2. From the standpoint of midwestern agriculture as a whole, the Great Lakes-St. Lawrence seaway project—with its low-cost transportation and electricity—remains as one of the important incomplete issues facing the Congress. During this session, as for 30 previous years, the blind, selfish opposition to the seaway—the eastern and southern ports, some of the private utilities, the railroads, the coal lobbies—have once again sabotaged seaway legislation. The whole American people are the loser as a result of such sabotage. Moreover, our Canadian good neighbor, a land which has been patiently waiting all these years for Uncle Sam to make up his mind on the project, has announced that it will have to go ahead on the seaway on its own. This would be very unfortunate, both for Canada and our country.

The seaway bill, of which I am again a cosponsor, is still pending before the Senate Foreign Relations and the House Public Works Committees; and we will insist when the second session gets underway that it be brought up for action.

VITAL SOIL CONSERVATION

3. On my farm in Barron County I have noted the tremendous importance of soil-conservation practices. It was only natural, therefore, that when the soil-conservation issue came up on the Senate floor I would recall my own and my son's personal experiences with soil conservation work. On July 26 there was brought up a committee amendment to increase the funds for soil and water conserving practices. The amendment provided \$280,000,000, rather than \$225,000,000 as the House of Representatives had voted. Those sound like large sums, but not when you divide them among all the States of the Union.

I voted for the increase, as did a majority of my colleagues. The increase was passed by a close vote of 41 to 39. Previously, we had beaten back an attempt to cut down that amount.

HARMFUL CHEESE IMPORTS

4. We of Wisconsin have always prided ourselves in the fact that our production of foreign-type cheese, for example Italian, Bleu, etc., has led the Nation in quantity and quality. We recognize, however, that it is very difficult indeed for a Wisconsin producer to attempt to compete with producers of foreign-type cheese in foreign countries.

Abroad they have lower living standards, lower labor costs, lower machinery costs, lower health and purity standards, for their products, etc.

Accordingly, when the Defense Production Act came up for a vote there was added to it an amendment which had been identified in the House of Representatives as that proposed by my colleague, Congressman AUGUST ANDRESEN, Republican, of Minnesota. This amendment provided that where imports of foreign cheese, fats, and oils damaged the American market for these products, that the amount of such imports could be cut down. The Andresen amendment passed the Senate by a voice vote. I supported it, of course.

Now, however, the Democratic administration unwisely seeks to repeal that amendment. The administration says that this amendment on the part of our Government was a one-sided action, which is objected to by foreign governments. The administration ignores the fact, however, that these various foreign governments have not hesitated to clamp down all sorts of restrictions against American products whenever they felt like it. And so a major battle is shaping up for the Senate floor for January, when the administration's bill, S. 2104, to repeal the protective amendment, comes up for a fight. I will, of course, vote against repeal.

DRAFTING FARM HELP

5 As the Korean casualty figures have mounted, Wisconsin farmers, like farmers all over the Nation, have felt an increasing drain of vital manpower. More and more men have been inducted into the armed services to serve as replacements.

Now, we all know that the farmers of America have always gladly contributed more than their share of youths to the defense of our Nation. Farmers know, however, that they cannot possibly meet their expanded production quotas if they are not allowed to retain a minimum of manpower. Remember, too, you can't take an unskilled hand and expect him to do the thousand and one detailed chores around the farm. It takes years of farm experience.

Accordingly, I have taken up with the Selective Service Administration and with local boards throughout the State of Wisconsin various cases where I felt justice and equity would require reasonable deferment of certain experienced farm hands. We have not sought any preference or favoritism, but merely justice for these young men and for the overworked farmers for whom they work.

PROTECTING FARM CO-OPS

Now a sixth instance.

6. Wisconsin is one of the greatest cooperative States of the Union.

We have always prided ourselves on the fact that in America's dairyland cooperatives have become an integral part of our whole economy. Cooperatives, by helping to reduce the costs of distribution and marketing of farm products, have helped save Wisconsin farmers scores of millions of dollars.

Cooperatives right now pay a tremendous share of the ever-increasing Federal tax load.

During September the new tax bill, H. R. 4473, came up on the Senate floor for a vote. The Senate Finance Committee had decided on certain compromise provisions—I emphasize, compromise provisions—under which unallocated earnings of cooperatives (not definitely allocated on the accounts of patrons) would be subject to corporate income taxation. Patrons would be held responsible for paying the tax on such amounts.

This compromise committee amendment was estimated as capable of producing around \$10,000,000 in additional Federal revenue. The amendment was backed by the Senate overwhelmingly, including myself. However, Senator WILLIAMS, of Delaware, sought to add an amendment to put a tax

on the co-ops themselves for all their undistributed earnings; thus, the tax would be on the co-ops, not the patrons. Fortunately, the Williams amendment was rejected. I felt that it was unfair and unreasonable and that it would have been seriously damaging to Wisconsin cooperatives. The amendment was defeated by an overwhelming vote in the Senate on September 24, 1951. I stated my opinion very definitely against that unreasonable Williams amendment.

MATTERS TAKEN UP WITH AGRICULTURE DEPARTMENT

During 1951, as in many previous years, I took up a great number of issues with the Department of Agriculture and other Federal agencies. Some of these issues were tied up with Federal legislation. Others were involved purely in administration.

7. For example, I took up with the Secretary of Agriculture the matter of additional appropriations for Brucellosis research. We all know what a terrific economic havoc Bang's disease causes among dairy herds of Wisconsin.

8. In addition, I took up with the Secretary of Agriculture and with the United States Immigration Service numerous arrangements in order to speed the importation of foreign agricultural farm labor in order to be of help for the canning of Wisconsin's crops.

There were a great many other issues in which I was happy to be of service to the great canning industry of Wisconsin—issues such as:

9. Assuring an adequate supply of critical materials for the canners.

10. Assuring fair price ceilings for them.

11. Trying to simplify regulations which they have to adhere to and trying to make sure that the Office of Price Stabilization recognizes their problems, etc.

CRITICAL MATERIALS FOR REA'S

12. Still another issue which I took up this year was the matter of assuring an adequate supply of critical materials for Wisconsin's rural electric co-ops. I had helped dedicate a new REA power project on the Flambeau River near Ladysmith, Wis. Thus, I had seen at first-hand how crucial REA's work is in this age of electricity. Kilowatt energy is indispensable to the modern farmer and to his family. REA's must continue to get sufficient copper to build new electric lines.

FARMERS INTERESTED IN ECONOMY, FREEDOM

I have confined this report thus far to issues facing Wisconsin farmers almost exclusively. It should be remembered, however, that the Badger farmer, like every other citizen in the State of Wisconsin, is interested in a great many public issues which do not pertain to farming directly.

The Wisconsin farmer is vitally interested, for example, in a prompt and successful ending of the long and bloody battle in Korea. He is interested in Government economy, an end to Federal waste and extravagance.

He is interested in the eradication of crime, communism, and corruption wherever they exist. He is interested in ending the pattern of Government favoritism, of \$9,000 milk costs to Government employees and deep-freezer gifts. The Badger farmer, moreover, is interested in the fight against socialistic trends of our times. He knows from experiences during World War II how the heavy hand of Government bureaucracy can damage him and all that he holds dear.

To take another issue, the Wisconsin farmer is feeling the effects of inflation. Like everyone else in our country, he knows that the real answer to inflation is in full and uninterrupted production.

He knows that every time there is a major strike in a leading American industry—an avoidable strike—that stoppage cuts down the amount of goods available. This serves

to increase inflationary pressure and causes prices to rise higher.

The Wisconsin farmer is a realist. He understands how the American way of life operates. He cannot be fooled or bamboozled by glittering high-sounding slogans or phony propositions. He wants to know what Government programs cost and how they will affect his liberties. He wants to know where the trend in American foreign policy is leading us. He wants to know what our commitments are throughout the world. Yes; all thinking Americans want to know the answers to these questions.

This year, as every year, Wisconsin farmers have written thousands of letters to me. They joined in the overwhelming denunciation of President Truman's dismissal of Wisconsin's great Gen. Douglas MacArthur. They joined in praising the efforts made by the famous Senate Crime Investigating Committee, a group on which I was happy to serve for over a year and a half from the beginning to its untimely end. They joined with other patriotic Americans in a great variety of issues which came up and which we faced as Americans all.

CONCLUSION

I have tried to cover the various major matters in which farmers are particularly interested. For detailed reports, however, on other issues which limited space has not permitted me to cover, I hope that our farmers will be writing to me. Their questions and comments will, as I have indicated, be welcome indeed.

So, to that farmer in Scandinavia, Wis., whose letter I quoted and to all other farmers in co-ops, in REA's, or as individuals, I say: Do let me hear from you, and thanks for your kind attention to this report. And do let me hear from folks in every occupation, every profession, every calling who are interested in their Government, yours and mine, in their America and their world.

Wanted: An American Leader for America

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks I am including excerpts from an editorial by that distinguished journalist, Mr. David Lawrence, which appears in the current issue of U. S. News and World Report. Excerpts from that editorial follow:

What we need is an American leader who is willing to promote policies of peace and comradeship with free nations and to render to our allies wholehearted support in money and men. But we need also a leader who is interested in preserving the economic and social integrity of the United States.

What we need is someone who does not feel that the flag of the U. N. should be flown above the Stars and Stripes or that our men in Korea should be taught to look on the American flag as the symbol of a drooping nationalism.

What we need is someone who recognizes that the U. N. itself is an obsolete organization today and that events have passed by the concept of a world organization disciplined only by majority vote. The U. N. is useful as a forum. Because of the veto, it is useless as a military alliance or agency to enforce peace.

What we need is an idea that supersedes the old-fashioned doctrine that 50 or more nations can be assembled in a group and vote as equals when they are not equals. As long ago as 1907 that concept was assailed at the Hague Conference as impractical. Through the League of Nations and now the U. N., it has been demonstrated to be ineffectual and as merely a weapon of intrigue and a device to disintegrate the strong.

What we need is someone who sees the world of tomorrow in its realistic structure as a group of nations dedicated to freedom and liberty and ready to associate themselves on a basis of reciprocal sacrifice.

What we need is a frank appraisal of the power of the larger free nations to protect their peoples from destruction by the evil forces which recognize no sovereignty as they infiltrate us all. A world in which dependent nations lose their sovereignty is as bad as a world in which the self-reliant nations, with great resources and industrial strength, are slowly but surely sapped from within by the insidious type of warfare that Russia now is waging.

What is needed is an administration in Washington with a man of imagination in the Presidency and a man of imagination heading the Department of State—men willing to take risks in the field of propaganda, in the field of counterinfiltration, in the area of military help, and in the enlistment of manpower by all those nations which want an alliance for self-protection.

What is needed is a leadership that makes it clear to the American people that it is our own safety, our own wealth, and our own manpower which are at stake, and a leadership that can convince other nations allied with us that internationalism must be a two-way street if it is to strengthen the cause of our respective nationalisms.

What is needed in America is a leadership that will not be lost in the vagaries of left wingism or bogged down in those adventures into socialism which can only lead in the end to the triumph of Communist doctrines among us, thus preparing the way for the same subtle invasions that have ruined other countries.

What is needed in America is not isolationism—for that has been outmoded by the long-range bomber and the atom bomb—but an Americanism that is not afraid to send its troops to any frontier in the world to stop the enemy in his tracks and to keep future wars remote from our shores.

What is needed is the same spirit that dominated the founders of the Republic the spirit of the Thirteen Colonies expressed in that historic slogan, "Don't tread on me!" For this is a tragic period in history in which American boys have been trod upon and America itself has been trod upon, and we have not dared to use maximum power in defense of American lives—90,000 casualties already.
